STARLEY—PARTON.—On April 27th, at the Wesleyan Church, Putney, S.W., Capt. R. Douglas Starley, M.C., R.A.F., youngest son of the late John Kemp Starley, of Coventry, was married to Frances Dorothy, only daughter of Mr. and Mrs. James Parton, of Putney, S.W., by the Rev. George Baxendale, B.D., B.A.

Births.

BERESFORD.—On April 30th, the wife of Capt. Tristram de la Poer Beresford, R.A.F., of a son.

FLETCHER.—On April 28th, at 17, Eastgate, Sleaford, Lincs., the wife of Lt.-Col. J. N. Fletcher, R.A.F.—a son.

HALL.—On April 26th, at Ilford, to Dr. (née Challen) and Archibald F. Newton Hall, R.A.F.—a son (Ian).

On Empty Spaces

YOUR advertising space may be full of matter—and yet it may be *empty* so far as pulling power is concerned. The biggest space in the finest medium in the world is valueless until you've filled it with the right copy.

The right copy is the kind that get results—results are the only criterion.

Knowing the how and why, not of advertising but of the advertising of the Aircraft Industry, is the mark at which the Meerloo Publicity Service aim.

We are responsible for a large number of the most successful Aircraft Publicity Schemes.

Look through this issue of "The Aeroplane"—you can see at a glance those advts. for which the Meerloo Publicity Service are responsible.

Let us show you what we can do on your proposition.

The Seal of Security
for aero engine joints
is
L'Hermetic

It securely seals joints against penetration by air, water, grease, dirt and dust. It is heatproof and insoluble in all spirit, oil and fatty essences.

The French military authorities and all leading French aero engine manufacturers use L'Hermetic by reason of its thorough efficiency and marked superiority over substitute compositions.

JOWETT.—On April 30th, at Houndless Water, Haslemere, the wife of Capt. Arthur Jowett, R.A.F., of a daughter.

KERSHAW.—On Friday, April 26th, at Ruloe, Northwich, Cheshire, the wife of Lt. Frank Kershaw, R.A.F., of a son.

KILLICK.—On May 4th, at Cooperville, Burgess Hill, Sussex, to "Betty," the wife of Lt. R. J. Douglas Killick, R.A.F.—a daughter.

SEDGWICK.—On May 2nd, at Sutton Courtenay, the wife of Capt. L. G. T. Sedgwick, R.A.F., of a daughter (Anne), who lived ten hours.

WAKEHAM.—On April 29th, at Holms, Girvan, Ayrshire, the wife of Lt. D. Gerard C. Wakeham, R.A.F.—a daughter.

FOREIGN COMMUNIQUES.

FRANCE.

May 1st.—On April 29th, Sub-Lt. Guerin brought down his twentieth aeroplane.

Army of the Orient.—Allied aviators carried out numerous bombardments. Two enemy aeroplanes were brought down in air fighting.

May 2nd.—Army of the Orient.—An enemy machine was brought down south of Ghevgeli by a French aviator.

May 3rd.—During May 2nd eight German aeroplanes were brought down, three by the Anti-Aircraft Corps. In addition, 12 enemy machines were badly damaged and fell in their own lines after encounters with our pilots.

Our bombarding forces carried out numerous operations during the day of the 2nd and the following night. Twenty-seven thousand kilogrammes (27 tons) of bombs were dropped on the stations of Ham, Nesle, Roye, Chaulnes, St. Quentin, and Jussy, and on the bivouacs and cantonments in those regions. Eight thousand kilogrammes (eight tons) of bombs were dropped on enemy establishments in the region of Rethel and on the railway station of Ashfeld La Ville.

May 4th.—Army of the Orient.—British aviators successfully bombarded enemy convoys south-east of Seres (Struma front).

May 5th.—In the course of May 3rd and 4th nine German machines were brought down by our pilots in air fighting, and two by our anti-aircraft guns. In addition, 23 enemy machines were seen to fall disabled in their own lines.

In the course of the same two days and during the night of the 3rd-4th, our bombing machines made a number of expeditions. Twenty-eight thousand kilogrammes (about 28 tons), of projectiles were dropped on the railway stations at Ham, Chaulnes, Jussy, Péronne, and St. Quentin, and on depôts and cantonments in those districts.

Army of the Orient.—Allied aviators have carried out many bombardments, and brought down two enemy machines.

GERMANY.

May 5th.—Yesterday we shot down 25 enemy aeroplanes and two captive balloons. Lt. Buckler achieved his 33rd aerial victory and Lt. Peutter his 22nd.

ITALY.

May 2nd.—Three enemy aeroplanes were brought down by our chasing machines over Grave di Papadopoli, Cimadolmo, and Fontanelle (all on the Piave front). Two more were hit by British aviators. One of them fell in the neighbourhood of Fonzaso (six miles west of Feltre), the other at Santa Lucia di Piave.

May 3rd.—Over the whole front there was intense aircraft activity; reconnaissances were carried out and air combats took place; eight hostile machines are reported destroyed.

May 4th.—A number of aircraft actions were carried out on our part, the enemy attempting in vain to oppose them by violent anti-aircraft fire and by the activity of his chasing flights. The hutments in the Val d'Assa were hit with 60 bombs by British aviators. One of our airships dropped one ton of explosives on the aviation ground at Campomaggiore (south of Sedico, eigh

'Phone: 3614/5.

miles south-west of Belluno). Twelve hostile machines were brought down, and one forced to land by our own and British aviators, while another was hit by our anti-aircraft guns, and fell in flames near Spresiano (Piave).

May 5th.—The activity of our aircraft was intense. Caproni flights and British aeroplanes, protected by a number of chasers, dropped about nine tons of bombs on the hydro-electric works at Cavedin (north of Mori, Lake Garda). While this operation was in progress other machines renewed the bombing of the aviation ground at Campomaggiore (south of Sedico).

Last night our airships, reaching by surprise the railway stations of Primolano (Brenta) and Bolzano (probably Belzano, north of Belluno), dropped there their loads of bombs with good effects. At the same time, an airship of the Royal Navy engaged enemy columns on the march beyond the Tagliamento.

Eight enemy machines are reported destroyed, two of which fell in flames within our lines.

May 6th.—On the 4th inst. at dawn our aviators bombed military objectives south of Fieri (the Austrian advanced base in Albania).

As the result of the offensive and defensive activity of our air forces at sea, and in the direction of the enemy coast, an air fight took place on the 4th instant in the Gulf of Trieste. Three enemy seaplanes were brought down, and it was found possible to tow two of them back to our base. All our machines returned undamaged.

BELGIUM.

April 30th.—Later information shows that two German aeroplanes were brought down by our aviators on April 25th.

May 3rd.—One German aeroplane was brought down in air fighting and crashed between the enemy lines and our own.

TURKEY.

May 1st.—One of our aviators brought down two enemy aeroplanes at Amman, the occupants of which, consisting of four British officers, were taken prisoners.

THE WAR IN REVIEW.

A Significant Admission.

In an article on Rittmeister von Richthofen, the "Frankfurt Zeitung" says:—"Superiority in the air has been the gre boast and the great hope of our enemies since 1916. They th attained superiority in the air in the numbers of their aeroplan and they have continually increased it. They have always flo up in the thickest swarms, and fallen upon us to win in t air the victory which they hardly any longer believed attainal on the ground. Our little Germany has not been able to ke pace with this totality of the greatest and richest countries of t world. Therefore, we shall never reach the number of their ae planes, whether American help increases it still more or leav them further in the lurch."

The Death of an Ace.

It is reported the Capt. Mahieu, the well-known French milit pilot, is missing after a night expedition.

American Aircraft Finance.

A Reuter's report from Washington on May 6th stated th the War Department has asked Congress for a billion doll (£200,000,000) appropriation for aircraft production in additi to the 640 million dollars (£128,000,000) already expended.

American "Archie" Work.

Reuter's correspondent with the American Army in Fra writes on May 6th:—

Our anti-aircraft guns brought down one enemy aeroplane a damaged another in this sector.

Anti-Aircraft Work.

Italian anti-aircraft artillery on the Lower Piave have brou down a large Austrian seaplane, K 388 (presumably a "Kapp type machine), capturing three officers, two of whom were ba wounded.

COMBINED TIME AND JOB CARD

for recording complete labour cost.

The **"IN"** and **"OUT"** time is recorded on the card, also the time when jobs are changed.

The TIME on the Job is cast out at the side of card and the total hours entered in the Job No. column under the Job number.

Unfinished Jobs are entered at the foot with Job number and the total hours worked up to the week-end under column headed "Carried Forward," and transferred to the next week's time card in the column "Brought Forward," any time worked on this job during the second week is entered in the column, "Time for this Week." If the job is completed during the second week, the total is added and entered in the "Jobs Finished" column. If the job is not completed, the total is entered in the column "Carried Forward," which will in turn be entered on the third week's time card.

STANDING ORDER NUMBERS for constantly recurring Non-Productive Jobs are represented on the card, e.g. K.31 Grinding Tools; E.53 Making a New Lathe Tool.

ON SIR HUGH TRENCHARD'S APPOINTMENT.

On May 13th, replying to Mr. Asquith,

The Chancellor of the Exchequer (Mr. Bonar Law) id:—I am glad to say that Major-General Trenchard is been offered, and has accepted, the command of very important part of the British Air Force in ance. (Cheers.)

All those in Allied countries who desire to get on ith the war will be gratified by the official announcement that Major-General Sir Hugh Trenchard is to take mmand of R.A.F. units in France.

To say that all, or anybody, will be satisfied would ot be true, for the announcement merely says that is to command "a very important part of the British ir Force." Apart from the fact that Mr. Law might ave shown more loyalty to his King if he had used e correct title of the *Royal* Air Force, it is not satisctory that the officer who was one of the founders, id has been altogether the builder of the organisation id of the high *moral* of the Royal Flying Corps, sides being an inspiration to "a very important part" the Royal Naval Air Service which has been at one me or another under his command, should be in comand of only a portion, no matter how important, of e force which he has created. His proper position in command of more than the whole force—as has ready been suggested.

Possibly, in these topsy-turvy times, when it is olemnly announced by such a portentous nonentity as ord Curzon that more in war than in peace the soldier ould be subservient to the civilian—and the civilian olitician at that—we may be entertained by an exosition of the falsity of Euclid's axiom that the part nnot be greater than the whole. One says this without the least disrespect to Major-General Salmond, who has carried on so splendidly, as G.O.C. R.A.F. in the Field, the task which was handed over to him when his great chief came back to England to evolve order out of the potential chaos created by the politicians who mixed without amalgamating the two Flying Services.

The "Gazette" of May 11th shows that General Salmond is appointed to command a division of the R.A.F. and to retain the rank of Major-General. One assumes, therefore, that he also will command "a very important part" of the R.A.F. in France. He has commanded the whole for some five months with so much distinction that one has no anxiety about his part of what Mr. Law is pleased to call the British Air Force—presumably in order to demonstrate that, being unable to assimilate military nomenclature correctly, he, as a member of the Cabinet, is the more fitted to control the British Army.

One would have full confidence if General Salmond were to command both the part which he is to command and General Trenchard's part also, even if each part were greater than the present whole. And if General Trenchard were to command the Allied Air Forces, as Generalissimo, the confidence of all concerned for our mastery in the air would be greatly increased.

However, possibly such a happy state of affairs may come when this unhappy country acquires a Government worthy of its tenacity of purpose, instead of one which merely fits its lack of intelligence. Meantime, General Salmond's loyalty and attachment to his great chief is so well known that the Royal Air Force believes that as colleagues they will work together in perfect amity. And so we may all be confident that the King's servants on active service in the air will be able to get on with the war under the best possible leaders.

C. G. G.

THE SUPERVISION OF AIRCRAFT PRODUCTION.

The Minister of Munitions has appointed Sir Arthur uckham, K.C.B., to superintend, as Member of Munions Council, the duties of aircraft production in ıccession to Sir William Weir.

The appointment of Sir Arthur Duckham to supervise the production of aircraft in place of Sir William Veir, promoted to be Air Minister, will be eminently ıtisfactory to all who are connected with the output of ircraft. His record at the Ministry of Munitions is xtremely good, and one knows personally something f his keenness in economising material, speeding up roduction, and promoting efficiency.

Arthur McDougal Duckham was born at Blackheath n July 8th, 1879, the son of Mr. Fred E. Duckham, I.C.E. Despite his English birth and surname, one ssumes that he was not given the name of McDougal ithout just cause. Being the son of an engineer and f Scottish ancestry, Sir Arthur would appear to be of ıe right composition for his present job.

He served his time in engineering workshops under Sir George Livesay, M.I.C.E., and thereafter specialised on furnace work, with particular reference to the carbonisation of coal, and to engineering problems concerned with chemical developments. He has devised and patented a number of operations and methods in these and kindred subjects, and has travelled much abroad in connection with engineering work.

He is the senior partner in the firm of Duckham and Cloudesley, Ltd., the famous consulting gas engineers. He went to the Ministry of Munitions when the department was first organised, and is now chairman of the Advisory Committee of that Ministry. One assumes that he will continue to hold that position while employed in connection with aircraft.

Sir Arthur Duckham is married to Maud, daughter of Mr. A. D. Peppercorn, and has a son and two daughters. He is a member of the Reform Club and of the Bath Club.

In 1917 he was made a K.C.B. for his valuable work in producing munitions of war.

A MATTER NEEDING OFFICIAL INQUIRY.

The following paragraphs from the "Daily Mail" of May 10th are worthy of the special attention of the Naval, Military, and Air Force authorities :—

> A naval airman who has earned distinction during the war was invited to a house in the West End where, during five visits, he lost over £400 at chemin de fer. He lost £200 in one night.
>
> He states that the croupier was an official employed in a department of the Admiralty. This fact, and others, the airman has communicated to the Admiralty and the police.
>
> The official referred to said to a representative of the "Daily Mail" yesterday: "I have acted as croupier at a friend's house, but I have not been there for some time. I acted in purely a friendly way. I was not paid. But why ask? It does not matter to the Admiralty whether I play cards after office hours. I am fond of a game of cards and am considered a very good bridge player. I have played at Monte Carlo and have won money and also lost.
>
> "I suppose the man who made the complaint lost and he is now squealing. The house is not a gambling house; only Mr. ——'s friends go there. The games are properly conducted. I have not heard about the complaint from the Admiralty and do not expect to. They probably threw the letter into the fire. The —— (mentioning a high official) was with me to-day and he was most charming, so that does not look as if there was anything amiss, does it?"

This gives only a hint of a scandalous state of affairs well known to all who are closely in touch with the Services, and one hopes that the whole subject will be adequately handled.

It appears to be a fact that officers in Town on leave or permanently working in London are lured to the haunts of professional gamblers by affable-seeming friends or acquaintances, and are there thoroughly rooked, and frequently blackmailed afterwards. In one instance, within the writer's knowledge, a person bearing a famous fighting man's name, and holding the King's Commission, has introduced such a professional gambler to a well-known club much frequented by Service people, and has induced members therefrom to visit his friend's—perhaps his partner's—gambling house, where they have been relieved of some hundreds of pounds.

A further development of the scheme appears to be a result of forbidding officers to wear uniform when dancing in public. This order has naturally prevented them from going to ordinary night clubs, where they would be under proper supervision. Consequently "galleries" or "rooms" are booked by a group of officers—one or more of whom may be touts for purveyors of vice—and others are "invited to a party" there along with their best girls, or any other girl for that matter.

At these "parties" youngsters on leave or freshly joined meet the most charming of women and men charming because their living depends on their charm and after having danced and fed and wined they are lured off to gaming houses or other places of amusement, where they are robbed of their money.

If they are of higher social or military value they may be led further on, and ultimately fall into the grip of the blackmailer and become merely the tools of German spies or actual instruments of the Hidden Hand which has done so much to prevent us from getting on with the war.

If the Government, and the high Naval and Military authorities, are really in earnest, it is high time that drastic steps were taken to stamp out concealed vice which merely leads to blackmailing by enemy agents.

Places for public dancing and moderate gaming in public should be placed on a respectable level under official control and sanction, whether the Nonconformist Conscience objects or not.

These disclosures go still further to show that our hypocritical English love of outward respectability, no matter what inward vice it may cover, which is conveniently known as the Nonconformist Conscience, is in fact one of the strongest possible factors in keeping under the heel of the Hun those who should be getting on with the war, and in providing a constant supply of fresh recruits for the army of slaves who are dominated by German agents.—C. G. G.

THE FLYING SERVICES FUND.

The attention of charitable minded readers of The Aeroplane is hereby drawn to The Flying Services Fund, which was founded in 1915 by the Royal Aero Club.

The Honorary Treasurer is The Right Hon. Lord Kinnaird. The Committee consists of Brig.-Gen. W. W. Warner, R.A.F. (Chairman); Mr. Chester Fox; Lt.-Col. Harcourt G. Gold, R.A.F.; Maj. T. O'B. Hubbard, M.C., R.A.F.; Sqdn.-Comdr. C. E. Maude, R.N. The Secretary is Lt.-Comdr. H. E. Perrin, R.N.V.R. The Bankers are Barclay's Bank, Ltd., 4, Pall Mall East, London, S.W.1.

The objects of the Fund are approved by the Lords Commissioners of the Admiralty and the Army Council and the Royal Aero Club has instituted and is administering this Fund for the benefit of Officers, Non-Commissioned Officers and Men of the Royal Air Forces who are incapacitated on active service, and for the widows and dependents of those who are killed.

A Meeting of the Flying Services Fund Committee was held on Thursday, April 25th, 1918, when there were present:—Brig.-Gen. W. W. Warner, R.A.F., in the Chair, Mr. Chester Fox, Lt.-Col. Harcourt G. Gold, R.A.F., and Lt.-Comdr. H. E. Perrin, R.N.V.R., Secretary.

The following Grants and Allowances were made:—

(58) An allowance of £4 a month for three months to the widow of an Air Mechanic in the R.N.A.S. who had died from injuries caused through an accident while on duty.

(35) An allowance of £4 a month for six months to the father of a First Class Air Mechanic in the R.F.C. who was killed on active service.

(53) An allowance of £4 a month for twelve months to the mother of a Leading Mechanic in the R.N.A.S. who was accidentally killed on active service.

(30) An allowance of £4 a month for three months to a Second Class Air Mechanic in the R.F.C. who had been incapacitated on active service.

(39) An allowance of £5 a month for six months to a Chief Petty Officer in the R.N.A.S. who had been incapacitated on active service.

(51) An allowance of £2 a month for twelve months to the widow of a Sergeant in the R.F.C. who had died from injuries received on active service.

(33) An allowance of £2 a month for twelve months to the widow of a Second Class Air Mechanic in the R.F.C. who was killed on active service.

(47) An allowance of £4 a month for six months to the widow of a Corporal in the R.F.C. who had died from injuries received in an aeroplane accident.

(36) An allowance of £5 a month for twelve months to the widow of a Leading Mechanic in the R.N.A.S. who was killed on active service.

(61) A Grant of £5 to the mother of a Sec. Lieutenant who was killed on active service.

(63) An allowance of £2 a month for twelve months to the widow of a First Class Air Mechanic in the R.F.C. who had died from wounds received on active service.

The offices of the Fund are at The Royal Aero Club, 3, Clifford Street, London, W.1, and all contributions should be sent there.

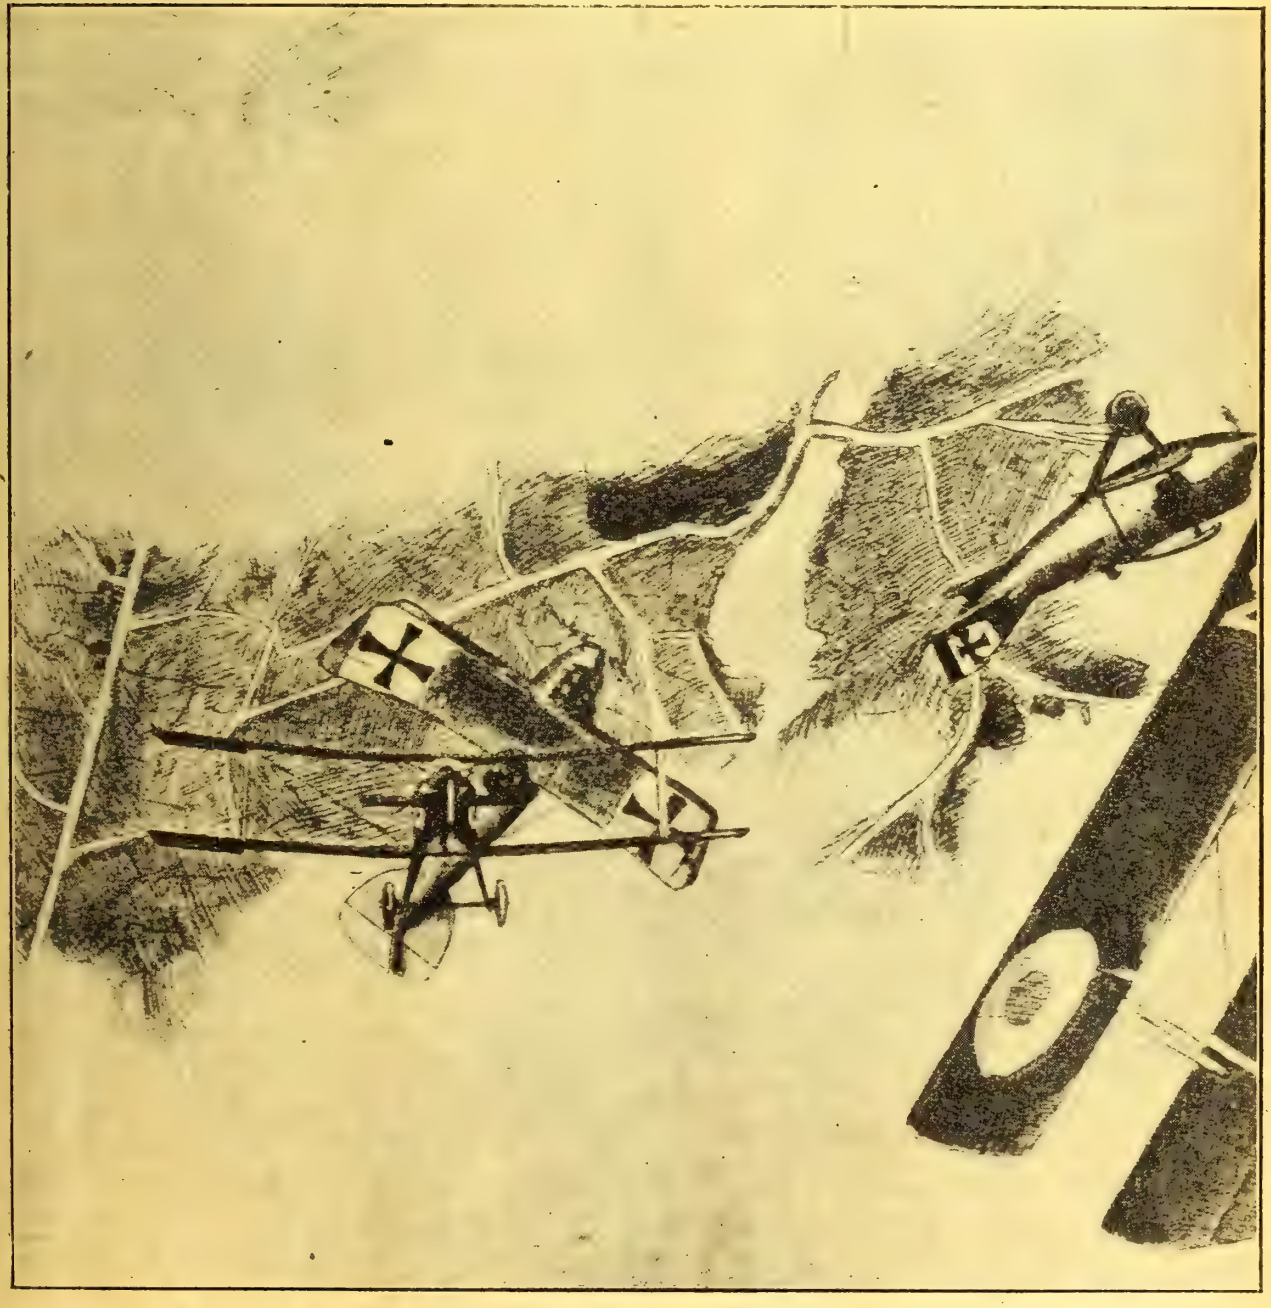
AN EXPLANATION.

The Editor thanks "de V." for his note on guns, and much appreciates his remarks. The reason for the occasional appearance of purely political articles in The Aeroplane is simply that practically every paper in the kingdom is under the thumb of one or other of the political parties, and consequently it is only non-political papers that can speak the truth about politicians. So many tens of thousands of officers and men in the Services read The Aeroplane that it seems well in the best interests of the country that that number of the King's servants should at any rate be told a part of the truth from time to time, so that they can spread it among their less well-informed comrades. Unfortunately the law of libel and the Defence of the Realm Act combined prevent even The Aeroplane from telling the whole truth about the politicians who have at times come so near to losing the war and ruining the country.

THE NEWER CHIVALRY.

BY HENRY FORESTER.

Prehistoric War.



Each successive period in the history of the world has its own method of warfare, dependent for its form on the conditions of the time. In the earliest days of human existence such hostilities as were waged on various parts of the earth were personal and not communal in character. In the Stone Age the preservation of the integrity of a home and the hoarding of food for the days when scarcity would fall on the land were questions of greater import to the individual than was the higher ideal of such things as might lead to the common good. Unity of action had little attraction. The strong took all those things which they desired, and the weak learnt that evasion was a cardinal principle if continued life was desired.

Fighting in these early days was a series of hand-to-hand combats, in which flint axes, wooden clubs, and stone-tipped spears were the common weapons. Hence it fell that the weak were denied the mechanical aid which would have compensated them for their lack of strength.

As time passed the weak wearied of perpetual defeat and subjugation and developed that intellect with which the gods have chosen to reward many of those whose physical strength is insufficient to protect them against the strong. Unity of action began by degrees to take the place of individual efforts. Tribes became States, and States bred rulers whose instincts led them towards domination over neighbouring States of less efficiency.

The Coming of Great Leaders.

Alexander in his majesty, with disciplined troops organised for campaigns beyond the borders of their own land, swept through the East in an ever-increasing wave

IN A DOG FIGHT.—A Sketch by an active-service pilot of one of those mixed-up scraps commonly known as a "dog-fight." One sees the two nearest British machines diving onto two Albatroses, which are directly over an opening in the clouds. The sketch is reproduced from "Cinquante-Quatre," a little book of R.F.C. songs and illustrations, compiled by officers of an R.F.C. Squadron as a memento of their service together.

of victory. Cæsar, dissatisfied with the parochial politics of his native home, dominated in a later age the regions of the West. His legions, trained and eager, upheld the eagles in the wilds of Africa, in the Near East, in all that country which is Germany, and throughout Britain. The power of organised armies and the subjection of the individual to the common need enabled him to consolidate his victories into a great empire which endured for centuries.

Other leaders, not perhaps possessed of the same skill in statesmanship and in war, yet great in one or the other, came and went. The principles of unity in action remained, but the subordination of the individual to the commonwealth ceased in a large degree. When William the Norman conquered England, he did it not by means of a skilled standing army, but with the aid of feudal nobles and their retainers. Thus there came into England a military aristocracy for the first time.

In the following centuries throughout the period commonly known as the Dark Ages, the rules of an arbitrary chivalry were formulated, in which the man-at-arms formed that part of the army which gave solidity to the mass, whilst the knights and their attendants carried out the more brilliant operations of war. In such reconnaissance as was undertaken, in the shock action of heavy cavalry, and in the inspiring of the warlike spirit, the knights of the days of chivalry excelled.

The Knightly Principle.

The knightly rank was attainable by all who displayed singular courage and a knowledge of that seemly code which regulated every act of the perfect knight. Each, whether gentle or humble, must have served faithfully for an allotted period one who in his turn had earned the golden spurs of chivalry. The necessity of obedience was ever before the novice's eyes that he in the fulness of time might be qualified to lead men. To fight faithfully for his lord or his king, without rancour towards his enemy, was the precept which regulated each hour of his daily life.

He had to learn with earnest endeavour the use of lance and sword. The perfect combination of eye, horse, and weapon was not acquired in a day. In the hardly fought tourney between knights of equal skill the merest hairbreadth of misjudgment would make the difference victory or defeat. There were many methods of attack, from the lance under the visor—a stroke of great skill—or between the tasset and the corslet, to the mace swung with precision at the moment when the opponent has overshot his mark. Each weapon had its due manner of employment, to be learnt only with arduous devotion.

The Worthy Opponent.

When, after due preparation and proof, he was adjudged fit to enter the knightly ranks, he sought a willing foe that his new dignity might make a worthy entry into the records of chivalry. His page, like him in days but just dead, a pupil in the school of knighthood, would convey his challenge to any whose bearing in battle had singled him out for attention. And then with due observance of the laws of chivalry his fortunes would undergo the test of experience.

In battle his place was in the thickest of the fight and against the most gallant enemy who would deign to cross swords with him. His bravery and skill were designed to be an encouragement to the men-at-arms who formed the least mobile part of the army. His object in life was to make his name worthy of reverence in the camp and of legendary fame in history. No newssheets cheapened his exploits day by day, nor contrasted the numbers he had killed against the numbers killed by another not so blessed by fortune. His credit rested on the sure foundation of the respect borne him by the soldiers with whom he fought.

The Passing of the Knight.

To-day, centuries after that early form of knightly combat has passed with many pleasant things into the realms of historic memory, the names of the greatest of those who fought reverberate still in the minds of soldiers. The Chevalier Bayard *"Sans peur et sans reproche,"* the Balafré, Sir John Knollys, the Black Prince, Sir Philip Sidney, each in their day lived in such manner that their fame will never die.

But his day passed. Individual combat again gave way to unity of effort. The improved tactical employment of troops left no place for the knight with his peculiar code and manner of war. Concerted movements of bodies of cavalry were an effective substitute for the isolated bravery of the knightly horseman. New weapons, the cannon, the musket, and pistol, left him little place in war save as the orderly but gallant leader of disciplined men.

The knights of the Middle Ages could not alone bring victory to the kings they served. Success in battle then as now fell to the trained and loyal forces strong in infantry and fired with a firm belief in the righteousness of their cause. They were, nevertheless, an integral part of that army, and were the inspiration that led it to victory. They did not live in vain.

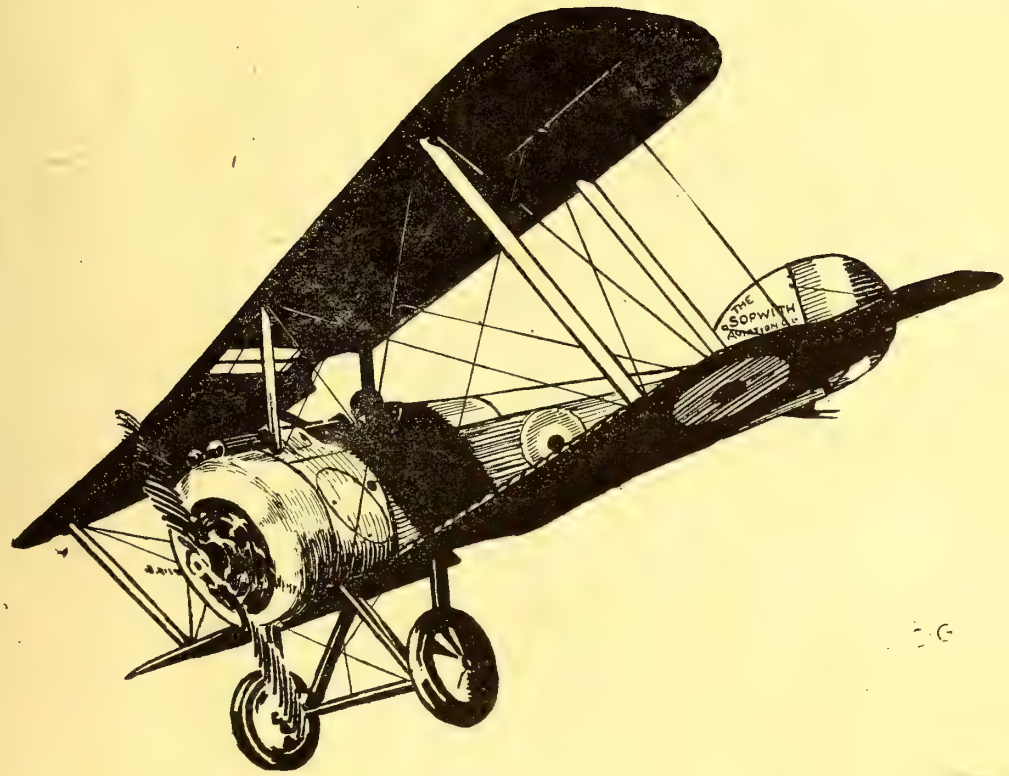
The Great Revival.

To-day there is a revival of that manner of war. Personal combat has returned for a space. Duels are fought in the presence of opposing armies as brilliantly and as grimly as ever in the days of old. Personal gallantry and personal skill has in one branch of war again taken the place of concerted action. The conditions of war have changed, while the principles remain the same, yet early methods have revived for a while.

The aeroplane pilot of to-day, who flies in fighting machines, is no unworthy successor of the knight of old. Flying in an element where control from the Higher Command is difficult to enforce, under conditions in which swiftness of decision and determined courage are essential to success, the pilot, if he so wills it, can revive all that is best of the olden days. His preparation for war is not, or should not be, very dissimilar.

The Science of Combat.

There is an exact science of aerial fighting, a series of proper methods to be adopted in the destruction of an enemy. On broad lines each may develop his method of attack, as has each of those who have become famous as fighters in the air.



Given weapons of equal precision and aeroplanes of equal excellence, success will lie with the fighter of greater skill. Herein lies much of the fascination of fighting in the air. The better man wins, and that is as the gods would have it.

The Old Challenge.

In the earlier stages of the present war legend has it that challenges to mortal combat passed between British and German pilots from time to time. Immelmann, who has gone honoured to a soldier's grave, is said on occasion to have invited pilots to meet him at a stated hour above the Foret d'Houthulst, and one understands that his challenges were accepted. The duel was fought for good or ill while no other aeroplanes interfered, for it would be beyond the rules of this quaint later chivalry to interfere in a personal battle of such a nature. This is the story; whether it be true, one leaves to others to judge. There is little doubt that many of our own people in less strenuous times than these present days have themselves issued such invitations to mortal combat.

There is a further parallel to the days of chivalry in aerial warfare. Pilots are not wont to speak bitterly or cheaply of dead enemies of whatever race they may

THE SOPWITH

AVIATION COMPANY, LIMITED
KINGSTON-ON-THAMES, ENGLAND.

CONTRACTORS TO H.M. GOVERNMENT.

Telephone: KINGSTON 1988 (8 lines).
Telegrams: SOPWITH, KINGSTON.

Paris Office:
21, RUE DU MONT THABOR.

be. The deaths of the great pilots Immelmann, Hawker, Bölcke, Ball, and so through the gallant list, have been mourned by the best in both armies. Gallantry is a sure answer to rancour and ill-feeling. The brave man has no race.

Not very long ago a British pilot, since gone gallantly to death, received the D.S.O. His brother-officers celebrated the occasion in the usual manner. When called upon for a speech, the hero of the evening proposed the health of—von Richthofen. The toast was honoured by the whole squadron, with one dissentient.

An aerial battle of to-day, even if both of the opposing forces fly in formation, break up rapidly into a series of personal combats if pilots of equal gallantry are fortunate enough to meet. The dead knights of yesterday will feel a kindred spirit with these newer knights who have gone to-day.

The Deadly Advertisement.

There is a deadly habit arising in the country. Advertisement, proper in the markets, is spreading into war. The "Daily Mail," intent on its daily discovery of the things that were known before, clamours insistently for the names of those who have behaved gallantly in the air, and whose gallantry has been acknowledged. The name, once known, is blazoned forth to the world with additional descriptions of the deeds of valour that have earned this unpleasant reward. Others, more fortunate, remain unknown to the "Daily Mail," but sadly enough are regarded with less faith by the public because they, too, have not been advertised.

The principle is wrong. Bravery and high efficiency will gain for a man great credit among his fellows, and his exploits will be spoken of until they are almost legendary. This military fame is truer and of higher value than all that can be said in the news-sheets. An army soon learns of its gallant men. None is more ready to acknowledge than those who are also brave.

The Repetition of History.

The day of knight-errantry in the air is passing. Organised tactics are taking the place of individual actions. Future aerial operations will be carried out in formations moving into action with manœuvres not less elaborate than those common on the ground. Individual skill will be of less importance than the efficiency of the mass. The pilot whose marksmanship, no less than his power of manœuvre, gained many victories in the air will find that the fire of many, not all of whom will be highly skilled, is proportionately more deadly in its effect. Later, too, a strategy of the air will develop, but not until the duration of continuous flight has been greatly increased.

The fighting pilot of to-day is fortunate in the freedom of action which is necessary for his effective employment. He is still more fortunate in that his exploits are carried out in such manner as gives him celebrity amongst his fellows. He is creating a tradition and forming legends that will live while the English race exists. Some of those who have gone will leave a name in history not less glorious than did Bayard or Philip Sidney.

THE R.F.C. FAMILIES' RELIEF FUND.

The following is a list of the Committee of the Royal Flying Corps Families' Relief Fund:—

Major-General H. T. Arbuthnot, C.B., Chairman and Hon. Treasurer, Ramsay House, Shooter's Hill, S.E.18

The Hon. Lady Shelley-Rolls, 21, Eaton Square, S.W.

Lady Henderson, Orchardmains, Tonbridge.

Lady Leighton, 6, Wellington Court, Knightsbridge, S.W.

Mrs. Barrington-Kennett, Remenham, Wraysbury, Bucks.

Miss Cholmondeley, Sedgewell House, Ideford, South Devon.

Mr. R. M. Balston, 41, Roland Gardens, S.W.7.

Lieut. E. Clive Fowler, R.F.C., Representing the War Office.

Mr. A. H. Varnier, Hon. Secretary, 46, Dover Street, W.1.

In August, 1914, the Chairman of the Aerial League (Major-General H. T. Arbuthnot, C.B.) wrote to Lieut.-General Sir David Henderson, K.C.B., D.S.O., to ask if the League could be of any assistance to him in the war; in reply Sir David Henderson said that he would feel greatly obliged if the League would look after the women and children of the men of the Royal Flying Corps; in accordance with that request this Fund was established to assist the widows and other dependants (who may be in necessitous circumstances) of N.C.Os. and Men of the R.F.C. who lose their lives on active service.

This Fund was registered under the War Charities Act, 1916.

A letter was inserted in various newspapers inviting contributions, which met with a liberal response; the Fund was also assisted by amounts collected by various ladies and gentlemen.

The circumstances of the families of 573 (five hundred and seventy-three) aviators who have lost their lives on active service have been investigated (with the co-operation of the representatives throughout the United Kingdom of the Soldiers' and Sailors' Families' Association and of the War Pensions Committees); of this number 134 (one hundred and thirty-four) families have been assisted financially.

Many letters have been received expressing gratitude for the help rendered at a most difficult time.

Official reports of casualties are supplied regularly by the Officer-in-Charge of Records of the R.F.C.

In consequence of the greatly extended operations of the war at the various fronts, a far larger number of casualties are now reported than at any previous time; the Committee fear that this must increase as the war goes on.

As the Fund is getting low, the Committee have decided to make a fresh appeal for contributions so that no really necessitous case shall remain without assistance, and, in view of the splendid work which our airmen are doing, they feel confident that they will not appeal in vain

HOW NOT TO ENCOURAGE RECRUITING IN THE R.A.F.

An engineer writes:—

On April 15th a young man 18½ years (Grade II.) working on carburettor fitting, applied at the R.A.F. Reception Depot (as per instructions in the Air Force Memorandum No. 6 in your issue of April 10th) to enlist as fitter in an R.A.F. mechanical unit.

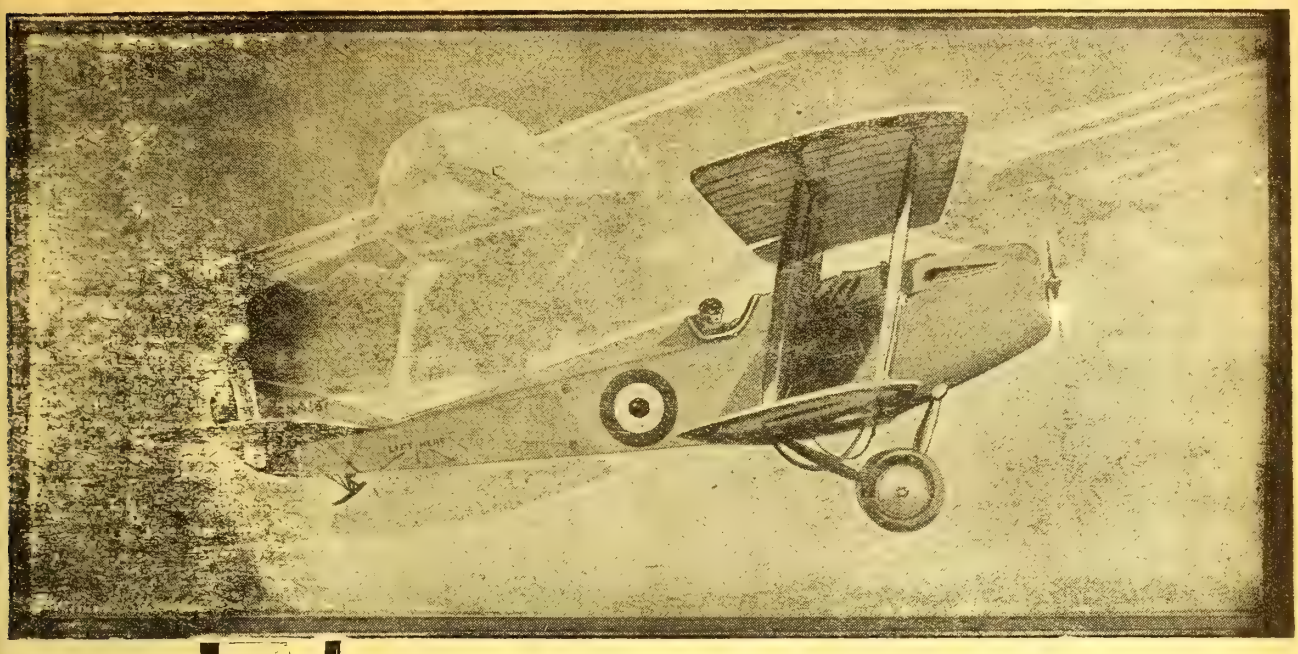
He was given a letter to take to the local recruiting office. From there he was sent to the Kingston Munition Area Recruiting Office. Thence he was sent back again to Whitehall, where he was told to await final instructions and railway warrant to attend some centre for trade test.

He therefore left his job at the end of the week, and after a few days had instructions to attend at Whitehall at 9.30 a.m.

He arrived at 9.30 and waited with a number of other men in similar circumstances in an upper room until 4.30 p.m., and was then told that no more men could be accepted in any branch of the R.A.F., and that it would be no use for him to apply again for at least another month.

He was told to apply for the re-issue of his trade protection certificate at the Kingston M.A.R.O., and is now back at work.

The firm are about 14 carburettors short on their output, and he is about £9 wages short, just because he was anxious to do his bit in khaki at 2s. per day instead of remaining at his job in "civvies" at over £6 per week.



To say the least about it, this is not at all encouraging to anyone married or single to join up before being actually *combed* out.

FIRST CATCH YOUR HARE.

At a lecture on "Economic Problems of Peace after War" at University College on May 7th, Professor W. R. Scott spoke of a League of Nations, and said that if such a league was to be successful it must, in so far as it was possible, remove or diminish any friction which arose from competitive schemes of nations in regard to trade routes. These were the life-nerves of a nation, and if endangered would jeopardise its safety.

One of the first problems to be decided after the declaration of peace would be the freedom of the air. Already there were indications that postal services might be transferred from the railways to the air, and no doubt aerial passenger traffic would soon be an established fact. There might be a reluctance on the part of many nations to permit unrestricted use of the air to foreign nations. A solution of this problem, he suggested, might be found in the establishment of a freedom of the air on the same basis as the freedom of the seas before the war, under the control of an International Aerial Board.

[Why not start in and win the war first and lay down international regulations based on the terms of peace.—Ed.]

DORA AND "THE AEROPLANE."

Readers of this paper, though perhaps not deeply interested in its private affairs, may like to have a brief account of the prosecution of Monday last. The following account, taken from the "Morning Post," is quite accurate as far as it goes, and is probably as full as any account which would be passed by the Press Bureau, seeing that the Censorship might not like to see all the facts of the case in print, especially those which demonstrate the curious way in which the Censorship on occasion conducts its own business.

As an example of breaking a butterfly upon a wheel, or of cracking an egg with a steam hammer, all the official excitement over a singularly uninformative sketch of a well-known and old-established workshop is quite in accord with our best Governmental tradition. One cannot, obviously, reproduce the alleged illustrations—which did not illustrate anything—for the entertainment of readers, but those who keep their back numbers of THE AEROPLANE can have no trouble in identifying them, seeing that the Censorship has kindly permitted the publication of the dates on which they appeared.

Mr. Travers Humphreys, for the defence, handled his case to perfection, and one desires to express one's personal gratitude to him, as well as admiration for his ability in grasping at the shortest notice technical points which might well have escaped the comprehension of more famous counsel after quite lengthy consultation.

The fine may appear large, but, stated briefly, the course of the case amounted to this. Sir Archibald Bodkin, the prosecuting counsel, said, in effect: "Here is a very excellent paper, edited by a knowledgeable person who has made a mistake." Mr. Travers Humphreys endorsed his remarks and emphasised the merits of the paper. And the Magistrate seems very naturally to have taken the view that if the paper were as good as two such distinguished gentlemen stated, it and its editor ought to be fined £50 apiece for a technical offence which, in a minor publication, would have been let off with a fiver or so.

Naturally, one pleaded guilty, for under the Defence of the Realm Act it is an offence against the regulations to exist at all. D.O.R.A. makes it an offence to collect or record information concerning munitions of war. Every engineering paper, every motor paper, and every aeronautical paper exists for and by the breaking that particular regulation. There is practically no act in the daily life of any one of us which could not be made an offence against D.O.R.A. if the Authorities desired so to interpret the regulations. For instance, leaving crumbs on one's plate at breakfast is wasting human food, and anyone so doing is liable to a fine of £50.

The maximum amount of harm which could have been done by publishing the advertisement on account of which this paper was fined was rather less than the amount done by leaving crumbs on a plate, especially when one considers that it had previously appeared in two other aeronautical papers. The fact that THE AEROPLANE was prosecuted and that they were not might perhaps be taken as a compliment, as indicating the importance attached by the Authorities to the respective circulations and relative influence of the various journals, but one imagines that the prosecution was really ordered on grounds, which may perhaps be explained after the war, when D.O.R.A. is dead.

In any case, one has no complaint to make against any of those concerned with the purely legal proceedings. One only hopes that the £115 15s. which the Government has thus acquired will help it to get on with the war.

The "Morning Post's" report reads as follows:—

Mr. Charles Grey Grey, editor of THE AEROPLANE, and THE AEROPLANE and General Publishing Company, Limited, Bream's Buildings, E.C., were summoned at Bow Street Police Court on May 13th for publishing in the issues of THE AEROPLANE of April 3rd and April 10th, without lawful authority, information with respect to the place of manufacture of aeroplanes, contrary to Regulations of the Defence of the Realm Regulations.

Mr. Travers Humphreys, for the defence, having intimated that his clients would plead guilty to the summonses relating to the issue of the paper of April 10th, Sir Archibald Bodkin, for the Director of Public Prosecutions, said he was content to accept that plea and to withdraw the summonses relating to the issue of April 3rd.

Mr. Grey was the editor of THE AEROPLANE, an important weekly paper, which dealt with all kinds of matters connected with aeroplanes and aeronautical engineering. On March 29th the Official Press Bureau sent a letter addressed to him, pointing out that although there was no objection on the part of the Authorities to the publication of the addresses of the offices of aircraft and other munition manufacturers it was not permissible, except in the case of very old-established and well-known works, to give the addresses of the actual factories or to make mention of the exact locality in which they were situated.

Accompanying the letter was a marked copy of THE AEROPLANE, indicating the kind of announcements considered undesirable by the Authorities. Nevertheless, in the issue of April 3rd there was a large advertisement which not only gave the exact address of certain works, but also an illustration of them, though the latter was imaginative to a considerable degree.

Mr. Grey, although he was not the advertisement manager, had accepted full responsibility, but explained that he had not seen the advertisement in question before it appeared, and that the sketch accompanying it was not a bit like the real works. He also mentioned that the letter from the Press Bureau, dated March 29th, did not, owing to the Easter vacation, reach him until April 2nd or 3rd and that the advertisement part of the paper had gone to press on March 27th.

Those were the facts relating to the summonses which he had now withdrawn as to the issue of April 3rd.

In the issue of April 10th there was an advertisement of a certain works with the address, including an illustration which gave a fair representation of the actual factory, and in regard to that, considering the circumstances, it could not be denied that there had been some carelessness.

Mr. Travers Humphreys said Mr. Grey had now given instructions that any new advertisements dealing with these works should be submitted to the Official Press Bureau before insertion. The advertisement complained of in the issue of April 10th related to certain works, but he was in a position if necessary to call expert evidence to show that no aviator would be able from the air, or even from the ground, to recognise the company's works from the illustration given in the paper. (Laughter.)

It was admitted that a technical offence had been committed. Mr. Grey was most anxious to fall in with the Authorities' views.

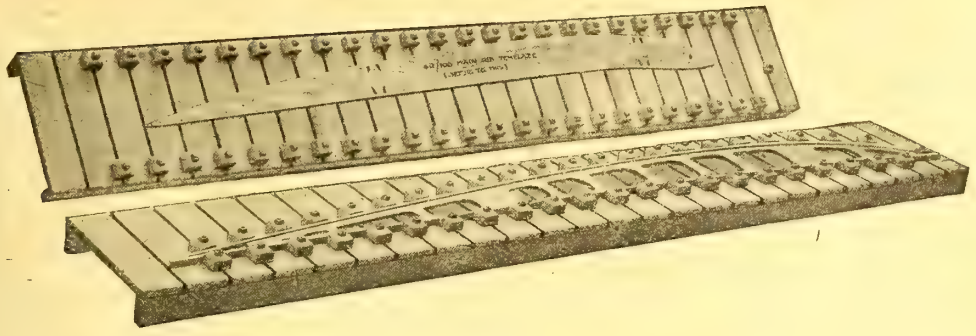
Mr. Graham Campbell (the Magistrate) said it was most important that a paper like that of the defendants should not contain any indication of the exact locality in which aeroplanes and their accessories were manufactured. Mr. Grey and the company would each be fined £50 and the company would also have to pay 15 guineas costs.

AIRCRAFT IN THE HOUSE.

On May 9th **Sir H. Norman** (R., Blackburn) asked the Prime Minister if, on April 9th, the late Secretary of State to the Air Ministry submitted a memorandum to him setting forth the changes he proposed to make in the reorganisation of the Royal Air Force in this country, with the reasons for those changes, and asking assent thereto; if this memorandum contained nothing of a secret nature except two figures; and, if so, to remove a prevalent misconception and in the interests of the Royal Air Force, would he communicate this memorandum, omitting any confidential figures, to the House, together with the reply from the War Cabinet conveying approval of the changes proposed and authority to carry them into effect.

Mr. Bonar Law: The document to which the right hon. gentleman refers is of a confidential character, and it would not be right to answer this question.

Sir H. Norman: Will the right hon. gentleman say whether he will seek some method of conveying to the House and the public, including the members of the Royal Air Force, at least the outlines of the reorganisation which is proposed, and of which the resignation of Gen. Trenchard was a part?—**Mr. Bonar Law**: The question as to general information ought to be addressed to the Air Board. As to the question on the paper, I can only repeat that the document is intended for the Cabinet, and must be regarded as for the Cabinet alone.



On May 13th the **Chancellor of the Exchequer,** asked by Mr. **Joynson-Hicks** whether arrangements had yet been made for the Secretary of State for the Air Forces to receive a seat either in this or the other House of Parliament, said:—I hope that an announcement will shortly be made on this subject.

THE BLOCKING OF OSTEND.

The following refers to the Ostend raid on May 9th:—

About 1.45 a.m. the enemy began firing. By the light of star shell it was observed that smoke screens were progressing excellently. A little before this, however, the sky, which had hitherto been almost unclouded, began to be partly obscured by low-drifting clouds, and at 1.50, just 10 minutes before the "Vindictive" was due to arrive at the harbour entrance, a sea fog set in. It stopped for a time the bombing attacks by the wing attached to the Dover Command, which formed part of the programme of the operation, and even searchlights could not be seen. The fog continued to drift towards the shore for nearly an hour before it cleared sufficiently for the air attacks to be resumed. It was impossible to see anything through the fog beyond 300 or 400 yards, and the "Vindictive's" task was thus rendered extremely difficult.

KINDLY MENTION "THE AEROPLANE" WHEN CORRESPONDING WITH ADVERTISERS.

NAVAL and MILITARY AERONAUTICS

FROM THE "LONDON GAZETTE."

ADMIRALTY, May 7th.

Vice-Admi. C. L. Napier, C.B., has been placed on the Retired List, at his own request, from April 26th. The following promotion has accordingly been made from that date :—To be Vice-Admi. : Rear-Admi. M. E. F. Kerr, C.B., M.V.O.

WAR OFFICE, May 7th.

REGULAR FORCES.—ESTABLISHMENTS—R.F.C.—MIL. WING.—Special Appt.—Graded as Flt. Comdr.—Capt. V. H. Huston, M.C., Canadian A.S.C., a Flying Officer, March 20th.

SCHOOLS OF INSTRN.—SCHOOL OF TECHNICAL TRAINING.—Asst. Instr.—Graded as an Equipt. Officer, 2nd Cl.—Temp. Sec. Lt. A. G. Harrison, Gen. List, a Flying Officer, and to be temp. Lt. while so empld., March 5th.

AIR MINISTRY, May 7th.

R.A.F.—The following temp. appts. are made at the Air Ministry :—Staff Officers, 2nd Cl.—Lt. (temp. Capt.) P. M. Beachcroft, and to be temp. Maj. while so empld., April 1st.

Staff Officers, 3rd Cl.—And to be temp. Capts. while so empld.—Sec. Lt. W. H. Dallow, Lt. T. Jones, April 1st. The initials of Capt. W. T. S. Williams, D.S.C., are as now described, and not as in the "Gazette" of April 2nd.

The following temp. appts. are made :—Director.—Col. (temp. Brig.-Gen.) F. R. Scarlett, D.S.O., April 1st.

Staff Officers, 1st Cl.—Maj. (temp. Lt.-Col.) C. H. K. Edmonds, D.S.O., Maj. (temp. Lt.-Col.) L. H. Strain, D.S.C., April 1st.

Staff Officers, 2nd Cl.—Lt. (Hon. Capt.) R. F. Maitland, and to be temp. Maj. while so empld. ; Capt. (temp. Maj.) W. C. Michie, Capt. (temp. Maj.) R. E. Nicoll, Lt. (Hon. Capt.) H. A. J. Wilson, and to be temp. Maj. while so empld., April 1st.

Staff Officers, 3rd Cl.—Lt. (temp. Capt.) L. E. Lander, Lt. (temp. Capt.) A. M. Waistell, D.S.C., April 1st.

To be temp. Cols. :—Lt.-Col. R. Gordon, D.S.O., while comdg. a group ; Lt.-Col. A. M. Longmore, while sen. R.A.F. Officer on the staff of the Commander-in-Chief, Mediterranean, April 1st.

FLYING BRANCH.—Capt. R. S. McClintock to be temp. Maj. while empld. as Maj. (Flying), April 20th.

Lts. to be temp. Capts. while empld. as Capts. (Flying) :—B. E. Berrington, (Hon. Capt.) H. G. ffiske, C. H. Tayler, April 3rd ; J. M. Batting, J. Cullen, W. L. Fenwick, T. S. Ivens, H. M. Moody, R. K. Morris, G. R. Travis, April 10th ; S. Baker, H. A. Pearson, M.C., G. L. Stedman, April 11th ; P. S. Burge, April 20th ; J. S. Stubbs, April 21st ; (Hon. Capt.) J. F. Chisholm, (Hon. Capt.) W. F. Cleghorn, April 22nd ; (Hon. Capt.) L. W. Jarvis, G. B. Solomon, April 23rd ; M. H. Findlay, D.S.C , K. R. Napier, L. A. Payne, April 25th ; R. Affleck, R. F. Browne, E. G. Leake, M.C., April 26th ; G. G. Crutchley, P. H. Cummings, A. L. Fleming, April 27th ; R. S. Durno, April 28th ; W. Beaver, May 2nd.

The follg. are granted temp. commns. as Sec. Lts. (A. and S.) :—C. H. Askwith, H. N. V. Barnes, T. E. W. Browne, H. L. Burley, O. H. Dampier-Bennett, D. W. Davies, L. C. Hillman, J. D. Horgan, F. J. Kieran, H. S. Matthews, D. R. McLachrie, W. S. Page, F. W. Paget, S. J. Saunders, G. F. Smith, G. R. B. Smyth, J. J. Sullivan, T. W. Whittaker, April 8th ; H. D. McLaren, J. A. Robb, April 10th ; B. G. Blampied, C. H. Bridge, J. M. Clarke, S. R. Clutterbuck, April 12th ; H. H. Coulson, H. R. A. V. Puncher, April 15th ; L. D. Brown, W. N. Shuttleworth, April 17th ; J. A. E. Steel, D. G. Wassell, April 27th.

The follg. are granted temp. commns. as Sec. Lts. (Obsr. Officers) :—A. G. Bishop, H. L. Carter, E. C. Coombes, E. C. Garland, C. J. Lewis, T. F. P. Llewellyn, F. I. L. Reis, L. A. Thrower, H. B. V. Vaughan-Evans, April 25th.

The follg. are granted temp. commns. as Sec. Lts. (Kite Balloon Officers) :—J. C. Buckley, L. R. Grice, W. J. P. Woodhouse, April 5th ; G. T. Burton, S. C. Capes, R. N. Richards, D. E. Williams, April 6th ; A. W. N. Evans, G. S. Thomas, April 10th ; A. D. E. S. Ades, R. Begg, F. Chambers, J. Cranfield, W. Eccles, J. A. Kenyon, G. N. P. Oates, D. Smith, I. A. R. Stedeford, J. W. Watson, April 12th ; H. W. Diss, April 16th ; S. H. Mabbott, M. H. Steff, April 18th ; R. H. Bailey, April 19th ; C. N. Crofton-Sleigh, H. Stephenson, W. E. Titchmarsh, April 20th ; W. O. Marshall, April 22nd ; R. G. K. Baker, C. H. Coggins, R. G. A. Colley, J. Garrety, A. C. E. Smith, April 23rd ; J. S. Corrigan, H. Grellier, A. D. M. Spear, April 24th ; K. G. Macmillan, April 25th.

Capt. and Hon. Maj. (Maj. Ind. Army) H. A. Hill resigns his commn. on ceasing to be empld., May 1st.

Lt. C. A. Malcolmson resigns his commn., May 8th.

Lt. (Lt., Can. Local Forces) J. F. Proctor relinquishes his commn. on account of ill-health contracted on active service, May 8th.

Lt. D. M. Scrimgeour resigns his commn. to resume his medical studies, and is granted hon. rank of Lt., May 8th.

ADMINISTRATIVE BRANCH.—F. H. G. Playfair (Lt.-Col., T.F. Res.) is granted a temp. commn. as Lt.-Col., April 6th.

Lts. to be temp. Capts. while empld. as Admin. Capts. :—W. J. King, April 30th ; P. R. Hutchinson, L. L. W. Smythe, May 9th.

Sec. Lts. to be temp Lts. while empld. as Admin. Lts. :—H. Norrington, April 1st ; A. J. Bright, A. Miller, April 28th ; (Hon. Lt.) R. L. Hubball, April 30th ; (Hon. Lt.) L. B. Clarkson, May 4th.

The follg. are granted temp. commns. as Sec. Lts. :—W. Borland, A. C. Cunnison, R. S. Dias, B. J. M. Dumas, E. L. Henry, G. H. Keeble, C. Lewis, C. Marley, J. Mellor, J. M. Russell, A. Scott, R. O. Vasey, L. Wardley, W. G. Willis, May 1st.

The follg. Cadets are granted temp. commns. as Sec. Lts. (Administrative) :—R. M. Freshwater, P. J. O'Brien, April 12th ; A. J. Ashton, G. W. Axtell, H. V. David, C. D. Davis, P. T. Grant, J. H. Hampton, V. S. G. Hawkins, W. Riley, A. S. Underhill, April 17th ; C. Donald, H. R. Whitehead, E. G. Bugg, F. F. Schorn, D. L. Gould, C. Brooke, D. McN. Livingstone, F. D. McClinton, W. Bartley, April 23rd ; A. H. Allardyce, W. Blackhurst, W. J. Bocking, S. R. Bolton, T. Fairley, W. Knight, E. Simpson, E. T. Stead, April 29th ; F. Butler, R. Davies, G. Harrison, J. N. Holman, W. E. Jones, A. Low, F. J. W. Miles, J. L. Muir, R. P. Rodick, H. L. Shearer, G. K. Smith, F. Taylor, D. A. Watson, May 6th.

Sec. Lt. W. H. Ayre resigns his commn., May 8th.

Sec. Lt. G. R. Davies relinquishes his commn. on account of ill-health contracted on active service, and is granted the hon. rank of Sec. Lt., May 8th.

Sec. Lt. S. J. Dodson resigns his commn., May 8th.

Sec. Lt. F. E. Schultz resigns his commn., May 8th.

TECHNICAL BRANCH.—Maj. J. Mead, M.C., to be temp. Lt.-Col. while empld. as Lt.-Col. (Tech.), April 27th.

To be temp. Majs. while empld. as Maj. (Tech.) :—Lt. (temp. Capt.) O. Stewart, M.C., April 10th ; Lt. (temp. Capt.) O. Lindquist, April 18th.

Lt. A. H. Chapman to be temp. Capt. while empld. as Capt. (Tech.), April 23rd.

Sec. Lt. L. S. Seccombe to be temp. Capt. (without the pay and allowances of that rank) while specially empld., April 30th.

Lts. to be temp. Capts. while empld. as Capts. (Tech.) :—H. E. O. Ellis, M.C., W. H. Hoffert, G. McKerrow, April 1st ; E. McR. Cockell, April 20th ; P. H. M. Currie, A. Hawley, May 1st ; R. Scott, May 3rd.

Sec. Lts. to be temp. Lts. while empld. as Lts. (Tech.) :—E. Hiscock, (Hon. Lt.) R. T. Lattey, April 1st ; E. F. Cameron, April 5th ; (Hon. Lt.) A. T. Thompson, April 14th ; (Hon. Lt.) W. E. Harper, M.C., H. N. Stradling, J. W. Tattersall, April 20th ; P. S. Riach, May 1st.

To be temp. Sec. Lts. while empld. as Sec. Lts. (Tech.) :—S. K. D'A de Ferrars (Capt., Lond. R., T.F.), and to be Hon. Capt. ; A. J. Dick (Lt., H.L.I., T.F.), and to be Hon. Lt. ; (Hon. Capt.) C. B. Dick-Cleland (from A. and S. Lt.) ; C. E. Ebbutt (temp. Sec. Lt., Gen. List) ; J. C. Graddon (from Admin. Lt.), and to be Hon. Lt. ; W. Hill (temp. Sec. Lt., Gen. List) ; D. F. Hollins (temp. Sec. Lt., Gen. List) ; G. P. Harding, M.C. (from a Flying Officer Obsr.) ; J. A. Hone (from a Flying Officer Obsr.) ; W. A. Lepper (Lt., E. Kent R.), and to be Hon. Lt. ; C. L. Loyd (Lt., E. Kent R.), and to be Hon.

War Office, May 10th.

REGULAR FORCES.—Establishments. — R.F.C. — Mil. Wing.—Flt. Comdr.—Temp. Lt. C. A. Taylor, Gen. List, from a Flying Officer, and to be temp. Capt. while so empld., Jan. 1st.

Schools of Instrn.—Central Flying School.—Instr.—Lt. (temp. Capt.) C. D. Fellowes, M.C., Yeo., T.F., a Flt. Comdr., vice Lt. (temp. Capt.) H. W. G. Jones, M.C., Welsh R., T.F., March 31st.

Air Ministry, May 10th.

R.A.F..—The following temp. appts. are made at the Air Ministry:—Staff Officer, 2nd Cl.—Lt. (temp. Capt.) W. P. Groves, and to be temp. Maj. while so empld., vice Capt. (temp. Maj.) Hon. M. Baring, April 27th.

Staff Officers, 3rd Cl.—Capt. (actg). Maj.) Hon. L. G. W. Guest, Lt. (temp. Capt.) S. T. Ravenscroft, April 27th.

The following temp. appts. are made:—Col. (temp. Brig.-Gen.) J. F. A. Higgins, D.S.O., to be Area Comdr. and to be temp. Maj.-Gen. while so empld., vice Lt.-Col. (temp. Brig.-Gen.) C. A. H. Longcroft, D.S.O., April 29th; Lt.-Col. (temp. Col.) G. M. Griffiths to retain his temp. rank while empld. as Dir. of Aeronautics, April 1st.

Div. Comdr.—Lt.-Col. (temp. Maj.-Gen.) W. G. H. Salmond, D.S.O., and to retain his temp. rank while so empld., April 1st.

Brig. Comdrs.—Lt. Col. (temp. Brig.-Gen. in Army), A. E. Borton, D.S.O., and to retain his temp. rank while so empld.; Lt.-Col. (temp. Brig.-Gen. in Army) P. L. W. Herbert, and to retain his temp. rank while so empld., April 1st.

Group Comdr.—Lt.-Col. (temp. Col.) U. J. D. Bourke, and to retain his temp. rank while so empld., April 1st.

Staff Officers, 1st Cl.—Maj. (temp. Lt.-Col.) C. Fraser, M.C., and to retain his temp. rank while so empld.; Maj. (temp. Lt.-Col.) (now temp. Col.) N. D. K. MacEwen, D.S.O., and to retain his temp. rank while so empld., April 1st.

Staff Officers, 2nd Cl.—And to be temp. Majs. while so empld. if not already holding that rank:—Capt. W. B. Adams, Capt. O. T. Boyd, M.C., Capt. (temp. Maj.) W. D. Long, Capt. (Hon. Maj.) N. M. Martin, Lt. (temp. Capt.) C. E. Wardle, Lt. (temp. Capt.) C. W. Wise, April 1st.

Staff Officers, 3rd Cl.—And to be temp. Capt. while so empld. if not already holding that rank:—Lt. (temp. Capt.) W. L. Birch, Lt. (temp. Capt.) V. Buxton Sec. Lt. (Hon. Lt.) K. A. C. Creswell, Capt. W. G. M. Crothers, Capt. R. B. C. M. T. de Poix, Capt. (temp. Maj.) G. Disney, C. C. Hansford (Lt., R.H. and R.F.A., T.F.), and is granted a temp. commn. as Lt., Lt. (temp. Capt.) J. McGlen, Capt. T. C. Macauley, M.C., Capt. C. H. Smith, Capt. C. C. Treat, April 1st.

Flying Branch.—Lt. (temp. Capt.) W. R. B. McBain to be temp. Maj. while empld. as Maj. (Flying), April 11th; Lt. (temp. Capt.) M. A. Hancock relinquishes the rank of temp. Capt. on appt. as temp. Lt. (Flying), April 26th. Lts. to be temp. Capts. while empld. as Capts. (Flying):—S. Stanger, April 16th; G. H. Bush, April 21st; C. J. S. Dearlove, L. H. Jones, O. J. F. Scholte, May 4th; Lt. (Lt. Can. Local Forces) J. H. V. Cameron relinquishes his commn. on ceasing to be empld. on acct. of ill-health contracted on active service, May 11th.

Administrative Branch.—C. F. Apthorp is granted a temp. commn. as Lt., April 1st.

Technical Branch.—Sec. Lt. M. Cohen to be temp. Lt. while empld. as Lt. Tech., April 1st.

Memoranda.—All Warrant Officers, 1st Class (and Warrant Officers, R.N., with seny. prior to May 18th, 1915) who on March 31st were serving with the R.N.A.S. are granted temp. commns. as Lts. in the Royal Air Force with effect from April 1st.

All Warrant Officers, 2nd Cl. (and Warrant Officers, R.N., with seny. of or subsequent to May 18th, 1915) who on March 31st were serving with the R.N.A.S. are granted temp. commns. as Sec. Lts. in the Royal Air Force with effect from April 1st.

Lt. C. F. Apthorp to be temp. Capt. while specially empld., April 1st.

War Office, May 11th.

REGULAR FORCES.—Staff.—The following appointment is made:—Special appointments.—(Graded for purposes of pay as a Staff Capt. whilst comdg. a Sqdn., R.F.C., Cdt. Wing.)—Capt. P. C. Suckling, attd. R. Fus., and to be transfd. to R F.C., Gen. List, March 1st.

Attd. to Hdqr. Units.—Brig. Maj.—The surname of Lt. (temp. Capt.) T. M. Eggar, Lond. R., T.F., and R.F.C., is as now described, and not as in the "Gazette" of April 17th.

Establishments.—R.F.C.—Mil. Wing.—Instr. in Gunnery (graded as an Equipt. Officer, 1st Cl.).—Sec. Lt. P. H. R. Whittet, M.C., Spec. Res., an Equipt. Officer, 3rd Cl., and to be temp. Capt. while so empld., March 24th.

Adjt.—Lt. (temp. Capt.) C. W. Pollock, Durh. L.I., Spec. Res., from a Garr. Bn., R. W. Fus., Dec. 18th, 1917.

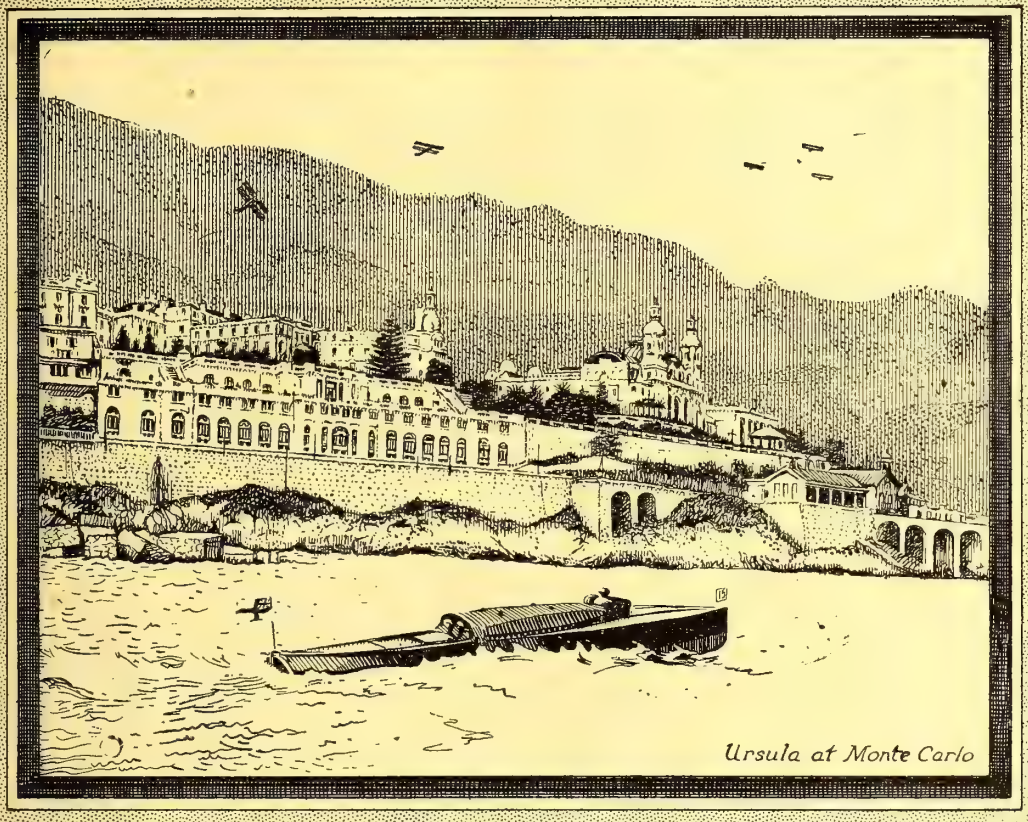
Equipt. Officer, 1st Cl.—Capt. O. I. Preston, M.C., Notts and Derby R., T.F., from the 2nd Cl., Nov. 27th, 1917, seny. Sept. 20th, 1917. (Substituted for notification in "Gazette" of Feb. 26th.)

Schools of Instrn.—School of Mil. Aeronautics.—Asst. Comdt. (graded as a Park Comdr.).—Maj. (Capt., Res. of Officers) W. J. Locker, N. Staff. R., Spec. Res., Jan. 1st.

Armament School.—Instr. in Gunnery (graded as an Equipt. Officer, 1st Cl.).—The appt. of Sec. Lt. (temp. Capt.) P. H. R. Whittet, M.C., Spec. Res., notified in "Gazette" of April 22nd, is cancelled.

CORRIGENDUM TO "MENTIONS IN DISPATCHES."

Supplement to the "London Gazette," dated Jan. 16th, 1918:—Under R.F.C.—Buchanan-Wollaston, Lt. H. J., Yeo.



War Office, May 13th.

The King has been pleased to approve of the following Awards to the following Officers and Warrant Officer, in recognition of their gallantry and devotion to duty in the field:—

A Bar to the Military Cross.

Sec. Lt. (Temp. Capt.) D. J. Bell, M.C., R.F.C., Spec. Res.

He has led his formation with great skill and has destroyed three enemy aeroplanes and driven down two others, one of which was seen to be completely out of control. The high state of efficiency which his flight has attained is due to his splendid

SB AC
THE SOCIETY OF BRITISH AIRCRAFT CONSTRUCTORS

example and fearless leadership. (M.C. gazetted June 18th, 1917.)

Capt. W. S. F. Johnson, M.C., Yeo. and R.F.C.

Whilst escorting machines of another squadron which were engaged in bombing work with one other officer he attacked ten enemy scouts. He destroyed two of them and forced another to land. On another occasion, when leading a patrol of six machines, he attacked ten enemy scouts. He destroyed one, and his patrol accounted for three others. A few minutes later, in conjunction with another officer, he destroyed an enemy two-seater machine of a new type. As a flight commander he showed great skill, and by his daring and good leadership set a splendid example to the officers of his flight. (M.C. gazetted July 3rd, 1915.)

Lt. S. S. Jones, M.C., S. Lan. R. and R.F.C.

As an observer he took part in two long-distance bombing raids and in raids on enemy aerodromes. He carried out several long-distance reconnaissances over the enemy's lines, taking a large number of photographs, from which valuable information was obtained. On one occasion, when his machine caught fire, at a height of 4,000 feet, and was wrecked on landing, he showed great promptitude and presence of mind in extricating the pilot and extinguishing his clothes, which were on fire. He always showed great skill and gallantry, and set an excellent example to the observers of his squadron. (M.C. gazetted Jan. 1st, 1917.)

Temp. Capt. F. G. Quigley, M.C., Gen. List and R.F.C.

In aerial combats, he destroyed five enemy machines and one balloon, and drove down four enemy machines out of control. He showed splendid courage and initiative. (M.C. gazetted Feb. 18th, 1918.)

The Military Cross.

Temp. Capt. C. H. Brewer, Bedford R. and R.F.C.

He set out to make a special railway reconnaissance, and though the weather conditions became very bad he continued his task with the greatest determination. His engine began to fail when he was a long distance over the enemy's lines. By skilful piloting he succeeded in crossing the enemy's trenches, but the machine crashed in "No Man's Land," and turned completely over. Heavy machine-gun fire was opened by the enemy, and though his jaw was broken he extricated the observer, who was pinned under the machine and was unconscious, and dragged him to a shell hole in the face of the enemy's fire. He showed splendid courage and resource.

Lt. T. W. Cave, R.F.A., attd. R.F.C.

While engaged in taking photographs of an enemy area he was slightly wounded by anti-aircraft fire. In spite of this and the enemy's fire 17 photographs were taken. Later, while he was again taking photographs over the enemy's lines, his machine was attacked by 12 enemy machines. He shot down one of them completely out of control, after which several photographs were taken. On three occasions, in the course of flights lasting four hours or more, he ranged a siege battery most effectively on hostile batteries, with the result that several gun-pits were destroyed and three explosions were caused. He showed splendid determination and initiative.

Temp. Sec. Lt. J. S. Chick, Gen. List and R.F.C.

While leading a patrol of four machines over the enemy's lines he attacked an enemy two seater machine, which his observer drove down completely out of control. Shortly afterwards, the patrol engaged 19 enemy machines; he dived onto the uppermost machine, and drove it down in a series of spins and side-slips completely out of control. He then attacked two others and brought them down in the same manner, while his observer drove down another out of control. On another occasion his formation, consisting of five machines, attacked 25 enemy aeroplanes. He destroyed one of the enemy and drove down another out of control. He set a magnificent example of courage and skill.

OFFICIAL COMMUNIQUES.

NAVAL.

Admiralty Communiqués.

May 13th.—On May 10th one of our seaplanes in the North Sea sighted a Zeppelin on patrol. An indecisive action lasting half an hour took place, and ended in the retreat of the Zeppelin to its base.

During the period May 6th-12th inclusive, Air Force contingents working from Dunkirk carried out successful bombing operations against Ostend docks and seaplane base, Zeebrugge Mole and lock gates, and enemy shipping in the vicinity.

Several direct hits were obtained on sheds on Zeebrugge Mole, and a large shed at Ostend seaplane base was completely burnt out.

In the course of offensive patrols six enemy machines were destroyed and a further two driven down out of control.

One of our machines is missing.

MILITARY.

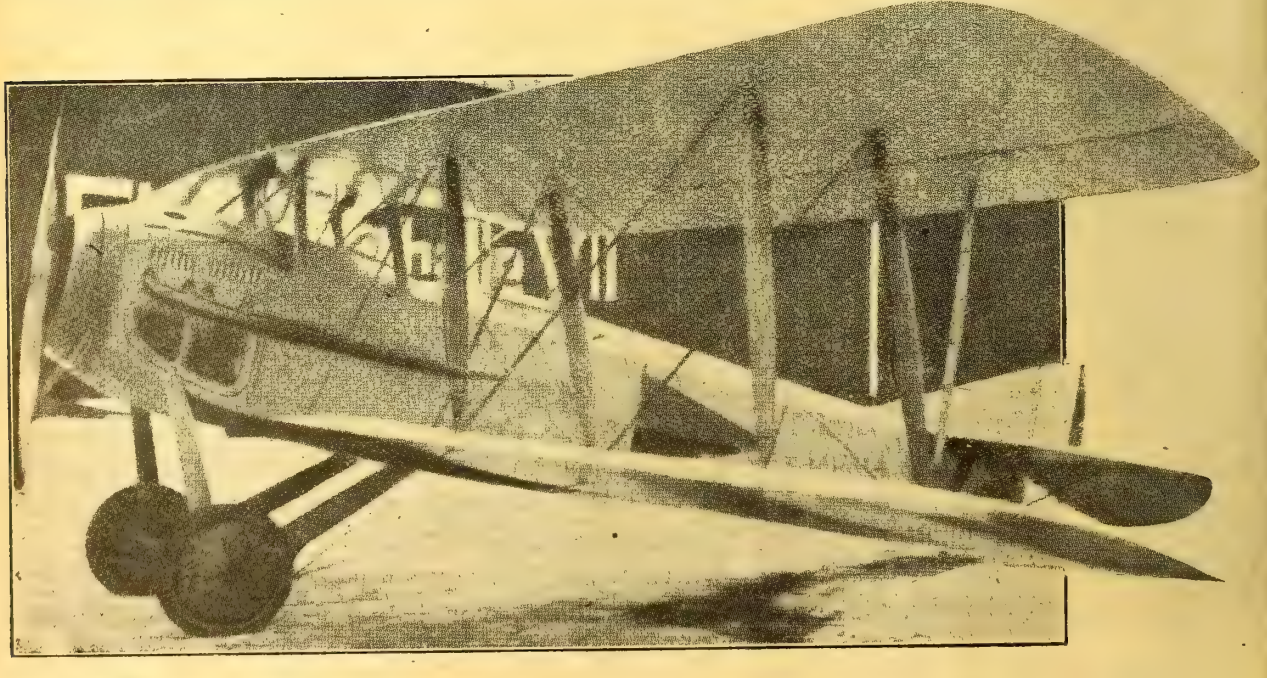
G.H.Q. Communiqués.

May 7th, 7.52 p.m.—Rain prevented flying on the 6th inst. until 5 p.m. After this hour some fighting took place, in which six hostile machines were brought down.

One of our aeroplanes is missing.

After dark 100 bombs were dropped by us on targets in the neighbourhood of Bapaume.

One of our machines has not returned.



May 8th, 8.20 p.m.—On the 7th inst. flying was again impossible until after 5 p.m. owing to rain.

The weather then cleared suddenly, and machines were sent out on reconnaissances and bombing flights. Four hundred bombs were dropped by our aeroplanes on different targets all along the front.

Twelve hostile machines were brought down in air fighting, eight of which were accounted for in a big encounter in the neighbourhood of Douai. One German observation balloon was brought down in flames.

None of our machines is missing.

May 9th, 8.40 p.m.—On the 8th instant the weather was fine, but little work in the air was possible south of Arras owing to the heavy mist which hung over the lines.

Reproduced from "Flugsport."

A Two-seater Spad biplane captured by the Germans, said by the enemy to be a British machine.

ROLLS-ROYCE

Supremacy in the Air

Rolls-Royce Aero Engines
like
Rolls-Royce Cars
are the
Best in the World

"It is no flattery to state that whatever our superiority in the air may be, it is largely owing to the good fortune which led the authorities to select Rolls-Royce Engines for the most important aircraft." *"The Liverpool Courier," March 14, 1918.*

ROLLS-ROYCE, LTD., *Contractors to H.M. Government,*

Telegrams: 'Rolhead Reg, London.' *Telephones: 1654 Gerrard (3 lines)*
AND AT DERBY, PARIS, NEW YORK, MADRID, BOMBAY, ETC.

ROLLS-ROYCE

On the northern portion of the front our aeroplanes were actively employed all day reconnoitring, taking photographs, co-operating with the artillery, and bombing.

Ten tons of bombs were dropped by us on Le Câteau, Cambrai, Bapaume, and on the docks and mole at Zeebrugge.

In the northern area strenuous fighting took place throughout the day. Twenty-two hostile machines were brought down and seven others were driven down out of control. Another German machine was shot down by machine-gun fire from the ground.

Seven of our aeroplanes are missing.

Owing to the mist, only a few of our aeroplanes were able to go out after dark. A ton of bombs were dropped, however, on the railway stations at Douai and Marcoing.

All our machines returned.

May 10th, 9 p.m.—On the 9th inst. cloudless weather enabled our aeroplanes to carry out a full day's work. Machines were in the air all day, observing for the artillery, reconnoitring, and taking photographs of the enemy's back areas.

Our bombing machines displayed great activity on the whole front. A total of over 24 tons of bombs was dropped by us on different targets, including important railway stations at Tournai, Douai, Marcoing, Chaulnes, and Cambrai, and the billets of Carvin, Péronne, and Chipilly, and the docks at Zeebrugge.

Fighting in the air took place more or less continuously, but became particularly fierce towards dusk. Twenty-seven German machines were brought down and 12 others were driven down out of control. A hostile observation balloon also was destroyed.

Six of our machines are missing.

During the night four and a half tons of bombs were dropped by us on the docks and the entrance to the canal at Ostend, and a further three and a half tons on Péronne, Chaulnes, and Bapaume.

All our machines returned.

May 11th, 8.45 p.m.—On the 10th instant low clouds and mist prevented flying till 5 p.m., and after this hour the weather cleared on a small part of the front, and great aerial activity took place in this sector until dark.

Oven 14 tons of bombs were dropped by us on Peronne, Bapaume, Thielt, Douai, Zeebrugge, and the docks at Bruges. Hostile scouts were very active, and made repeated attacks on our bombing machines.

Eight German aeroplanes were brought down in air fighting, and six others were driven down out of control.

Nine of our machines are missing.

One of our aeroplanes reported missing on the 7th instant has since returned.

May 12th, 7.55 p.m.—On the 11th instant, except for a short period of clear weather in one sector, in which bombing and reconnaissance work were carried out by our aeroplanes, the whole front was enveloped in mist throughout the day.

One hostile machine was brought down in air fighting.

Two of our machines are missing.

It has been ascertained that three other German machines were brought down on the 10th instant, in addition to the eight previously reported.

May 13th, 9.10 p.m.—On the 12th inst. flying was again impossible until evening. Visibility was then excellent, and our aeroplanes were able to carry out a great deal of successful work in conjunction with the artillery.

Over eight tons of bombs were dropped on targets in the neighbourhood of Menin, Armentières, and La Bassée, and on the docks at Bruges.

In air fighting six hostile machines were brought down.

One of our machines is missing.

During the night 14 tons of bombs were dropped on the railway stations at Don, Marcoing, and Chaulnes; on Bapaume, Péronne, and on the docks at Bruges. One of our machines has not returned.

War Office Communiqués.

May 8th.—The G.O.C. Italy reports:—

The Royal Air Force has, since my last report, destroyed 17 hostile aeroplanes and brought down one out of control. Several of these have fallen in our lines. During this period we have lost no machines. Targets of military importance in rear of the hostile lines have been bombed, with good results.

May 8th.—The G.O.C. Mesopotamia reports:—

A portion of our troops entered Kirkuk on Tuesday without opposition.

The Turks, who retired towards the Lesser Zab River, abandoned three damaged aeroplanes.

May 9th.—The G.O.C. Macedonia reports:—

Early on the morning of May 1st five of our machines bombed the aerodrome at Rudova (in the Vardar Valley, north-west of Lake Doiran). One large shed was destroyed, and bombs were observed to fall among 12 aeroplanes on the ground. The same aerodrome was again bombed on the evening of May 7th, when a direct hit was obtained on a workshop and bombs were seen to fall close to 16 machines which were counted on the ground.

On May 8th Drama aerodrome was bombed early in the morning and again at 4.30 p.m. Considerable damage was caused, and all the bombs dropped were seen to burst among the hangars and the machines lying on the ground.

All our aeroplanes returned safely.

On May 4th a hostile machine was brought down behind our lines near Dimitric (at the head of Lake Tahinos), the German pilot and observer being killed.

May 11th.—The G.O.C. Mesopotamia reports:—

On May 8th our aeroplanes attacked Turkish camps at Fathah (on the Tigris, 32 miles north of Tekrit). A large number of bombs were dropped, and hostile troops and transport were fired on with machine-guns.

A Turkish aeroplane was shot down and destroyed near the junction of the Lesser Zab with the Tigris (55 miles west of Kirkuk).

May 13th.—The G.O.C. Mesopotamia reports:—

On May 11th the enemy was driven across the Lesser Zab at Alton Keupri.

On the following day our aeroplanes bombed hostile camps between Alton Keupri and Erbil (Arbela) and also on the Tigris.

SUPPLEMENT TO "THE AEROPLANE"
INCORPORATING AIRCRAFT ENGINEERING, AERODYNAMICS, AND MATTERS PERTAINING TO THE AERONAUTICAL ENGINEER AND THE AIRCRAFT TRADER

The British Aircraft Industry.

(SECOND SERIES.)

BY R. P. HEARNE.

X.—THE DAVIDSON AVIATION CO.

We have no lack of geniuses and cranks in the Aircraft Industry, but we could do with some more really good business men. By business men I do not mean "hot air merchants," speculators, and other mushroomy individuals; I mean level-headed and responsible men, who have skill and experience in organising a business, and in handling workers and clients satisfactorily—men, in short, who can build up a sound industry and make it pay.

I have omitted one quality from the list of essential requirements in a successful business man, and it is so important, in the Aircraft Industry particularly, that special attention must be drawn to it. We have it summarised in one magic word—Output. On this vitally essential requirement your genius and your crank usually fail; whilst on the other hand the "hot air merchant" is distinguished more by his output of words than of work. The mushroom man or the gambler who who takes up a new industry fails also in this matter of output, for he may rush out a great deal of stuff, but it is of such shoddy quality that it is merely waste of material.

The sound business man must give quality as well as quantity output, and with aircraft work in time of war I need not dwell on its immense importance.

Mr. Percy L. Mott. Mr. W. Ewart Chester.

I am glad to say that I have met many excellent men of business in our Aircraft Industry, and amongst them I can include Mr. W. Ewart Chester, the founder and managing director of the Davidson Aviation Company. Although this company has only come into existence since the war, and although its rise has been phenomenally rapid, I venture to say that it will continue to be as useful and active when peace comes as it is to-day.

Previous Experience.

We cannot consider Mr. Chester as a newcomer to the industry in the same sense as if he had been a cheese merchant or a farmer, for example, before he soared into the aerial firmament. It was quite a natural evolution. His whole business career previously had been in connection with woodwork on a large scale, and this training had been effected with one of the leading firms in this country. Both before and during the early stages of the war Mr. Chester had gained valuable experience in factory organisation and management.

His task, therefore, was to adapt his knowledge in woodwork and factory organisation to aeroplane construction, and it was a foregone conclusion that he would succeed in the effort.

Starting with twenty-four men two years ago Mr. Chester has built up an organisation which now controls six important factories employing a very large number of men and women. And as the tale unfolds it will be seen how enterprising the Davidson Company is.

Originally the firm was engaged on minor contracts; but from the first it must have attracted attention by the manner in which it carried out every job entrusted to it. The expert business man knows to the full the importance of being up to time and sample with his deliveries of goods. Mr. Chester was bold enough to accept contracts which were difficult of accomplishment within the time given, but his knowledge of production saved him from taking on any impossible contract and failing to carry it out.

I believe that some people in the trade call the Davidson Company "the S.O.S. firm," in in that you apply to them in time of great stress to help you out with a difficult contract, and if they agree to do so you may rely on them. The powers that be have discovered the same useful quality, and thus there has been a very great expansion in the activities of the Davidson Company.

It must be rare indeed for the one firm to be engaged in cutting down timber, drying it, using it for aeroplane work, making metal parts for aeroplanes, and also making other vehicles. That is a bald statement of the Davidson work to-day. Let me develop the theme.

The firm buys its own timber, in some cases purchasing standing trees, cutting them, and lorrying them to their own sawmills. At these mills is installed a Sturtevant drying plant, which enables the wood to be rapidly prepared for use. One does not imply, of course, that the whole supply can be obtained in this manner; but none the less, the new drying plant is of immense assistance in the present emergency.

Organisation.

In the various Davidson factories one may see a great variety of aircraft work under progress, and though Mr. Chester has been handicapped in that he had to take over existing buildings and adapt them to new requirements he has been wonderfully successful.

I took careful note during a surprise visit to the various factories, and I observed how well the work was fed up to each department. There is no worse sympton of bad management than to see this and that section of a factory held up or going slow because they are being starved in supplies by the other

departments. The workers get slack and dissatisfied; you see messengers flitting to and fro; there is confusion and bandying of complaints between the various "shops," and output is being delayed.

One of the Davidson sub-factories is an old cinema hall, narrow, long, and about as ill-fitted for aircraft work as any building could be. Yet so well is it laid out that I noted a smoother and brisker movement of work than in many an up-to-date factory with every facility, but lacking in the vital essential of good management.

In the larger works, where Mr. Chester and his staff have had better opportunity, we see even more clearly the benefit of good organisation. The productivity indeed seemed extraordinarily good.

I noticed this especially in the engineering works which have been built by the company for the manufacture of metal fittings and parts, etc. This is a miniature factory as modern factories go, but I think that in output per square foot of space it must be near the record. The machines and workers are packed in like the mechanism of a watch, and yet, as in the manner of the timepiece, there is no congestion, and all the work goes on smoothly. The variety of the jobs in hand was noteworthy also, and I was specially pleased to note that many discharged soldiers were amongst the diligent workers.

The Choice of Assistants.

Mr. Chester has the good business man's skill for delegating the work to responsible and well-chosen men. He does not run round trying to superintend every little task himself. (These two sentences are worth thousands a year to various clever men who conduct their businesses on the wrong lines. And to avoid hurting their feelings whilst giving this precious advice I confess that in my own tiny affairs I have not the business ability to follow my own advice, though I know it is right. One is born either a good or a bad man of business. There is no altering that fact; and the only improvement possible is to recognise that for all of us there are certain things which the other fellow can do better.)

The value of being a good business man and of being able to delegate authority is that the head of the firm can find time to work out new developments. I have often spoken to the mismanagers of tin-pot shows, and they buzzed about like bees in the frantic endeavour to do everything's work. A firm of this kind could never expand successfully. Any accidental expansion would produce a burst.

I do not wish to make out Mr. Chester to be a paragon in any way. But, undoubtedly, he is a very good business man. As such he is rare and valuable. Applying to him all the tests of business ability that I know of, I find his ability well proved. The most trying test is that of being able healthfully to expand business. Already I have shown how the Davidson Company has grown in two years to possess its own saw-mills, aircraft manufacturing plant, and engineering works.

Manifold Activities.

Not content with that, Mr. Chester has taken over other kinds of manufacture for the Government at short notice. He quite candidly confesses that he knew nothing about this work. But when asked to make it he found the men to guide him; he picked out at once a suitable factory building from which the occupants were bought out at 24 hours' notice, and ere the new works were ready he had his staff preparing the raw materials in another building. In this way he coped with the problem of carrying out his first contract up to time.

I could give many other instances of the enterprise which the Davidson Company manifests, but at the moment it is not expedient. The list already furnished is more than sufficient to show how active this firm is. Mr. Chester is laying his plans well ahead, and I wish I could set out how ingeniously he is preparing for the future. He is one of the men who do not mean to shut up their factories and dismiss their hands when peace comes. He seeks to adapt his works and his workers to the new conditions that will arise. If aeroplanes are not required in immense quantities, then his wood-workers and engineers will be switched on to other suitable work for which there is a demand, or a possible demand.

Steel Tubes, Tube Manipulation, and Tubular Structures for Aircraft.

Continued.

A most interesting paper was read before the Aeronautical Society on Thursday, May 2nd, by Messrs. W. W. Hackett and A. G. Hackett, of Accles & Pollock, Ltd., the famous tube manufacturers, of Oldbury, Birmingham, the first half of which was reprinted last week.

Mr. A. G. Hackett, who is the Accles & Pollock specialist on tube manipulation, jointing, etc., continued the lecture from this point of view. He said:—

Tube Manipulation.

The possibilities of tube manipulation such as butting, tapering, drawing with taper gauge, expanding, flanging, bending, lapping, etc., are becoming better understood. Some designers, however, whilst recognising the usefulness of these different operations, still ask for what is not commercially possible, because they fail to make allowances for the alteration in the thickness of the tube which will occur as the result of such operations. For instance, if the diameter of a tube is increased the thickness of the wall is reduced, and if decreased in diameter the thickness is increased. Again, if a tube is flanged, the flange will not be of uniform gauge, but will decrease in thickness as it increases in diameter.

A section of a bent tube cut from an F.2.B. undercarriage "V" strut shows that the gauge of the tube has, by bending, been reduced on the outside of the curve from .061 in. to .048 in., and increased on the inside from .061 in. to .072 in. The thinning of the tube would cause it to break if it had not been properly annealed; and further, if proper mandrils had not been used, or the tubes had not been filled with suitable material, a series of "puckers" or "corrugations" would have been formed on the inside of the bend. Where proper thickening up of the wall along the inner curve takes place in bending the bent portion of the tube is the strongest, but if "puckering" takes place this point becomes the weakest.

Bending is sometimes carried out with steel tubes in the hot state, but where strength is required this is bad practice, as by heating the tube is rendered much weaker than it would be if bent in the cold state. Of two "V" struts, one bent in the hot and the other in the cold state, and the same weight being applied in each case, it will be seen that the tube bent while hot has been distorted much more than the other.

Tubular Joints in Aircraft Construction.

Generally speaking, structural work for aircraft purposes is to-day carried out by means of sockets placed in suitable positions and arranged to receive the ends of the various tubular cross-members and bracings. These tubes and sockets are connected in three or four ways, namely:—

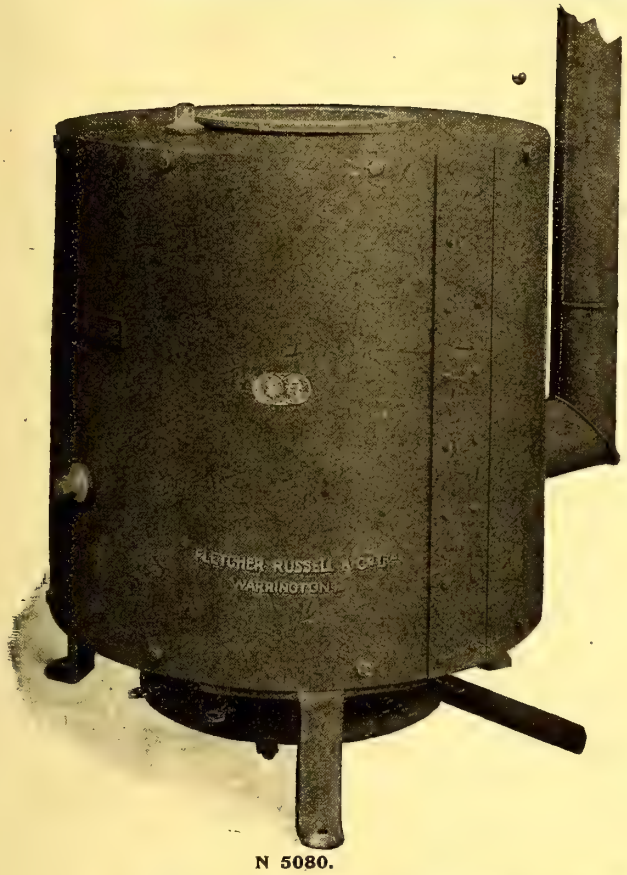
By brazing.
By silver-soldering.
By soft-soldering.

Sometimes the sockets or lugs are dispensed with, in which case the cross-tubes are mitred and welded direct to the main tube.

The latter method is not advisable except in very rare instances, as any operation involving great heat is dangerous, owing to the weakening which results from the annealing or perhaps burning of the steel.

Another method is sometimes employed in which the cross-bracings are connected by means of a hinge joint to a sleeve on the main tube (i.e., a trapped end tube with a nut and bolt).

Of types of lugs used in aircraft structural work, perhaps the most common is the lug made up by one long sleeve, with two branches mitred and welded on. Into and through these the main and branch members are fitted, and are held there, preferably, by soft-soldering and pegging. Another form of lug is made in two halves, pressed to shape, trimmed to depth, and welded along the joints. A wiring plate may be included. A three-way lug, with double wiring plate is common.



It will be useful to give the results of some comparative tests made on these various methods of jointing tubular structures, but before doing so we would remark that, in a paper like this, only the fringe of the subject can be touched. Everyone who is in any way connected with the practical side of aeronautical construction will readily call to mind many other types of joints, each designed for a special purpose or to overcome a constructional difficulty.

Soldering, Brazing, or Welding.

Speaking from an experience of at least eight years in which we have been in touch with aircraft construction and design, we have met with a surprising amount of fluctuation in the

WARRINGTON.

respective popularity of soldering, brazing, welding, etc., for steel tube work, all these methods having been ruled out in turn, only again to find favour in certain quarters. This is partly due to the fact that machines designed by private manufacturers have been brought into great popularity, and the methods and designs of such makers adopted.

We have seen welding carried almost to excess and then almost abolished. Brazing has been boomed and then decried, and soft-soldering substituted for it—with a different type of lug or joint to allow for the reduced strength of the jointing material.

This, again, has been deemed unsafe, and silver-soldering, or hard-soldering, has risen into prominence, and to-day one hardly knows which type really is the popular one, as on the machines now being built for war purposes all styles and types of jointing may be found.

One has to realise that in all these methods the human element comes much into play. For instance, it is possible so to weld a joint that it appears to be sound, yet it may be a "fake"—metal being merely laid on and not fused with the surrounding parts. Or, again, the welded joint may be burnt, thus causing a dangerous weakening.

Similarly with brazing, it is possible with care to make a fine type of joint, but the probability is that in a certain percentage of cases overheating will take place and failure result.

We will now deal with the results of a few experiments recently carried out on certain of these types of joints.

Soft-Soldered Joints.

Let us take soft-soldering first. In all cases the tests were made with a soft-solder composed of 60 per cent. tin and 40 per cent. lead—using "Fluxite" or some similar article as a flux.

Tubes of various gauges were tried, but up to a certain point the strength of the soldered joint was such that the tube failed in tension without the joint giving way.

It was found that the strength of a soldered joint is much greater than it is generally supposed to be, and from experiments carried out, the clearance or thickness of the soldering material does not, between the limits of .001 in. and .008 in., make much difference, but for any components that can be guaranteed to size we would recommend as "thin" a joint as possible.

[A striking example of a strong joint of the soft-solder type was given, an elevator "bloater" and its tube being selected for the purpose. The test on this joint was carried out in order to prove to the satisfaction of inspectors that the stipulated minimum clearance of .005 in. on the diameter was not necessary. In this particular case the elevator lever (or "bloater") was held stationary while a torsional load was exerted on the tube. The result showed that the tube twisted and buckled without affecting the soldered joint.]

One of the chief arguments against the use of soft-solder is the reduction in strength resulting from vibration, it being claimed that this form of joint will not sustain a vibratory load nor a series of shocks. This may sometimes be right, but even under these conditions a very satisfactory result can be obtained if the sweating is done thoroughly and well, and added strength is given if the joint be "pegged."—[Much testing at from 1,200 to 1,800 impulses per minute is required to prove this point.—C. G. G.]

Tests on Soldered Joints.

The writers recently carried out some experiments on what may be termed a "Tup-testing machine" for soldered and brazed joints. It will be noted that the rising and falling tup or hammer is actuated by a bell crank lever, worked by a "sudden-drop" cam rotating in the direction of the arrow. The dead load on the tup shaft can be varied by means of the sliding weight.

[This consisted in fitting a tube into a lug or socket and then tapping—or "tupping"—it on the end to try and drive it further into the socket.]

A standard drop of 4 ins. was arranged.

It was at first thought that the effect of the "tup" action would be to quickly rupture the joint, but to our great surprise the joint held to such an extent that we found it necessary during the test to increase the load from 10lbs. to 24lbs. The following are the details of the test:—

Size of tube: 1in. outside diameter by 18-gauge.
Depth in socket (or lap): ½ in.
Thickness of solder: .005in.
Number of blows: 113,500 with 10lb. weight up.
Further number of blows: 64,000 with 24 lb. weight up.

At this stage the joint showed signs of giving way, so it was decided to apply a tensile test to see if the repeated blows had in any way deteriorated the solder. To our surprise the tube did not pull out until a load of 5.2 tons had been registered, giving the excellent result of 3.31 tons per super inch on the solder lining.

It may be urged that these results are not a fair basis on which to reckon, as they do not represent the ordinary work of the average operative. In answer, we would say that these results were all obtained from test pieces sweated by different operatives, in some cases being the work of girls with about two months' experience.

It may be possible to work out a formula to arrive at a basis for designers of soft-soldered joints, but even here, as in all calculations relating to structures, other factors have to be taken into account. For instance, a joint may be quite strong enough if in a 1in. by 20-gauge tubular joint the solder reaches to a distance of ½in., and working on this basis it follows that the same distance for a 2in. diameter tube of the same gauge would be correct, but no one would be satisfied with this, and would naturally double the length of socket to meet the increased diameter.

Generally speaking, it may be taken for granted that with ordinary care, and with a good quality of soft-solder, a joint can always be made to withstand a shearing stress of 2½ tons per super inch on the solder itself—provided (and this is the crux of the whole matter) that the articles are well tinned and cleaned prior to the operation of sweating.

As regards the apparatus for sweating, different people will have a different choice, but having tried soldering irons, blow-lamp, coal-gas jets, and hydrogen flame, we have found that the three latter are about equal, and each is better than a soldering iron alone, but this latter is necessary for finishing in awkward corners.

Eventually the use of a simple electrical device will probably become popular for repetition work.

Brazing.

As previously mentioned, this means of connection still has many adherents. There is, however, a great disadvantage attached to it, viz., the risk of burning the tube owing to the intense heat necessary. That this burning and consequent weakening does take place can be easily shown by the results of tests carried out by us on a cantilever testing machine.

The tests were upon tubes which had been fixed into sockets and brazed or soft-soldered, and showed the decided disadvantage of the brazed joint from the standpoint of strength.

A further series of tests was carried out on the alternating stress machine, and these results were similar.

Another point may be mentioned with regard to these tests. In one test the result was poor in comparison with the others. This joint was "faked," the tube and socket being left dirty and improperly tinned, in consequence of which the soldered joint had no "life." Even under these conditions the joint held for 75,130 revolutions, as against about 4,000 for the brazed joint. At this point the socket failed, due to the insecure fixing of the tube.

Another peculiar feature of this test was the heat generated in the brazed tubes due to the constant working of the molecules. The tubes commenced to warm up almost immediately, and, before they broke, the temperature of the tubes near to the points of fracture (i.e., near the socket) was about 120 deg. C., sufficient to cause the charring of any adjacent wood, whereas the soldered tubes remained quite cool until the last few minutes prior to fracture. [Presumably because the solder was too soft and spongey to transmit the effect of the blows, and so acted as a cushion.—C. G. G.]

We are quite aware that in many places on aircraft structures brazing is permissible and good, but where any weakening of a member is likely to cause disaster, brazing should be carefully avoided.

Silver Soldering or Hard Soldering.

The foregoing remarks as to brazing hardly apply to silver-soldering, as by this method a strong joint can be obtained without undue heat. We are not in a position at the moment to give any comparative figures of tests, but we should say that from the standpoint of tensile strength, silver-soldering is higher than soft-soldering, and very near to that of brazing. The heat necessary to perform the operation is lower than for brazing, and it is not likely to weaken any members if reasonable care is used. It is, however, a longer process, and the material used is very costly.

Welding.

We may well ask ourselves, in these days, where we should be without some form of autogenous welding. The thousand and one articles that are built up of sheet metal welded together speak for themselves, and make us wonder how we ever got on without this useful engineering process.

Still, welding has it limits of usefulness, and if these are exceeded danger may be near.

In the early days of aeronautical engineering welding was often used in places and on parts where to-day it is "taboo," and such a method as welding tube to tube has dropped to a great extent out of favour, having been superseded by the more costly but better and safer engineering practice of jointing by means of machined or built-up tubular sockets, previously referred to.

Welding—by whatever means it is done—is always open to a certain amount of doubt, and though there are innumerable cases where this doubt as to the strength of a joint is well covered, yet, owing to the hidden nature of the defects of welding and

GALLAY
ACHIEVEMENTS

Their excellence and the reasons thereof

1. Our **system of construction** is proved by Government test to be 15 per cent. more efficient than any other type with equivalent water space and air orifice.

2. It is **lighter** per B. Th. U. dissipated than any other type.

3. It is **stronger** and yields less to impact than any other systems and owing to homogeneity of structure it will stand greater stresses vertically, horizontally or frontal.

4. The strength is inherent and not dependent on **tanks** or **casings**. The latter can be entirely dispensed with.

5. Every particle of metal used in construction acts as a **cooling agent.**

6. Each **waterway** is **regular** throughout its length.

7. **Air resistance** is reduced to the **minimum,** no blobs of solder obstruct the air passages, a regular wind cutting edge is always presented.

8. We have **reduced** the **radiator factor** to limits hitherto considered impossible.

9. Our system is suitable for **pump** or **Thermo** syphon.

10. We are Aero engineers and our staff comprise **specialists** in each department.

L.T.D.

the possibility of burning and oxydisation, present-day designers avoid it in any important member of an aircraft structure.

A most important rule introduced during recent years has been the suitable annealing of welded joints, and this rule should be adhered to whenever possible. Many will have noticed the brittleness of a welded joint before annealing or normalising, and the malleability of the same afterwards.

On this point the writers have discovered within the last few months a rather strange fact. We had occasion recently to make up some small lugs in which it was found that a certain amount of shortening took place as the result of the welding on of the arm. We have since noticed this shortening in other tubes, some of quite considerable length, where various fittings have been welded on at intervals, and so far we have not arrived at a satisfactory explanation.

Notes on Welding.

The easiest method of welding is the butt joint, i.e., when two tubes are placed end to end and joined together to form one length or mitred together to form one piece. In such a case the surfaces to be welded are readily accessible, and the flame has freedom for doing its work.

A more difficult type of welding is that necessary when one tube has to be mitred to the outside of another tube, as when forming a "T" lug. In this case the easily-melted end of the one tube has to be united to the outside surface of the other, and anyone who has had experience with welding will know how much more difficult it is to attack the hard outside skin of a tube or sheet than it is the edge.

In order to prove this point we carried out tests on tubes measuring 1 in. outside diameter by 20-gauge and 1 in. outside diameter by 16-gauge—some being butt-welded and others having an interposed tube of about the same diameter, to which the end of each tube was welded.

Comparative tests were made on a cantilever tube joined to the main member by welding, and a similar type of leading was also tested for a lug, with the tube fixed in place by welding.

The following were the results:—Welded direct to tube, 335 lbs.; welded into socket, 365 lbs.

Welding is often harshly criticised as regards its ability to withstand vibration, but even in this respect we have found striking instances where the tube has broken before the joint. [One believes firmly that the speed and quality of the vibration is more important than the heaviness of the blows or the number of blows; also that the tube outside the weld is permanently weakened by the heat of welding.—C. G. G.]

Some time ago we tried an intermittent shock and vibratory test on a machine which gave a series of vibrations to the tube, the blows due to the "peg-cam" being 1,400 per minute. In some cases the tube broke off without the welded joint suffering in any appreciable manner. [But that does not say that the tube was not weakened by the heating and the subsequent contraction of welding.—C. G. G.]

As regards welding of any description to be done on tubing, we do not advocate the use of tubing made from steel too high in carbon. A low carbon steel gives the better result, and it is also most essential that the phosphorus content of both tube and welding wire shall be low.

Wherever possible, we would suggest that the welding on of hinges and sockets to a main spar or post be avoided. To slot a tube, or soften it by welding, is unwise, and in place of any fixtures that at present demand such operations we recommend a sweated and pegged fitting.

In support of this some experiments were carried out by our Company, in order to convince some of our friends of the advisability of following the course we have suggested. In one case a wiring lug was fixed on a main spar by welding, and in the other by sweating and pegging.

Alternating tests on these tubes gave the following results:—Welded, 5,190 revs.; soldered, 8,800 revs.

Tubular Construction Work.

A number of very interesting illustrations of tubular constructional work with which Accles & Pollock have had to deal during the last few years were then shown.

One showed a large trussed girder as designed for use in experimental airship planes. This girder weighed (complete, as shown) 4¾ lbs., and a load of 5 cwt. at the centre of the 8 ft. span produced a deflection of only ¼ in. A similar girder, weighing 5½ lbs. with a depth of 7¼ ins., buckled and collapsed at a total load in the centre of the beam of 10 cwt., equal to one ton distributed evenly. The distance between supports was 8 ft. 6 ins.

A triangular trussed girder or strut which had not yet been tested had the following characteristics:—Length over all, 9 ft. Side of triangle, 12 ins. Total weight, 9¾ lbs.

Rust Prevention.

Mr. Hackett continued:—One further point remains to be mentioned. It is well known that a long life for any modern aeroplane is not expected. The present necessary wastage in aircraft is such that the question of internal rust and corrosion of the steel work is not of serious moment. [One disagrees, for the good reason that aeroplanes may stand for six months in store before being brought out for use in a sudden emergency when there is no time to examine them in detail.—C. G. G.] The time is coming, however, when such matters will have to be seriously considered. For any post-war machines—especially if designed for general passenger traffic—the question of the length of life of all parts will be one of primary importance.

We have experimented with two or three methods of preserving from rust and corrosion, with fairly satisfactory results, and in the case of airship framework, subject as it is to salt-water influence, we have used with fair success the "Cosletising" process. [Which one has strongly advocated in this paper for years past.—C. G. G.]

For soldered work, such as rudder and fin frames, we have instituted at our works a thorough system of washing and brushing in hot soda water to remove all traces of the "Fluxite" or the flux, and we think this is most essential.

In conclusion, we would say that "the last word" in tubes and tubular structures has not by any means yet been spoken. With the increase in the size of machines, the constant and ever-increasing shortage of seasoned timber, the extended use of machines in future years in hot climates, with all the climatic effects on timber, the "all-steel" machine will undoubtedly soon become a reality and a necessity, and consequently the subject of tubes and tubular construction assumes increasing importance.

MR. HOLT THOMAS ON AERIAL TRANSPORT.

According to the "Times" newspaper, the possibilities of flying in the winning of the war, and the future of aeronautics in commerce, were discussed by Mr. G. Holt Thomas, managing director of the Aircraft Manufacturing Co., Ltd., in an address at the Savoy on May 3rd, to the American Luncheon Club.

The recent advance on the part of the Germans, he said, could not have taken place if we had had enough aeroplanes. A few hundred aeroplanes had recently held up hundreds of thousands of Germans by machine-guns and bombing. The same thing would have happened in Italy, but it had been forgotten that the aeroplane was a mobile force, or we should have had hundreds of aeroplanes within a few hours bombing and machine-gunning the enemy. If the business men of all countries had grasped what aviation men had grasped since the French manœuvres of 1910, we should have won this war by aeroplanes some time ago.

[But then the Germans would have grasped it first, as their business men are the quickest graspers, and on Mr. Holt Thomas' argument we should have lost the war. Even as it was German military men grasped the idea sooner than those of any other country.—Ed.]

The Germans had already established aerial posts, but only a very small proportion of the air belonged to the Central Powers. If we could settle what our aerial routes would be it would mean that the Germans would never be able to develop routes except by our permission. The Germans had started a service between Berlin and Constantinople

It was said that the aeroplane was not a commercial proposition because it could not carry a motor-car. It could carry weights greater than a motor-car. The claims for the general commercial use of aircraft were:—(1) It was faster than any other form of transport; (2) it was quite reliable enough to-day, and would get much more reliable as engines improved; and (3) it was not too costly to make it a commercial proposition.

From London to Berlin the fastest route was 20½ hours; by aeroplane it was 7½ hours. To Constantinople the fastest route was 72 hours, but with an aeroplane travelling only 80 miles an hour they could get there in 20 hours. Petrograd was 50 hours away by the fastest route, and an aeroplane would take only 18 hours. There was no place on earth farther than five days from London at 80 miles an hour. He did not suggest that one machine would fly from London to Melbourne, but routes could be established.

We had to look upon a commercial system of aeroplanes as a series of stages, with changing machines and pilots. Melbourne was 5 days from London at 80 miles an hour. Tokio 4½ days; New York, 2 days by the longest route, via the Azores; Buenos Aires, 2½ days; Ceylon, 2¾ days; and Cape Town, 3 days.

Taking the cost of running an aeroplane with two engines and carrying a good load at 5s. per mile between London and Paris, the cost of the carrying of mails worked out at one-third of a penny per ounce, and if they charged a halfpenny an ounce they would make a good profit. They could carry passengers to Paris at £5 a head, to Marseilles at £10 per head, and to Constantinople at £25. He was talking about full loads all the time.

The post to Paris would, of course, be a special service at a special rate. Mails could be looked upon as absolutely commercial, and he thought passengers, too, but there might be occasions when they would get dipped in the Atlantic. In attempting an aerial service across the Atlantic he thought there ought to be ships every hundred miles or so, simply because it was a commercial proposition, and in order not to lose the mails. If there was an accident the mails could easily be picked up.

The Design and Construction of Internal Combustion Engines, with special reference to Aero Engines.—VI.

BY C. SYLVESTER.

Author of "The Conversion of Electrical Machinery," "Testing Motors and Motor Starters," etc., etc.

Crank-shafts.

The methods adopted for obtaining the twisting and bending moment of crank-shafts, and determining the quantity of material necessary for their construction, may be briefly described as follows:—

The stroke and speed of the engine is the first consideration, in order that the acceleration of the piston and its inertia forces may be calculated.

A diagram should then be drawn showing the total pressure on the piston, from which a corrected diagram showing the crank effort for one cylinder may be obtained.

From this the twisting moment for one cylinder, and subsequently the whole of the cylinders, is determined according to the crank angle for each cylinder.

Thus, the maximum twisting moment to which the shaft is subjected being known, it only remains to consider the quality of the material from which it is proposed to construct the shaft, to arrive at the necessary thickness of the webs and journals.

Transmission of Power.

It is the practice in all types of engines to design the crank-shaft of equal size throughout. That is, the size of the journals and the thickness of the webs of one crank is the same as those of another.

Although this is the practice, it must not be taken for granted that the power transmitted is equal at all portions of the shaft. This is not so, because the only portion of the shaft which is transmitting the whole of the power of the engine is the portion between the load and the nearest cylinder.

Passing from the nearest cylinder to the end cylinder, the power transmitted is decreased as each cylinder is passed. When the end cylinder is reached the pressure on that portion of the shaft is equal to the power developed by one cylinder only.

From this it would appear that a gradual reduction in the size of the shaft would be practical. This may be so, and a saving of weight and material might be effected, but the additional cost of labour and the inconvenience in having to provide various-sized bearings would offset any advantage gained in this direction.

Aero-engine Crank-shafts.

Crank-shafts for aero-engines are machined from forgings of the highest grade chrome nickel steel, heat-treated to obtain the best properties of the material.

They are bored hollow throughout, sufficient material being left to ensure a maximum strength with a minimum weight. They are perfectly balanced on knife edges to minimise the whip of the shaft, and the surplus material is removed from the most convenient portion of the shaft in order that the mechanical strength may not be affected.

Crank-shaft Bearings.

The design and construction of crank-shaft bearings vary in different types of engines. For engines up to 140 b.h.p. roller bearings are favoured. Above this power gunmetal bearings, with a lining of Babbit's metal, are sometimes used.

Where this type of bearing is adopted the method of fixing it in its housing is by means of dowel pins. One pin at the top and another at the bottom will keep the bearing in position.

Crank-shaft Thrust Bearings.

These are built up of rollers and balls, the rollers taking the vertical thrust and the balls the lateral thrust. The balls run between discs of hardened steel, the thrust being taken by a flange turned on the shaft from the solid material.

Cam-shafts.

Cam-shafts for aero-engines may be made of mild steel, providing that the cams are made of cast steel and are separately fitted. When this method is used, considerable care should be taken in the cam fitting.

Cams and shafts turned from solid chrome nickel steel are very satisfactory, the cams being more accurately ground to correct shape and finish.

It is not good practice to work any auxiliary apparatus from a cam-shaft, as this will react very unfavourably upon the timing of the valves.

Sufficient bearings should be fitted to prevent any deflection of the shaft as the valve springs are depressed.

Cam Design.

One of the chief features of cam design is that it should open a valve and allow it to close without shock. That is, there should be no blow between the cam and the valve or valve tappet on opening, or between the valve and its seat on closing.

To obtain this condition, the point of contact should be tangential to the cam circle, yet sufficient clearance should be permitted to allow for the expansion of the shaft and cam, after it is ascertained that the valve is resting on its seat.

In aero-engine construction it may be said that cams are divided into two classes:—

1. Cams which will open a valve a predetermined distance, then allow it to close.
2. Cams which will open a valve, maintain it open for a predetermined period, then allow it to close.

These types are illustrated in Fig. 17 A and B respectively. To design the cam A, it is first necessary to determine the period of time the valve will be open. As an example we will presume that the valve is open for a period of 90 degrees. Then, if the valve lift is, say, half an inch, the cam may be constructed as shown in Fig. 18.

When dealing with a cam of the type illustrated in Fig. 17 B, we have a much different proposition.

Here we will again presume that the cam is open for 90 degrees, but of this period it is to be maintained open at its maximum point for 20 degrees. The type of cam and the method of arriving at its design is shown in Fig. 19.

In the above diagrams we have ignored clearances altogether, but it is most essential that allowances should be made for them. To do so it is necessary to add the clearance to the height of the cam.

The angle between the centres of the inlet and exhaust cams depends upon the predetermined point, in degrees, of the opening of the valves.

Valves.

All valves used in aero-engine construction should be made of

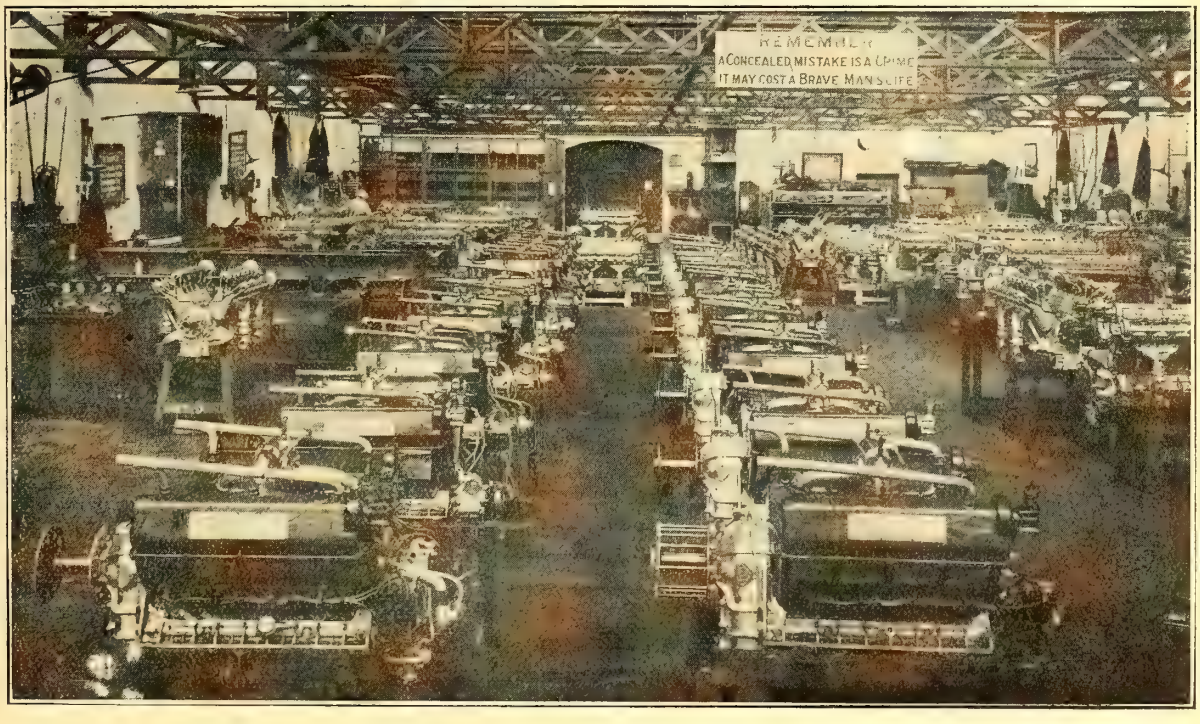
SUNBEAM-COATALEN AIRCRAFT MOTORS



No firm has shown more energy and enterprise in aerial engine production than the Sunbeam Motor Car Company. They work ceaselessly to achieve further improvements, with the result that the fame of the Sunbeam-Coatalen goes on increasing.

As an example of the high repute in which these engines stand, it might be pointed out that Sunbeam-Coatalen motors can be found on the famous Handley-Page aeroplanes. These giant bombing machines are amongst the greatest triumphs of British aircraft engineering. It need hardly be said that only the finest and most reliable engines could be associated with these powerful bombing machines Sunbeam-Coatalen engines, in fact, have given splendid service in every branch of aerial work.

National pride can be taken in the fine achievements of the British motor industry during the war, and the record of the Sunbeam Motor Company stands out as a bright example of progressiveness and success. As long as we have firms of this calibre, we may feel confident that in war or in peace we can hold our own against any opponent.

Mr. R. P. Hearn in "The Tatler," May, 1st, 1918.

SIR JOSEPH JONAS, COLVER & Co., LTD.

Manufacturers of Steel of every description, including

HIGH GRADE NICKEL STEEL & FORGINGS

for Naval and General Marine Purposes.

Special Heat Treated Alloy and other Steels for Aircraft and Automobile Purposes

IMPORTANT SPECIALITIES:

S.S.G. — **A SPECIAL NICKEL CHROME GEAR STEEL.**
FOR AIR OR OIL HARDENING. When treated this steel has exceedingly tough properties and is specially suitable for Gear Wheels, Connecting Rods, etc.

S.G.W. — **A NICKEL CHROME STEEL IN FOUR GRADES.**
Eminently suitable and strongly recommended for Gears, Crankshafts, and other highly stressed parts, and having exceptional machining qualities. Combines unusually heavy shock-resisting and wearing properties with silent running.

G.P.S. — **A HIGH GRADE ALLOY CASE HARDENING STEEL**
For severely strained parts, such as Gear Wheels, Gudgeon Pins, etc.

The Future

To-day, individually and nationally we live for it!

Unconsciously, our every present action is influenced thereby.

The Past, with its many faults and failings, we endeavour to forget.

The Present, so full of perplexing problems, needs all our energies, but—

The Future ever looms large on the horizon, and, realizing its vast possibilities, even while we struggle through our present difficulties, we make such plans as will enable us to better resume our dealings with old customers and, before, and in the early days of, Peace, make many new friends.

And we think those plans will interest you so we ask you to get in touch.

BELLING ELECTRIC GLUE POTS

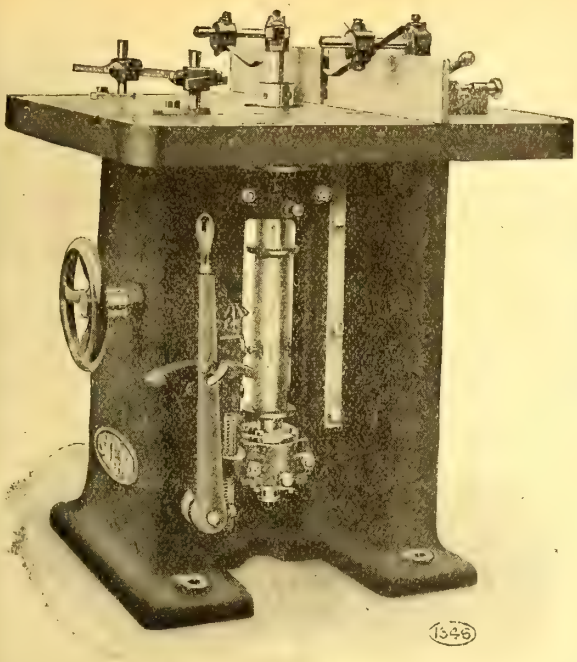
for Aeroplane and other work

List No. 38.
Price 32/-
(Spare Elements 3/6 each)

Strongly made in cast iron, the Glue container being tinned.
Capacity: 2 pints of glue.
Loading: 900 watts.
3 elements, 3 heats, 3 loose connectors for attaching the cable to.
Weight: 14 lbs.
For use off a power circuit.

List No. 39.
Price 35/-
(Spare Elements 3/6 each)

As above, but with a loading of only 600 watts so that it can be used off an ordinary lamp socket.
Complete with connectors, 2 yards flex, and lamp holder adaptor.



List No. 40.
Price 47/6
(Spare Elements 3/6 each)

Similar to List No. 38, but fitted with a 3 heat switch on a separate panel, which is connected to the Glue Pot by 4 feet of metallic flexible tubing.
For use off a power circuit and recommended for Factory work.

All prices are subject to 25% advance.
Carriage extra on orders under £3 net value.

ardened tungsten steel, the heads and stems being made in one iece from forgings.

All valves and valve springs should be easily accessible, the ormer to allow for easy adjustment. The latter should be of ufficient size to permit high volumetric efficiency.

For large internal combustion engines certain laws are laid own for determining the correct size of valves, but as the design f the valve is much different from that used in an aero-engine, ie same rules cannot be applied for aero-engine design.

Here it is good practice to depend upon experience for the orrect size and type of valve to be used. When experimenting vith a new type of engine, the valves should be very carefully vatched to detect the slightest sign of burning.

Width of Valve Seats.

For aero-engine construction the width of a valve seating may e determined by the following simple rule, found by the experi- nce of the author to be satisfactory :—

D x 1/16 in. + 1/16 in. = Wv.

hat is, where D equals the diameter of the valves in inches, nd Wv is the width of the seating.

For instance, the seating of a valve two inches in diameter ·ill be 3/16in. wide, that of a valve three inches in diameter ·ill be ¼in. wide, and so on.

The additional 1/16in. is to allow for the overlap of the valve eat over that in the cylinder head. This is illustrated in Fig. o, which shows the complete seating of a valve, the seating in ie cylinder head being indicated by the dotted lines.

Valve Construction.

The later types of aero-engine have proved that the valves used i the earlier design of engine are not satisfactory for the present- ay design. The well-known mushroom-hea valve is now practi- ally a dead letter, as considerable imporvement is shown in the itest types of valves.

In Fig. 21, A, is illustrated the mushroom-type valve. Here it ill be noticed that there is only a small amount of material ove the seating, indicated by the dotted line. This was the ief cause of failure of the valve.

Fig. 21, B, illustrates the present-day design. Here it will be observed that the centre of the valve head is practically hollow, but there is a considerable amount of material above the valve seating.

What has been really done is to transfer the material from the centre to the edge of the valve head. Thus the actual weight of the valve is not increased.

This revision in valve design serves two useful purposes :—

1. The heat in the valve head, from the exhaust gases, is dissipated to a greater extent than in the mushroom valve, thus reducing the tendency of burning the seat.
2. As there is more material above the seat, the process of re-grinding may be carried out without fear of reducing the width of the seat.

Valve Springs.

Valve springs for aero-engines are generally of the spiral or ribbon type. The first type is to be preferred if it can be adopted with convenience—that is, where there is sufficient valve lift to allow the spring to be easily depressed. A system of double spiral springs is sometimes used, a small spring being fitted inside a larger and stiffer spring. This system, which ensures the maximum pressure on the valve, reduces the stress on the springs.

Ribbon springs are constructed from strips of spring steel, hardened in oil. They have the advantage of being able to be fully depressed without causing undue stresses on the material. They are very suitable for valves having a small lift. If they are used for valves having a high lift it would be necessary considerably to increase the cross section of the material, this being a serious disadvantage.

Strength of Valve Springs.

The strength of a valve spring should be such that the pressure on the valve seating, when the valve is closed, is between 30 and 60 pounds according to the size of the valve. A three-inch inlet valve should be subjected to a pressure of about 60 pounds.

(To be continued.)

AN INGENIOUS MACHINE TOOL.

Mr. Arthur Collier, of Electric Avenue, Brixton, S.W., has laced upon the market an appliance called the "Arco" Bit, for hich a provisional patent has been granted. This bit has been specially designed to bore clean holes in wood or other material, nd especially in ply-wood, and it results in exceptionally finished ork.

While it seems undesirable to describe the tool in detail, it ay be said that considerable success has been attained in air- aft factories, one of which has tested the bit for ten weeks, mploying it to bore 3¼in. holes through eight thicknesses of in. 3-ply wood at a time. This was done on an ordinary ½in. ood boring machine running at 1,500 r.p.m.

The appliance is manufactured for boring holes from 1¼in. to ¼in. by eighths, and two shanks or holders only are required carry the whole range.

RUSTLESS IRON FITTINGS.

A new company has been formed, called Rustless Iron Cowper-Coles Process), Ltd., with offices at Shepperton.

The company will specialise in Rustless fittings of all descrip- ons, especially for seaplanes and aeroplanes, also railway and ip's fittings, and have acquired some important improvements Sherardising from Mr. Cowper-Coles, also a new process called Doxidising," which is specially suitable for iron and steel work xposed to salt water, as the zinc coating is protected from corro- ion.

A TIMBER-SAVING PROCESS.

The Robert Temple Manufacturing Co., Ltd., of 13-15, Brew- ouse Lane, Putney Bridge, S.W.19, has introduced a process hich should be valuable in the conservation of existing timber upplies.

Mr. Temple, the inventor, has, for several years past, been xperimenting in various forms of laminated timber, with xcellent results.

By bending the fibres of the timber in the direction of the oad, without the use of steam or heat, he has been able to roduce a material which is claimed to be stronger than metal, eight for weight.

Under a recent test a component of a machine made under his system proved to be three times as strong as an aluminium omponent weight for weight, which it has replaced.

It will be readily seen that work of this description is of vital nportance to the Aircraft Industry, and there is no doubt that iany of the fittings on aeronautical machines will shortly be replaced by this work, which of course has a considerable advantage over a metal component.

The process does not require highly skilled labour, and can for the most part be manufactured by female labour.

A great factor is that only the actual amount of material required in the work is used up, as by this process the work is moulded to shape. This is of enormous advantage owing to the present scarcity of material. Many shaped articles constructed on present methods entail at least 50%-70% waste.

It is claimed that the process results in great saving of material, great strength, and perfection in shape. All the work is absolutely weatherproof, and will not cast or twist, and it should therefore be of great use to the engineering trade for the purpose of making patterns, owing to its great strength and retention of perfect shape.

With their several different processes the firm claims to be able to produce practically any shape or form, in one piece of laminated plywood, without the aid of any interior construction, and they feel quite confident in affirming that in the many different forms in which their work can be employed it gives equal strength and saves 50% in weight over existing systems.

For obvious reasons the process cannot be described in print, nor can illustrations be introduced, but aircraft constructors who are interested are invited to apply to the firm in question.

AIRCRAFT ENGINE EXPERIMENTS.

An Order has been made by the Minister of Munitions, under the Defence of the Realm Regulations, which will give the authorities control of all experiments in the construction of engines for aircraft.

The Order provides that on and after May 15th no person may begin or proceed with the experimental construction of any aero-engine without a licence from the Minister of Munitions, for which written application must be made to the Director-General of Aircraft Production, Kingsway, W.C.2.

The applicant must give full particulars of the construction for which the licence is required, and such further information as the Director-General may require, and must comply with any restrictions or conditions that he may impose.

For the purpose of the Order "the term experimental construction means any construction which is not under or for the direct purpose of fulfilling a Government contract, and shall include the preparation of any working drawings, but not the preparation of general arrangement drawings."

Where a first application for a licence under the Order has been made and is pending for the carrying on of any experimental construction begun before May 15th, such construction may be carried on until the licence has been refused.

PATENTS INDEX.

The subjoined list of recent inventions has been specially compiled by The Aeroplane, from the Current Official Patents Record :—

Patent Applications.

Addis, W. A. Fuselage longeron fitting for aeroplanes. No. 6799. April 23rd.

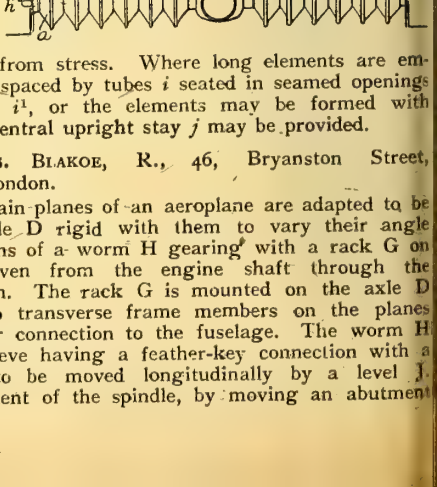
114,966. Sept. 7th, 1917. Taylor, W. Apparatus for condensing and retaining compressed gas in a receiver, for use in connection with motor-vehicles, aeroplanes, motor-boats, or the like.

Complete Specifications Accepted, prints of which can be obtained on May 23rd, 1918.

115,060. March 20th, 1917. Prost, C. Flying machines.

Abridgments of Recently Published Specifications.



113,683. Pistons. Sadgrove, H. F. V., 34, Blenheim Road, Moseley, Birmingham.

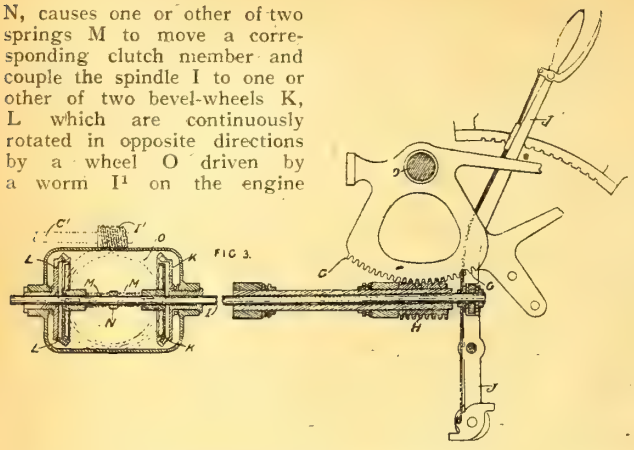
An aluminium or like piston for an aeroplane or like engine is strengthened by an internal structure of steel, etc., which is secured in position during casting and comprises an end disc *a* which may be perforated and is connected by rods or tubes *e*, *f* to blocks *c*, *d*, which are afterwards bored to form the bearings of the gudgeon pin. The disc *a* and blocks *c*, *d* are formed with positioning-pegs a^2.

113,651. Radiators for Internal Combustion Engines. Goudard, M. and Mennesson, M., 190, Avenue de Neuilly, Neuilly, Seine, France.

In radiators of the kind comprising elements *a* formed of stamped sheet-metal plates spaced apart by perforated distance rings *b* forming supply passages, a group of elements is arranged on each side of a central supply passage d^1 from a reservoir *c* and a corresponding central outlet d^2. The elements may be shaped so as to be easily centred, and the distance rings *b* are preferably formed from rolled sheets of such a strength that they may be crushed so as to form a good joint when the elements are assembled on bolts *h*. End plates *f* secured to the reservoir, are held in position by the bolts *h* so as to relieve the elements from stress. Where long elements are employed, they may be spaced by tubes *i* seated in seamed openings and carried by rods i^1, or the elements may be formed with stamped bosses. A central upright stay *j* may be provided.

113,629. Aeronautics. Blakoe, R., 46, Bryanston Street, Marble Arch, London.

Steering.—The main planes of an aeroplane are adapted to be turned about an axle D rigid with them to vary their angle of incidence by means of a worm H gearing with a rack G on the planes and driven from the engine shaft through the reversing-gear shown. The rack G is mounted on the axle D and is connected to transverse frame members on the planes which have no other connection to the fuselage. The worm H is mounted on a sleeve having a feather-key connection with a spindle I adapted to be moved longitudinally by a level J. Longitudinal movement of the spindle, by moving an abutment

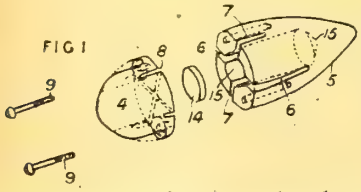


FURTHER CONTRACTS WANTED IN WOOD AND METAL

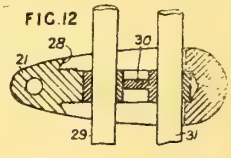
A LARGE Government Controlled Establishment in the N. W. of London, with complete woodworking, engineering, sheet metal and welding plants, with a Works covering 2½ acres, is in a position to accept further contracts, both for complete machines and spares, in wood or metal, specializing in the following: Fuselages (complete with controls), Main Planes, Undercarriages (wood or tubular), Tail Planes, Rudders, Fins, Elevators, Ailerons, Detail Metal Fittings, Machining, Pressure and Gravity Oil Tanks, Cowling and Welding. Having just finished important contracts of various well-known types and familiar with the most up-to-date types on the present market, can give quick and immediate deliveries both in wood and metal, the Works now being available for any further contracts.

Box No. 1,000, "The Aeroplane,"

166, PICCADILLY :: :: :: :: W.1.

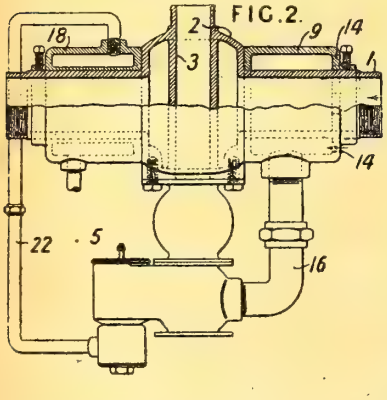


N, causes one or other of two springs M to move a corresponding clutch member and couple the spindle I to one or other of two bevel-wheels K, L which are continuously rotated in opposite directions by a wheel O driven by a worm I^1 on the engine



shaft C^1. The resulting motion is transmitted to the sleeve carrying the worm H and the planes are adjusted.

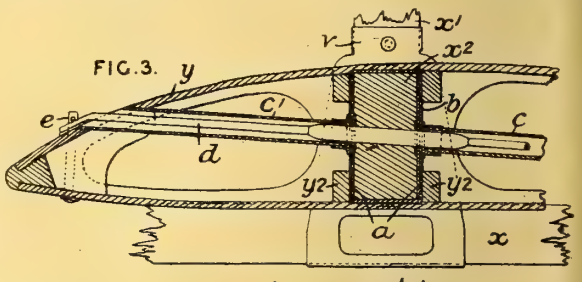
113,673. Aeronautics. Anderson, A. L., 6, Springfield Road, Gatley, near Cheadle, Cheshire, and Anderson, R., 1429, Ashton Old Road, Higher Openshaw, Manchester



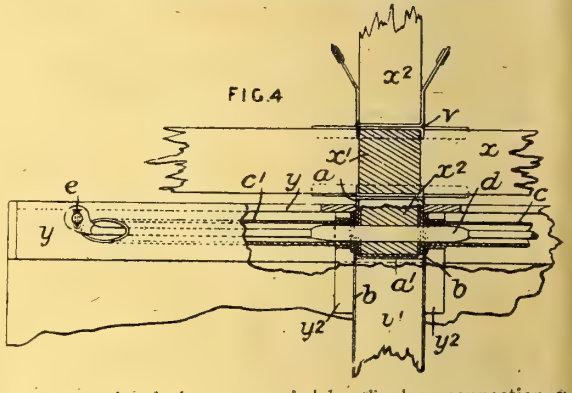
Framework; Planes; Arrangement of.—A device for locking together two or more bracing-wires at their crossing comprises two clamping-members slotted to take the bracing-wires and presenting a streamline form when secured together. Fig. 1 shows one form in which two members 4, 5, of circular or

elliptical cross-section, are slotted at 6, 7, 8 to take two flattened or streamline bracing wires. The wires may be separated where they cross by a washer 14 of resilient or inelastic material accommodated in a bore 15. Screws 9 secure the two parts together. The washers 14 may be of aluminium or lead. Fig. 12 shows a modification in which a solid rear portion 21 screws into the front slotted portion, which has a bevelled rear edge engaged by an undercut portion 28 on the rear portion to prevent the slotted portion from bursting. Three flat wires 29, 30, 31 arranged between insulating-washers are shown. The section shown is taken through one of the slots.

113,760. Internal-combustion Engines. Olsen, G. O., 729, Morton Street, Mattapan, Massachusetts, U.S.A.



Carburetting.—Air and fuel are heated both before and after mixing. The exhaust passes through a pipe 1, an enlargement 2 of which is traversed by the induction pipe 3. A casing 9 surrounds one portion of the pipe 1 and is provided with openings 14 and a discharge pipe 16, so that air is drawn to the carburettor 5. Similarly, fuel from a reservoir is drawn to the carburettor through the exhaust-heated chamber 18 and passage 22. The chambers 9 and 18 may slide on the exhaust pipe, and be fixed by set-screws.

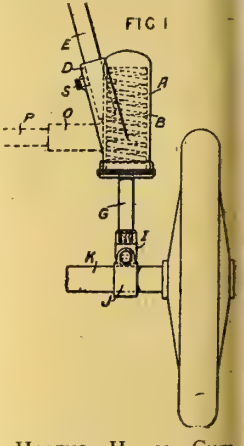


113,736. Aeronautics. Jackson, W. J. Mellersh-, 28, Southampton Buildings, London.—(Goodyear's India Rubber Glove Manufacturing Co., Maple Street, Naugatuck, Connecticut, U.S.A.)

Planes, Construction of.—Aeroplane structural elements, for example, the wings, pontoons, rudders, stabilisers, and wind shields, are formed by heating a hard rubber-containing sheet to give it greater extensibility, securing the stretched sheet to a supporting-frame, and permitting the sheet to shrink. The entire sheet may be heated simultaneously, or portions of the sheet may be heated successively, for example, by a flatiron. The sheet may be temporarily secured to the frame before heating and stretching.

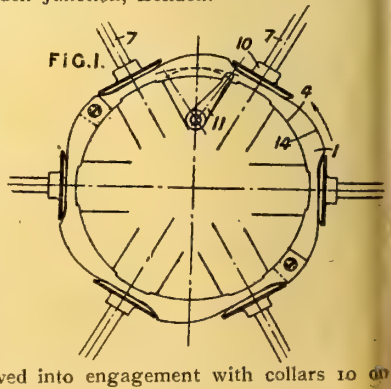
113,723. Aeronautics. Sopwith Aviation Co. and Hawker, H. G., Canbury Park Road, Kingston-on-Thames, Surrey.

Planes, Arrangement of.—The wings of aeroplanes are connected to the fuselage or centre section by a longitudinal hinge consisting of a single pin passing through hinge members forming extensions of the transverse spars of the fuselage and of the spars of the wings. The inner member of the hinge is con-



stituted by a pair of plates *a* carried by the box connection *v* of the fuselage framework, and connected together by a channel member a^1, and the outer member of the joint comprises a box *b* arranged within the inner rib *y* of the wing and carried by the spar y^1. The hinge-pin *d* passes through guide-tubes *c*, c^1, and is secured by a pin *e*. The transverse member x^2 of the fuselage may extend within the joint.

Planes, Construction of.—Strengthening fillets y^2 are fastened to the spars y^1 and the rib *y*.



Framework.—The longitudinal, vertical, and transverse members *x*, x^1, x^2 of the fuselage are connected together by a box *v*.

113,874. Aeronautics. Pease, W. H., Brook House, Blythe Street, Mapperly, Nottingham.

Shock of Landing, Deadening.—A spring buffer for the land wheels or floats of aircraft comprises a cylinder A, having integrally-formed sockets D to take struts E, extending from the fuselage, the cylinder A containing a spring B, which bears on a piston carried by a rod G. In the form shown, the rod G has a swivel connection I, J, with an axle K, the slot in the member I being elongated to allow lateral movement as the axle tilts. An additional socket O is provided for a lateral stay P. The struts E are secured in their sockets by transverse pins held in place by caps S screwed into nipples in the sockets.

113,752. Internal-combustion Engines. Hagens, H., 31, Cumberland Park, Willesden Junction, London.

Valve-gear; Regulating; Starting; Cylinders, Cooling.—Radial-cylinder engines for aeroplanes, etc., are provided with supplementary cam mechanism, which actuates all the exhaust valves simultaneously to reduce the compression at starting, or to admit air to the cylinder for cooling purposes. The supplementary cam 1 comprises a number of swells, 14 which are moved into engagement with collars 10 on valve rods 7 by a hand-lever 11.

THE AIRCRAFT CATALOGUE.

TO stand still is to stand alone—In August, 1915, The Aircraft Supplies Co., Ltd., issued a Stock Sheet only, to-day "Aircraft Supplies" is a 24 page journal and Catalogue of Aircraft Metal Parts. It is issued on alternate Tuesday evenings (next issue May 28th), and is sent free to those engaged in the Aircraft Industry.

"AIRCRAFT SUPPLIES."

THE "ASCOL" BOOK

Will be published in a few weeks' time and included in the 200 pages will be reprints of all the articles which appeared in the first two volumes of "Aircraft Supplies," A.G.S., and "Ascol" Chart Sections, and a Beginner's Guide. Copies at 3/6 and 10/6 each (postage 6d. extra). Advertisement rates on application.

MARKET TOPICS.

(Prices are for quantities on usual terms.)

May 9th, 1918.

COPPER.—Supplies are being received very promptly, and although it is rumoured in some quarters that the demand is in excess of the output the figures for April are very gratifying, and it is expected that the May output will also show a substantial increase over April. There does not therefore appear to be any cause for anxiety.

It is understood that the Government has arranged with the Australian Copper Producers Association for the whole of the Australian Producers' output to be sent here, less quantities still to be supplied under existing contracts and quantities required for home consumption.

The price to be paid is £109 10s. 0d. per ton f.o.b. Sydney, for Electrolytic, £107 6s. 0d. per ton f.o.b. Sydney, other kinds; if the proportion of the latter exceeds one-fourth of the total tonnage the Association is to allow £4 6s. 8d. per ton abatement, making the price £105 3s. 4d. per ton.

The maximum quantity to be delivered against the contract is 20,000 tons, and the minimum quantity 15,600 tons. If the former is exceeded a price will be mutually agreed for the surplus; if the latter quantity is not reached the Government can claim delivery of the deficiency later at the contract price.

Although the agitation for an increase in price, to come into force after June 1st, still continues there is a strong feeling that there will not be any alteration.

TIN.—The price of Tin has risen to a most absurd figure, and is undoubtedly due to the extortionate prices which are being demanded by speculators in the East, who are apparently controlling the whole situation.

On April 26th the Ministry of Munitions took over the control of Tin, Mr. W. A. Tennant being appointed the Director of Tin Supplies.

This step has not yet had any effect upon prices, and there does not appear to be any hope whatever of the price being brought down to a reasonable level until some kind of a control is exercised over the Eastern market.

About three quarters of the world's supply of Tin comes from Eastern sources, i.e., Straits Settlements, Banca, Billiton and Hong Kong, and both this country and U.S.A. are dependent upon them for supplies. It is, therefore, very essential that some drastic action should be taken to put an end to the speculation which is being carried on in the East at the expense chiefly of ourselves and U.S.A.

Comparative Prices.

To-day	£380	0	0	per ton.
May 2nd	£360	0	0	per ton.
April 26th	£350	0	0	per ton.
April 22nd	£333	0	0	per ton.
April 19th	£330	0	0	per ton.

Supplies of Tin for Government contracts are procured with much delay. It is, however, still impossible to procure any for domestic purposes.

STEEL.—The feverish activity of the mills continues and the efforts which are being put forth are certainly bearing fruit.

There is very little difficulty in obtaining supplies, and the position generally is most satisfactory.

Some of the producers are demanding an increase in price, and it is understood that the question is being considered by the Ministry.

TIMBER.—The question of supplies is as irritating as ever and developments are anxiously awaited. It is understood that permission is being given for common timber to be used on laminated work. It is, however, not quite clear whether the authorities expect the wood to pass VI Specification, or whether constructors have permission to use the wood, notwithstanding its failure to pass the specification tests.

Larger quantities of hardwood have been received recently. The arrivals are, however, still on the light side. The Plywood position continues to improve, due primarily to the energy and activity of the few firms manufacturing the boards, notwithstanding the heartbreaking obstacles they have been compelled to overcome.

FABRIC.—Supplies are very satisfactory and official prices remain unaltered.

MONTHLY MARKET PRICE LIST.

May 5th, 1918.

The prices given below are the prices ruling on the above date.

Terms.—Usual for the various materials mentioned.

Prices of old metals are as quoted by scrap dealers.

Prices must not be taken as specific quotations for definite quantities delivered to any part of the country.

A NEW SUNBEAM DIRECTOR.

A vacancy on the Board of Directors of the Sunbeam Motor Car Co., Ltd., has been filled by the directors, who have elected Mr. Charles N. Wright, of the well-known firm of Fowler, Langley and Wright, to the office. Thus the Board becomes greatly strengthened on the legal side, a matter of no mean importance in these days when industry is compassed about with legal restrictions at every stage and turn.

Mr. Wright has lived all his days in Wolverhampton, his father and both his grandfathers having been iron masters with works in the town. On the other hand, the whole of his own career has been concerned with law. In 1888 he was articled to Mr. Henry Hartley Fowler, afterwards Sir Henry Fowler, M.P., and later Viscount Wolverhampton, of the firm of Fowler and Langley, as it was then styled. Mr. Wright was admitted a solicitor in 1893, and became a partner in Messrs. Fowler and Langley's business in 1898, and a notary public in 1914. He was President of the Wolverhampton Law Society in 1912. Sir Henry Fowler, it may be recalled, remained an active member of the firm until 1908, in which year he retired on receiving a peerage.

"AIRCRAFT SUPPLIES."

The fortnightly House Journal and Stock List of The Aircraft Supplies Company, Ltd., has for some time been regarded as holding an important position where aeronautical literature is concerned. From the commencement of the company a stock list has been issued, although in 1915 it was necessarily only a stock sheet. Later the house journal made its début, and since March, 1917, has appeared regularly every fortnight.

The Aircraft Supplies Company, Ltd., with its usual anxiety to assist those engaged in the Aircraft Industry, as well as to provide something more interesting than an ordinary stock list, are including in their house journal, "Aircraft Supplies," topics of interest generally, and an article on some subject of particular interest to the Industry.

Back numbers of "Aircraft Supplies" contain articles on various subjects. These are about to be reproduced in a book being published by The Aircraft Supplies Company, Ltd., entitled "The 'Ascol' Book." This book, in addition to including articles on such subjects as the heat treatment of steel, prime costs, dope and how to use it, and rigging of aircraft, will also contain illustrations of those A.G.S. parts most commonly used and a complete section of the Ascol charts, which now number over a dozen, and also a beginners' guide containing much information of use to those new to the Industry.

The major portion of "Aircraft Supplies" contains a complete list of the parts in stock at "Ascol House" at the time of going to press, and the company claims to have over 5,000,000 different parts in stock on an average.

A casual visit to the showrooms, and particularly to the large warehouse, is convincing proof that "Aircraft Supplies" gives one only a small idea of the amount of business done at Ascol House and the utility of "Ascol Service" to the Aircraft Industry generally.

INSTRUCTION IN FLYING.

Although in these days it is becoming customary for most people to enter into Service aeronautics without previous training, quite a number of prospective pilots would prefer to learn to fly beforehand, in order that their initial attempts may not be made before the very critical eyes of Service instructors. As a matter of fact, there is a good deal to be said for preliminary training, because very often a flying pupil who makes a slow and indifferent beginning ultimately proves to be a better pilot than the man who takes to the air like a duck to water.

The proprietors of the Cambridge School of Flying and Aerodrome Co., Ltd., which is now well established, have laid themselves out to cater especially for the class of person who prefers to adopt this course. With the object of endowing the school with a Service atmosphere the proprietors have procured the assistance of Mr. L. Ryder Knowles, a late Naval pilot, who becomes chief instructor. Mr. Knowles has had considerable experience of flying both at home and abroad, and it will be his work not merely to instruct pupils in the simple art of flying, but to give them a working idea of the various studies which they will have to undertake on appointment to a Cadet Wing, R.A.F., and the initial principles of reconnaissance, bombing, and fighting tactics are suitably handled.

The equipment of the Cambridge School is being kept up to date, and arrangements are being made to start a boarding establishment for pupils during the summer months, in connection with which a reading and recreation room will be provided for the use of all those under instruction where a reference library of all recent aeronautical publications of any value and the various aircraft periodicals will be available.

In addition to the practical flying course, a theoretical course dealing with aeroplane design and construction has been started, which is sent out as a correspondence course to those who wish to learn the principles of aviation at home. The proprietors will be pleased to afford any information desired, and inquiries should be addressed to the firm at 30B, St. Andrew's Street, Cambridge.

GARAGE SUPPLIES FOR AIRSHIPS.

In the Patents Court on May 9th, the Comptroller-General of Patents (Mr. Temple Franks) heard an application foreshadowing the use of garages for the supply of hydrogen for aircraft.

The application was made by Messrs. Samuel Cutler & Son (Limited), engineers, for a licence to use six German patents for the manufacture of hydrogen gas. It was said that one of the patents, in an alternative form of manufacture, claimed the discovery that manganese iron ores could be used as reaction substances in the production of hydrogen.

The applicant said that he was manufacturing to supply the Admiralty for balloons and airships, and the time was coming possibly when private persons would want to set up works at different points for the supply of hydrogen gas.

The Comptroller intimated that he thought the patents should be granted and progress made with the work at once.

AIRCRAFT FINANCE

CURRENT TOPICS.

CHEAPENING MONEY.

What the Financial World is particularly concerned about just now is the possibility of the Government inducing the banks to lower the value of money in order to stimulate subscriptions to the War Bonds. It is of importance to the manufacturer as well as to the Government. The banks would reduce the rate of interest for money on deposit with them, so that it would seek more remunerative employment elsewhere, say, in War Bonds.

Coincidently the banks should in normal circumstances grant financial accommodation for ordinary industrial purposes on correspondingly reduced terms. But times are far from normal.

Share Market Activity.

In the Stock Exchange there is a tone of confidence which would be even more marked if domestic politics provided less irritation. Quite a large business is passing in engineering shares, like Vickers, Armstrong Whitworths, Birmingham Small Arms and Beardmores, while purely aircraft descriptions have not been neglected.

For instance, Aircraft Manufacturing 7 per cent. "B" Participating preference shares are in the neighbourhood of 23s. According to gossip their participating rights are becoming more valuable owing to the increasing profit-earning capacity of the business.

French Aircraft Profits.

By the way, the results of the Morane-Saulnier Aeroplane Company have recently been published: they are interesting because of the light they throw on working conditions in France. The net profits are given as 755,388 francs after providing 1,649,738 francs for the war-tax in respect of the preceding year.

Increased Production Costs.

It is remarked that the net profit represents a decrease of 25 per cent. on those of 1916 in spite of the fact that the output increased by 30 per cent. This is ascribed to higher wages and the increased cost of materials as well as to stoppages. General expenses, which were 1,799,275 francs in 1916, rose to 3,234,230 francs.

What the U.S. is Spending.

It is interesting to read that the U.S. War Department has asked Congress for a $1,000,000,000 appropriation for aircraft production in addition to the $640,000,000 already expended.

There is just published the report of Straker-Squire; it covers a period of twenty-seven months to the close of 1917. After meeting all claims in respect of excess profits there is profit of £28,685, and a disposable balance of £35,000. The sum of £1,660 is written off preliminary expenses and new issue expenses and the dividend for 1917 is 10 per cent., leaving £3,880 to be carried forward.

B.S.A. Prosperity.

A factor of some importance in relation to the strong financial position of the Birmingham Small Arms Co. is the decision of the Daimler Co. to capitalise a portion of its reserve fund The B.S.A. is proprietor of the Daimler Co., and the shares so distributed as a bonus means a bigger income to the Small Arms Co. which has an interest in aircraft, and which is understood to be enjoying exceptional prosperity all round. Hence, B.S.A. shares are being persistently bought up for possibilities.

COMPANIES RECORDS.

VAUXHALL MOTORS, LTD.

The fourth ordinary general meeting of shareholders of this company was held recently, when the Chairman announced that no accounts were available as questions were still open regarding special allowances with the Ministry of Munitions. The profits and turnover had both been increased despite the increasing difficulties in regard to labour and materials.

The Chairman gave some dramatic figures of the company's position in regard to labour, demonstrating the difficulties encountered and surmounted by dilution of labour. He emphatically stated that "we have now arrived at the absolute minimum of skilled and unskilled men that we must employ if the Ministry of Munitions require us to carry out our contracts, and I suggest that the time has arrived when the authorities have got to choose between taking more of our men or curtailing our production, for they cannot have both.

Contract Prices.

"The production has been much greater than in the preceding year, though the profits are less, owing to the reduction in the price. I may here mention that the price is fixed by the Ministry for the whole of our output, and thus the accusation of extravagant prices said to be paid to munition makers has no foundation in fact in our case. Perhaps it would not be out of place here to say that, as the result of recent happenings at the front, we may be called on for still further contributions both in the way of taxation and man-power. We hope, of course, that we shall not experience either, but if the latter, then it will very seriously affect our output.

Looking Ahead.

"There are two very serious matters of perhaps greater importance from a post-war point of view than just now. The first is the proper training of apprentices, which I am afraid has been rather sadly neglected in our industry in the past. We hope to remedy this to some extent, at any rate as far as we are concerned, by starting a proper school for training boys thoroughly and properly in every department of the motor industry. This is a scheme which is of national importance, if we are to maintain our position in the commercial fight when the war is over.

"The other scheme we are interested in is the proposed housing scheme to be subsidised by the Government. We are very badly in want of good housing accommodation, particularly near our works, and we feel that some housing scheme has got to be considered by us at once if we are to attract and keep the skilled labour we shall require after the war, so we feel the Government's proposals in connection with this matter have come at an opportune moment, and I hope I shall be able to report some further progress in this matter next year."

BRITISH ALUMINIUM CO., LTD.

At the recent annual meeting of this company, the Chairman made some very interesting remarks concerning the enormous strides which had been made in the development and use of aluminium in the construction of airships and aeroplanes. He pointed out that the uses to which the metal is being put at the present time, while largely of a destructive character, will considerably extend the field in commercial enterprise after the war.

There is no doubt that the rapid extension of aircraft has been greatly helped by the use of aluminium in both its pure and alloyed forms, and he predicted that the metal will play an important rôle in all matters relating to aerial construction. The Chairman went on to say:—

"It may be interesting to note, in connection with the rapid development of the use of the metal, that the total world's consumption to-day is approximately five times the consumption of 10 years ago. This rapid increase in its uses has necessitated extensive developments in its production during recent years, and such developments have been made, or are in contemplation, all over the world. The British Government have recognised that this is a key industry, and that it is essential for the future welfare of this country and its industries that the production should be substantially increased.

Extension of the Works.

"Realising the necessity for further development in order to cope with the increased demand, and in pursuance of the express wish of the Government for the increase of productive-capacity in this country, the company have made considerable investigations as to available water supply of sufficient size which could be economically used for the purpose. They finally selected a scheme for the development of hydro-electric power involving a large area in Scotland, and they are making application to Parliament during the present Session for the necessary powers.

"The Board of Trade and the Ministry of Munitions have made their own investigations into the matter, and are satisfied that the scheme which the company has put forward will make the most economical use of the power available, and they have signified their approval and promise of support in the application for the necessary powers.

"The shareholders have already authorised the application at meetings which were held in January last, and, if the application is successful, the powers should be granted during the present year. The scheme, which is a large one, will take some con-

siderable time to develop, and will involve fairly large capital expenditure. The provision of the necessary capital is a matter which will require most careful consideration, but it is not one which calls for decision in the immediate future.

"It is not contemplated, neither will it be necessary, that the whole amount involved shall be issued at one time, although it will be prudent to make provision so that the capital is available as and when it may be required in the course of the development."

VICKERS, LTD.

The shareholders are in receipt of two circulars issued by the company. The first, dated April 17th, in which the Directors announce:—

"Owing to the fact that no settlement of this company's accounts has yet been come to with the Government, the Directors regret it is still impossible to submit any accounts to the shareholders for the years 1915 and 1916, and now for the year 1917, they have, nevertheless, good reason to hope that the accounts for 1915 will soon be completed, and they will then be submitted to the shareholders at the earliest possible date. The completion of accounts for 1916 and 1917 must, however, still be delayed for a considerable time, if only for the reason that owing to the immense mass of work flowing through, it has been impossible to arrive at definite prices with the Government for many of the contracts placed with the company.

"The Directors recognise, however, the inconvenience which would be caused to the shareholders if payment of the final dividend for the year ending Dec. 31st, 1917, were postponed, and feel justified in recommending a final dividend (free of income tax at 5s. in the £) for that period of 1s. 6d. per share, equal to 7½ per cent. (free of income tax at 5s. in the £) on the Ordinary Share Capital. This, with the interim dividend already paid, will make a total distribution of 2s. 6d. per share, equal to 12½ per cent., for the year (free of income tax at 5s. in the £)."

And the second notice dated May 2nd advising shareholders:

It has been pointed out to the Directors that the Second Extraordinary General Meeting, called for the purpose of confirming the Special Resolution of which notice was given recently, was convened by inadvertence for Whit Tuesday.

As this is likely to be an inconvenient date for shareholders, the Directors have decided to hold the Confirmatory Meeting on Wednesday, May 15th, 1918, and of this meeting notice is given overleaf. This will make it unnecessary to hold any meeting on Whit Tuesday.

THE SHAREHOLDERS' MEETING.

Several interesting developments of this vast undertaking were dealt with by the chairman at the 51st annual meeting held at Sheffield on April 25th. After explaining the delays in connection with the production of the accounts and setting out the views of the Board on the question of the income tax in regard to paying future dividends he went on to review the outlook affecting the future of the company.

The Board had given a great deal of attention recently to post-war production, and had discussed the most varied plans for utilising for peace purposes as much as possible of their war plant. As he had said repeatedly before, a great portion of it would be quite unusable, and the best suggestion that he could make was that this class of plant should be taken up and stored in one of their big buildings ready for use in case Germany attacked us again.

He hoped he had made it clear that they had a large programme before them. That programme would be certain to cost a large sum to get into the new trades and carry the new stocks, and for that reason conservation of capital was necessary. He said that because he wished to justify the decision of the directors with regard to the future payment of income-tax on the dividends. He then proposed "that the consideration of the accounts for the past financial year, ending December 31st, 1917, be adjourned, to be considered after the accounts for the years ending December 31st, 1915 and 1916 respectively, shall have been duly considered and passed."

COMPANIES ANNOUNCEMENTS.

NEW COMPANIES REGISTERED.

The files of the following new companies are available for inspection at Somerset House.

BRITISH AMERICAN AIRCRAFT INVESTMENTS, LTD.—Private company. Registered May 9th. Capital, £1,000 in 1,500 participating preference and 500 ordinary shares of 10s. each. Manufacturers of and dealers in aerial conveyances and components, owners of hangars, garages, sheds and aerodromes, etc. The subscribers (each with one share) are: J. F. Durban, 90, Castlenau, Barnes, S.W.13, law clerk; Evelyn M. Taylor, 3, Angles Road, Streatham, S.W.16, stenographer. The first directors are to be appointed by the subscribers. Qualification: 25 ordinary shares. Remuneration £250 each per annum. Solicitors: H. Dade and Co., 14, Queen Victoria Street, E.C.4.

CROMPTON HAUMAN ENGINEERING CO., LTD.—Private Company. Registered May 6th. Capital, £2,000 in £1 shares. To take over the business of a general engineer carried on by G. Crompton at 55, High Street, Lincoln, and to carry on the business of aeronautical, marine and general engineers, iron, steel and metal merchants, etc. The subscribers (each with one share) are:—G. Crompton, 55, High Street, Lincoln, engineer; J. E. Hauman, 6, St. Ann's Terrace, Barnes, S.W.13, engineer. The first directors are:—G. Crompton and J. E. Haumann (chairman), both permanent.

R. L. DUBOIS AND CO., LTD.—Private company. Registered May 1st. Capital, £2,000 in £1 shares. To take over the business now carried on at 673, Romford Road, Manor Park, known as "R. L. Dubois and Co.," and the business carried on at 5, Khartoum Parade, Ilford, Essex, as "Patenall Co.," and to carry on the business of aeronautical and aeroplane engineers, ironfounders, mechanical and electrical engineers, etc. The subscribers (each with one share) are:—R. L. Dubois, 60, Gladstone Avenue, Manor Park, E.12, engineer; L. Schaer, 78, Larch Road, Cricklewood, N.W.2, engineer. The first directors are: R. L. Dubois, M. C. Bachofer, A. L. Bachofer, L. Schaer, and E. J. Marro. Registered office: 5, Khartoum Parade, Ilford Lane, Essex.

PARKINSON MOTORS, LTD.—Registered May 1st. To carry on the business of electrical and mechanical engineers. Nominal capital £25,000 in 20,000 7 per cent. £1 cumulative preference shares, and 10,000 1s. ordinary shares. Directors and subscribers: E. Parkinson, Greenlaw, Guiseley, and A. Parkinson, 2, Elder Mount, Guiseley.

MORTGAGES, CHARGES AND SATISFACTIONS.

WHITEHEAD AIRCRAFT (1917), LTD.—Mortgage dated April 11th, 1918, to secure £1,000 and interest charged on land and premises in High Street, Feltham, known as the "Hollies." Holders: E. W. Wells, Lampton Road, Hounslow.

BUSINESS NAMES REGISTRATIONS.

INTERNATIONAL AIRCRAFT WORKS.—Registered Jan. 26th, 1918. Aeronautical and general engineers, 12a, Emmanuel Avenue, Acton, W. Partners:—

L. de Borger (Belgian), 332, Fulham Road, S.W.10.
J. Tielemans (Belgian), 156, Coningham Road, Shepherd's Bush, W.
J. Jassin (Belgian), 1, Arminger Road, W.
F. Grenade (Canadian, formerly Belgian), 6, Noel Road, Acton W.

DIVIDEND DECLARATIONS.

A. DARRACQ & CO. (1905), LTD.—The directors announce the declaration of an interim dividend of 5 per cent. on the ordinary shares.

POST-WAR COMMERCE.

The Report just issued of the Committee on "Commercial and Industrial Policy after the War," presided over by Lord Balfour of Burleigh, should be in the hands of every manufacturer and trader in Great Britain.

The recommendations and suggestions are of the utmost urgence and importance to every branch of manufacture and of particular interest to the Aircraft Industry considered from the point of view of post-war deevlopment. Space alone prevents anything like a full account, but the following extracts will suffice to show the far-reaching effects and importance of the subject.

The conclusions embodied in the Report deal, among many other points, more particularly with the following:—

Fiscal Policy.—Development of Imperial resources and the conservation of the Empire's raw materials; internal reorganisation of home industries and the assistance to be granted by the State; financial facilities for trade and the bearing of taxation on industrial development, and last but not least the recommendations of the Committee on the subject of the treatment of enemy and aliens in commercial and industrial occupations.

Important commercial and industrial interests are represented on the Committee, and although a large measure of agreement has been arrived at, several members have signed the Report with specific reservations.

The Report is one of the most important and interesting documents yet published, as a result of the commercial upheaval brought about as a direct consequence of the war.

A CHANGE OF ADDRESS.

Attention is drawn to the removal of the offices of the Meerlo Engineering Co., Ltd., to 199, Piccadilly, W.1. The new telephone number is Regent 1394. The change has been made necessary by the need to devote all the space at the works to production, which has now reached a very high mark, both as regard quantity and quality.

Although at the present time work is going forward at very high pressure, it is hoped that output may be improved still further, and inquiries for A.G.S. nuts and bolts are therefore solicited. Prompt deliveries, thorough workmanship, and attention to detail are guaranteed by Mr. John Meerlo, jun., the managing director of the company, who devotes personal attention to every order.

It is beyond dispute that aircraft manufacturers who make a practice of ordering all their small stuff from specialists increase to a considerable degree the quality and quantity in their output of complete aeroplanes.

PERSONAL NOTICES.

NAVAL.

Death.

LUPTON.—Capt. Charles Roger Lupton, D.S.C., R.A.F., who was killed on May 9th, was the only son of Charles and Katharine Lupton, of Carr Head, Roundhay, Leeds. He was 19 years of age.

MILITARY.

Deaths.

BAIRD.—At an inquest in Essex, on May 11th, on Sec. Lt. John Donald Baird, D.S.O., M.C., R.A.F., aged 20, of Prestwick, Scotland, evidence was given that when taking part in a manœuvre at a height of 6,000 ft. the officer's machine fell. He was killed instantly. It was stated that Mr. Baird was an experienced aviator.

BOARDMAN.—Sec. Lt. Alec Gilmour Boardman, R.F.C., who was killed on April 29th in an aeroplane accident on Salisbury Plain, was the son of Mr. and Mrs. John A. Boardman, of Hadley, Woodford Green. He was 18 years of age.

BROWNE.—Lt. Harold Johnston Browne, R.F.C., who was killed in action on May 3rd, in his nineteenth year, was the eldest son of Mr. Harold Browne, of 3, Fairfax Road, South Hampstead, and 163, Queen Victoria Street, E.C. He was educated at Trinity School, New York, Dumpton House, near Broadstairs, the Royal Naval College, Osborne, and Clifton College, showing considerable ability in boxing, cricket, football and all sports. He entered the R.F.C. as a cadet on July 25th, 1917, and was promoted to 1st Lt. R.A.F. a few days before his death. A brother officer, eye-witness, writes: "I pen these few lines *re* the death of Lt. H. J. Browne and his observer, O. Lt. L. J. Derrick, who fell just in front of our support lines. They were attacked by about six enemy aeroplanes very high up and unfortunately were forced to descend in flames. They appeared to be making great efforts by spiral nose-dive to get to earth before the flames overtook their position in the 'plane, but were unsuccessful as the wings appeared to close and collapse in the body; and then, seeing something had to be done, they appear to have made a jump for life. . . ."

HARGRAVE.—Sec. Lt. W. G. Hargrave, R.A.F., who was killed in Italy on April 25th-26th, was the second son of the late C. S. Major Hargrave, R.E. Born in 1891 he was serving in his father's corps in South Africa on the outbreak of war, and had completed about twelve years' service. He served in German South-West and subsequently in German East Africa, contracting malaria and blackwater fever in the latter campaign. Proceeding to Cape Town when convalescent he was sent home to take up a commission in the Royal Flying Corps, and was gazetted last August. His C.O. writes to his sisters:—"He put up one of the best shows yet done on this front. For half an hour he fought with seven enemy machines, and it is believed brought down three, though up to the present I have only been able to confirm one, and am doing all in my power to claim the other two."

HEPWORTH.—Lt. Arthur Montagu Hepworth, M.C., The Queen's, attd. R.A.F., who was killed in action on May 4th, was 31 years of age, and youngest son of the late Montagu Hepworth and of Mrs. Hepworth, of Hedsor Priory, Bourne End. He had his commission in the Queen's in January, 1915, and was promoted to lieutenant in June, 1916, before which he had been appointed acting captain.

HERRON.—Kenneth Chester Herron, Essex Yeo., whose death was announced recently, was hit by a rifle bullet while flying low over the German lines at Villers-Bretonneux, and died almost immediately. His pilot was uninjured, and flew back to the nearest British ambulance, so that he did not fall into the hands of the enemy.

KEARNEY.—Lt. Norman Charles Kearney, R.A.F. (late East Surrey Regt. and R.F.C.), was killed at Andover, Hants, on Saturday, April 27th. Mr. Kearney had just left the ground when apparently engine trouble developed. The machine stalled when fifty feet from the ground and nose-dived to earth. Death was instantaneous. The machine caught fire and was completely destroyed, but owing to the promptness of Major Joy, who rushed to the spot, his body was rescued.

Mr. Kearney was 26 years of age and was the son of the Rev. N. C. Kearney, M.A., of Geelong, Austratia, and Wimbledon, and the younger brother of Mr. E. C. Kearney, the inventor of the "Kearney" High Speed Mono Rail System. He was married in December, 1915, to Frances, the youngest daughter of Mr. and Mrs. W. Howes, of Mill Hill Road, Norwich.

He enlisted in the East Surrey Regiment in February, 1916. He was in the first Battle of the Somme and was wounded at Guillemont on September 3rd, 1916. Later he received a commission in the R.F.C., in which he was regarded as a first-class pilot, and had recently been recommended for the post of pilot-instructor. He leaves a widow and one child of three months.

MOORE.—Lt. Clive Goulding Moore, 22nd Royal Fusiliers and R.F.C., who has been missing since Aug. 15th, 1917, is now reported killed whilst flying on that date. He was the eldest son of Robert Ernest Moore, of 3, Temple Gardens, and 42, Acacia Road, and Hilda Mary Moore. He was 21 years of age.

MUCKLOW.—Edward Gerald Mucklow, R.F.C., who was accidentally killed on April 22nd while night flying, was the son of the late Walter Mucklow, of Bury and Grange-over-Sands, and Ada Mucklow, Elton, Storrs Park, Windermere. He had been flying on active service for over 14 months.

TATE.—Lt. Alan C. R. Tate, R.A.F., killed on May 2nd, whilst on an offensive patrol, aged 22, was the elder son of Colonel Alan E. Tate, C.M.G., A.D.M.S., Quetta, and Mrs. Tate, 26, Wimborne Road, Bournemouth. He was educated at Charterhouse and Stonyhurst. He was debarred by the results of an accident, which permanently lamed him, from serving in the Army at the outbreak of the war, but for a year he was an orderly under the Croix Rouge in France. In June, 1917, he entered the Royal Flying Corps as a cadet, graduating as pilot early in the present year. In March he joined a squadron at the front.

THORNE.—Lt. Arthur Burrell Thorne, R.F.A., attd. R.A.F., who died on May 8th as a result of a flying accident whilst engaged in training pupils, was the husband of Katharine Thorne (née Thursby) and the second son of Maj. Frederick Gordon Thorne, Norfolk Regt., and Mrs. Thorne, of Heacham, Norfolk. He was 23 years of age.

TYSON.—Major Eric James Tyson, D.S.O., M.C., R.F.C., died of wounds received on March 11th. He was educated at Westminster, and on leaving school entered the motor business. Immediately at the outbreak of war he enlisted in the A.S.C. (M.T.), and was all through the retreat from Mons. Later he transferred to the R.F.C., where his promotion was rapid. He was awarded the M.C. and mentioned in despatches, and subsequently acted as flying officer and instructor on home service. In 1917 he was awarded the D.S.O. for repeated meritorious service and conspicuous gallantry in the air. His Brigadier General says:—"He was the finest flier, the best squadron commander, and one of the pluckiest men I have known, and, personally, I could have spared anybody better than him at this critical time." His Colonel writes: "As his commanding officer, I cannot hesitate from saying that your son was one of the finest and bravest characters which it has ever been my fortune to meet during the whole course of my service. As a squadron commander he was without an equal, and by his personal example and cool courage his squadron has reached a most remarkable state of efficiency. The decorations which he wore, the D.S.O., and the M.C., hardly bear witness to all he has done for his country." Another Commanding Officer writes: "I use no language of exaggeration when I state that your son was, in my opinion, one of the very bravest and most dashing pilots that I have met with during the whole course of my experience. His rule of life was simple, and always explicitly followed, viz., never to ask a subordinate to do anything which he wouldn't and couldn't do himself. I think this rule was the secret of his greatness as a leader, and supplies the reason why he was so beloved by everyone in the squadrons in which he served." Maj. Tyson, who was born in 1892, was the only son of Mr. Joseph Tyson, Bursar of Westminster School. He leaves a widow and a baby son.

WHALLEY.—Walter Gilbert Whalley, R.A.F., late Canadian Infantry, who was killed whilst flying at Duxford on April 27th, was the husband of Eleanor A. Whalley, of Oxford, and youngest son of the late C. G. C. Whalley and of Mrs. Rothwell Garnett, of South Vancouver, B.C. He was 32 years of age.

Engagement.

REISS—WHITEHURST.—The engagement is announced of Peter Quentin Reiss, Lancashire Fusiliers, attd. R.A.F., son of Mr. and Mrs. Henry J. Reiss, of Holmes Chapel, Cheshire, and Vivian, younger daughter of Mr. and Mrs. Whitehurst, of Farnborough, Berkshire.

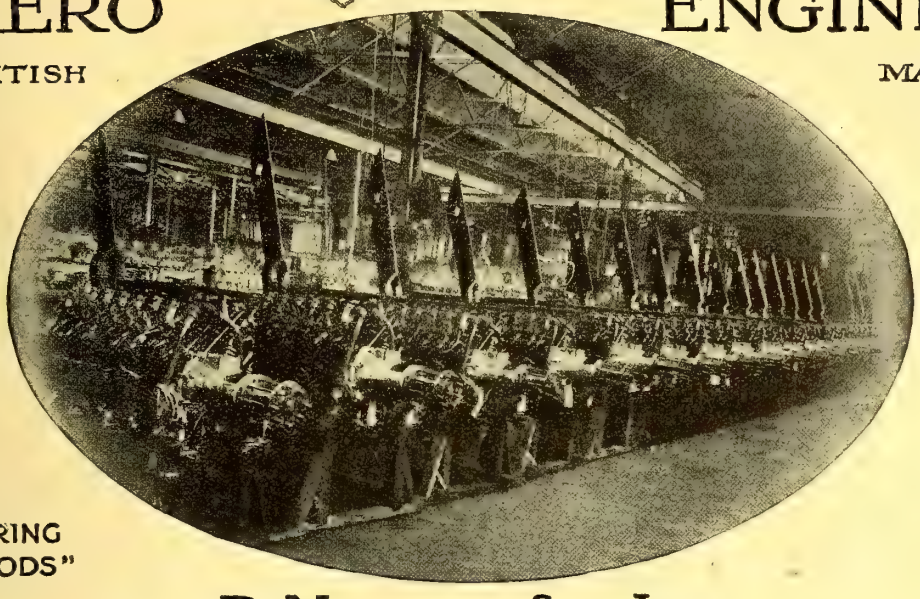
Births.

BAINES.—On May 6th, at 18, Holland Park, W., to Flora (*née* Allatini), wife of Capt. M. T. Baines, Yeomanry and R.F.C.—a daughter.

MACPHERSON.—On April 26th, at Cooling Rectory, Rochester, the wife (née Joan Howell) of Major C. E. H. C. Macpherson, Royal Dublin Fus., attd. R.A.F.—of a daughter (Nancey Jean).

MINCHIN.—On May 6th, at Bedford, the wife of Captain H. Cotton Minchin, The Cameronians and R.A.F.—of a son.

AIR FORCE.



Deaths.

BELL.—Sec. Lt. Benedict Godfrey Allen Bell, R.A.F., fourth son of Canon J. Allen Bell, vicar of Wimbledon, was killed on April 7th. Born in 1891, he was educated at Bowden House School and at Shrewsbury. In 1912 he went out to Singapore. After having made several unsuccessful applications for leave, he resigned his appointment, and reached home in

T. L. CASTLE, 2, Cricklewood Broadway, London, N.W.2

Telegrams : SKRUSADYS, PHONE, LONDON. Telephone: HAMPSTEAD 2699.

March, 1917. He joined the R.A.F. immediately, and went out to the front last January.

BENSON.—Sec. Lt. Reginald Charles Benson, R.A.F., who was accidentally killed whilst flying on May 11th, was the husband of Madeleine Benson, The Lodge, Harmondsworth, Middlesex. He was 24 years of age.

COHEN.—Sec. Lt. Benjamin Cohen, R.A.S., met his death while flying at Montrose on May 8th, owing to his machine taking a nose-dive to earth. He was 23 years of age, and a native of Montreal.

DAVIES.—At a Norfolk inquest on May 8th a verdict of accidental death was returned on the body of Sec. Lt. R. L. J. Davies, an instructor who, while practising diving at a target ground, was killed through his machine crashing to earth.

GIRDLESTONE.—Lt. Horace Wilfred Girdlestone, R.A.F., who was killed in action on April 30th, was the son of the late Henry Girdlestone, Cape Town.

HOPKINS.—While flying near an Essex aerodrome Lt. Harry Lynn Hopkins, R.A.F., fell with his machine, which appeared to stall. He was removed to a convalescent hospital near by, where it was found that he was dead.

JAMES, NASH and WARD.—Capt. Bertram James, R.A.F., Lt. Gordon Nash, R.A.F., and Lt. James Gordon Ward, R.A.F., were killed in a collision between two aeroplanes which occurred at Dartford on May 7th.

The accident was witnessed by a large number of people, as the machines involved had been performing evolutions over the town for some time. Shortly before eight o'clock the machines were seen to crash into each other, and one came down in a spinning nose-dive to the earth.

Mr. Nash lived at St. Paul's Cray, not far from the scene of the accident.

Capt. Bertram James, R.A.F., was the son of Mrs. J. C. James, of Semaphore, South Australia. He was 22 years of age.

LE FEUVRE.—Sec. Lt. W. E. Le Feuvre, R.A.F., was engaged on instruction when the machine crashed into the aerodrome, causing his instantaneous death. He was 29 years of age.

LOWRIE.—Lt. Victor William Valette Lowrie, R.A.F., who died as the result of an aeroplane accident on April 27th, aged 18, was the only son of Mr. and Mrs. Alfred Lowrie, of Lynwood, Radyr, Glamorgan. He was educated at the Llandaff Cathedral School and afterwards at Clifton College, where he held the School Racquets Championship. Last August he joined the Air Service, obtained his wings in record time, and became an instructor.

LUTYENS and PINSENT.—Whilst being tested over Surrey, on May 8th, an aeroplane collapsed in mid-air and fell to earth in five sections. The pilot, Lt. Lionel Derek Francis Lutyens, R.A.F., and a civilian passenger, Mr. David Hugh Pinsent, were killed. Mr. Pinsent's body is believed to have fallen into a lake. Lt. Lionel Derek Francis Lutyens, R.A.F., was the son of Mr. and Mrs. Lionel Lutyens, of 26, Queen Anne's Grove, Bedford Park, W. He was 23 years of age.

At the inquest on Mr. Lutyens on May 11th no evidence was forthcoming as to the cause of the accident, and a verdict of accidental death was returned. It was stated that though diligent search had been made by the police and by 1,200 soldiers of the London Regt., and though a canal had been dragged, no trace had been discovered of the body of the civilian observer, Mr. Pinsent, who was flying with Mr. Lutyens at the time of the accident. An Army sergeant stated that the aeroplane was flying at a tremendous height when it suddenly broke into five parts, which came crashing to earth. He at once ran to the wreckage, where he saw Mr. Lutyens dead, but he saw nothing of Mr. Pinsent.

David Hume Pinsent, B.A., Royal Aircraft Establishment, Farnborough, was the only surviving son of Mr. and Mrs. Hume C. Pinsent, of Foxcombe Hill, near Oxford, and Birmingham He was 26 years of age.

NASH.—Sec. Lt. Gordon Nash, R.A.F., who was accidentally killed on May 7th while flying, was the younger son of the late W. G. Nash and Mrs. Nash, of Crayfield, St. Paul's Cray, Kent.

THORNE.—Lt. Arthur Burrell Thorne, R.A.F., who died on May 8th as the result of a flying accident, which occurred while instructing pupils, was the husband of Katharine Thorne (née Thursby) and the second son of Maj. Frederick Gordon Thorne, Norfolk Regt., and Mrs. Thorne, of Heacham, Norfolk. He was 23 years of age.

WAIT.—Cadet William Winslow Wait, R.A.F., a Canadian, who was in an aeroplane which nose-dived into Elstree Reservoir on May 11th, was drowned. He was 26 years of age

* * *

SPINK.—On May 4th, at the Princess Christian Nursing Home, Windsor, Evelyn, dearly loved only child of Capt. Herbert Spink, R.A.F., of Broadwater, Wraysbury, Bucks, aged eight years.

Engagements.

HAY—LIDDELL.—The marriage arranged between Capt. J. C. M. Hay, R.A.F., and Miss M. Monica Liddell will take place on Thursday, May 16th, at 2.30, at St. Mary's, Cadogan Gardens. No invitations will be sent, but all friends will be welcome at the church, and afterwards at 20, Hans Crescent.

HUGHES-CHAMBERLAIN—SMART.—An engagement is announced, and a marriage will shortly take place, between Capt. R. Hughes-Chamberlain, R.A.F., son of Mr. R. C. Hughes-Chamberlain, late J.P., Nottingham Road, Natal, and Muriel, only child of Mrs. F. B. Smart, of Montagu Mansions, London.

Marriages.

JONES—BUCKNALL.—On April 20th, at St. George's, Bloomsbury, Capt. John Hugh Oscar Jones, R.A.F., was married to Charlotte Margaret Georgina, elder daughter of the late John Loyd and Mrs. Bucknall, of Marlborough, by the Rev. L. A. Smith, Vicar of Blayford and Rural Dean.

SWAIN—McNALLY.—On April 27th, at St. Mary's, Bury St. Edmunds, Frank Lawrence Swain, R.A.F., younger son of Frank Swain, of Sidcup, Kent, was married to Dorothea Olive, only daughter of J. F. McNally, of St. Peter Port, Guernsey, by the Rev. C. R. Farnsworth.

WALSH—SCARFE.—On May 9th, at St. Mary's Church, Finchley, Sec. Lt. George Cecil Walsh, R.A.F., son of the late Mr. C. F. Walsh and of Mrs. Walsh, 6, Regent's Park Road, Finchley, was married to Laura, daughter of the late Mr. F. N. Scarfe and of Mrs. Scarfe, Fursby House, Nether Street, Finchley, by the Rev. W. St. Hill-Bourne, Rector, assisted by the Rev. George Vasey, Vicar of St. Michael's, Brunswick Park.

Births.

COX.—On May 4th, at 24, Bath Road, Reading, to Eileen, wife of Major G. H. Cox, R.A.F.—a daughter.

HODGES.—On May 7th, 1918, at 17, Craven Road, Harlesden, to Dorothy, wife of Capt. J. S. Hodges, R.A.F.—a daughter.

LANGLEY.—On April 30th, at 13, Foster Road, Gosport, Hants, to Lorna (née Lodge), the wife of Lt. J. B. Robert Langley, R.A.F., of a son.

ROGERS.—On May 5th, the wife of Capt. Tanner M. Rogers, R.A.F., The Hollies, Kenilworth—of a son.

TRAVERS.—On May 10th, 1918, at Mole Cottage, Westhumble, Dorking, the wife of Major Benjamin Travers, R.A.F.—of a daughter.

FOREIGN COMMUNIQUES.

FRANCE.

May 7th.—During May 6th four German aeroplanes were brought down by our pilots in aerial combats and two were seen to fall in a damaged condition in their own lines.

During the same day our bombarding aeroplanes dropped four and a half tons of bombs on the railway stations of Flaville-Martel, Mennessis, Ham, Guiscard, Noyon, and Vermand.

May 10th.—Lt. Fonck, during two patrol flights yesterday, brought down six German biplanes—the first two in ten seconds, the third five minutes afterwards, and the last three in the course of his second patrol.

May 10th.—Army of the Orient.—Aircraft activity was intense over the fighting lines and back areas. Four enemy machines were brought down and one forced to land.

May 12th.—On May 10th, in spite of the bad weather, our chasing aeroplanes were active. Two German machines were brought down and eight were badly damaged. On May 11th a German captive balloon was set on fire by our pilots. On May 10th and 11th our bombarders dropped 7,000 kilos (about seven tons) of projectiles on enemy railway stations, dumps, and cantonments, especially in the region of Noyon, Chauny, and Fleury le Martel. At the last-named place several fires were observed.

GERMANY.

May 9th.—In aerial fighting during the last few days, and by our anti-aircraft guns, the enemy lost 37 aeroplanes. Ober-Lt. Schleich brought down yesterday three enemy machines, and thus achieved his 26th, 27th, and 28th aerial victory.

May 9th.—Strong enemy flying squadrons bombed the mole and the village of Zeebrugge at noon and in the evening. No military damage was done.

Two enemy aeroplanes were shot down by our aviators on the land front and another one on the sea.

May 12th.—In aerial fighting, during the last two days, 19 enemy aeroplanes were shot down. Twelve of them were brought down by the fighting squadron formerly led by Baron von Richthofen.

Lt. Loewenhardt gained his 20th and 21st aerial victories.

May 13th.—The losses of enemy aerial forces on the German front during the month of April amounted to 15 captive balloons and 271 aeroplanes, of which 122 fell behind our lines, whilst the others were seen to fall beyond the enemy's positions

During aerial fighting we lost 123 aeroplanes and 14 captive balloons.

ALL-BRITISH

M-L

MAGNETOS

THE main features of "M-L" ALL-BRITISH MAGNETOS are great reduction in size and weight as compared with pre-war magnetos of the same electrical output, effective sparking at very low speeds and strict interchangeability—permitting prompt supply of spares.

COVENTRY.

At your Service after the War

Where Flying Men are fitted out.

ONE SERVICE

Uniformity of custom and kit; on land, on sea and in the air one organisation only—unity of control centring on one ideal—efficiency. That is the ideal aimed at by the R.A.F. It also summarises the policy of Dunhills; as the R.A.F. have co-ordinated all the efforts and abilities of its two parent services for the better 'strafing' of the Hun so is every idea, every thought and every effort concentrated by the House of Dunhill on the problem of eliminating weather.

The land crab knows nothing of weather inconvenience—it is left to men of the R.A.F., who fight it in its own headquarters, to feel the full fury of its All Highest displeasure.

But Dunhills know and have provided for the worst to the last little detail; and it is just this expert "understanding" knowledge that made them so indispensable to men of the old Air Forces.

The new Force still has the old traditions, the old enemies and now they are one service they still have Dunhills for equipment—the one service that will never fail them.

Call in, if you can, at our well-known "base" in Conduit Street—a few paces from Regent Street—and inspect the full kit. Or, if London is "out of bounds," drop a line for patterns and full details which will be sent gladly on request.

Dunhills

ITALY.

May 7th.—British aviators shot down three hostile machines in the Motta di Livenza district, and bombed the enemy's rear areas between the Astico and the Brenta.

May 9th.—British aviators bombed the aviation ground at Motta di Livenza.

May 13th.—Naval.—On the morning of May 12th one of our mixed squadrons of seaplanes and aeroplanes effectively bombed the submarine base of Cattaro. Enemy chasing aeroplanes rose in pursuit without result. Notwithstanding intense enemy fire all our machines returned safely.

AUSTRIA.

May 12th.—Field Pilot Senior Lt. Link Crawford on the 11th inst. shot down two English aeroplanes, and thus gained his 22nd and 23rd aerial victories.

BELGIUM.

May 7th.—This morning, after a violent bombardment, a party of the enemy attempted to capture a trench in the region of Nieuport, while enemy aeroplanes fired with machine-guns on our advanced lines and dropped bombs on the town of Nieuport The enemy attempt was unsuccessful.

May 8th.—One of our aviators set fire to two German balloons near Zarren.

An enemy aeroplane was brought down in our lines by one of our machines. It crashed near Westvleteren.

May 9th.—Enemy aeroplanes bombarded several of our cantonments without success. Our aeroplanes were very active during the day.

TURKEY.

May 5th.—West of the Jordan, as the result of an air fight, an enemy aeroplane was brought down in flames.

May 8th.—By a daring surprise attack our troops captured an enemy position south-west of Umm esh Shert.

May 8th.—Our aeroplanes attacked early in the day the enemy's camp near Jericho.

May 10th.—In the coast sector our aviators brought down two machines, which fell in flames.

BULGARIA.

May 4th.—In the Tcherna bend a squadron of German aeroplanes brought down an enemy machine, which fell in front of our positions and was destroyed by our artillery fire.

May 6th.—In the Moglena region and west of the Vardar two enemy aeroplanes were brought down.

May 7th.—East of the Tcherna a German aviator brought down an enemy aeroplane, which fell in flames behind our positions.

SERBIA.

May 9th.—Allied aviators have bombarded the aerodrome at Drama and the cantonments at Beranci.

THE WORK OF THE K.Bs.

The following, presumably official, account was published in the daily newspapers of May 13th :—

It was not until the early months of 1915 that the Kite Balloon division of the R.N.A.S. came into being. When the demand for observation balloons for the Dardanelles operation came through in March of that year the Royal Navy was able to send out a completely equipped Kite Balloon Section in a specially fitted steamer. The vessel, the "Manica," a converted tramp, which arrived just a month after the demand was made, immediately proved the value of the unit. Within three days a Turkish camp was shelled under the direction of the kite balloon, and the occupants thrown into confusion; while in the following week the "spotter" directed fire on the Gaba Tepe position, which resulted in the destruction of the barracks.

However, the triumph came before April was out, for from their aerial perch the observers spotted, lying quietly in the water on the other side of the Peninsula, out of sight of our warships, a large Turkish transport. The transport apparently considered herself quite safe. H.M.S. "Queen Elizabeth" was operating near by the balloon ship, and the bearings of the Turkish vessel were given her. The first shot fell short. By this time the other ships near by were beginning to take an interest in what was happening to "Elizabeth's" invisible target, which was lying nine miles the other side of the Peninsula. A second shot went nearer the mark. Again, the direction was corrected, and a third heavy projectile screamed overland. By the telephone wire of the kite balloon came the words, "Got her. She's sinking by the head." The signalman semaphored this literally to "Queen Elizabeth," and a roar of laughter went up as the various ships read the laconic message.

Repeated attacks were made by the Turks on the solitary kite balloon and her parent ship, but they were fought back. The effect on the Turkish shipping was evident, for whenever the "Manica's" offspring ascended, the enemy craft, remembering the fate of the transport, hustled off out of range of our big guns. The official record of the "Manica" for the next fortnight was as follows :—

April 28th.—Two field batteries silenced; several guns destroyed.

April 30th.—Chanak shelled; burned for two hours.

May 2nd.—Battery of 8-inch guns shelled; three direct hits.

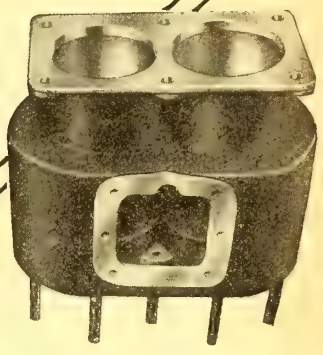
May 8th.—Four batteries silenced.

May 12th.—House, reported to be Turkish Headquarters, destroyed.

This and other work was a wonderful tribute to the efficacy of the new observation contrivance, and it should be remembered that barely two months before there was not a single kite balloon in England, and that the whole of the section was in an embryonic state. The experience gained in the "Manica" was the foundation of what is now an active branch of the Royal Navy.

[The history of how the K.B. came to be adopted at all, despite official opposition, is a matter of internal history, to be told after the decease of D.O.R.A.—Ed.]

A Series of Official Photographs of the Sablon Station at Metz showing the results of a bombing raid.



"The best job I have ever had done"

This is what the man to whom these agricultural tractor engine cylinders belonged said, when he came to collect his repair. This is what everyone either thinks or says about the job he sends to :—

THE NEW WELDING Co.

Ask any Engineer

in your neighbourhood where he sends his welding repairs, and send yours to where ninety-nine out of every hundred send theirs—THE NEW WELDING CO. The Engineer has proved for himself that there is no repair service in the country where he can obtain a better job, at a more reasonable price, or in quicker time.

PRACTICAL FLYING

3/9 Net

COMPLETE COURSE of FLYING INSTRUCTION
By a FLIGHT COMMANDER.

THE FIRST PRACTICAL WORK on actual TRAINING and INSTRUCTION for the R.A.F. Written and illustrated by practical Flying Officers who have had considerable experience as instructors under Service conditions.

With an Introduction by Major-General W. S. BRANCKER, R.A.F.

OVER 100 ILLUSTRATIONS, Diagrams, etc. Special Pull-out Map, illustrating a Cross-Country Flight.

The following subjects are covered :

THE theory and practice of flight —Principles of aeroplane engines —The first lesson in the air—The first solo flight and aerodrome practice—The use and working of the instruments—Map reading (illustrated with special Ordnance Survey Maps)—Preparing for a cross-country flight — Cross-country flying — Advanced flying — Night flying, etc.

Everyone who takes an interest in Aviation will find in this work a very clear exposition of why an aeroplane flies, how it is flown, and the manipulation to produce apparently difficult "stunts."

WAR SERVICE MANUALS — TP LTD

"Practical Flying" is only one of many War Service Manuals. *Write for complete list.*

KINDLY MENTION "THE AEROPLANE" WHEN CORRESPONDING WITH ADVERTISERS.

AIR WORK ON THE WESTERN FRONT.

The "Times" correspondent writes from the British front on May 10th:—

The few days of fine weather have given our flying men another chance, and, as you know from the official communiqués, they have made good use of it.

German airmen taken prisoner lately say that they are now having great difficulty in replacing the personnel, their Air Force having lost some 700 pilots and observers since the beginning of the offensive on March 21st. One reconnaissance flight alone has lost 130 of its men.

They speak with the greatest admiration of British airmen, but mitigate their compliments by declaring that our machines are better than theirs—all of which is only evidence that their moral is badly shaken.

It is reported that Lt. von Richthofen, brother of the famous flying man recently killed, and who was said to have succeeded to the command of the "circus," has had his skull fractured from a fall of his machine after a fight, and will be unable to fly again.

An extraordinary example of the superior moral and fighting quality of our flying men is given in an incident which occurred three days ago, when on May 7th two of our two-seater fighting machines fell in with a patrol of seven German scouts, and immediately gave battle. While the fight was on, two other enemy patrols of about equal strength hove in sight, and joined in, until there were either 20 or 21 German machines engaged against the two British.

The fight went on for half an hour, in the course of which our two actually shot down eight enemies and sent down others out of control. Of the machines certainly shot down four broke into flames in the air, and four were seen to go straight to earth and crash. Our two only broke off the fight when all their ammunition was exhausted, and then, out of 20 or so Germans originally engaged, only seven were left in the air.

On the following day these same two machines again fell in with a party of the enemy, of whom they shot down one and sent three more down out of control, so that the total "bag" for the two machines in two days was nine machines destroyed and apparently an equal number driven down.

In another case, on May 6th, one British machine gave fight to five Germans, consisting of four triplanes and one scout, and shot down two triplanes and came home safe.

In other ways also the Royal Air Force has been doing splendidly. The co-operation of aeroplanes with artillery and infantry has been magnificent in all kinds of weather, and an

enormous amount of bombing of enemy troops, railways, billets, transport, batteries, and so forth has been done, as well as harassing troops on the roads and in the trenches with machine-gun fire from low down. Prisoners continually tell us of the great damage done, especially by bombing, in the Albert, Bapaume, and Bray areas.

THE WAR IN REVIEW.

La Revanche.

Reuter's correspondent writes from Paris on May 10th :—

The following details are available of the exploit mentioned in this afternoon's communiqué of Lt. Aviator Fonck yesterday. He left in the morning, telling his comrades that he would avenge the death of Lt. Chaput. Shortly after his departure he encountered an enemy formation of which he brought down two machines within ten seconds, and, pursuing another, also sent it to the ground five minutes later. He then returned to his aerodrome, and, after a brief rest, set off again. During his second flight he brought down another three enemy two-seaters in less than five minutes.

Observation Extraordinary.

From the "Daily Express" of May 11th :—

According to Lt. Depret-Bixio, of the French Army, who is a naturalist as well as a flying man, many insects follow captive balloons in their ascent. He has seen flies go as high as 2,970 feet, after which they die. Grasshoppers cling to the basket of the balloon until the air becomes too rarified for them, when they let go and fall. He says the swallows have a glorious time catching these insects.

Italian Notes.

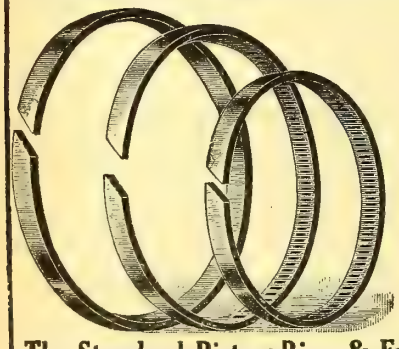
The Hon. E. Chiesa replying in the Upper House to an interrogation on the Air Service on April 30th said that though they now had 150,000 men in the Service, and the experimental and building sides of the organisation were in excellent working order, yet the ideal organic form of the Aeronautical Corps had not been arrived at.

The present arrangement whereby pilots of all ranks still belong to a regiment and are merely attached to the Flying Corps is unsatisfactory. Seniority and such-like thorns are not easily avoided: *e.g.*, men from certain regiments get seniority quicker than those from other regiments.

In the hope of being able to re-organise the aviator officer's military career on a juster basis the Commissary said that the changes only just lately introduced into Allied England's Air Force are being closely watched.

In respect of a certain great and recent loss which aviation here is mourning, it has been hinted in print that the large eight-cylindered engine used has very high compression, early timing, and very advanced ignition. The inference is that the engine might very conceivably set its carburettors ablaze.—T. S. Harvey.

Austro-Ukrainian Aerial Traffic.



A Reuter message of May 13th states that aerial traffic between Vienna and Kieff appears about to come to an untimely end. "Az Ujsag" (Budapest) quoted by the "Kreuzzeitung," attributes the impending stoppage to the variability of the weather, to the fact that the aeroplanes used too much petrol and also to the improvement in the railway connection between Vienna and Kieff.

The First American Citation.

The "Times" correspondent with the American Army writes on May 6th :—

Sec. Lt. Alonzo M. Seymour, whose home is at Peekskill, New York, was the first American to receive individually the French Army Corps citation with the Croix de Guerre to-day. He is a probationary aeroplane observer. The citation states that he distinguished himself immediately after the arrival

CARBURETTERS

H. M. HOBSON, LIMITED

29, Vauxhall Bridge Road, London, S.W.1

his unit by his daring and quick perception, directing on April 12th a successful service for the Army, despite bad atmospheric conditions and constant attack by enemy anti-aircraft guns, and ably conducting from beginning to end our demolition of a troublesome enemy battery.

[One does not forget that the whole of the old original Lafayette Squadron had the Croix de Guerre, and some of them the Légion d'Honneur a couple of years ago.—Ed.].

The Liberty Engine.

The "Times" correspondent at Washington writes on May 7th as follows:—

There have been bitter attacks on the Liberty engine, but I am in a position to assert, without qualification, that the Liberty engine will give magnificent results when used for the purpose for which it has been designed. One of the great causes of delay has been the desire of the military authorities to attain perfection, instead of being content with an excellent performance. Minor improvements have proved useful, but no essential changes have delayed construction.

[Judging from American reports the puissance of the Liberty engine is about analogous to the "almighty dollar"—in the United States, if nowhere else.—Ed.]

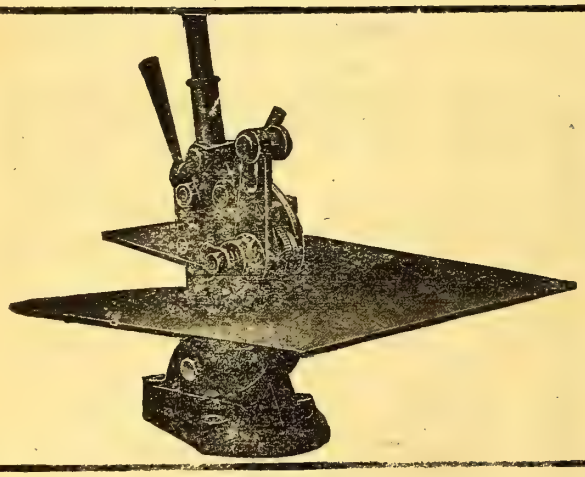
Tactical Operations.

Reuter's Special Service reports from the British Front in France on May 8th as follows:—Fighting continues in fine weather, with good visibility, so that the airmen of both sides are very active, with our own, as usual, rendering splendid service to our artillery in addition to swooping down and engaging the hostile infantry. The tactical objective of the operation would appear to be an attempt to clear the way for a thrust towards the Scherpenberg from the north-east, and it may prove to be but the beginning of further fierce fighting in this region.

A Booby Trap.

The correspondent of Reuter's Special Service with the American Army reports May 7th:—

The "Flying Circus" has been busy all day with tricky tactics. Once an American machine, answering the challenge of a German over the lines, was set upon by four others, which had been "sitting" in the clouds above their companion. Several times our machines on answering challenges have found double the number of Boches reported when they arrived at the spot.



[This "novel trick" dates back to somewhere in 1915.—Ed.]

Aeroplane Construction

In aeroplane construction the vital factor is "how many machines can be turned out in a given time." This depends entirely upon the efficiency of the machinery employed. And **no** machine reaches its highest point of production until its clutches, brakes, etc., are fitted with Ferodo Fabric.

Ferodo Fabrics are the most efficient transmitters of energy. Leather, wood, textile beltings, etc., are out of date for Friction drives and Braking purposes. The moment they become soaked with oil they are useless; Ferodo Fabrics never slip, never seize; are not affected by water, oil or acid, and are absolutely reliable under all conditions.

An Engineering Firm in South London, engaged on aeroplane metal spares, requires an engineer for estimating, costing, and progress work. Good salary will be paid to capable man. No one already engaged on Government work or residing more than 10 miles away will be considered.—Apply, stating age, experience, and salary required, to Box No. 3579, THE AEROPLANE, 166, Piccadilly, W.1.

Metal Fitters required, preferably with experience of small parts. Tottenham district. Full union rates.—Apply, A. C. H., care of Messrs. H. Lebus, Finsbury Cabinet Works, Tottenham, N. No person already employed on Government work or resident more than 10 miles away need apply.

Required, Experienced Lady Tracer for aircraft work, London district. One used to detail.—Reply, stating age, full particulars of qualifications, and salary required, to Box No. 3605, THE AEROPLANE, 166, Piccadilly, W.1.

Required, Energetic Man for progress department in aeroplane factory, London district. No person resident more than 10 miles away or already engaged on Government work need apply.—Reply, stating age, experience, and salary required, to Box No. 3604, THE AEROPLANE, 166, Piccadilly, W.1.

Draughtsman and Assistant Draughtsman required for aircraft work. First-class men only need apply. No one already on Government work will be engaged.—Applications must be made through your nearest Employment Exchange, mentioning this paper and No. 3603.

Chief Buyer required for aeroplane works in London. Must be reliable man, and have had previous experience for purchasing for aeroplane or mechanical engineering works. Knowledge of tools an asset. No one already on Government work or living more than 10 miles away will be engaged.—State age, salary, and experience to Box 399, Sells, Ltd., 168, Fleet Street, E.C.4.

Superintendent, Metal Departments, required for aeroplane works in London. Depts. include machine shop, tool room, fitting shop, and tinsmiths' shop. Experience of repetition work and automatics essential. No one will be engaged who is on Government work or living more than 10 miles away.—State age, salary, and experience to Box 398, Sells, Ltd., 168, Fleet Street, E.C.4.

Wanted, several experienced aeroplane draughtsmen; must be able to do detail design and simple stressing of detail parts. No person already on Government work will be engaged.—Apply your nearest Employment Exchange, mentioning this paper and No. A.5248.

SITUATIONS WANTED.

Works Manager, free to re-engage immediately. Twenty years motor, five years aero engines and planes: British, American, and Continental experience. Guarantees rapid, up-to-date and economic production. No service obligations.—Reply, Box No. 3551, The Aeroplane, 166, Piccadilly, W.1.

Position of Trust. Foreman Erector preferred. Three and a-half years' practical experience on various types of aeroplanes and seaplanes. Trial solicited.—Box No. 3599, The Aeroplane, 166, Piccadilly, W.1.

Mill Foreman, disengagad, recently engaged in large London aircraft factory. Good organiser. Used first-class accurate work; reliable; good references.—Foreman, 52, Stanger Road, South Norwood.

Aeronautical Engineer, well used to design and construction of aircraft, stresswork, tools and planning; shortly at liberty for responsible position in shop or D.O.—For particulars, apply C. E., 384, Goldhawk Road, W.6.

Works Manager, aircraf, disengaged about May 15th, seeks re-engagement. Sound knowledge construction all types of aero and seaplanes (including Handley Page). Can introduce effective methods for equipment and quick production. References, similar capacity, very good. Near London preferred.—Answer, Rose' "Spera," Wavendon Avenue, Chiswick, W.4.

Young Man seeks situation as works inspector or assistant; thorough knowledge of plane assembly. Final erection, details and timber; late A.I.D. Practical man. Grade 3.—Reply, Box No. 3601, The Aeroplane, 166, Piccadilly, W.1.

WANTED.

Wanted Woodwork for aeroplanes, very large up-to-date factory, fully equipped with latest machines; any class of aircraft work undertaken; prompt deliveries; best work.—Apply Box 3030, The Aeroplane, 166, Piccadilly, W.1

A London Firm in South-Western district has facilities for doping and covering, in addition to woodwork of all descriptions, with a large output and guaranteed deliveries. Estimate on application.—For further particulars, apply Box No. 3535, The Aeroplane, 166, Piccadilly, W.1.

Woodworking Firm (just finishing contract for flying boat parts) is prepared to undertake machining or assembling of any class of aircraft work, large works. Fully equipped with latest machinery; accurate work and prompt delivery guaranteed.—Apply, Box No. 3529, The Aeroplane, 166, Piccadilly, W.1.

Wanted, Woodwork Parts for Aeroplanes. Well-equipped factory.—Apply Box No. 3600, The Aeroplane, 166, Piccadilly, W.1.

HAULAGE.

Steam and Petrol Motor Wagons for Hire, for timber transport.—Apply, Silwood Storage Co., Ltd., 7, Victoria Street, Westminster, S.W. Telephone, Victoria 6882.

ENGINEERING.

ON GETTING ON WITH THE WAR IN AMERICA.

All catch-phrases, like catchy tunes, are apt to be overdone. Being catchy, they catch the limited intellect most easily, and the limited intellect, being without resources of its own, proceeds to wear out its newest toy in the manner usual with childish minds. The latest phrase to be worn thread-bare is "get on with the war." Really it is quite a good phrase, and, properly applied, it is of national importance. Improperly applied, it becomes either a nuisance or a camouflage, or both.

As a case in point, when some truly patriotic member of Parliament tries to bring home to the House of Commons some of its sins of omission or commission, and goes too near the unpalatable facts—as, for instance, Lord Hugh Cecil did quite recently—his home truths are drowned by cries of "Get on with the war!" vociferated by perhaps dozens, perhaps hundreds, in any case the majority of those present, none of whom have done more towards helping the victory of the Allies than to spend some of their time in the House of Commons and thereby deprive themselves of that much time in which they might have done worse harm outside. Thus these blatant M.Ps. at the same time hinder those who want to get on with the war, and throw a camouflage over themselves by pretending to rebuke others.

A Critical Period.

Nevertheless there are distinct signs that we shall really be doing something definite towards winning the war ere long. We are to-day passing through one of the most critical periods of the war, but one believes that the actual critical point was passed when the Germans failed to reach Amiens and failed to take Hazebrouck.

Some people seem mighty concerned about the fate of Ypres, but actually Ypres is of no importance whatever, and the Army would in fact have been stronger by many good men—probably several divisions—if General Smith-Dorrien's advice had been taken years ago, and if we had then drawn our trench-line behind Ypres instead of in front of it. However, what is done cannot be undone, and the magnificent quality of the Allied Armies in France is the best insurance against any chance of a moral rot setting in, even if much more than the flattened town of Ypres and its surrounding quagmires were presented to the enemy. The French catch-phrase "*Passeront pas*," which amounts in France almost to the importance of the foundation of a religious faith, expresses the situation at its worst.

It may be a long while before "*Passeront pas*" becomes "*En Avant!*" but the time for advance is coming, and the coming of that day depends on our methods of getting on with the war behind the fighting line. If each person in the Allied countries devoted himself, or herself, wholly to that task henceforth, instead of seeking for personal aggrandisement or enrichment, or indulging in internal quarrels, the critical period would be very much shortened.

Good Out of Evil.

It is curious how good comes out of evil in critical periods. As a notable instance take the aircraft position in general and that of America in particular. It has recently been announced officially that President Wilson has appointed a controller of aircraft production to supersede that monumental wash-out, the much-boomed "Aircraft Production Board." It has also been admitted openly that out of the 10,000 American aeroplanes, more or less, which were advertised to have darkened the sky and reddened the soil of Germany by about this period of the war, some two or three samples—alleged to be of indifferent merit—had actually reached Europe up to approximately the end of April.

An amiable effort was made in the press recently by Mr. Edward Price Bell, the well-known American publicist, to gloss over this non-arrival to schedule time by explaining that shipping space was better employed in transporting men and food to Europe than in bringing aeroplanes, and that American factories were better employed in making school machines on which to give elementary training to would-be pilots and observers on the American Continent, than in making war machines. All of which is perfectly true, though it has so fallen out by the Grace of God and not by any human design.

Many men and much food can be conveyed in the space which would be needed by few aeroplanes, and meantime the American factories are learning, while building school machines, how to tackle the higher art and science of building war machines.

The Better Whole.

It has been announced officially that there are now half a million American troops in Europe. There would have been many less if America had started shipping aeroplanes in quantities. All men and no aeroplanes constitute a better whole than part men and part aeroplanes, for the men are wonderfully good, and the aeroplanes would indubitably have been wonderfully bad.

The American who elects to join the Allied Air Force is, on the average, of very high quality. Before America came into the war we had many citizens of the United States, generally posing as Canadians, in both the R.N.A.S. and the R.F.C., and there were many in the French Service d'Aviation also. Their notions of discipline were quaint, according to our old-world ideas, but they were—and are, one may still say of most of them—magnificent fighting men. Moreover, they seem to have natural aptitude for flying, an aptitude due doubtless to their initiative and self-reliance inherited from ancestors who would not have become Americans if they had lacked the initiative and self-reliance which

forced them to go and carve out for themselves a new nation in the New World.

One notices also that many Americans who come to Europe take the war very seriously, and do not regard it either as a glorified form of sport, as an outlet for their own ambition, or as merely a bit of a bore which cannot be helped and so must be endured with as little personal inconvenience as possible. They seem rather to be quite determined to get on with the war as expeditiously as possible. Which is very estimable, so long as the individual retains his personal sense of humour.

American Humour.

Apropos which, some of our American Allies are already enriching the language of aviation. As for example an American pupil who landed at an aerodrome in England in the course of a cross-country flight, and crashed his machine rather badly. Having extricated himself from the wreck, he wandered up to the Squadron Office, and, addressing himself to the C.O., remarked: "Say, Mister! Are you the Big Noise in this Constituency?" The C.O., being used to the unconventional American, civilly admitted the soft impeachment. Whereupon the pupil continued: "Well! I've come to tell you that my gasoline kite has spread itself some over your pasture."

History unhappily fails to record the rest of the conversation, but one is grateful for even so much enrichment of the English language. "Gasoline kite," or more briefly "gas-kite," has now passed into standard use at some of our aerodromes. Not that our British aerial navigators cannot themselves turn out expressive terms when necessary. For instance one gathers that, as an off-set to the name "Blimp," applied to the small submarine scout airships, the crews of the largest-sized airships, intended, like the German Naval Zeppelins, for deep-sea air work, in connection with battle fleets, call their big craft "Battle-bags." Which seems quite distinctive and expressive, if a trifle inelegant

The Serious Mind.

Nevertheless, not all Americans are gifted with a sense of humour, and one gathers from one or two letters that certain recent remarks in this paper on the much advertised Liberty engine have been taken *au grand serieux* by a few Americans now in training in this country, who, to judge from their writing, believed that one's endeavours to correct over-enthusiasm, and so to prevent disappointment, by a little gentle sarcasm, were likely to imperil our alliance with the United States and lose the war.

One learned then for the first time that Americans actually exist who object to having their legs pulled. Really, people who take life so seriously as all that may be in grave danger of taking death equally seriously, and that is a fatal attitude of mind for a soldier, whether an aviator or not. It is an excellent thing to be serious about one's work, but it is quite dangerous to one's work to be too serious about life in general.

One prefers the attitude of mind of one of our dead pioneers of flying, who always took the greatest care to see that the curious contraption which he flew was in the best possible order, though he invariably laughed at its construction, its engine, and everything in it, and when he had made a bad job as nearly respectable as it could be made, used to push off into the air, after remarking, "I will now proceed to have another grapple with Gabriel." Eventually Gabriel won, for that pioneer was killed in trying to avoid killing people in a crowd, which he could only avoid by an evolution which was impossible on the machine which he was flying, though it would have been simple enough on a modern aeroplane. He was deadly serious about his work, but to him life and death alike were a joke.

The Liberty Engine.

However, to return to the Liberty engine, and getting on with the war. Opinions of Americans who ought to know range all the way from the belief that "the Liberty is the last possible thing in gasoline engines," to an equally sincere belief that in making the Liberty engine in vast quantities "the United States is engaged in piling up the World's Record Junk-Heap." Probably the truth is somewhere between the two.

The Liberty looks quite a nice engine. It is free from external gadgets, which of course pleases the engineer who judges by externals, and forgets that a French locomotive with, so to speak, all its bowels outside, puts up as good a performance as any British engine, and is easier and quicker to repair in small matters. It would, for example, please the American who, after watching a wonderful test-run by a Rolls-Royce, allowed that it was "some engine" and then remarked, "but, say, it could do with a shave." Personally, one prefers to have an engine, or a car, bristling with gadgets outside where one can get at them, instead of having them stowed away so that one has to dismount the whole engine to adjust a throttle lever or renew an oil-pump washer.

On test Liberty engines produced in experimental shops have done very well indeed. It remains to be seen whether those turned out by the thousand in "automobile plants" will do as well.

The most surprising thing is that so knowledgeable a people as the Americans should have concentrated so much energy on a water-cooled engine, just when the Germans had discovered that water-cooling is not the only thing for war flying. A bullet grazing a cylinder of a water-cooled engine means a perforated jacket and seizing up inside ten minutes. A graze on an air-cooled cylinder probably means no damage at all.

Also the Germans have apparently made up their minds that their powerful water-cooled engines are not the best things for single-seat fighters, for, after trying the eight-cylinder 240-h.p. Mercédès and the six-cylinder 260-h.p. Mercédès, they came back to the 180-h.p. six-cylinder, with specially high compression, a lighter engine altogether, which meant a lighter aeroplane, quicker to manœuvre in fighting. And after that they mounted their crack fighting pilots on triplanes with 110h.p. air-cooled engines, which, despite shocking construction, were actually better fighting machines, and would have played havoc with the French and British aviators but for the fact that the newer machines and engines of the Allies were still quicker in handling and better built.

It is, therefore, the more surprising that, with the amount of experience of the Franklin system of cooling available all over America, from the hottest climate in the Southern deserts to the coldest in the high-level roads of the Rockies, America should have standardised on water-cooling. One is given to think whether, in America as elsewhere, vested interests are stronger than the desire to get on with the war.

America's Mistake.

The worst mistake made by the Americans to whose care the production of aircraft was committed a year ago was in assuming that they knew anything about aeroplanes or aero-engines. So far as one can recollect none of the important gentlemen who constituted the Aircraft Construction Board had had any previous experience of aircraft work, and so far as one can gather they were not particularly anxious to consult the few men in America who had practical experience of flying.

Their mistake was not due to lack of opportunity to learn, for Americans were the first men to fly, and only the truly Anglo-Saxon thick-headedness of the American business man prevented America from being the leading aeronautical country before the war and caused it to be the last. Not only were Americans first in flying from the ground but they were first in flying from water, and yet my esteemed friend Glenn Curtiss could obtain no support in his own country. The enormous growth of his factories before America came into the war was due to orders from Britain and Russia, and not to American business acuteness

All the other American aeroplane makers were entirely neglected and one can scarcely blame them for failing to make good on quantity-production propositions in one year. The man who has been in the habit of making one aeroplane a year in a shed, assisted by two men and a boy, is scarcely fitted to run an aeronautical sausage factory, and the man who has run a plant which makes automobiles or rocking-chairs by the million is still less fitted to make aeroplanes of war. So naturally America has had much to learn.

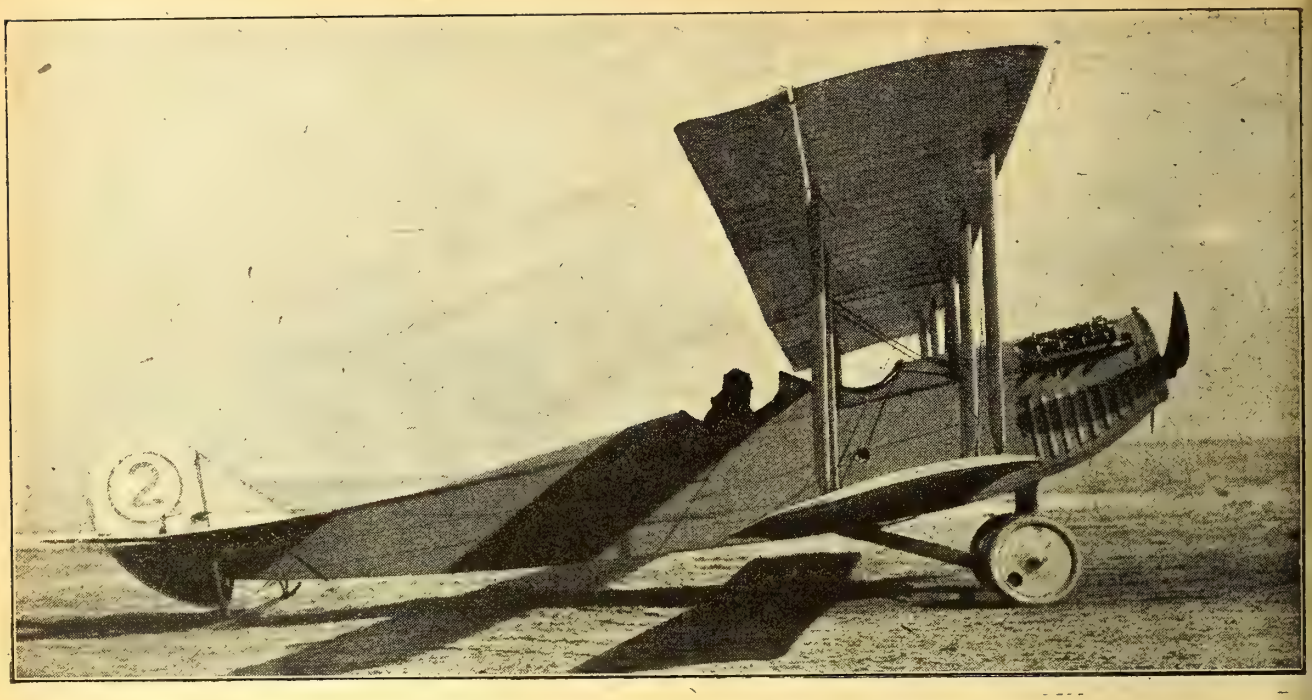
However, it now seems that the Aircraft Production Board, which apparently has made every possible blunder in the past twelve months, has been washed out, and that a capable Irish American, Mr. Ryan, has been put in sole charge of the job, to do for America what Sir William Weir has done for Great Britain. In America the Irishman does the things which in England are done by the Clydeside Scot, so the appointment seems full of promise.

The Wrong Way to Work.

Lord Derby—whose recruiting scheme has left such a bitter taste in the mouth of those who trusted that nobleman's word—said in a recent speech that one should check the desire to find something wrong with another nation and should dwell on that which is good.

Lord Derby's official position gives more weight to his *obiter dicta* than does anything among his own acts or words in the past. He has consistently displayed complete misunderstanding of human nature, and never more so than in this latest saying. Nothing is more deadly to the success of the Allies' cause than complacent mutual admiration.

This desire to hide all that is bad, although it is known to exist, and to glorify what is fair to moderate, is merely another manifestation of that all-pervading Nonconformist Conscience which has so hindered us in getting on with the war.



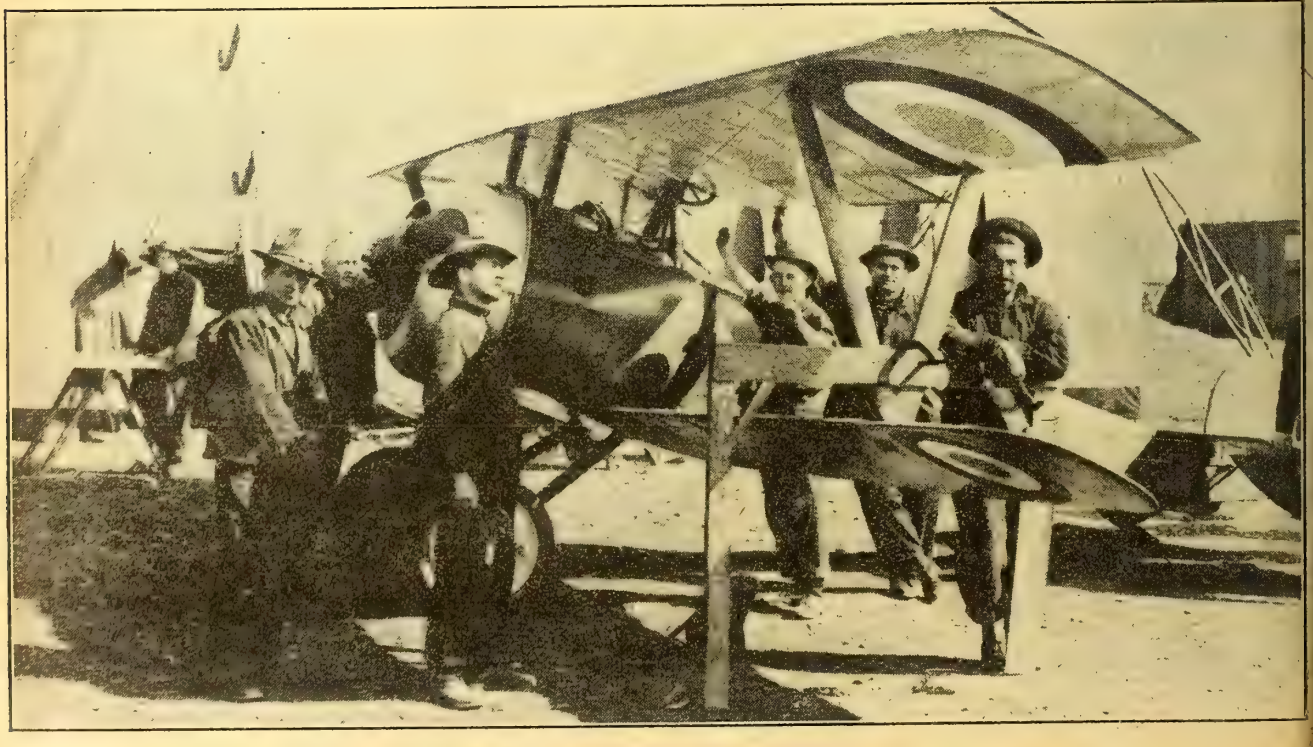
Our Government-doped press keeps on telling the people of this country that all is well with the Navy, all is well with the Army, all is well with the Air Force, all is well with all our Allies, and all is well with the Government—especially the Government. The result is that the unthinking millions who read those papers really believe that all is well and simply sit with their hands in their pockets and believe that they have won the war.

It does not seem to have occurred to the Government and its hangers-on that the time will come when even the fool Englishman's intelligence will awake sufficiently to prompt him to ask why, if everything is so perfect—especially the Government—we have not won the war. When once he shows so much intelligence he may either decide that we cannot win the war, or he may decide to make somebody pay *in corpore vile* for not winning the war—especially the Government.

Possibly the recently adopted Government policy of

AT AN AMERICAN TRAINING SCHOOL IN FRANCE. Mr. Baker, the American War Secretary, watching a "fly past" of American Aviators on un-American aeroplanes.

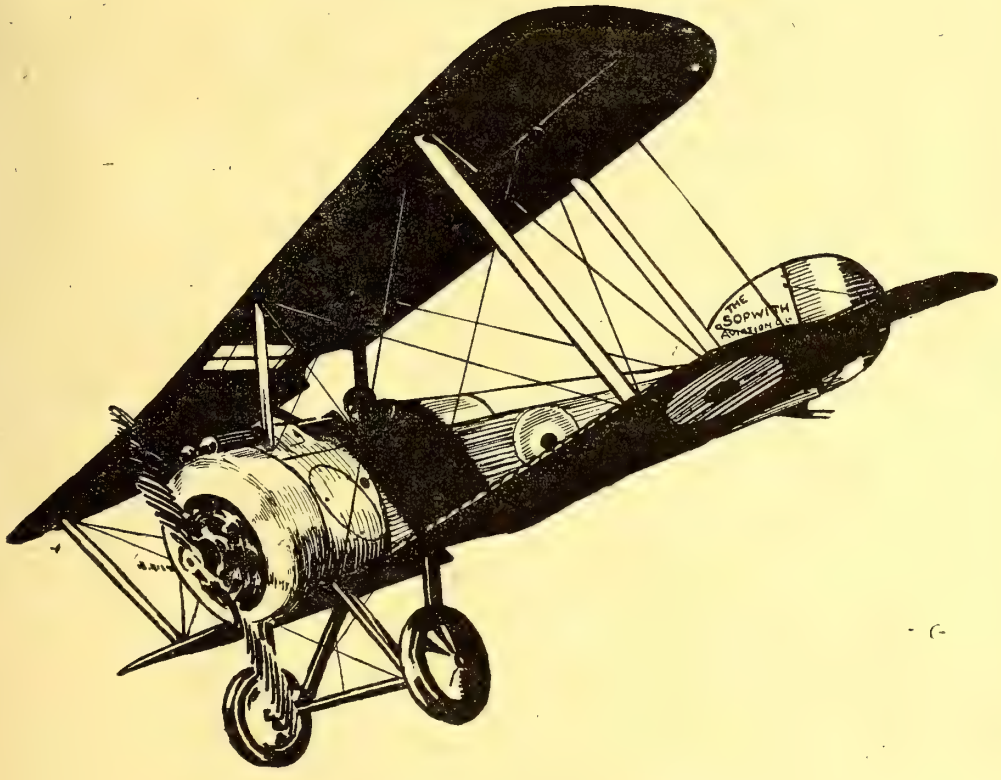
A Typical American "Training Tractor," the J. N. type Curtiss.



"when in difficulties blame the soldier" may show an appreciation of the situation indicated in the foregoing paragraph, but the Government may find that when it comes to the pinch the people will awake to the fact that in these days the People and the Army are the same thing, and that the Government is something very different—thank Heaven for it. In that day the People will follow their Military leaders and not their political misleaders.

Meantime, the Government is sedulously going the wrong way to work either as concerns maintaining the confidence of the people or getting on with the war. Instead of dwelling on that which is good—especially in the Government—let it find what is wrong, and let it advertise the fact that it is being put right both here and in Allied countries.

Cleaning Up.



France is clearing out her Bolos and *Bonnets Rouges*, and is advertising the fact. If Sir Cecil Spring Rice had lived, instead of dying mysteriously in Canada, we might have by now been doing as much in this country. America is cleaning up her aircraft production and her other scandals, and is doing it, like France, openly so that the confidence of the people is increased by seeing that the rulers of the country are in earnest. Which is precisely what is not apparent in this country.

Only in England, where everything is so perfect—especially the Government—none is made to suffer for alleged error except the men who have won the confidence of the Navy and the Army and the Air Force. Which is so likely to increase the confidence of the King's Armed Forces in their leaders, is it not?

Wakening the Anglo-Saxon.

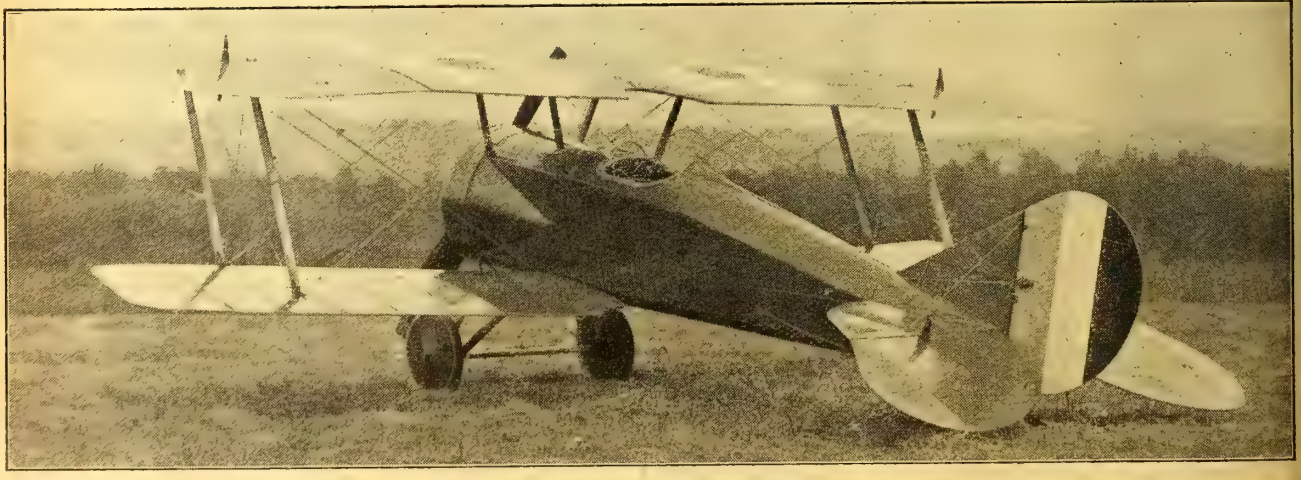
As one has said on previous occasions, the only way to instil life into an Anglo-Saxon is to scare him to death. This applies just as well to the Anglo-Saxon American as to the Englishman.

Tell an Englishman that his Army is broken, if not beaten—as Mr. Hamilton Fyfe told us in 1914—and he will enlist in his millions to prove you a liar. Tell him that his Army has won the war and he will become a concentrated Cuthbert, and will use all his ingenuity in dodging military service.

Tell an American that he cannot make aeroplanes, that his wood-work is not fit to be used in soap-boxes, that his engines are only fit for the junk-heap, and that his engineers are only capable of making preserved meat cans, and he will start right in to make real flying machines fit for war work. Tell him that his "airplanes" have a remote resemblance to the apocryphal instrument which his journalists call a "battleplane" and he will flap his arms like an American eagle and scream that he has got the Archangel Michael beaten to a frazzle as a fighting aviator.

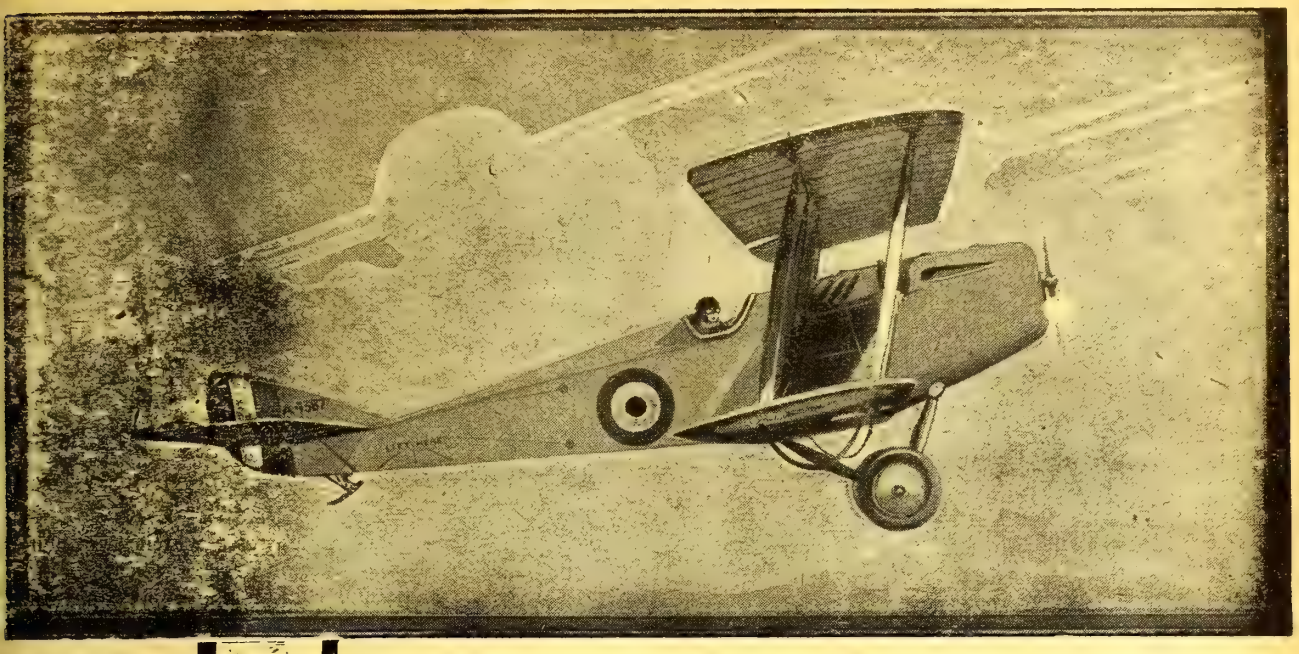
It is no good handing out what the American calls "taffy" to the Anglo-Saxon, no matter which side of the Atlantic he inhabits. As Mr. Kipling has said, apropos dealings with the English:—

"Don't ride over seeds, keep your temper, and never you tell him a lie."



Which is precisely what those in authority in this country—especially the Government—do not yet seem fully to comprehend.

Quick Reforms.



Very soon after America's entry into the war, a wise American remarked that America would make all England's mistakes and a lot more besides, and much bigger mistakes, but that she would make them in twelve months instead of in three years. One has heard much in the past of "graft" in America. It was rampant in the Civil War of the 'sixties; it is said to be as bad to-day. But the virtue of graft in America is that there is no particular objection to a man's grafting so long as he delivers the goods. America is not the victim of the Nonconformist Conscience as we are in this country.

Our system of graft consists in social and personal influence, in the Chapel, the Church, the Club, the Services, or the Courts. It may be strictly honest, from the highest moral standpoint, or it may not. It works just the same as the American system, in that the wrong people get the orders, the honours, and the responsible jobs. Being social and personal it takes longer to work than the American system, for it takes years to build up the necessary personal position, whereas it only takes a minute to hand out a bunch of banknotes. And when the grafter has failed to deliver the goods, whether as a manufacturer of war material, or as a Government official, or as a politician, it is harder to convict him and harder to get him punished than if it were a case of money graft, for his downfall is prevented by all the social influence of those who backed him.

In America when a grafter fails to deliver the goods

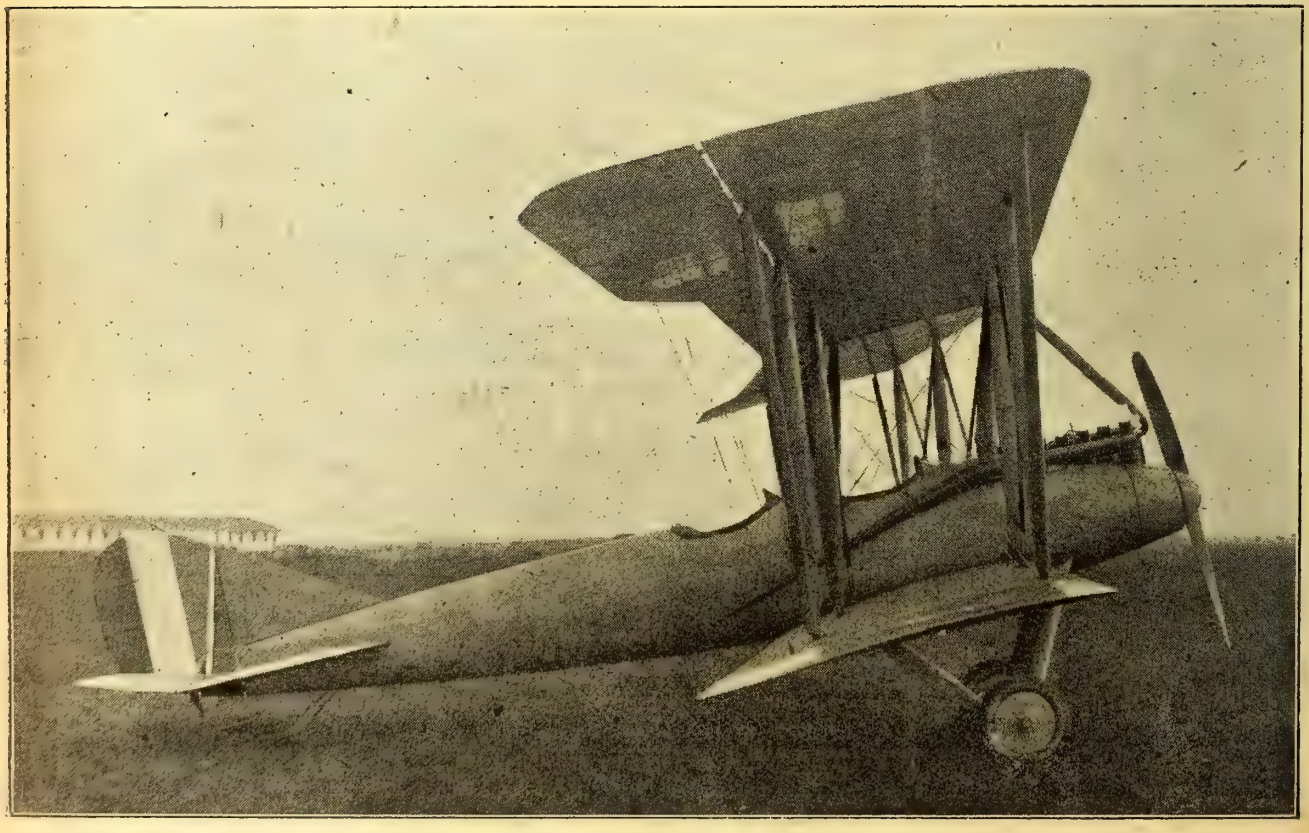
he is thrown over at once. Someone else is put to do his job, and America is able to get on with the war. The penalty in America is inflicted, not for being found out in graft, but for failing to deliver, and the penalty is the very severe one of not being able to graft any more. Which, though it may not be the highest moral course, is certainly the quickest, and the most productive of efficiency.

And that is why, although the Congressional Committee which was appointed to look into the reasons for America's failure to deliver everything except men after a year of war has disclosed a mass of the most amazing blunders and intrigues, America will very soon be able to restore strategic and tactical initiative to the Allies in France.

Keeping Pace with the Times.

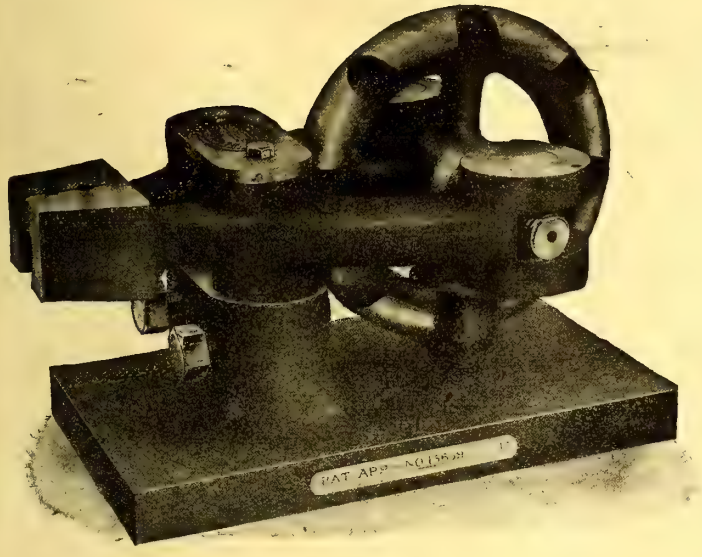


There is one point in particular in connection with aeroplanes which America must learn. It is impossible to standardise aeroplane design, because designs are constantly changing.

There is an aged "Punch" picture in which a French sportsman is shown aiming at a pheasant running along the ground. An Englishman alongside him says, in amazement, "But, surely, monsieur, you are not going to shoot him running?" "*Mais non, m'sieu',*" replies the Frenchman, "I vait till 'ee stop!"

It is no use for the American aeroplane producer to stand and watch aeroplane design and "vait till 'ee stop." Aeroplane design is flying in these days.

Also there is no use in fooling around waiting for drawings. One may again recall the story of Stonewall Jackson, alleged to be the first American general to cart around a proper corps of military engineers. In one of his advances he came to a river minus bridges. He sent for his chief engineer officer and told him to get out plans for a bridge, and he sent for his chief ordnance officer, a hardened old campaigner, and told him to get material ready to build the bridge as soon as the engineers had their drawings ready.



At the end of two days the ordnance officer went to

Steele's Ad. Serv.

Jackson and said: "Say, General! That bridge is finished and I reckon the Army can be getting right along. But we're still waiting for them pictures."

It seems that American aeroplane constructors are still waiting for "them pictures" of modern aeroplanes from this side. If they wait for them to be complete, accurate, and immutable in design, they will wait till the end of the war. The proper way to reproduce aeroplanes in quantities is to get a sample machine, take it to pieces, and make a "Chinese copy" of it, using the pieces as samples. One has known such a copy to be in the air and flying inside five weeks of the arrival of the sample in the reproducer's factory. One has never known a complete and accurate set of drawings to be produced inside five months, though possibly such things have happened.

If American manufacturers are to be a success as producers of aeroplanes they must organise for quick changes in design and not for vast output. That is the art of making war aeroplanes. The factory which can "swop over" from one design to another in the quickest time is the one which will do most to get on with the war.

Profiting by Our Mistakes.

American representatives in this country and officials in America should study the history of aviation in Great Britain for the past three and a half years. It would save them much in the next twelve months. One wishes that one had time to prepare a handbook on the subject for their assistance. Still, the files of this paper are always available to them if they care to spend a week in learning enough to save them months of useless work, let alone millions of dollars and probably hundreds of lives. Our mistakes since the beginning of the war have cost us much, and Americans, if they are as clever as they think they are, and we hope they are, will profit by them.

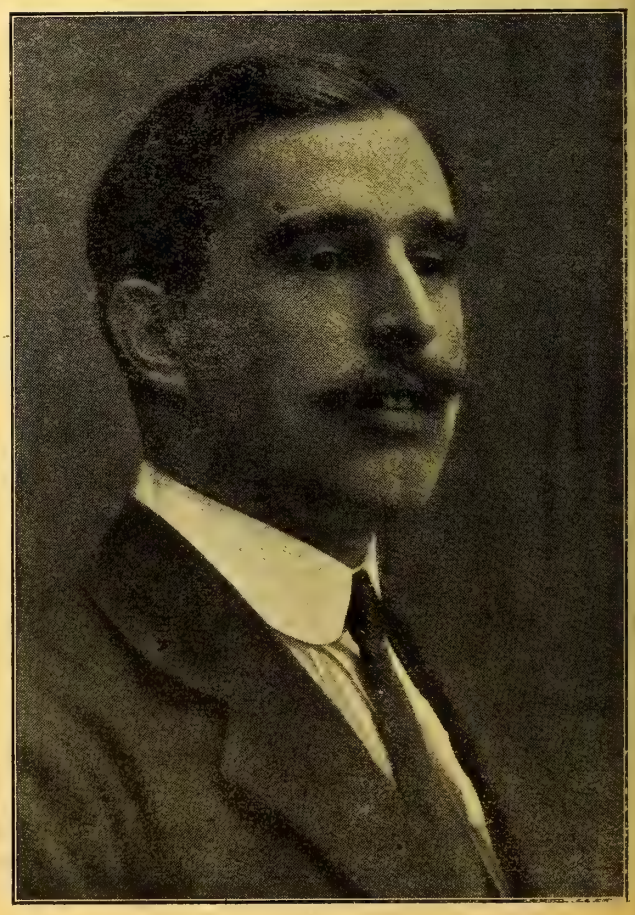
When America really gets over her blunders of the past year, and begins to turn out real aeroplanes and real aero-engines, she will have as fine a flying service as any in the world, especially when it is cut clean adrift from the old-fashioned, hide-bound Signal Service, which has held it in bondage so long. Even now in 1918, the American military authorities have not learned the lesson which we learned in 1912, when we found that the Corps of Royal Engineers was choking military aviation to death, and when, in consequence, the Royal Flying Corps was founded, to become, as it was when the Royal Air Force was formed, the finest fighting machine in the world.

Our Spare Machines.

Fortunately, good has come out of evil in another respect. All the good timber and fabric and steel and labour which was prodigally wasted in this country a year or so ago on making vast stocks of unnecessary school machines and engines, which have been lying in store month after month taking up much-needed room, now come in very useful for training American pupils who ought to be learning on American machines, but have none.

This happy result is no credit to the people who wasted the material in the first place, nor to the American Aircraft Production Board which failed to produce its own machines in the second place. It is just a piece of the amazing and entirely undeserved luck which hangs over this country.

In much the same way the huge superfluous stocks of recent type active-service machines can be used up in the field, without any being left over to be burned as obsolete, and so the newest of 1918 types will be in common use throughout the Air Forces just that much sooner. Which, again, despite the best intentions and worst achievements, as is our custom, will help to get on with the war.—C. G. G.



A GREAT ITALIAN PILOT.

All who were connected with international aviation in its early days will hear with regret of the death of Emilio Pensuti, who was one of the earliest and greatest of Italian pilots. For the past five years he has been chief pilot of the Caproni firm, and to his skill and experience is very largely due the development of the great Caproni multiple-engine biplanes and triplanes which have done so much valuable work in the war.

Pensuti met his death in a truly heroic manner which places him on a level with any other of the pilots who have died in air fighting. He was flying with an important Italian officer on board, when, owing to some insufficiently explained cause, the machine caught fire. In order to save his distinguished passenger Pensuti directed him to climb out on to the wing of the machine away from the fire, and he himself stuck to his post in the midst of the flaming body of the machine till he landed it correctly, and thus saved the life of his passenger. He died very shortly afterwards as the result of his burns.

If he had been content to let his passenger take the risk of being smashed, he might possibly have saved himself by letting go of the controls and climbing out along the wings in the hope that the machine would fall in such a way as not to kill him when it hit the ground, but this action would have lessened the chance of saving his passenger's life. Therefore, he made certain of saving the passenger even at the cost of his own life.

During his service with the Caproni Company he made over 3,000 flights on all types of that firm's machines. His death is an irreparable loss to Italy.

The Late Emilio Pensuti.

AIR MINISTRY CHANGES.

By an Order in Council which is published in the "London Gazette" of May 14th, it is provided that in future the Parliamentary Under-Secretary to the Air Council (now Major Baird) shall be Vice-President of the Council, and that the holder of that position shall no longer be appointed by the President from the two additional members of the Council.

The provision that these two additional members shall be included in the Council is annulled, and in substitution it is provided that there may be included in the Council such additional members, if any, not exceeding two, as may be appointed by the Secretary of State.

The Order also provides that the Deputy Chief of the Air Staff shall not be a member of the Air Council.

THE ARMY OF THE FUTURE.

BY HENRY FORESTER.

In his book entitled "Deductions from the World War," and in the chapter on "The Army of the Future," the Baron von Freytag-Loringhoven devotes much space to an exposition of his views in regard to the supply and training of officers for the armies of the days to come. The rank and file of an army may on emergency be improvised from non-military personnel, and can be rapidly trained to a degree of efficiency which, while in no way comparable to that of the seasoned soldier, yet will be capable of making a fair showing on the field of battle. The officer, on the other hand, cannot be produced in a few days or weeks.

The Real Aristocracy.

The acquisition of the powers of leadership comes only from experience aided by the hereditary qualities of the ruling race. The army officer, if he is to attain and maintain the highest efficiency, must be of a class apart, a truth recognised for generations by the German nation.

"The spirit of German militarism, which has enabled us to stand the test of the World War, and which we must preserve in the future, because with it our world position stands or falls—which, moreover, is 'every whit as monarchical as it is aristocratic and democratic'—rests ultimately on the building up of an officers' corps which shall be thoroughly efficient for purposes of war. For this purpose a sound aristocratic tradition is of the highest value. . . . Aristocratic tradition, *in the wider sense*, is of the utmost service in the training of personalities. No profession stands in greater need of the latter than that of the officer" (pp. 146-7).

Not only is it necessary that the corps of officers in the future army as in the old should be recruited from the gentle classes of the country, but it is essential that its members should be highly educated not only in such matters as appertain to the art of war, but in all those arts and sciences which qualify men for a life in which breadth of mind is of primary importance. Neither birth nor education alone can give a man all that he requires to place him in a position of responsibility above his fellow-men, but they can, when united, justify his selection as an officer.

"He can and must strive to attain that 'harmonious combination of abilities' which Clausewitz declared to be the characteristic of military genius. Thereby he will guard himself against narrow-mindedness and the danger of that mechanical mode of thought which the predominance of technical science at the present day is apt to induce."

Military Study.

Our author further indicates the necessity for a special study of military history on the part of all officers. While there is little use for the scholastic officer, it is of vital importance that all who are set aside to lead men should be well read in all military subjects—and a warlike education covers most things in this world.

Whatever force it may be considered necessary to maintain in the days of peace, no opportunity should be lost by Great Britain of training a corps of officers considerably in excess of the numbers required for the peace establishment. Otherwise the wastage of war makes it necessary for the country to avail itself of the service of temporary officers whose training, brief as it cannot help being, is not sufficient to fit them for the stress of war and responsibility attaching to the command of even small detachments.

Staff Work.

This is especially so in the case of the General Staff. On the smooth working of the Staff—the perfect co-ordination of trained minds—depends everything in war. However brilliant the supreme commander may be, all his designs will be brought to nought if his Staff are not fitted for their work. No profession or business in the world is so exact a science as that of war. Each link in the chain of command requires careful forging, for the failure of one link can bring disaster as surely as can the disruption of all.

The present war began at a time when this country possessed a General Staff second to none in the world. The business of mobilisation and the transportation of troops to the front proceeded in perfect order and without delay or confusion. The more difficult task of expanding the army into a force comparable in size with those of the greater Continental Powers was also undertaken successfully, but only at the expense of the General Staff.

A General Staff cannot be improvised rapidly. Staff Officers had to be found for the new formations and for the enlarged War Office. Dilution of a kind unappreciated in the best Labour circles was resorted to in order that part of the army should have its due share of trained Staff Officers. Regular regimental officers were in great numbers added to the Staff, and others were obtained from outside sources. While a surprising degree of excellence has been attained under these somewhat adverse conditions, yet the result has not been so satisfactory as might have been expected had there been sufficient experienced Staff Officers to supply all formations.

Ersatz Staff Officers.

It should not be necessary to turn good civilians into poor Staff Officers. Business men, stockbrokers, journalists and the like, excellent though they may be in those walks of life for which they have been set aside in the scheme of things, cannot be expected to display the qualities inherent in the good soldier within a few months of their joining an army. Moreover, their minds have become so thoroughly imbued with the principles and practice of their own avocation that they are somewhat disinclined to adapt themselves readily to new conditions.

The battles of the Stock Exchange, the parade ground of a great emporium, the strategy of Fleet Street, are not good forcing grounds for the battlefields of Europe. The intriguing hand driving the facile pen in ways that lead to the ruin of a great general has no power to lead an army or a country to victory. Soldiers are necessary in the State, and it is therefore well that they should be skilled in their profession.

The Nation's Duty to Itself.

When the present war ceases it will be the duty of those in power to maintain the national defences at such a high level as to prevent the possibility of military failure in the future war. In addition, the maintenance of a large army in the days of peace reduces the expenditure in war to a high degree. Had, for instance, this country had a conscripted army, of a size equal to that of France, since the days of the Crimean War, the present national expenditure would be halved, and there would actually be a saving if the total expense of such an army for the sixty years of peace were compared with the cost to England of the present hostilities.

The Air Force.

The Air Force, which, by the consent of the Northcliffe Press, would appear to be the future Senior Service, will need but little reduction in peace time. The present combined strength of the Royal Naval Air Service and the Royal Flying Corps, while insufficient for the demands of war, is the minimum size necessary for the new Service in peace.

MANN EGERTON & Co.Ltd.

LONDON NORWICH IPSWICH BURY ST. EDMUNDS.

It must not be forgotten that a nation can strike more swiftly and certainly with the aerial arm of its services than is possible with either the land or sea forces. In truth, a nation with an effective air force can take offensive action at a few hours' notice. The aerial arm can hold the day while the army and navy mobilise for their share in the war.

Therefore the necessity of mobilisation will no longer prevent surprise in the opening of hostilities. The decisive victory of a determined and vigorous primary offensive will be more marked than ever, and the maxims of Clausewitz will come to a closer realisation than even that great soldier expected.

The Task of the Air Ministry.

The work before the Air Ministry, now that the single air service is in being, will be vast in extent. Not only have all the difficulties of amalgamating the two services to be overcome, but educational establishments for officers must be formed and a suitable reserve must be organised.

No longer will Sandhurst, Woolwich, and the Staff College be available for officers of the Air Force. Therefore other means must be adopted for teaching flying officers those things which it is well that they should know. Instructors in the art of war as it affects the flying service must be obtained and a scheme of training and instruction devised. There is little doubt that the soldiers in whose hands lie the destiny of the Air Force are quite capable of directing that service in the paths of success.

The Future of the Industry.

There should be no slump in the Aircraft Trade when peace and its relaxations return. When those firms primarily devoted to other work relinquish the building of aircraft, and the firms which exist on inflated prospectuses and borrowed money collapse into the oblivion of discovered insolvency, those left in the Trade will barely be sufficient to meet the growing demand. The constant improvements in type necessitate a large programme of construction, quite apart from the constant replacements, consequent on periodic casualties.

Reserves.

While there can be no difficulty in the maintenance of a reserve of officers and pilots (assuming that in the future there will be an increase in the number of N.C.O. pilots and a consequent decrease in officer aviators) and of mechanics, it will not be quite so simple to create a reserve of matériel. The aeroplane and airship of commerce is not of great use for warlike purposes and is less likely to be as aeronautics progress. Therefore there will have to be created a large surplus of aeroplanes of late type as a reserve for the losses consequent on the first few weeks of war. This reserve will be regulated in size by the dimensions of the aerial fleets of foreign nations.

A Service to the British Empire.

The Baron von Freytag-Loringhoven will have achieved one purpose for his enemies (provided his book is well read) if the people of England can realise their responsibilities in regard to the formation and maintenance of a large Air Force, a large Army, and a Navy of sufficient size to keep enemy fleets within their home ports.

Expenditure of men and money must not be considered in the matter if the nation is to remain inviolate. Even the amelioration of the conditions of life among the poor and other measures of social reform must give way before the demands of defence. When once the military forces of the Crown have been put on a proper footing, then there will be time and money to spare for other things.

AIR FORCE RESULTS.

The following is a comparative statement of the number of bombs dropped by British aviators in France behind the enemy's lines, and of those dropped by the enemy in the area occupied by British troops, during April, 1918:—

	British.	Enemy.
(1) By day	17,867	687
(2) By night	6,033	1,346
Total	23,900	2,033

THE DEATH OF MR. J. GORDON BENNETT.

It is reported that Mr. James Gordon Bennett, proprietor of the "New York Herald," died at Nice on May 14th, at the age of 77, after a short illness which succeeded a series of attacks of pneumonia.

Mr. James Gordon Bennett was known chiefly to those concerned with aeronautics for his patronage both of ballooning and of flying. He endowed the International Balloon Race for the first three years of its existence with a trophy and a series of large prizes. The first race was held in 1906, the start taking place at Paris, the winner being Lieut. Lahm, an American pilot. Subsequent races were won successively by Germany, Switzerland, America, America again, France, and by America a third time.

At the first big public aeroplane competition held at Reims in 1909, Mr. Gordon Bennett offered a trophy for the greatest speed round a marked course, which was won by Mr. Glenn H. Curtiss on a Curtiss aeroplane. The trophy which was international in character was open for competition every year, under rules determined by the F.A.I. Congress, were held up to 1914, when the outbreak of war stopped the race which would have been held in the late summer.

The Gordon Bennett Cup was won in 1910 by Mr. Claude Grahame-White on an 100 h.p. Blériot monoplane at Belmont Paris, New York; in 1911, by Charles Weymann, on a 100 h.p. Nieuport monoplane for U.S.A.; in 1912, it was brought back to France by Jules Vedrines on a 140 h.p. Deperdussin, and kept in France in 1913 by Marcel Prévost on a 160 h.p. Deperdussin, who, for the first time in history, covered practically 125 miles round a closed course within the hour.

There is no doubt that the trophy and substantial prize which it carried which were provided by Mr. Gordon Bennett did much to stimulate the speed side of aviation, and the cultivation of speed for speed's sake. It is not very commonly recognised that for all practical purposes the 1912 and 1913 Deperdussin racing machines were the predecessors of the streamline type aeroplane which has been so effectively used by all belligerents. This being the case, it is really rather extraordinary that the Germans who, during peace time, did not possess a single aeroplane which could hope to win the Gordon Bennett race, should obtain something approaching a monopoly of fast aeroplanes during the earlier stages of the war.

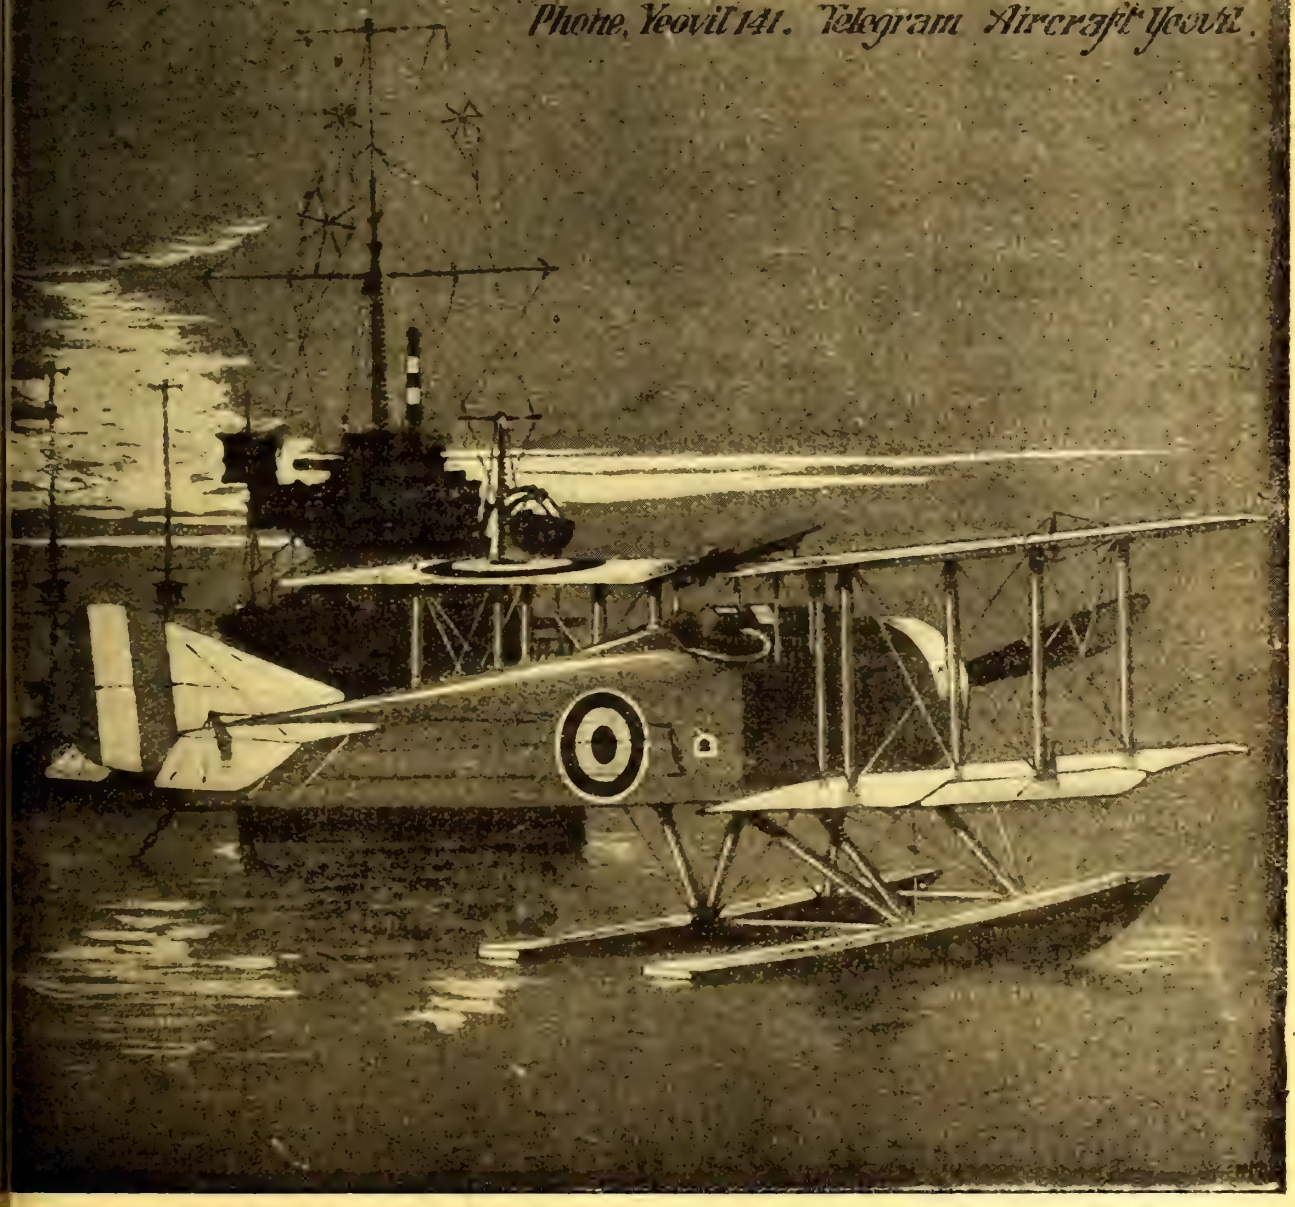
THE DEATH OF EUGENE GILBERT.

It is with deep regret that one records the death of Eugène Gilbert, one of the pioneer pilots of France, who was killed while flying at Villacoublay on May 17th.

The old time students of aeronautics will remember Gilbert's consistent flying in peace time on all manner of monoplanes notably Blériots, Moranes, and Deperdussins.

One of his most notable performances was his unsuccessful flight for the Pommery Cup in October, 1913, from Villacoublay to Stettin, a distance in a straight line of 625 miles which he covered in 5 hours 23 minutes on a 160 h.p. monocoque Deperdussin monoplane, similar to that on which Marcel Prévost had won the Gordon Bennett race, a machine absolutely unsuited to cross-country flying, for on it a forced landing would have meant almost certain death. The cup was eventually won by the late Brindejonc des Moulinais, who flew from Paris to Warsaw on a Morane Saulnier monoplane, and who also was accidentally killed during the war.

On June 27th, 1915, Sous Lt. Gilbert was compelled to land in Swiss territory after a raid on the Zeppelin works at Friedrichshafen, and was interned.



In the August following he succeeded in making good his escape. But the French Government sent him back to internment, as the letter Gilbert had written withdrawing his parole did not reach the authorities until after his escape. In February, 1916, Gilbert, not now on parole, and disguised as a woman, again eluded his guards, but he was discovered at Olten and sent back to Zurich. On May 24th of the same year Gilbert, for the third time, escaped. He got away from his prison on the 24th of that month, and six days later, in the guise of an aged and infirm peasant, he crossed into Haute Savoie.

Eugène Gilbert will be mourned by his compatriots and by those in this country who were associated with his early work as a pioneer who helped to make history.

NAVAL and MILITARY AERONAUTICS

FROM THE "LONDON GAZETTE."

War Office, May 13th.

The King has been pleased to approve of the following Awards to the following Officers and Warrant Officer, in recognition of their gallantry and devotion to duty in the field :—

The Military Cross.

Sec. Lt. F. N. S. Creek, Dur. L.I. and R.F.C.

He carried out several successful reconnaissances of enemy aerodromes and railways, and obtained valuable information often under the most difficult weather conditions. On one occasion he took several photographs of an enemy aerodrome though he was attacked by an enemy machine and subjected to anti-aircraft fire. He displayed the greatest skill and determination.

Temp. Sec. Lt. F. H. Davies, Gen. List and R.F.C.

Whilst on artillery observation duty he engaged a hostile scout, which he succeeded in sending down out of control. He then continued to observe for the shoot, and successfully accomplished his task. Later, whilst again on artillery patrol, though attacked by five hostile aeroplanes, he, by successful manœuvring, enabled his observer to fire several bursts into the leader of the formation, whose machine was seen to go down in a vertical nose dive and crash to earth. Continuing the fight against the remaining four hostile machines, he eventually forced them away, and succeeded in ranging on and neutralising three hostile batteries. He set a magnificent example of skill and determination.

Temp. Lt. A. L. Fleming, R.F.C.

He attacked a formation of three enemy machines, and forced the leading machine, which was a two-seater, to land, although the other two were attacking him from behind. He then attacked and destroyed another of the enemy machines, and engaged the third, which succeeded in escaping. He destroyed four enemy machines during one month, and showed splendid courage and skill on many occasions.

Temp. Capt. J. B. Fox, Gen. List and R.F.C.

During a period of two months he led his formation on six long-distance bombing raids into enemy territory. On the last occasion, though engaged by three separate hostile formations, he dropped his bombs with excellent effect over his objective, and brought the whole of his formation back to the aerodrome intact. His formation accounted for three enemy aeroplanes destroyed and four driven down out of control. He has carried out upwards of 40 successful operations, his skill and leadership being of the highest order.

Sec. Lt. W. L. Harrison, R.F.C., Spec. Res.

In aerial fighting, he destroyed two enemy machines and drove down others out of control. He always showed a splendid spirit of dash, keenness, and tenacity, coupled with determination and skill in attacking enemy aircraft.

Sec. Lt. (temp. Capt.) G. F. Hughes, R.F.C., Spec. Res.

While leading his formation over the enemy's lines he was attacked by 12 enemy machines, two of which he shot down. On the following day, when in charge of a patrol, he attacked seven enemy triplanes, drove down one out of control, and forced three others to land. On another occasion, while in charge of a patrol, he was attacked by a large number of enemy scouts; owing to his skilful flying his observer succeeded in shooting down one of the enemy machines, which broke up in the air. He always showed the greatest coolness and courage in action, and, as a flight commander, led his formation with splendid courage and determination.

Temp. Sec. Lt. P. A. MacDougall, Gen. List and R.F.C.

He always showed great initiative and skill in attacking enemy aircraft, and drove down or destroyed several enemy machines. On one occasion while on patrol he encountered three enemy two-seater machines, and, though his engine was giving trouble, he attacked them single-handed, and drove one of them down out of control, having shot the observer. On another occasion, after driving down an enemy machine, he attacked and silenced a battery of six guns which were firing on our machines. His example of pluck and determination was of the utmost value to the squadron.

Sec. Lt. (Temp. Lt.) J. F. N. Macrae, Gen. List and R.F.C.

While on an offensive patrol he attacked an enemy machine and drove it down damaged. On the same day he took part in a bombing raid at a low altitude on an enemy aerodrome, and secured a direct hit on one of the hangars. While returning he engaged enemy troops and transport on a road, causing casualties and confusion. He then climbed and attacked an enemy kite balloon, and, in spite of intense fire, succeeded in forcing it down damaged. He showed splendid courage and initiative.

Sec. Lt. (Temp. Capt.) M. E. Mealing, Shrops. L.I. and R.F.C.

In aerial fighting he destroyed three enemy machines and drove three down out of control. He also drove down an enemy balloon in flames. He always showed a splendid spirit of courage, keenness, and determination.

Temp. Capt. G. B. Moore, Gen. List and R.F.C.

He led a patrol to attack hostile balloons. The patrol drove down three balloons in a collapsed condition, one of which he accounted for himself. He has also destroyed three enemy aeroplanes and driven down three others out of control. He has always shown splendid courage and resource.

Temp. Sec. Lt. E. Pybus, Gen. List and R.F.C.

He carried out valuable photographic reconnaissances of enemy areas. Though on one occasion he was attacked by enemy machines, he succeeded in taking the required photographs. On three occasions, in the course of flights lasting four hours or more, he ranged a siege battery most effectively on hostile batteries, with the result that several gun-pits were destroyed and three explosions were caused. He showed splendid determination and initiative.

Temp. Sec. Lt. H. N. C. Robinson, Gen. List and R.F.C.

While on an offensive patrol he had trouble with his petrol pressure and was forced to turn back towards our lines. On his way back he saw seven enemy scouts attacking two of our artillery machines. He immediately dived on to the enemy and drove one of them down. During this operation one of his guns jammed. The enemy still continued the attack, and he again dived on them, but his remaining gun also jammed. Though both his guns were out of action and he had very little petrol left, he continued to dive on the enemy repeatedly and eventually drove them away. He showed splendid courage and resource.

Temp. Capt. E. R. Tempest, Gen. List and R.F.C.

He attacked a formation of seven enemy machines, firing one from a distance of a few feet and destroying it. On another occasion with his patrol he engaged 13 enemy machines. Though both his guns were out of action, he continued fighting for 15 minutes in order to enable the rest of his patrol to keep up the fight. Having driven off the enemy he brought his patrol back safely. He showed splendid courage and initiative.

Temp. Capt. J. L. Trollope, Gen. List and R.F.C.

During a period of three months he has engaged and brought down completely out of control four hostile machines, and has sent down crashing to earth three others. On all occasions he has displayed the greatest courage, determination, and skill and it is largely due to his fine leadership that the flight under his command has contributed so much to the marked success of his squadron.

Temp. Sec. Lt. H. J. Walkerdine, Gen. List and R.F.C.

Whilst escorting machines of another squadron, who were engaged on low bombing work, he encountered ten hostile scouts, two of which he succeeded in crashing to earth. He has at all times, by his conspicuous skill and gallantry, set an excellent example to his squadron.

Lt. W. L. Wells, Middx. R., and R.F.C.

On four occasions during three months he has been engaged with superior enemy formations, and has brought down con

INCORPORATING AIRCRAFT ENGINEERING, AERODYNAMICS, AND MATTERS PERTAINING TO THE AERONAUTICAL ENGINEER AND THE AIRCRAFT TRADER

The British Aircraft Industry.

(SECOND SERIES.)

BY R. P. HEARNE.

XI.—F. W. BERWICK & CO., LTD.

For nearly twenty years it has been one of my hobbies to it factories in this and other countries. At the end of it I could , for myself, manage a village Punch and Judy show, but I ve the critical faculty of being able to tell a good factory from ad one.

had not been five minutes in the factory of F. W. Berwick l Co. when I asked my guide, Mr. F. W. Berwick, how long had been in America and Germany. To my astonishment he lied that he had never been in either country.

"But," I replied, "this tory plan is on the very best erican lines, and this rough organisation is more ial in Germany than in gland."

He merely smiled, and left with a further confirmation my theory that when we go right way about things in United Kingdom we can ep ahead of all our rivals. e tragedy is that we so sel- m go the right way about it, d splendid men and splendid aterials are wasted.

Contrasts.

When I come away from a e British factory, well nned and smoothly run, I an optimist of optimists, r I know the limitations of e Germans, and I know that ey cannot successfully com- te against the alliance which nks the brains and the uscles of the great western tions. But unfortunately you ve only to turn into some her British factory to find venliness, old-fashioned me- ods, rule of thumb, and pig- aded conservatism of mas- rs and men conspiring to hold back. Our slums are just rt of that wicked old indus- ial muddling for which we e now paying a terrible price. Contrast some old hole-and- rner factory, set in a sunless m, with a new building cing the open country. Instead of starved workers, housed in rk, cold, and unventilated shops, you have well-nourished rkers labouring in splendidly lighted, clean and well-ventilated d heated buildings.

Mr. F. W. Berwick.

A Sound Understanding.

It was the flooring that first attracted my attention at the Ber- ick factory. I am a faddist about factory floors since some ars ago a clever American engineer drew my attention to the matter. From very careful experiments it was found out that a rigid and cold floor is not the best for the workers.

To stand for many hours daily on stone or concrete is fatiguing, owing to the absolute hardness of the surface. Its coldness absorbs bodily heat and vitality, and, if factory heating is installed, more fuel is required to keep up the temperature of the building than would be the case if wood flooring were employed.

The shops of the Berwick factory are floored with pitch pine, and Mr. Berwick estimated that the saving in fuel alone more than compensated for the extra cost, leaving out the beneficial effect on the workers.

Light and Air.

I was next attracted by the uncommonly good lighting, due to the scientific planning of the roof. Very seldom indeed have I seen anything so good.

On the ventilation problem also I can class the Berwick factory as A1, and nowhere was the excellence of the arrangement more apparent than in the dope room. In the matter of doping I feel very strongly, for I have gone into dope rooms where it was torture to breathe. Although the poisonous element has been removed from dope, the fact still remains that the vapours given off are very pungent, not to say distressing. Looked at merely from the business standpoint it is not helpful to factory output to have the workers operating under unpleasant conditions, and it is a marvel to me how the women in some dope shops do any work at all.

Practical Science.

In the Berwick dope room there is a very well planned ventilation system, which keeps the atmosphere fresh and pure. As a refinement the room has its recording thermometer and hygrometer, and the readings of temperature and dryness of the air are taken as guides for the control of the ventilation.

A very effective method has been devised of holding the articles to be doped over draining and ventilating tunnels so that the drip, as well as the vapours, are carried away from the worker. It is by far the best dope room I have seen, and yet a newer and still better room is being prepared.

The whole of the woodshops and dope and covering rooms are protected against fire by the Grinnell Patent Sprinkler Installation.

A Model for Officialdom.

I should like someone to hammer into the heads of high officials in the Government the vital importance of encouraging the most up-to-date factory methods, especially in all work which may be injurious to health. And I can recommend these officials to take the Berwick factory as a model. Here we have an organisation planned for high efficiency, and yet its most notable features are the safety, comfort, and well-being of the employees.

Increasing Output.

And what is the result? Excellent output of very high quality. You can get high output by rush methods, but the pace is killing and quality is bound to suffer. The true test of factory efficiency is where you get quality as well as quantity.

Right through the Berwick factory I could trace a wonderful organisation, all aimed to bring about the truest efficiency. The offices are comfortable and well lighted and heated, and arranged on a sound plan. From the moment the factory worker clocks on he enters a building where he has every facility for giving his best work with the least waste of time or effort. Each main workshop has its progress department where a special staff keeps a close survey of the output, and a further analysis of these statistics puts the head of the firm in constant touch with the results achieved in the various production departments.

Inspection of Products.

In the main shop I also was much struck by the very fine viewing room, where the firm carries out its own searching tests of the work done. There was exceptional facility for keeping a very close check on quality, and hard by was a very nice little laboratory with men in it who knew their work. The equipment is excellent.

Camouflage.

After the war I hope to be still sufficiently remote from senile decay to write a few humorous articles. One of these efforts will deal with "dummy" factory laboratories and another will deal with factory first-aid departments.

I shall have some screamingly funny things to say about dirty little rooms filled with old bottles and antique scientific apparatus with cobwebs over them, these rooms being labelled "laboratories" for the purpose of impressing visitors of high degree. And of the red cross painted on the door of the fusty apartment known as the first-aid room, or "first and last aid," as some grim humorist has put it, I can also tell some curious tales.

But in the Berwick factory the first-aid room is a veritable miniature modern hospital, beautifully clean, fully equipped, and staffed by trained nurses.

Welfare of Employees.

Crossing the road from the main building I entered another section which it is a misnomer to call a canteen, so much ab is that word. The Berwick restaurant, as I prefer to name i made up of several comfortable compartments, one being a room for the heads of departments, another for office staff, a large hall for the general workers.

The whole arrangement for cooking and serving meals is ca out by the firm, and all the canteen employees are paid. I a great believer in the doctrine that every job should be paid and well paid too.

Production.

I have said very little about the products of this model fac but I may indicate that the firm turns out complete aeropl and make engines to one of the most complicated designs evolved. Yet so effective is the planning of work and the division of labour that even the engines are made to a very extent by women operatives.

Most elaborate care has been taken to minimise error, an this end the machinery, jigs, and tools have been given sp attention. Combined with these points we have the matt efficiency in every department carried to a science, and, have shown, the care given to the welfare of the worke another striking feature of this factory.

It is not surprising, then, to find that the work turned out the Berwick factory is up to a very high standard, and ne importance to that fact is the highly significant feature tha quantity production is very satisfactory.

Planning and Working.

I have attempted to show the chief merits of this n factory, the planning and working of which have filled me admiration. And now for a still more remarkable fact. T works were only commenced two years ago, and built by pr enterprise under war conditions. They were set running a ago on jobs which were quite new to the founder of the firn

I am not straining language thus when I describe Mr. F Berwick as an organising genius, for it is to him we ow creation of the Berwick factory. To motorists Mr. Berwi well known as the originator of the beautiful Sizaire-Berwick which a few years before the war aroused so much interest t splendid design and workmanship.

Originally the Sizaire-Berwick chassis was built in France it had been Mr. Berwick's plan to erect an English factory. outbreak of war delayed his efforts. Eventually in the fa great difficulties he succeeded in erecting a model fac and by another master stroke he quickly adapted this to duce for the nation some of the finest aircraft work turne in this country to-day.

And yet we have croakers saying that after the war we be beaten in enterprise and engineering by the Germans!

The Aero-Engine Fuel of the Future.

BY "DIOGENES."

I suppose that the views of the present-day pilot on the subject of fuels are that the very best is almost if not quite good enough for him, and that anything which falls short of the very best is absolutely beneath contempt.

This is all very well at the moment, and may continue to serve so long as the aeroplane is used solely as a weapon of war, provided only that the drain upon the fuel supplies is not such as to imply that the best fuel of to-morrow will be notably inferior to the best of to-day. The time is, however, coming—and we hope it is coming soon—when the extensive use of aeroplanes for other than sporting purposes will depend mainly on straightforward commercial considerations.

When that happens, we do not want to be absolutely in the power of the people, whoever they may be, who happen to have control of the highest grade fuel. Motorists know, to their cost, that even when there is not a war on, the quality of fuel has an uncomfortable habit of deteriorating, and they know also that so long as they allow themselves to be dependent on one particular fuel there is a very considerable risk of one less particular set of capitalists forming a ring, and doing just what they please with prices.

Post-War Fuel.

Of course, the average stuff that will be sold as petrol to the average motorist after the war will be something very much like what we used to call paraffin, or, at best, white oil.

If the aeroplane engine persists on being supplied with the very best spirit, that spirit may be forthcoming in limited quantities at an almost unlimited price. It will not, however, be marked down for the aeroplanes as its natural prerogative, but will only be bought in straight competition with anybody else, who may be prepared to pay the same or even a higher price.

Nowadays, the motorist is showing a strong disinclination to remain for everlasting entirely in the hands of the petrol suppliers. He is out to produce or evolve new fuels, which, even if they are not quite so good, will do fairly well, and will, at least, serve as a check on the price of petrol.

If aeroplane services, on the other hand, are to remain entirely dependent on supplies of the very best fuel, and are incapable of using anything else, then their fuel bill will presently become appalling, and all estimates of cost of operation will be to be upset at short notice.

Pounds, Shillings and Pence.

It may sound queer to talk of estimating cost of operati a time when nobody really cares what it costs to keep an plane in the air, and when engine efficiency and reliabilit infinitely more important than any pecuniary saving.

We must, however, face the fact that sooner or later we get down to pounds, shillings and pence. If one type of ma will show a saving of a penny or twopence a mile as ag another type, then, other things being equal, number one get all the business, and there will be no demand for nu two.

In those days the aeroplane will have more in common the commercial motor vehicle than with the ordinary moto The commercial vehicle has been obliged from the fir justify itself on an economical basis. The private car has been under an equal obligation. Doubtless, there will be sportsmen who will own aeroplanes for their own enjoyment the backbone of the whole thing, if we except the support the Government must give to a great military asset, will b commercial services for the carriage of mails and passenger

In any such services the difference between success and fa is a matter of fractions of a penny per mile, and, whethe like it or not, we shall have to get down seriously to the pro of making the aero-engine run well on a comparatively inf class of fuel, or else of evolving some totally new fuel which be produced cheaply and in ample quantities, however grea demand, and possesses all the essential qualities of the lig petrol.

Alternative Fuels.

Clearly, benzol and the various fuels broadly classed u that name do not offer any chance of the second possible tion of the problem. I will leave it to experts to determine far a heavy fuel of this class can ever be successfully use high altitudes.

The only big alternative to benzols and petrols is, so fa I am aware, alcohol. Alcohol alone is a bad fuel for sta up a cold engine, even at ordinary temperatures upon

AIRCRAFT MANUFACTURING COMPANY——LIMITED

Contractors to

War Office and Admiralty

London Office
27, BUCKINGHAM GATE, S.W.1.

And at
HENDON, N.W.9.

ground. At low temperatures and at great heights, plain alcohol would, I take it, be out of the question.

Moreover, no engine is really efficient with alcohol alone, that is not designed for a high compression and a low piston speed.

The most obvious way of using alcohol as part of a mixture is by combining it with benzol. These two mix well, which cannot be said of alcohol and petrol. Benzol will, however, mix with petrol, and so, by mixing all three, we may get a fuel of which a sufficient percentage is volatile at low temperatures.

Mixed Drinks.

I suggest, however, that a more promising field of investigation is that which concerns mixtures of alcohol with ether. I believe one such mixture was successfully used in an aero-engine some two or three years ago, and I can see no reason, though I am open to correction, why this class of fuel should not be quite satisfactory in this connection.

Ether is, of course, extremely volatile, so that there may be some risks of leakage and some dangers in storage. Assuming that these can be overcome, the ether in the fuel ought to enable it to start up an engine at any altitude and any temperature, and once the engine is well warmed up, there is no obvious reason why the alcohol should not maintain the good work by keeping it running.

In one alcohol-ether mixture to which a proprietary name has been given, the proportions are, I believe, about 35 per cent. of ether to 65 per cent. of alcohol. In other mixtures the percentage of ether is smaller, and a certain amount of benzol is introduced.

Denaturising.

In any case, it would, of course, be necessary to find a cheap and satisfactory denaturant which would make the fuel unsuitable for human consumption. This is by no means a simple problem.

We must remember that with aeroplane services connecting up all parts of the globe, supplies of fuel would have to be m tained in all countries. The ether could, doubtless, be got of without difficulty, leaving the alcohol in a drinkable condi We have to assume that we are dealing not with a man takes a drink because he likes it, but with a man who will drunk on anything which is not too horrible to swallow.

There are instances of people who do not shy at methyl spirits, which is nasty enough in all conscience. Moreover, have to consider not only the civilised man, but the savage, w tastes are not necessarily refined.

Unaccountable Tastes.

By way of illustration, I may mention what I believe is authentic instance. On a certain railway in Africa trouble experienced with hot axles. The trouble occurred with picious frequency in one particular district, and inquiries instituted. As a result, it was discovered that native labour either eating or drinking the axle grease, according to temperature and its consequent condition.

We have not as yet disposed of the good old theory that have no right to poison a confirmed drunkard, or even to a him to poison himself. The latter would be the simplest cheapest way of disposing of him, and would probably be for all concerned. However, it is not permissible. There our denaturant must not be poisonous, and, at the worst, only have violently emetic qualities.

A Problem in Economy.

To sum up, this is our problem. Given a man who will methylated spirit or axle grease with pleasure and is mad intoxicating drink, to provide a denaturant which, without ki him, will prevent him from absorbing alcohol.

This is really one of the toughest bits of the whole fuel alc problem, and I suggest that when we have satisfactorily so it alcohol will become the main part of the fuel upon which world's aeroplane services will come to depend.

How Not to Inspect.

BY "FULTONITE."

"Why inspect?" Thus the President, in his address to the Institution of Automobile Engineers, challenged the attitude towards inspection on the part of all firms engaged in war work.

Take, for instance, the pioneer work of the much-lamented Lieut.-Colonel Fulton, who died in harness after having conceived an Inspection Department worthy of the name. Colonel Fulton and his pioneer band of helpers started out with a praiseworthy effort to assist production, and not one of those early enthusiasts, who are now lost in the bewildering and chaotic monstrosity bearing the appellation of the Aeronautical Inspection Directorate, could be suspected of being one "who thinks he knows everything."

That condition of mentality, or super-mentality, followed later, and is now stultifying what should be one of the most helpful of Government Departments.

The original Aeronautical Inspection Department, under Colonel Fulton, was founded upon fine traditions, and soon earned the right to be considered "One of the few bright spots of the war" (vide The Aeroplane).

But soon tradition was trampled upon, and all sorts and conditions of men, and women, were ruthlessly badged into His Majesty's Service.

Instead of approaching the firms concerned with the vital provision of aircraft, as a help-mate, willing and ready with an efficient body of men to inspect and encourage, the newer Directorate tackled the job as Dictator.

The Proof of Failure.

Had the policy of Colonel Fulton been carried on, firms would have been capably relieved of all inspection, and could have devoted their entire energies to production. In the writer's opinion, which is backed by every firm of repute in the Kingdom, the proof that the Inspection Directorate has signally failed in its functions to provide manufacturers with a sound and reliable system of inspection is the fact that they themselves have been compelled to provide inspection independently.

The need for inspection was never at any time critical or universal; but what was required, and subsequently procured by the firms themselves, was a kindly process of education for those firms whose legitimate business was thrust to one side by the national need for aircraft.

By the merest chance, a firm found itself in the lucky possesion of a level-headed inspector experienced in the new class of work, but the vast bulk of the firms were left to grope their way under the cynical aloofness of their Government Representative, to educate themselves, and, worse than all, to withstand ignorant criticism, and, in many cases, obstruction.

The Need for Remedy.

These things are mentioned in the sincere hope that much will be remedied, even at this late time of day. That the remedy is sternly necessary, dozens of firms well know, and bitterly deplore.

The King's Service could have been so well served that f might have put the entire onus of inspection upon His accre representatives. As it is now, no firm dare wholly trust to standard of inspection set to them, and so they have been compelled, by sheer force of circumstances, to set up the exper machinery of an inspection department of their own, which many cases known to the writer, is more efficient and reli than that representing the purchasers, the British Taxpayer (chap)!

Why inspect? Firms could have been greatly assisted by intelligent transfer system of inspectors, as, for instance, sending of an inspector from a firm where he had already e rienced the inspection and manufacture of certain parts machine, to another firm just beginning similar work, an on.

Instead of that, round pegs in square holes seem to have the (one might almost say) studied policy of the Directorat

To illustrate the functioning of the Directorate, in so far a applies to itself, the following story well illustrates what follo

A proud mother brought her young hopeful to the Music centor of one of the great Cathedrals for examination as singing, and subsequent admission into the chorister's Coll attached to the Cathedral. The fateful test being over, youngster duly reported to his mother that he had failed. greatly upset, waylaid the Revd. the Precentor, and pleaded son's cause in such distressing terms that, adopting humanitarian policy that it is frequently necessary to be cruel be kind, his Reverence turned on the mother and barl "Madam, your boy has 90 per cent. breath and 10 per c voice."

And that is the present-day "functioning" of the A.I.D. ins tor, 90 per cent. clerk and 10 per cent. inspector.

Hence, the lamentable necessity for the thousands of mem of the A.I.D. staff, whose upkeep must now be costing the co try something like a sum equal to one and a-half millions ster per annum, a sum of money which would purchase nearly aeroplanes.

These are startling figures, the more so when one recalls emphasises the fact that there are dozens of young men in Directorate who could and should be doing much more effec service elsewhere.

AERIAL TRANSPORT.

A Reuter's message from Paris, dated May 14th, reported t Gen. Bongiovanni, head of the Italian Aviation Departm who is now in Paris, states that France, Britain, and Italy h come to an understanding with regard to aerial communicat between London, Paris, Nice, Rome, and Brindisi, and t this matter is now being thought out.

Gen. Bongiovanni is confident that all difficulties will be ov come, and that aerial postal communication between the Al will be instituted.

The Design and Construction of Internal Combustion Engines, with special reference to Aero Engines.—VII.

BY C. SYLVESTER.
Author of "The Conversion of Electrical Machinery," "Testing Motors and Motor Starters," etc., etc.

Carburetters.

A carburetter may be briefly described as a device by which petrol and air are converted into gas.

A carburretter consists of a float chamber, into which petrol flows from a tank. A small pipe, connected to the chamber, is fitted with a small nozzle or jet.

During the suction stroke of the engine petrol is drawn through the float chamber into another chamber, termed the mixing chamber. The petrol bursts from the jet in the form of a spray, and breaks into gas, which mixes with air from an air inlet, the mixture being drawn through the induction pipes past the inlet valves into the cylinder.

To understand the action of a carburetter clearly it is essential that the theory of carburation should be understood.

Carburation.

One of the problems which have kept the minds of inventors busy is the search for constancy in carburation, which will ensure the proper quality and quantity of mixture under the most varied circumstances.

The conditions to be fulfilled in order that an engine should work perfectly under all circumstances are very numerous indeed. It is necessary that the carburation should not only remain unchanged at all engine speeds and at all degrees of aperture of the throttle, which is essential for flexibility, but it is also necessary—

That the petrol consumption be as low as possible.
That the engine should always pick-up quickly.
That the engine should work smoothly at all times.
That the engine should start easily, when cold, without any trick or preparation.

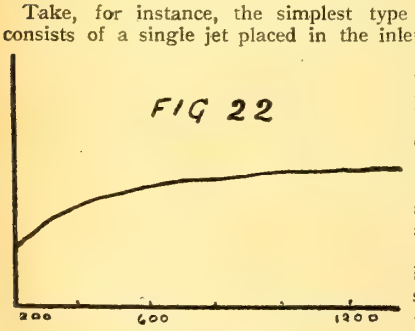
These various qualities must all be obtained by means of such a device as will at all times secure the constancy of the results when once obtained. This latter condition is indispensable; otherwise the automatism will very soon become illusory.

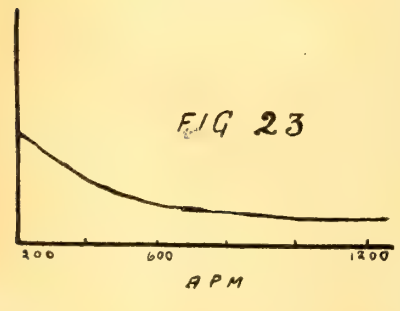
Numerous solutions have been proposed up to now, but they offer little variety, as they almost all of them set at work mechanical devices actuated by depression, and complicated with opening air inlets for correction. Such devices are bound to be delicate, and likely to get out of order very easily, and even supposing their initial adjustments to be correct they cannot long remain so.

Why, then, are these adjustments for correct carburation necessary? Chiefly for the following reason:—In a spray carburetter of ordinary construction the speed of flow of each fluid, air, and petrol is not modified proportionately under the influence of the varying depressions. Effects of inertia come into play, producing an excess of petrol at high speeds and a want of it at low speeds.

Petrol Curves.

Take, for instance, the simplest type of carburetter, which consists of a single jet placed in the inlet pipe, from which the inrushing air sucks a varying amount of petrol according to the speed of the air as explained above.





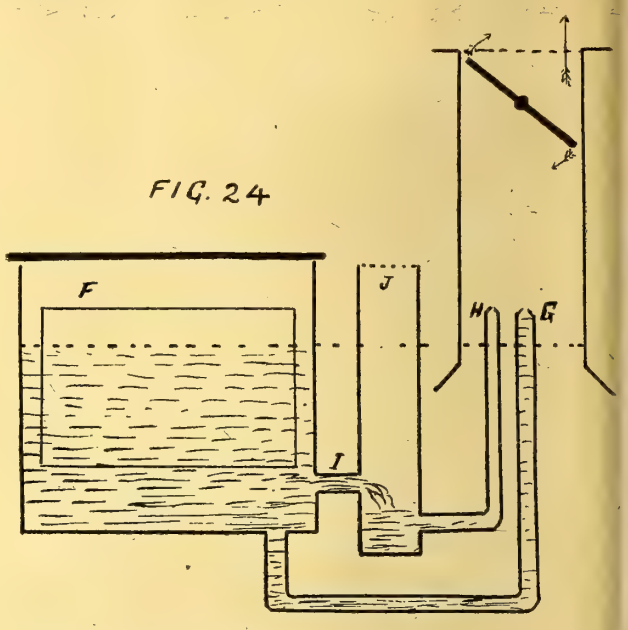


Fig. 22 illustrates the ratio of petrol to air at varying engine speeds.

The problem then to be overcome may be summed up as follows:—"To determine a second jet, the flow of which must be submitted to such conditions that the curve of the ratio of petrol and air will be inverse to that shown above, as illustrated in Fig. 23. This second jet may be termed a 'compensating jet.'"

We will now suppose these conditions are fulfilled, and that both jets work simultaneously. Now they will mutually complete and correct each other. That is, when one flows too much the other will be flowing too little, and inversely.

From this it will be seen that the conjugation of the two above curves leads to a straight line, which shows that the ratio of petrol and air will be constant at all speeds.

The Solution of the Problem.

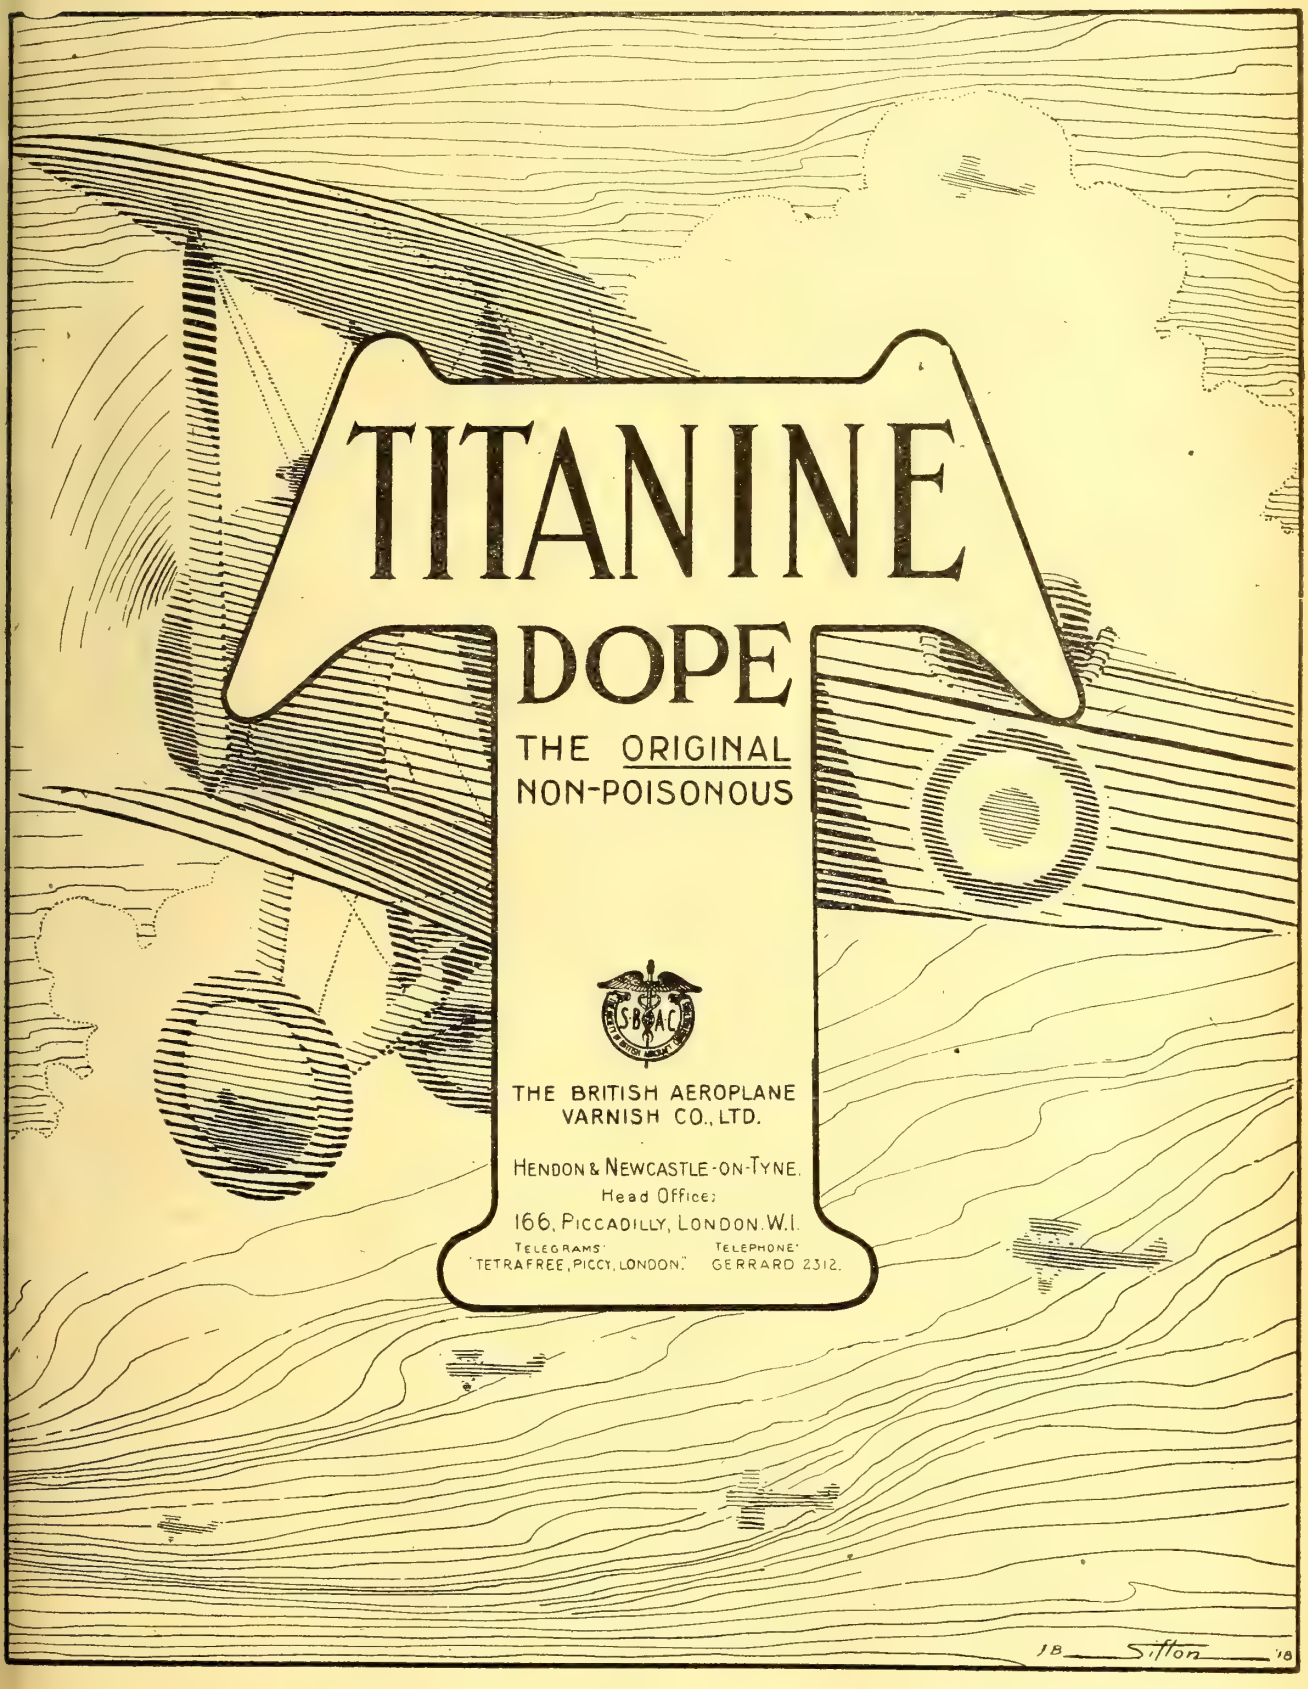
An examination of the second curve shows that the compensating jet must have a constant flow for a given unit of time, this flow being independent from the suction within the carburetter.

The scheme illustrated in Fig. 24 shows how this condition has been fulfilled. To a jet of the ordinary type G, which draws petrol direct from the float chamber F, is added a compensating jet H, the latter having its origin at the bottom of a pipe J, which has its free end in the open air. The arrival of the petrol at the bottom of this pipe is regulated by a gauged orifice, the flow being determined only by the height of the column of petrol which weighs on it, which height is itself constant, owing to the principle of the float chamber F.

The section of J, being considerably larger than that of H, the result is that changes of pressure within the carburetter remain without influence over the flow of the petrol through the gauged orifice I, which therefore plays the part which the second curve shows to be necessary.

Carburation at High Altitudes.

It has been found that as an aeroplane ascends the mixture gradually becomes richer of its own accord. This is only natural, as in an automatic carburetter the mixture of air and petrol is practically constant at all engine speeds and at various throttle positions; or, in other words, the varying vacuum in the carburetter does not alter the strength of the mixture.



However, the composition of the mixture is not constant during changes of temperature or under varying atmospheric pressures.

It is a well-known fact that as the altitude increases the temperature of the air becomes lower, and consequently the weight of air per unit volume should increase. But the atmospheric pressure diminishes, which causes the density of the air to decrease.

This diminution of density is considerably more than the increase due to the drop in temperature, so that carburation is affected to an appreciable extent at high altitudes.

Regulation for Altitude.

Now, as is well known, the rate of discharge from the main jet, which is in direct communication with the float chamber, is according to the difference in pressure between the air over the float chamber and the air in the mixing chamber over the jet. This fact is taken advantage of to arrive at a means of varying the discharge from the main jet at will, so that it is only necessary to provide a means of altering the pressure over the float chamber and thereby vary the difference in pressure between the

MAKERS OF METAL PARTS AND FITTINGS.

A "dental" operation that saves foundry work, prevents long stoppages and saves the cost of replacement.

This 7-cwt. Cast Iron Cog Wheel, which had several teeth missing, as shown in the left hand illustration, was very easily put right by Barimar. New teeth were welded in. These repairs when done by the Barimar Process usually give good service for years. Many testimonials have been received from customers praising the quality of the work in this class of repair.

"At the Head of the Industry in Britain."

"Barimar, Ltd., of 10, Poland Street, Oxford Street, London, W.1., a firm of scientific Welding Engineers, which is by common consent at the head of the whole industry in Britain——"

"Journal of Acetylene Welding."
Published in Chicago, U.S.A., December, 1917.

The article in the "Journal of Acetylene Welding," Chicago, U.S.A., gives some indication of what American experts think of Barimar methods. If you want to read the whole story, you will find it on pages 6 to 9 of the Barimar book—"The Welding Test."

How to get "THE WELDING TEST"

If you have any broken parts to be repaired, a copy will be posted free. If you want a copy just to see what it is all about, please enclose three penny stamps to pay postage. Kindly ask for Manual "B C" and mention THE AEROPLANE.

Barimar Welds all Metals

As the firm operates all systems of welding, it follows naturally that all metals can be welded by Barimar. A glance through the pages of "The Welding Test" will show what can be accomplished by the Barimar Scientific System of Welding.

Cut costs and send the Repair now

Barimar cannot quote for repairs without seeing the job. Do this: Remove all fittings, attach a label with your name and address and send the part carriage paid. Passenger train saves time. Then write to us fully giving all instructions.

Address your Repairs to Dept. "B C."—

BELLING ELECTRIC GLUE POTS

for Aeroplane and other work

List No 38.
Price 32/-
(Spare Elements 3/6 each)

Strongly made in cast iron, the Glue container being tinned.
CAPACITY : 2 pints of glue.
LOADING : 900 watts.
3 elements, 3 heats, 3 loose connectors for attaching the cable to.
WEIGHT : 14 lbs.
For use off a power circuit.

List No. 39.
Price 35/-
(Spare Elements 3/6 each)

As above, but with a loading of only 600 watts so that it can be used off an ordinary lamp socket.
Complete with connectors, 2 yards flex, and lamp holder adaptor.

List No. 40.
Price 47/6
(Spare Elements 3/6 each)

Similar to List No. 38, but fitted with a 3 heat switch on a separate panel, which is connected to the Glue Pot by 4 feet of metallic flexible tubing.
For use off a power circuit and recommended for Factory work.

All prices are subject to 25% advance.
Carriage extra on orders under £3 net value.

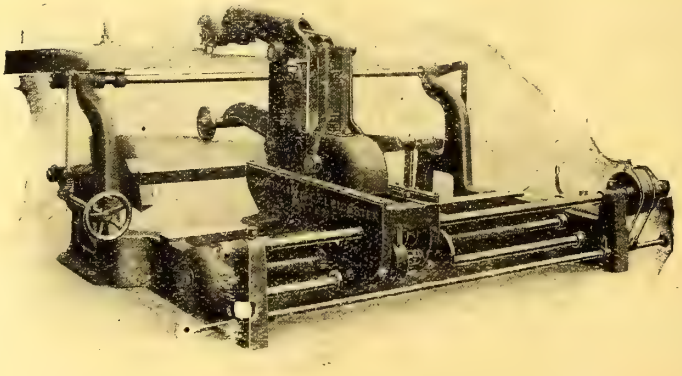
WADKIN & CO LEICESTER



AUTOMATIC PROPELLER SHAPERS.

For Propellers having any number of blades.

Our latest machines have 2 speeds of traverse along the blade, viz.: 4½in. and 5¾ in. per minute.

An average size propeller can be shaped therefore in 30 mins.

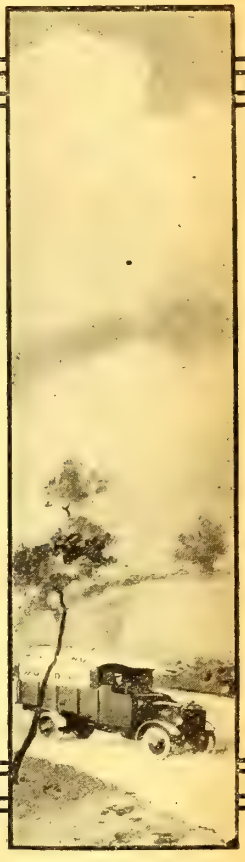
Over 100 of these machines now in commission.

Made in 2 sizes to take propellers up to 12ft. and 14ft. dia.

Either machine deals with propellers 16in. wide and 9½in deep through hub.

PRICES.

12ft. type..**£282 10s.**
14ft. ,, **£309 10s.**



An important feature is that WOODEN FORMERS ONLY are required. These can be easily made in your own shop and make the manufacture of small quantities of propellers a paying proposition on our machine.

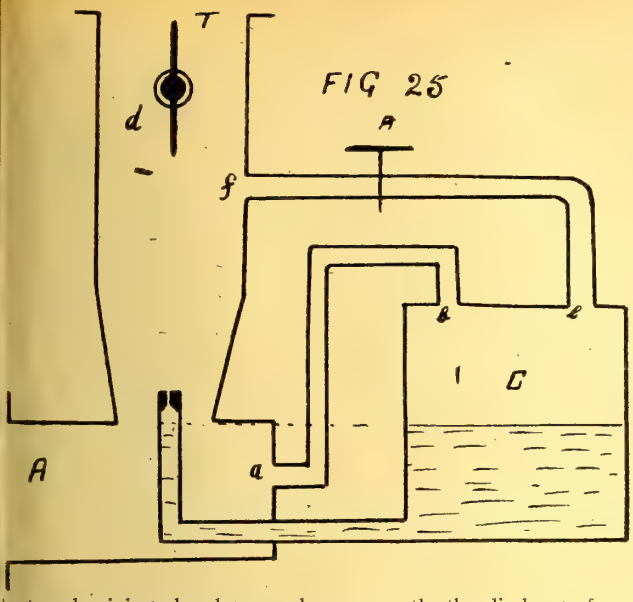

FIG 25

loat and mixing chambers, and consequently the discharge from he main jet alters accordingly.

To make this clear let us examine Fig. 25. This explains the rinciple of the Zenith carburetter which is extensively used on ero-engines.

In this diagram the float chamber is hermetically sealed. A ommunication *a b* is established between the top of the chamber nd the air inlet of the carburetter. A second communication *e f* oins the top of the float chamber to the mixing chamber, above ie choke tube, and a hand-controlled tap R is placed in this assage.

If we suppose our engine is running, there will be a certain epression or vacuum in the mixing chamber *d*, whilst in A the ressure will be that of the atmosphere, and the greatest vacuum ill be at the mouth of the choke tube.

In all cases the pressure at *a* will be greater than that at T ecause of the resistance offered by the choke tube to the flow of ir.

If the tap R is closed, the discharge from the main jet is deter- nined by the vacuum or depression at T, less the depression at C, hich at this time will be the same as at *a*.

Now, if the tap R is opened, we lower the pressure at C and becomes nearer to that which exists at T, and in this way he discharge from the jet is decreased, for the reasons stated efore.

In practice this arrangement is carried out by simply drilling assages in the body of the carburetter itself.

The third hole that will be seen inside the float chamber is o allow the compensating jet to work, at the same pressure as he float chamber.

As the carburetter is adjusted on the ground, with the tap shut, it is only necessary to open it more or less to correct the mixture at high altitudes.

A Practical Illustration.

The method adopted on the Salmson aero-engine is a small extra air valve fitted into the inlet pipe just above the carburetter. This is illustrated in Fig 26.

By manipulating the lever L one opens the valve S and lets a certain quantity of air into the inlet pipe, which reduces the suction on the jets in the carburetter and consequently reduces the flow of petrol from them. Therefore the pilot only has to move the lever L in order to correct the mixture at high altitudes, and a few trials will show how much this valve has to be opened.

This valve should never be used to increase the power of the engine, and it is quite wrong to surmise that the mixture is too rich because the engine runs faster when the valve is opened on the ground. Smaller jets must not be fitted on this assumption, and the valve should only be used for altitude correction.

Some Hints About Carburetters.

1. If misfiring takes place and explosions occur in the exhaust pipe, it is a sign of the mixture being too rich. This could be caused by a punctured float, or because the float needle is bent, or some foreign substance is resting on the needle seating which prevents the float needle closing properly.

2. Should the engine, after several minutes' running, overheat and gradually lose power, it is due to want of petrol. This could be caused by an inadequate petrol supply to the float chamber owing to the filter being choked up. Also a jet might be stopped up, or the petrol pipe itself might be blocked with dirt.

3. Short red flames from the exhaust indicate a weak mixture, whilst long blue ones are a sign of too much petrol. Should the blue flames dance about the exhaust and "go in and out" it proves the mixture is very rich, which a black exhaust is a sure sign of an extremely rich mixture indeed.

4. The inlet joints must be quite tight. Air leakage above the carburetter will increase the petrol consumption, reduce power, and cause trouble in starting the engine.

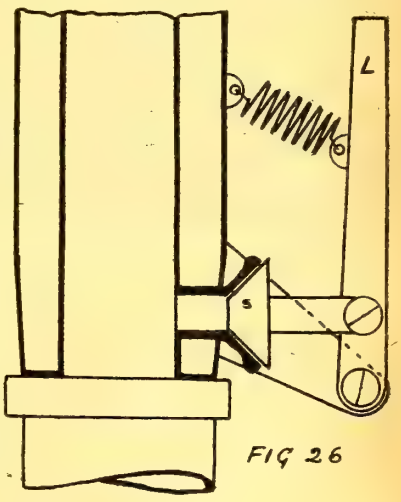

FIG 26

(To be continued.)

THE HISTORY OF DOPE.

Sir,—In view of the interesting discussion in these columns concerning the history of dope with the object of establishing who was the first to apply Cellulose Acetate dope to tighten fabric stretched over aeroplane wings, I should like to remark that so far as I am aware Eichengrün's patents contain no reference to this valuable tightening effect.

Eichengrün himself in a review of the chemistry of Cellulose Acetate published in Ullmann's Enzyklopädie der Technischen Chemie, 1914, volume I, page 128, attributes the first use of Cellulose Acetate solution for this purpose to Leduc Heitz and Co., while maintaining that an earlier patent of his own describes the kind of solutions used for this purpose. The translation of the passage is as follows :—

"Enamel-like Acetate layers on fabrics and on objects of all kinds are produced according to Eichengrün's process (D.R.P.254784/09) with the aid of viscous solutions which are prepared with the aid of mixtures of two or more non-solvents, and one or more solvents.

"This process was used for the treatment of the carrying surfaces of aircraft by the firm Leduc Heitz and Co. (E.P.229396, 1910 sic) (F.P.431692/1911 J.N.G.), while the same firm combined the Acetate coating with a Linseed Oil varnish covering according to F.P.446627/12."

To go into this subject thoroughly would involve a very lengthy discussion as to the validity of the patents relating to Cellulose Acetate solutions, and I will only observe that the Eichengrün patent for their general use on fabrics and on objects of all kinds, D.R.P. 254784/09, gives a reference to a still earlier employment of similar solutions.

Müller in his specification, F.P. 410205/08, mentioned by Mr. Bayley and Dr. Mond, does not claim the use of Cellulose Acetate solution in situ, which is the main point, but regards it solely as a proofing agent.

The embittered correspondence in 1913 between Austerweil and Eichengrün my be summarised by stating that Eichengrün claimed the Acetylcellulose solution itself and its general employment, while Austerweil claimed to have utilised for the first time the tightening and other effects obtained by applying the Acetylcellulose solution to the stretched fabric and regarded the composition of Eichengrün's solutions as already described in earlier patents.

(Signed) J. N. Goldsmith, M.Sc., Ph.D., F.I.C.

THE NORWEGIAN AIRCRAFT SHOW.

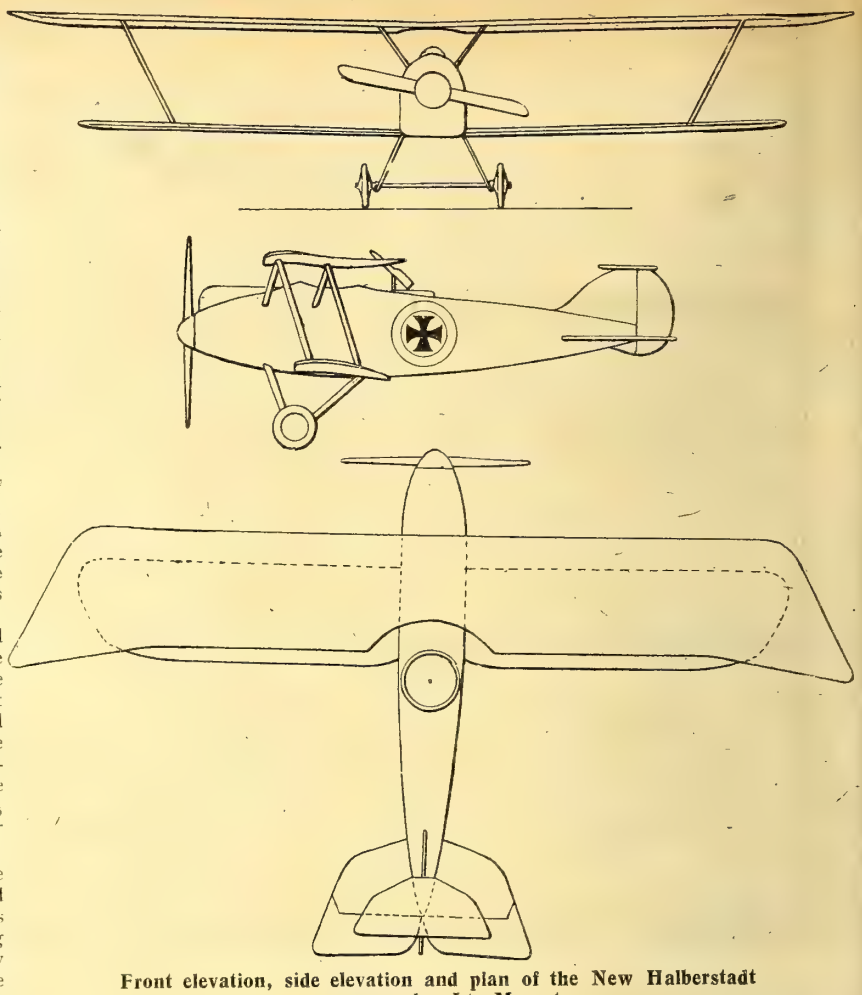
A correspondent of the "Times," writing from Christiania on May 2nd, says :—

To-day, in splendid weather, the King opened the first Northern aircraft exhibition. The Queen, the Crown Prince, and a great number of officials were also present. The exhibition shows the advance made in the Northern countries in this sphere of activity. While the Royal party were inspecting the exhibition a number of machines were in the air.

An official dinner was given in the evening, and the distinguished company included the Prime Minister, the Foreign Minister, the Swedish and Danish Ministers, the President of the Storting, and a number of authorities.

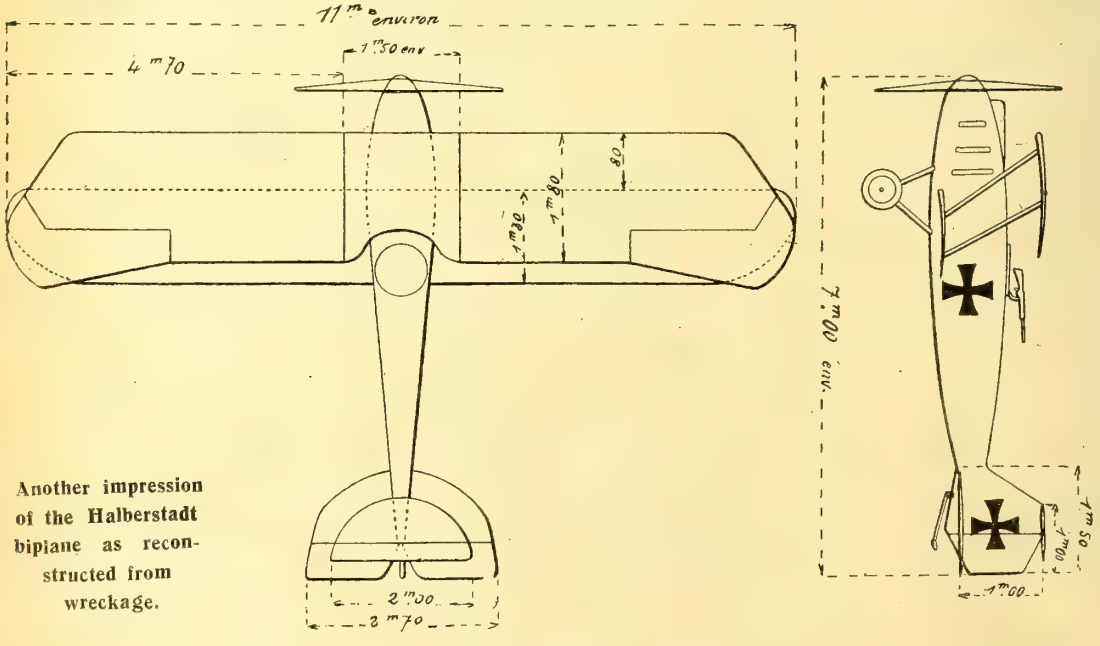
After the President of the exhibition had proposed the toast of "The Northern Kings," the Prime Minister spoke on the advantage of aircraft to the intercourse of the Northern Kingdoms. There is lively interest in aircraft everywhere, especially in regard to traffic to the West.

THE NEW HALBERSTADT.



Writing in "L'Aerophile" of 1st-15th March, M. Lagorgette states that the Hannover biplane to which reference was made in this paper recently is almost certainly not a Hannover but a Halberstadt. Several of these curious machines with biplane tails have been shot down at one time or another, but have been so badly wrecked and burnt that it has not been possible at the time of writing to reconstruct a complete machine, but nevertheless the particulars given on the accompanying sketches give a fair idea of the general aspect and dimensions of the machine.

Together with these sketches are published other sketches of the same or a similar machine observed from the ground by Lt. Mussat, commanding a battery of mobile anti-aircraft guns.



Lt. Mussat insists that the fuselage of the machine is extremely deep, and M. Lagorgette suggests that as no trace of a cabane has been found in the wreckage of the shot-down samples, the upper planes must be fixed direct to the top of the fuselage, and as in the Roland.

Observers on the ground, both French and English, as well as pilots who have come across odd examples of this machine, state that it has a very high ceiling and great speed, and that it is only found singly and at great altitudes. This rather confirms the idea that the machine is actually a Halberstadt, because the Halberstadt Company have always specialised on high-speed machines, and, being a comparatively small firm, their output is not very large.

It would appear that this particular type of machine is used for the particular kind of reconnaissance on which the Germans have specialised for some months past, using for it either this type of machine or the new Rumpler with the Maybach engine. These machines cross the lines at a very great altitude, generally in the region of 20,000 feet, always carrying oxygen for the use of pilot and passenger. They travel to considerable distances behind the French and British lines, apparently with the intention of photographing certain specific points, and owing to their immense altitude they generally pass unnoticed except by pilots who specialise on high patrol work. On reaching their destination they apparently do a long dive to their objective, take their photographs near the ground, climbing at once to the 20,000 ft. level and returning unseen.

Front elevation, side elevation and plan of the New Halberstadt as seen by Lt. Mussat.

Another impression of the Halberstadt biplane as reconstructed from wreckage.

OFFICIAL ENCOURAGEMENT.

A lecture was given under the auspices of the Air Ministry on Tuesday, May 14th, at the Town Hall, Fulham, to the staff and employees of the Regent Carriage Co.

The large hall was practically filled, and the Lecturer, Lt. George, R.A.F., had a most enthusiastic audience, being repeatedly applauded. He spoke for well over an hour and a half, giving a description, illustrated with lantern slides, of the various types of machines manufactured by the Company.

He also spoke of the magnificent work done by the R.A.F. on the various fronts, where he had himself flown.

ON WOODWORK JOINTS.

The Directors of Evans Bros., Ltd., publishers, London, announce the publication of a handbook on woodwork joints, describing the different kinds of joints in timber work known to carpenters. In the nature of things ordinary carpentry does not enter into the construction of an aeroplane, but there are so many purely carpentry jobs always on hand in an aircraft works that such a book should be of distinct value. Copies of the volume may be obtained from the Rolls House Publishing Co., Ltd., Rolls House, Breams Buildings, E.C.4., price 3s. 9d., post free.

An Aircraft "Dabble."

I am a "dabbler"—that is to say, I dabble, dabble in anything that comes along; therefore I am generally "in" whatever there is going.

I have dabbled in almost everything. Shipping, railways, hotels, mining companies, rubbers, and many other things that lend themselves to dabbling. My latest dabble is aircraft manufacture, and of all the dabbles I have dabbled in, aircraft manufacture is the one, it, and all the rest of the family.

There have always been difficulties in dabbles. In mining it was either water in the mine or the shares, or the fairy tales of the mining engineer. The untruthful are classed as follows: liars, damn liars, and mining engineers; while a mine is generally a hole in the ground owned by a liar.

In rubber dabbles, the trees sometimes will not grow or are ungetatable, and so on.

As this article is not one on dabbling generally, but on aircraft manufacture dabbling in particular, I will not go into the beauties of dabbling, suffice it to say no dabble has ever been made difficult by the purchaser of the commodity produced by the mine, railway, rubber, etc., etc.

That is where the aircraft manufacturing dabble is unique. Every dabble I have gone in for meant there was a demand for the commodity dabbled in, and after due consideration I decided there was a demand for aircraft.

It will be noted I write in the past tense, for I am convinced that actually there is NO demand for aircraft, and I speak from experience. There are reasons, sound reasons, for my conclusions. They may be disputed, but facts and official documents are stubborn things.

It is easy to get orders for the manufacture of aircraft from the Government, but these orders are only subterfuges. They cannot be executed, the Government see to that.

With one hand they give an order, and with the other and both feet they see that it cannot be executed. Let me recount what actually happened.

I turned my mind to aircraft. "Surely there is a demand," said I. I had read about it in the "Daily Wail."

But the "Daily Wail" seems to be like the mining engineer, both however survive, and I was gulled by them.

"The country wants aeroplanes," I read, and decided I would do my bit in that respect.

"The ideal factory for the manufacture of aircraft is a piano works."

Right! So I found a piano works that was practically idle. Some filthy lucre, and the works were mine for the war. So far, good.

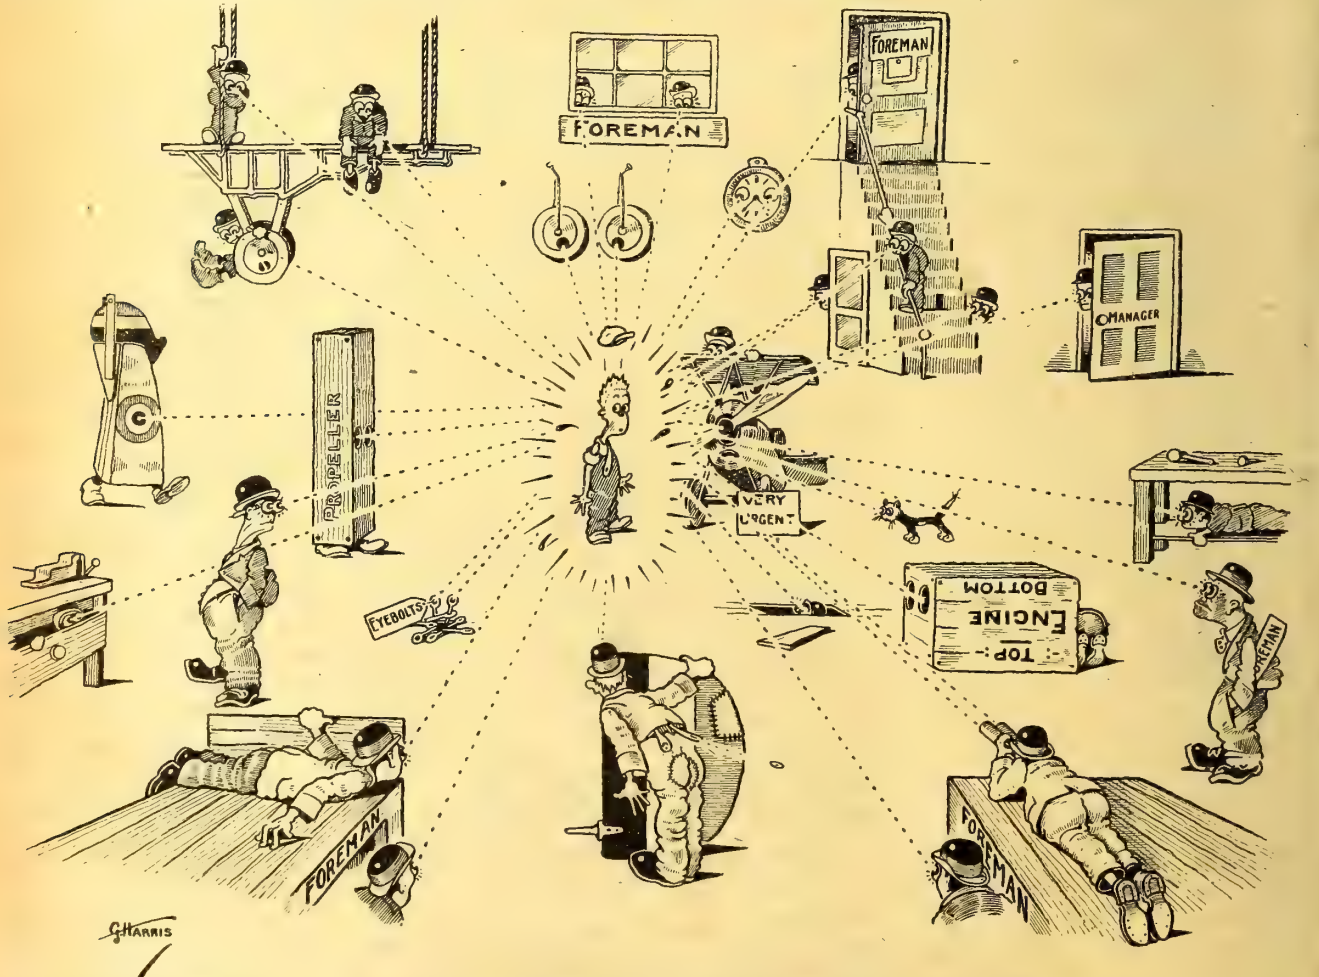
Of course being only a dabbler, I did not propose to manufacture aircraft myself. No; that was left to experts.

More lucre and these gentry were at my service. They knew all there was to know about manufacturing. Their credentials were high, so were their fees, but I did not mind that. A labourer is always worthy of his hire.

My works pleased them, they talked glibly about dopé, spars, presses, A.I.D., etc., while I stood by looking wise and holding the cheque-book.

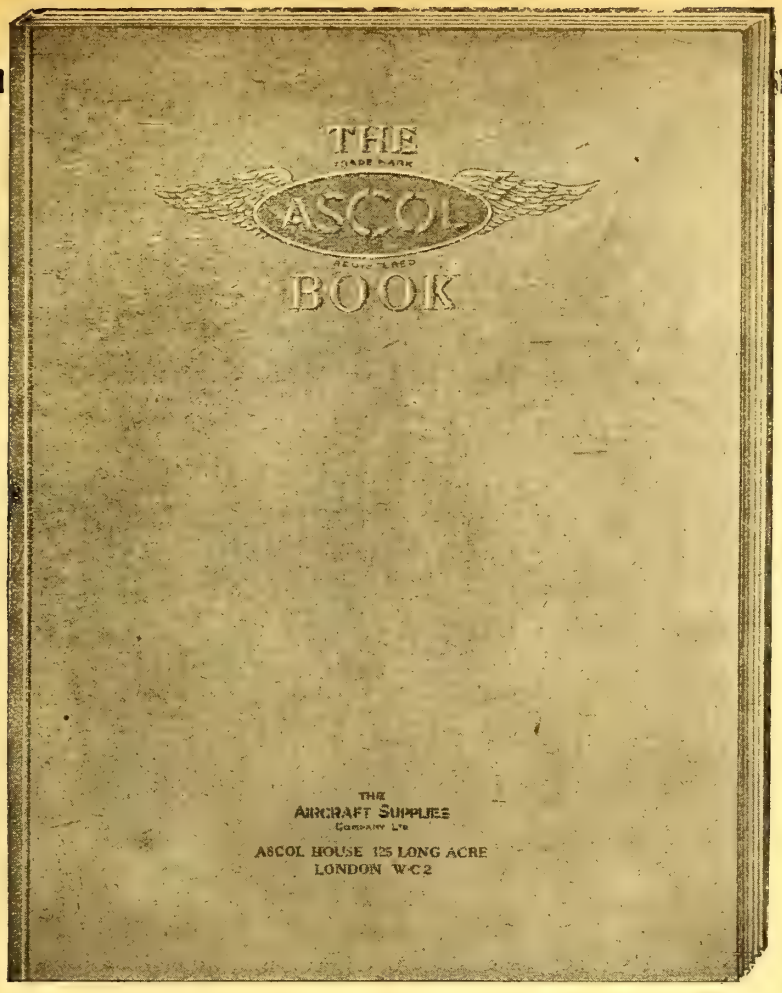
Now said Expert No. 1, "I'll show how to get orders," and he did. Class "A" certificates, accompanied by orders for the manufacture of over 1,000 parts of aircraft, were produced in a few hours.

These orders were given by firms whose stability was beyond question, and I was simply dumbfounded at the ease with which the expert obtained them.



"Can we make them at the price?" I asked. Mr. Expert smiled, drawing from his breast pocket a strange article which I afterwards learnt was a calculating rule. He commenced to pull it about.

Really it was an extraordinary instrument. It told him how much mild steel it would require to make a part, and with the assistance of the market prices in THE AEROPLANE he arrived at the cost of the steel.



He knew all about labour and what it could do. Adding this to the price of the steel he arrived at the cost of the manufacture. The difference between this and the figure on the order was tremendous, so great that I could hardly believe it.

"Why there's a fortune here," I exclaimed. The expert smiled again—"Of course there is," he replied, "when we get properly started."

He knew—I did not—what "properly started" meant.

DISTORTED PERSPECTIVE. The workers' impression of the ubiquitous foreman. The utilisation of various handy objects for purposes of camouflage displays considerable ingenuity.

ORDER YOUR COPY OF THE ASCOL BOOK EARLY

YOU will find the Ascol Book full of just the information you want to know. Among other items it contains a reprint of the whole of the articles which have appeared in "Aircraft Supplies," details of A.G.S. Parts, sections dealing with "Ascol" Charts, a Beginner's Guide (which includes a great deal of information to those new to the industry), and a reprint of the "Glossary of Aeronautical Terms," from the "Aeroplane Speaks," by kind permission of the publishers, Messrs. McBride, Nast & Co.

The volume, which runs into close on 200 pages, will be sold for charity at 3s. 6d. per copy (postage 6d. extra). Special cloth-bound copies will be sold at 10s. 6d. each. Order your copy NOW.

THE AIRCRAFT SUPPLIES COMPANY LTD

ASCOL HOUSE, 125, LONG ACRE, LONDON, W.C.2.

ASCOL

"Now there are a few things we require," he continued, "the first is gas and electric light."

"Easy," I thought, and forthwith a personal application was made to the gas company, likewise the Borough Council for electric light.

At both places it was necessary to produce a permit from the Ministry of Munitions. We had not got this, but were informed where it could be obtained—The Priority Office, Caxton Street, W., or somewhere like that.

Off we rushed to the Priority Office, and interviewed a real, almost live, Cuthbert.

We could not get the permission right off, in fact we must write.

We did at once, and we considered that the permit would be in our hands by return of post—such is the simplicity of a dabbler.

While we were waiting for the permit, Mr. Expert arranged where the gas was to go, and soon had several men at work fixing the pipes for the supply that was to be "on" as soon as the permit arrived. The man who gives the permits for Aircraft Factories to use gas and electric light must have gone for a holiday or something. Anyway, nothing happened. A day passed, a week, two weeks, yet no permit; I was promised wondrous things when we got the gas, and I bowed my head in my home at night, many nights, and the prayer I said was, "God! Give the Cuthbert who giveth the permission for Aircraft Factories to have gas and electric light strength to write a permit for me."

Each morn I rose full of hope that "it" had arrived, and daily my hopes were shattered.

This nerve-racking business went on day after day.

"Gas, gas!" I prayed, "Oh for some gas; even poison gas!" Heavens! Could it be that the Cuthbert in the Priority Office had been gassed, or had he taken the "Evening News" to heart and joined up.

Oh, the terrible suspense, and incidentally the expense. The potential profits on the orders were disappearing. Rent, experts' salaries, and other little devils were gobbling up money in a merry way. All this till we "got started."

The Expert wanted other things besides light; he wanted two power drilling machines. These, I may explain, are not for soldiers; they are used for making holes in metal, etc.

We had what Mr. Expert described as an apology for a drilling machine, one that was worked by hand. We had a man turning this at 1/2 per hour, but he resigned saying we ought to hire Italians for turning the old organ; he wasn't going to pull his guts out for anyone.

After he went we got a young girl on the job. One morning's work, and her mother came to the factory "to see what we were going to do about it." "Right down wicked," she described it, "making young girls turn themselves into engines just because we were too mean to buy a power drilling machine."

But we were not; the truth was that we had tried to buy two of these necessary machines.

As in the light matter we wanted a permit. This had to be applied for from the Engineering Section No. X. Area, Hotel Magnificent Annexe, "application to be made on forms supplied in triplicate" (and damn the paper shortage).

Once more we waited the pleasure of a Cuthbert. This time there was no suspense. He sent round an inspector. I saw him, so did Mr. Expert.

He went into the question of why we required the machines; I explained there were twenty-five thousand holes to drill, and that if we continued the handle-turning process it would be a question not of using the engine parts in this war, but the next.

Well! we told him all about it. He inspected the factory, took all our names, and the details of the employees, their ages, etc. Now whatever all this had to do with making holes in steel I was at loss to understand, being a non-technical man. I supposed it must have something to do with the gauge of the metal or something.

Then a horrible thought flashed across my mind, D.O.R.A. can make a crime of anything; could it be that making aircraft was a crime?

The inspector looked at me in a mysterious way. I read his meaning to be, "I see a plan afoot to manufacture aircraft!" but I was wrong.

The poor man was ill, Mr. Expert told me so—"he suffers from dropsy."

"I am sorry for him," I exclaimed.

"You should have dropped to him," said Mr. Expert.

As I was not yet versed in all the technical terms, I did not understand, but I do now.

Anyway the No. X. Engineering Area did not think 25,000 holes any excuse for the purchase of drilling machines, so they refused the permit. And as the engine parts are of no use without the holes, I am afraid it will be a long time, if ever, before the parts in question will be fitted to Aircraft.

The same post that brought the refusal from No. X. brought a reply from the Priority Cuthbert. *We were not allowed to have the electric light or gas.*

Mr. Expert wants other things, such as a power press and a welding plant, but what's the use of these without light, and what's the use dabbling in aircraft manufacture? I'm cutting my loss, and going in for dabbling in perambulators when the troops come home.

DABBLER.

AN AMERICAN AERIAL MAIL.

Definite plans are being made by the United States postal authorities to try a serious experimental aerial mail, along routes of considerable length. Originally, private tenders were invited for the supply of the necessary aeroplanes, but all the offers have been rejected and it is proposed to use aeroplanes loaned by the War Department. Eight machines, of which two are intended as reserves, will be employed. It occurs to one that if it is desired to keep six machines regularly in use, the reserve of two is hardly adequate. Three to one would be nearer the mark.

One route is a 3-hour trip between New York and Washington. It will compare with the railway time of 5 hours 16 minutes. It occurs to one that such an itinerary will not give the aeroplane a chance to demonstrate its potentialities for coping with difficult circumstances.

Considerable discussion has been aroused regarding the selection of a suitable landing place at New York, but the waste of time which would be involved by the delivery of the mail in the suburbs will be overcome by dropping them into a net in the court-yard of the New York "up-town" post office.

The extension of the service to Atlanta is under consideration. Stopping places are contemplated at Philadelphia, Petersburg, Charlotte, Spartanburg, and Greenville, and the distance to be travelled under these conditions between New York and Atlanta will be 873 miles.

The organisers of experimental aerial mails of this character would do well to lay down routes for demonstration flights between places which are not served by through railway connections, because the average business man who has no sentiment at all for aeronautics will not be convinced that the increased cost and risk involved by sending mails by aeroplane is justified unless the saving in time is overwhelming. The proposed charge for an ordinary letter is 27 cents, or about 1s. 1½d., and in order to make the post popular at such a charge the deliveries have got to be hustled to a marked extent.

For distances of under 1,000 miles an aerial post does not begin to pay unless the alternative route involves transhipment from road to train, or from train to steamboat, when, of course, it is impossible to reduce the time taken by 75 and occasionally by 90 per cent. according to circumstances. But in the case of a route where the time taken is reduced from, say, 6 hours to 4 the ordinary business man would prefer to choose the slower and cheaper route especially if one aerial delivery in twenty failed, as might quite easily happen.

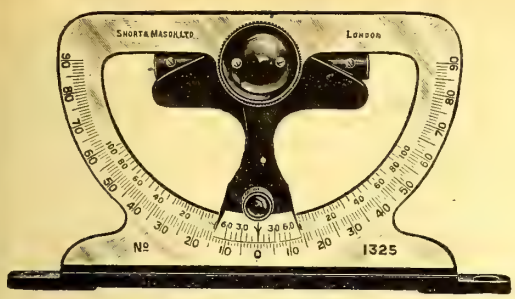
SCANDINAVIAN AIR TRAFFIC.

The "Morning Post" correspondent writes from Christiania on May 5th:—

Delegates representing aviation traffic companies in the three Scandinavian countries have been holding conferences here during the past two days with regard to the project for establishing an inter-Scandinavian commercial aviation service. To-day a public meeting was held, at which the King and a number of public men took part. An understanding has been arrived at, and the service is to be inaugurated in the near future. Companies are to be formed in the three countries, each of them being financed separately.

The Norwegian company has already begun to secure suitable sites for landing places. At the same time negotiations have been entered into with England with a view to securing permission for the dispatch of a sufficient number of aeroplanes to enable an import trade to be carried on with that country.

* * *



It is now reported that there is no intention to sanction an aerial postal service during the war between Stavanger and Aberdeen. The policy of the Air Board, and apparently now of the Air Ministry, has always been that if aeroplanes are suitable for such services they can be far better employed in war operations. Similar representations from France have also been temporarily declined for the same reason.

[At the same time there are actually quite a number of machines and pilots which could be employed on such work without depleting active service material or personnel.—Ed.]

* * *

A message from New York, dated May 15th, says:— A regular aerial post was inaugurated in the United States to-day between New York and Washington, and before long it is expected that the service will extend all over the country. Machines of the Curtiss type, equipped with a 150 horse-power Hispania-Suiza motor, and capable of carrying from 300lb. to 600lb., left New York and Washington simultaneously, the latter carrying a specially autographed letter by President Wilson appealing for Red Cross funds.

One got through and the other failed soon after the start.

AIRCRAFT FINANCE

CURRENT TOPICS.

AWAITING THE HUN.

No developments of special significance or importance have occurred to influence the financial world. The Budget no longer excites the slightest interest. The halt on the Western battle front is becoming tedious and not only inspires caution with the resultant check to any latent initiative in the Stock Exchange, but it prevents the materialisation of any embryonic financial schemes outside.

It is not that there is a lack of confidence. On the contrary, no one was more sanguine of the ultimate issue, but at the same time no one doubts that the German offensive will soon be resumed. That creates uncertainty, and uncertainty is frequently a greater anathema to the financial world than bad news.

Speculative Interest.

Aircraft construction and kindred shares have claimed as much interest as the average industrial security; indeed transactions in them have been rather more frequent because there happen to be quite a number of people who want something with speculative possibilities. Admittedly these are almost as difficult to find as a needle in a haystack, but nevertheless the chance of obtaining an appreciation in capital value and thereby dodging income tax seem irresistible to some.

Blériot's Bigger Dividend.

The French Blériot Co. has decided to pay a dividend of 20 francs per share. This is instructive as well as interesting. For 1916 the dividend was only 12½ francs, and the year's net profits figure at 890,956 francs in comparison with 523,840 francs for 1915. With the balance brought into the accounts there is a disposable surplus of 1,021,460 francs. The dividend does not involve as much as 400,000 francs.

More Capital Needed

In view of the growth of the business and with a view to preparing for the changed conditions after the war it is considered desirable to provide more working capital. Therefore the shareholders have authorised the board to create 2,000 ten year bonds of 500 francs each. These will bear 6 per cent. interest, and are to be offered at the price of 490 francs.

Aero Engine Profits.

The construction of motor and aeroplane engines, more particularly the latter, is now the chief concern of the Ballot Co., a French undertaking. Last year's report recently made its appearance. The profit earned was 2,519,232 francs against 2,021,954 francs for 1916.

The profits, it is emphasised, are struck after making ample provision for all contingencies, and also that the capital of the concern is only 1,800,000 francs in 100 franc shares. These are now priced on the Bourse at about 400 francs, having responded to the dividend of 25 francs per share, which calls for 450,000 francs.

A Pleasant Bonus.

Reverting to the British industry, the Electric Construction Co. has now provided a pleasant surprise for its shareholders. In addition to the dividend of 7½ per cent. there is to be a bonus of 2½ per cent., making 10 per cent. in all for the year. For the two preceding financial years the payment was 7½ per cent., and for the year previously 6 per cent. It had been expected that the past year's results would show up well, and there are some people who expected a rather higher distribution than that announced. However, at 25s. the Ordinary shares represent a yield of 8 per cent., which is really not so bad.

Petrol Prospects.

If coal is the King of Industry, petrol is certainly the Crown Prince. It is the recognition of the potentiality of oil and its wonderful product, petrol, that explains the constantly increasing interest in oil shares. Without a doubt they are the most consistently bright market in the whole of the Stock Exchange, having ousted rubber shares.

With the Russian oilfields suffering from the effect of severe physical damage, and the Roumanian oilfields also hors de combat and the petrol shortage increasing, oil is, in the market sense, likely to be dearer before it becomes cheaper. At the same time, many of the shares are commanding a price which discounts a lot of possibilities.

STRAKER-SQUIRE, LTD.

The shareholders' meeting of Straker-Squire, Ltd., was held last Thursday, Mr. Sidney Straker, A.M.I.C.E., Chairman and Managing Director, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the period under review—namely, Oct. 4th, 1915, to Dec. 31st, 1917—had not been free from anxiety, but, on the whole, the results might be considered as satisfactory. He had been of the opinion for some time that to present accounts showing profits subject to excess profits duty was not only unsatisfactory, but often misleading, and accordingly the profit of £28,685 was net profit, after meeting all claims for excess profits. Of this sum the shareholders had already received dividends amounting to £21,119, and it was now proposed to pay a balance dividend at the rate of 10 per cent. per annum for the year ended Dec. 31st, 1917, amounting to £8,750, which would leave a carry-forward of £3,880. Considering that they had met all claims for excess profits and had not yet been able to take full advantage of the additional capital subscribed last year, the result was one which should afford gratification to all concerned.

In September, 1916, an arrangement was made with the Government by which the company's factory was taken over at a rental of £27,500 per annum, and, in addition, they were to have a sum for compensation for disturbance, payable when the factory was handed over to the company again. At the moment it was difficult to prophesy what condition the works might be in at the uncertain date when they would be in possession again, or whether the sum to be paid for compensation would be adequate to meet the circumstances. He entertained the belief, however, that they would probably receive fair treatment, and if they did he hoped that the period which must elapse between the time of their resuming possession and getting these works, with supplementary works, into full working order, would be such that the company's future prospects ought not to be jeopardised. In the meantime a considerable part of the new capital had been expended in laying down further machinery at their other works, and generally extending the manufacturing facilities of the company. Those works were fully employed, and the trading profit was quite satisfactory.

Looking Ahead.

Besides other Government work, they were engaged upon manufacturing spare parts for vehicles which they had manufactured in the past. The board was carefully considering the best means of meeting future competition and placing the company in a position to manufacture at the earliest possible opportunity. Their latest commercial model had proved such an attractive machine that orders had been placed by many of the most important agents in the kingdom, and deposits paid on orders on hand, which orders amounted to approximately £150,000. Until they were further forward in their arrangements for manufacture they did not consider it advisable to accept further orders.

COMMERCIAL AERONAUTICS IN SIAM.

The first annual general meeting of the shareholders in the firm of Barrow, Brown & Co., Ltd., the well-known firm of merchants, who have supplied aircraft matériel in the past to the Siamese Flying Services, took place at the Company's office in Bangkok on March 9th, Mr. W. A. Graham being in the chair.

The Directors' report and balance sheet were adopted, and a dividend declared of 10 per cent. for 1917. The report showed that in addition the position of the Company has been strengthened by ample reserves.

Mr. Brighouse was re-elected a Director, and Mr. Leatherbarrow was also voted a member of the Board. Mr. Donaldson was re-appointed auditor.

COMPANIES ANNOUNCEMENTS.

NEW COMPANIES REGISTERED.

The files of the following new companies are available for inspection at Somerset House.

Aeronautical Consultants, Ltd.—Private company Registered May 10th. Capital, £1,000 in £1 shares. To enter into an agreement with E. St. Clair Duncan and A. J. Swinton and to carry on the business of manufacturers of and dealers in mechanical, electrical and general engineering appliances, motor

boats, seaplanes, floats and accessories, aviation and aeronautical instructors, etc. The subscribers (each with one share) are:—T. Charlton, 21, Pendarves Road, S.W.19, financial agent; S. Whorlow, 67, Mount Pleasant Road, Lewisham, S.E., financial correspondent.

The Jackson Aircraft Co., Ltd.—The Directors have declared an interim dividend at the rate of 7½ per cent. per annum, free of income tax on the preference shares.

Mr. J. L. Curtiss has been appointed Secretary in the place of Mr. Herbert Bennett who has resigned. The registered offices of the company are at 215, Mare Street, Hackney, E.8.

L. R. Syndicate, Ltd.—Private company. Registered May 15th. Capital, £1,000 in 1s. shares. To work a process for rendering incombustible and/or impermeable wood, paper, cloth and other materials, to manufacture a substitute for doping and soap or a substitute for soap, to manufacture sealing wax and apparatus for preventing the explosion and combustion of the petrol oozing from aeroplane and other tanks, etc. To enter into an agreement with F. J. Lecharlier and A. A. J. Ravelli. The subscribers (each with one share) are:—F. J. Lecharlier, 90, Cannon Street, E.C., engineer; A. A. J. Ravelli, 70, Princes Gate, S.W., notary; W. C. L. Lamot, 22, Northumberland Avenue, W.C., agent. Permanent directors: F. J. Lecharlier and A. A. J. Ravelli.

M. L. Glover & Co., Ltd.—Private company. Registered May 15th. Capital, £4,000 in £1 shares. To take over the business of manufacturers of heat-treated and otherwise finished aeroplane engine and other parts carried on by M. L. Glover at 39, High Street, Cheadle, Ches. The subscribers are:—M. L. Glover, 1, Priestman Road, Heaton Mersey, engineer, 1 share; A. A. Smith, Riversdale, Romiley, near Stockport, solicitor, 10 shares. The first directors are:—M. L. Glover and A. A. Smith. Solicitors:—Hervey Smith and Sons, 93, Market Street, Hyde.

Sadgrove Aircraft Co., Ltd.—Private company. Registered May 15th. Capital, £15,000 in £1 shares. Aircraft constructors, engine, motor and turbine manufacturers, etc. The subscribers (each with one share) are:—W. B. Sadgrove, The Knowle, Normanton Road, South Croydon, wholesale furniture manufacturer.; W. H. Sadgrove, Walden, Woodcote Valley Road, Purley, aeroplane manufacturer. The first directors are:—W. H. Sadgrove (permanent), W. E. Brown, and J. S. Richardson. Solicitors:—Ward, Bowie & Co., 7, King Street, E.C.

Alloy Welding Processes.—Registered May 9th. Manufacturers of and merchants of electrodes for electric blow-pipe and other forms of welding and soldering, etc., etc. Nominal capital, £120,000 in 20,000 £1 preference shares and 100,000 £1 ordinary shares. Directors: E. H. Jones, 18/20, Church Square, Islington, engineer. Qualification of director 100 shares.

ANSWERS TO CORRESPONDENTS.

"Elixir."—If the trust deed comprises both partly capital to replace existing debentures and partly new capital it will require to be stamped at the rate of 2s. 6d. per hundred pounds in respect of the whole amount as a new security and not in part as a substituted security as you appear to surmise. The case has been fought and records stand. If you desire the reference is at your disposal.

"Evergreen."—Your enquiry is quite outside my scope. Refer to any of the standard works on political economy.

"M.A.C."—The concern is a private company. The accounts are consequently not published, but as a shareholder you have a right to be furnished with the auditors' certified copy and also a copy of the memorandum and articles of association. There is no market quotation for the shares and no information is available to enable a valuation to be furnished, but if you will send along a copy of the last balance sheet I will gladly give you an opinion.

A RESIGNATION.

It is announced that Mr. A. H. Botwright has resigned his Chairmanship and Directorship of the London Aviation Co., Ltd., 29, Charlotte Street, Shoreditch, and has no longer any connection whatever with that firm.

AMERICA'S PROGRESS.

Mr. J. W. H. Mason, writing from New York to the "Daily Express" on May 10th says:—

America's production of aeroplanes is now entering the stage where rapid output has been made possible by the co-ordinated work of thousands of Government employees in numerous industries, from lumber felling to cloth weaving.

When America entered the war, the Government had a total of 260 aeroplanes, mostly of inferior types.

[One doubts whether there were half as many which were fit to fly. At any rate there were never a dozen at a time in flying order during the Mexican campaign.—Ed.]

The personnel of the aviation corps, which was a brench of the War Department's Signal Corps, was only a few hundreds strong. The total available aeroplane productivity of the country during the twelve months preceding America's declaration of war was sixty-four machines. The Government had ordered a total of 366 for the year, but sixty-four was the best that could be done by the eleven plants (only one of them of any magnitude) then engaged in airship building. Between April 1st, 1916, and April 1st, 1917, American aviators were in the air for an aggregate of only 1,000 hours. There were but three aviation grounds for the army's flying men between the Atlantic and the Pacific.

From this condition to that existing at present represents the work almost of a magician. To-day there are a score of aviation fields in the United States. At one of these camps, a few days ago, there were 135 machines in flight. The total hours spent in the air by the birdmen during that one day was 857—nearly as many as all American military aviators had spent aloft for the entire year previous to America's entrance into the war. The distance covered by the airmen at that one camp on that one day was 50,000 miles—twice around the world.

[857 hours for 135 machines means almost 6½ hours by each machine in the day, so one takes leave to doubt the figures. But 50,000 miles in 857 hours is only 58 miles an hour, so it does not seem that the machines can be of high value even as training machines. Figures are dangerous things to use without knowledge of their significance.—Ed.]

There are now over forty plants in America making aeroplanes. Over 400 factories are turning out special parts for aeroplanes and fifteen engineering companies are engaged in building the motors.

Aviators are now numbered in the thousands, and the graduates from American flying schools are more numerous than the total aviators engaged in action in any one day on either side of the western front.

TO ALL INTERESTED IN AEROPLANE COMPANIES.

A publication which should be of considerable value to all those concerned with the business side of aviation has just been published by the Aeroplane and General Publishing Co., Ltd., entitled "The Aeroplane Blue Book," a Directory of Aircraft Finance.

This handbook sets forth financial particulars concerning the leading firms engaged on aircraft construction, and on allied work, and indicates the capital of each company and how divided, the amounts issued and paid up, names of directors and other official profits and dividends declared, loans, mortgages and other charges, extracts from last balance sheets and directors' reports.

The information contained in the Blue Book is essentially public in character and each entry is of a nature which could be obtained from the files at Somerset House, but it will be manifest that its collation in a handbook will save endless time to those interested in the financial state of the different companies, and actually a real economy is affected in its purchase, because each inquiry at Somerset House involves a fee of 1s., whereas the price of the Aeroplane Blue Book post free is 1s. 7d.

As a book of reference it should be filed by every manufacturer interested in the industry and should be examined by every shareholder.

Davis High-Speed Steel Furnaces

The Davis "D.H.S.T." series of Gas-fired Furnaces have been specially designed for the hardening of modern High-Speed Steel Tools, and to provide the maximum of convenience and efficiency at the least practicable fuel cost.

The firing element consists of Davis PATENT Air-Blast Burners, for gas at ordinary main pressure and air at 2 lbs. per sq. inch. Two chambers are provided, each fitted with stopper brick, a pre-heating temperature of 1,000 deg. C. being attainable in the upper chamber, and 1,350 deg. C. in the lower; whilst the flame does not impinge on the work.

Illustration shows the No. 50 size (top chamber 10 in. by 4 in. by 2 in.; lower chamber with silica tube, 9 in. by 2¼ in. inside diameter). Price **£16 6s. 6d.** complete. Write for Lists F18 A, B and C (gratis).

Also Ovens, Muffles, Crucibles, Lead Melters, etc.

HUMBER LIMITED,
COVENTRY.

(*Continued from page* 1882.)

pletely out of control five hostile machines and sent down one other crashing to earth. He has displayed the greatest gallantry, courage, and determination in dealing with enemy aircraft.

Lt. (Temp. Capt.) R. Dodds, Cent. Ont. R. and R.F.C.

He has destroyed or driven down 11 enemy machines. On one occasion while on a one-machine patrol he attacked three enemy scouts, but owing to his gun jamming he was forced to withdraw from the attack. Though under heavy fire from the pursuing enemy he succeeded in remedying the defect, and then turned and attacked the enemy again. He destroyed one of them and drove down another out of control. Later, he led a bombing raid on an enemy aerodrome, and under intense machine-gun fire from the ground dived to within 100ft. of the hangars before releasing his bombs. Though his machine was damaged he remained at a height of 200ft. until the rest of his formation had dropped their bombs. His magnificent example of pluck and determination was of the greatest value to the squadron.

Lt. A. B. Fairclough, Can. M.G. Co. and R.F.C.

During four months he has destroyed four enemy machines, and has driven down two others completely out of control. When engaged with hostile aircraft he has at all times displayed the utmost dash and courage.

Lt. K. W. Junor, Can. M.G. Corps and R.F.C.

In aerial fighting he destroyed two enemy machines and drove down two others out of control, which crashed on landing. He always showed the greatest courage, skill, and resource.

Lt. R. W. McKenzie, Aust. F.C., attd. R.F.C.

As a result of engaging hostile aircraft during four months, he on four occasions has destroyed a total of four hostile machines. He has also carried out numerous low-flying reconnaissances, in which he has bombed and engaged with machine-gun fire enemy formations. He has at all times displayed marked determination and devotion to duty.

War Office, May 14th.

REGULAR FORCES.—Establishments—R.F.C.—Mil. Wing.—Flt. Comdr.—Lt. E. D. Dent, Durh. L.I., T.F., from a Flying Officer, and to be temp. Capt. whilst so empld., Dec. 18th, 1917.

Gen. List.—Flt. Serjt. F. V. Webb, from R.F.C., to be temp. Sec. Lt., Jan. 28th.

Admiralty, May 17th.

The King has been pleased to approve of the award of the following honour for services in action with enemy submarines:—

Distinguished Service Order.

Flt. Comdr. R. Leckie, D.S.C., R.N.A.S.

* * *

The King has been pleased to approve of the award of the following decorations and medals to officers and men of the Royal Naval Air Service:—

(i.) *For Services in Mesopotamia.*

The Distinguished Service Cross.

Lt. G. D. Nelson, R.N.V.R.

For the great courage and devotion to duty displayed by him as engineer officer of his detachment. He was untiring in his work, in spite of attacks of malaria and dysentery, and the successful running of the engines was due to him.

Flt. Sub-Lt. J. D. Hume, R.N.A.S. (since killed):—

For continuous good patrol work, artillery spotting, feeding Kut-el-Amara, etc., sometimes making three trips a day under all weather conditions. He invariably displayed great coolness and resource in the face of the enemy, regardless of personal danger.

A Bar to the Distinguished Service Cross.

Flt. Lt. V. G. Blackburn, D.S.C., R.N.A.S.

For services in the advance and retreat from Ctesiphon, when he performed most excellent work.

Flt. Sub-Lt. W. H. Dunn, D.S.C., R.N.A.S.

For conspicuous courage and skill in carrying out an extraordinary amount of flying, both in sea and land planes. He is invariably cheerful and ready when called on for work.

The Distinguished Service Medal.

C.P.O. Mech., 1st Gr., J. F. Armitt, O.N. 343587 (Ch.); C.P.O. Mech., 2nd Gr., J. Rodger, O.N.M. 2435 (Ch.).

* * *

The following officers have been mentioned in dispatches:—Wing Comdr. F. W. Bowhill, R.N.A.S., Flt. Lt. C. B. Gasson, R.N.A.S., Obsr. Lt. E. F. Turner, R.N.A.S.

(ii.) *Miscellaneous.*

A Bar to the Distinguished Service Cross.

Flt. Comdr. C. P. O. Bartlett, D.S.C., R.N.A.S.

For conspicuous bravery and devotion to duty in carrying out bombing raids and in attacking enemy aircraft. On March 28th, 1918, he carried out three bombing raids. Whilst returning from one of these missions he was attacked at a height of about 2,500 feet by three enemy triplanes, and five other scouts. One of these he drove down, attacking it with his front guns, whilst his observer shot down out of control a second. Observing that two of the triplanes were diving on him and converging, he side-slipped his machine away with the result that the two enemy machines collided and fell to the ground together, where they burst into flames. He has carried out very many bombing raids, and brought down several enemy machines, invariably showing the greatest skill and determination.

Flt. Lt. (Actg. Flt. Comdr.) L. H. Slatter, D.S.C., R.N.A.S.

For distinguished service rendered during a bombing attack on Ostende Seaplane Station on March 26th, 1918, when, in spite of intense anti-aircraft fire and the glare of numerous searchlights, he descended to 400 feet over his objective to drop bombs. Flt. Comdr. Slatter is a leader of unqualified keenness and dash and possessed of exceptional courage and judgment.

* * *

The following decoration and medal have been awarded by an Allied Power. The King has in each case given unrestricted permission for their use on all occasions.

Conferred by the President of the French Republic.

Croix de Guerre.

Sqdn.-Comdr. H. R. Busteed, O.B.E., R.N.A.S.

Medaille Militaire.

C.P.O. Mech., 1st Gr., A. H. Simmonds, O.N. M.443.

Correction.—In "Gazette" dated May 1st, page 5,281, col. 2, for Flt. Lt. Frederick Neville Halstead, R.N.A.S., read Flt. Lt. Francis Neville Halsted, R.N.A.S.

War Office, May 17th.

REGULAR FORCES.—Staff.—A.Gs. and Q.M.Gs. Staff.—A.A. and Q.M.G.—Capt. (temp. Lt.-Col.) C. Fraser, M.C., N. Staff R., from a Staff Officer, 1st Cl. R.F.C., graded as an A.A.G., and to retain his temp. rank whilst so empld., Jan. 28th.

FROM THE COURT CIRCULAR.

Buckingham Palace, May 15th.

The Right Hon. Sir William Weir (Secretary of State for the Royal Air Force) had an audience of the King this morning.

Buckingham Palace, May 16th.

Lt. Duncan Grinnell-Milne, Royal Fusiliers and Royal Air Force, had the honour of being received by The King.

OFFICIAL COMMUNIQUES.

MILITARY.

G.H.Q. Communiqués.

May 14th, 8.58 p.m.—On the 13th inst. flying was only possibl for a few hours during the early part of the day. In this perio a great deal of work was done by our aeroplanes with the artil lery, many reconnaissances were carried out, and 500 bombs wer dropped by us on various targets.

In air fighting two hostile machines were brought down.

None of our machines is missing.

May 15th, 9.20 p.m.—On the 14th instant reconnaissances artillery work, photography, and bombing were carried out b our aeroplanes.

In air fighting six hostile machines were brought down an one other was driven down out of control. In addition, on German aeroplane was shot down by anti-aircraft gun fire an another by the fire of our infantry.

Two of our aeroplanes are missing.

Bombing was continued actively during the night, and 12 ton of bombs were dropped by us on the railway station at Lill Menin, Chaulnes, and Péronne, on billets at Bapaume, and i the area south of the Somme and on the docks at Bruges.

All our machines returned.

On the 15th instant a successful raid was carried out by us o the railway station and sidings at Thionville (16 miles north o Metz). Twenty-four heavy bombs were dropped, and burst were observed on the railway sheds and track and on th furnaces. The Carlshutte factory alongside the railway was h four times.

All our machines returned safely in spite of the heavy ant aircraft fire experienced by them when over their objectives.

May 16th, 10 p.m.—On the 15th instant a great deal of wor was done by our aeroplanes and observation balloons in co junction with our artillery. Long-distance reconnaissance were carried out throughout the day, and a great many phot graphs were taken in the enemy's forward and back areas.

Our bombing machines began their attacks at dawn an continued till dark, dropping in all a weight of over 24 ton of bombs. The targets included the railway stations at Tourna Courtrai, and Chaulnes, billets in the neighbourhood of Doua Bapaume, Menin, and the River Somme, and the Zeebrugg Bruges Canal.

Enemy aircraft were active in the early morning and agai in the evening hostile scouts attacking our bombing machine with particular insistence.

Twenty-five German machines were brought down and others were driven down out of control. One other hostile aer plane was shot down by machine-gun fire from the ground.

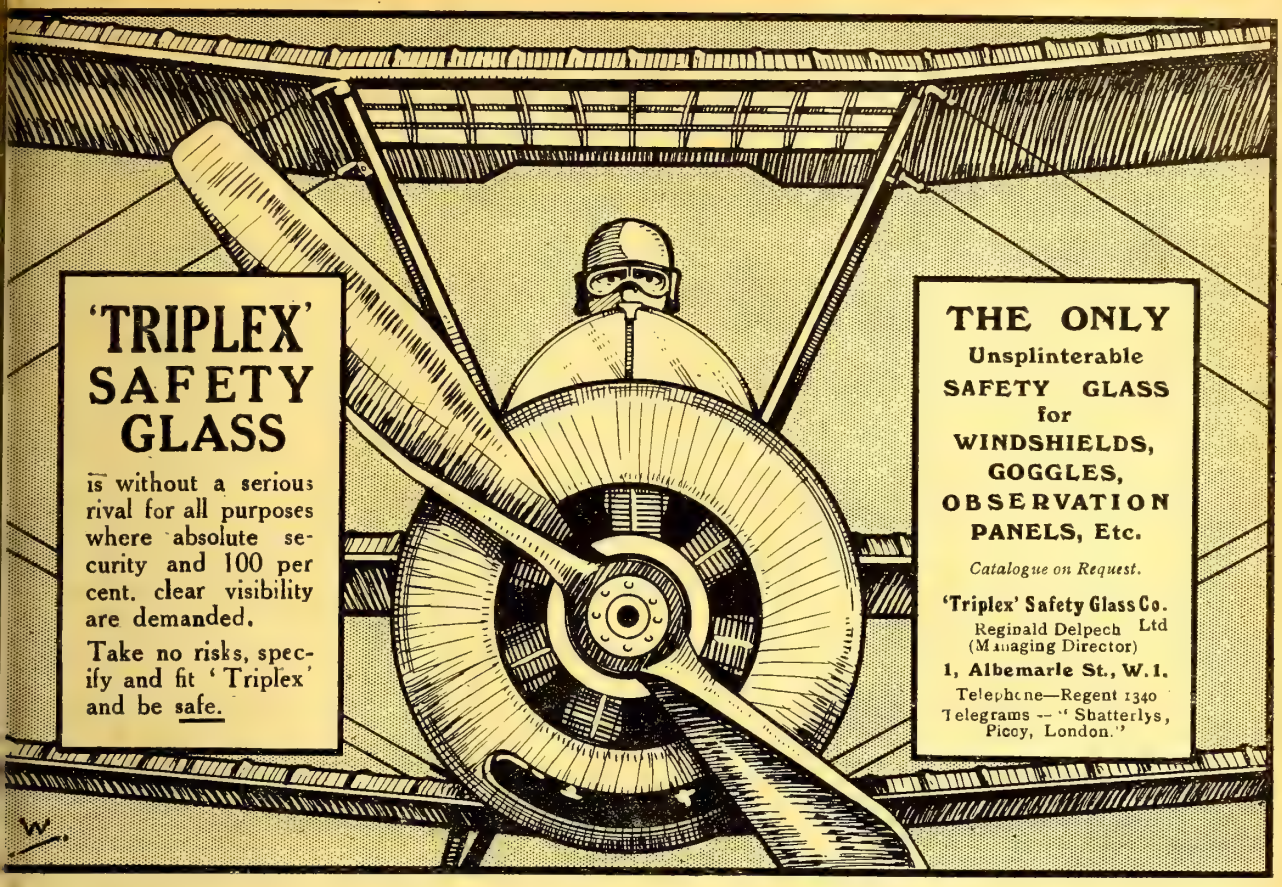
Eleven of our aeroplanes are missing.

After dark bombing was continued by our night-flying aer planes. Over 14 tons of bombs were dropped by us on th railway stations at Chaulnes, Lille, and Douai, the enemy billets at Péronne, Bray, and Bapaume, and the docks Bruges. One of our machines has not returned.

Early on the 16th inst. our aeroplanes set out to bomb th factories and railway station at Saarbrücken, in Germany. O crossing the lines they encountered 10 hostile scouts, and running fight took place along the whole way to our objective By the time Saarbrücken was reached 25 hostile machines ha collected and were attacking our aeroplanes with the utmo vigour.

In spite of these attacks, 24 heavy bombs were dropped b us on our objectives. Several bursts were seen on the railwa and a fire was started.

Having attained their objectives, our aeroplanes concentrate their efforts on fighting the enemy's machines, five of whic were brought down.



One of our aeroplanes also was seen to be shot down.

All our other machines returned.

May 17th, 9.33 p.m.—Great aerial activity prevailed on th 16th inst. Our observation balloons accomplished a large amou of registration for the artillery, and reported movements in th enemy's forward areas. Our aeroplanes carried out long-distan reconnaissances, artillery work, bombing, photography, an fighting throughout the day.

Over 23 tons of bombs were dropped on important railwa centres, aerodromes, and billets behind the enemy's lines.

Fighting was intense in the early morning and in the ever ing. Thirty hostile machines were brought down, and fiv others were driven down out of control. In addition two Ge man machines were brought down by anti-aircraft gunfire. Tw

'TRIPLEX' SAFETY GLASS

is without a serious rival for all purposes where absolute security and 100 per cent. clear visibility are demanded.

PRACTICAL FLYING

3/9 Net

COMPLETE COURSE of FLYING INSTRUCTION
By a FLIGHT COMMANDER.

THE FIRST PRACTICAL WORK on actual TRAINING and INSTRUCTION for the R.A.F. Written and illustrated by practical Flying Officers who have had considerable experience as instructors under Service conditions.

With an Introduction by Major-General W. S. BRANCKER, R.A.F.

OVER 100 ILLUSTRATIONS, Diagrams, etc. Special Pull-out Map, illustrating a Cross-Country Flight.

The following subjects are covered:

THE theory and practice of flight—Principles of aeroplane engines—The first lesson in the air—The first solo flight and aerodrome practice—The use and working of the instruments—Map reading (illustrated with special Ordnance Survey Maps)—Preparing for a cross-country flight—Cross-country flying—Advanced flying—Night flying, etc.

Everyone who takes an interest in Aviation will find in this work a very clear exposition of why an aeroplane flies, how it is flown, and the manipulation to produce apparently difficult "stunts."

ON SALE THIS WEEK.

Obtainable through any Booksellers; or post free from the Publishers 4/- net

WAR SERVICE MANUALS

"Practical Flying" is only one of many War Service Manuals
Write for complete list.

hostile machines landed behind our lines, and their occupants were captured.

Five of our machines are missing.

During the night our night-flying machines dropped a further 10½ tons of bombs on different targets, including the railway stations at Lille, Douai, and Chaulnes, billets in the neighbourhood of Bapaume, Péronne, and Rosières, and the docks at Bruges.

The enemy's night-flying machines were also active. One Gotha aeroplane landed behind our lines, and the crew were taken prisoners.

With reference to the report of the raid on Saarbrücken on the 16th inst., three hostile machines were driven down out of control on that occasion. The statement that five hostile machines were brought down is incorrect.

May 18th, 9.55 p.m.—On the 17th inst. the weather again favoured operations in the air, though at times visibility was poor.

A large amount of work was done by our artillery with aeroplane and balloon observation. Many photographs were again taken of the enemy's back areas, and the constant bombing attacks carried out by our aeroplanes during the last four days were continued. Over 22 tons of bombs were dropped by us on Tournai, Courtrai, and Chaulnes railway stations, on several hostile aerodromes, and on billets all along the front.

Hostile aircraft were not as active as on previous days, although large formations of German machines were encountered well east of the lines. Nineteen hostile aeroplanes were brought down and four others were driven down out of control.

Ten of our machines are missing.

On the same day over a ton of bombs were dropped by us on the railway station at Metz. Several bursts were seen on the track and on factories alongside the railway.

All our machines returned.

During the night our machines dropped 10 tons of bombs on Chaulnes, Haubourdin, Douai, and Marcoing stations, on Péronne, and targets in the neighbourhood of Bapaume.

Raids were carried out also during the night on Thionville and Metz railway stations. Thirty-two heavy bombs were dropped, and several direct hits obtained. A fire was started at Thionville.

One of our machines failed to return.

On the 18th inst. a most successful raid was carried out by us in broad daylight on the railway stations, factories, and barracks at Cologne, in Germany. Thirty-three bombs were dropped, and bursts were seen on the railway sheds. Our bombing machines were attacked by several hostile scouts, two of which were driven down out of control.

All our aeroplanes returned.

May 19th, 9.5 p.m.—On the 18th inst. another fine day enabled bombing reconnoitring, photographing, and fighting to be continued by our aeroplanes. Improved visibility made it possible to carry out slightly more work in conjunction with the artillery than could be accomplished during the past few days.

The railway stations at Courtrai, Valenciennes, Aulnoye, Roulers, and Chaulnes were heavily bombed by us, and several of the enemy's aerodromes, ammunition dumps, and billets were also attacked. A total weight of over 19 tons of bombs was dropped on these targets.

As on previous days, the greater part of the fighting took place well east of the lines. Twenty-one hostile machines were brought down and two others driven out of control.

Eight of our aeroplanes are missing.

After dark our bombing machines were only able to be at work during half the night owing to a thick mist which blew in from the sea. Ten tons of bombs were dropped by them on Marcoing, Haubourdin, Douai, and Chaulnes railway stations, on billets in the neighbourhood of Bapaume and Bray, and on the Solway Works and lock gates at Zeebrugge.

One of our machines failed to return.

May 20th, 11.10 p.m.—Another full day's work in the air was accomplished on the 19th inst. Our balloons and aeroplanes actively co-operated with our artillery observing the fire of our batteries and locating active hostile guns. The enemy's railway stations, aerodromes, dumps, and billets were again attacked by our bombing aeroplanes, which dropped over 17 tons of bombs.

Severe fighting took place well to the east of the line, where our bombing machines were attacked by large hostile formations. Three German observation balloons were destroyed by us, 27 hostile machines were brought down, and three others were driven down out of control. Twelve of our aeroplanes are missing.

After dark bombing was carried out vigorously both by us and by the enemy. Our machines dropped 15 tons of bombs on Chaulnes, Douai, Don, and Marcoing railway stations, St. Denis Westrem aerodrome, Bray, and Bapaume.

One of the enemy's large bombing machines was brought down in our lines by anti-aircraft gunfire.

All our machines returned.

On the 20th inst. a ton of bombs was dropped on the barrac gasworks, and railway station at Landau in Germany (nor west of Karlsruhe). The railway was hit several times and t fires were started.

All our machines returned.

War Office Communiqué.

May 17th.—The G.O.C. Palestine reports:—

On May 7th our aircraft executed a successful bombing ra on Amman railway station (30 miles north-east of the Dead Se on the Hedjaz railway, and on May 9th the enemy aerodro and railway station in the vicinity of Jenin (on the Cent Palestine Railway, 14 miles north of Samaria) were attacked our Air Service.

Home Command Communiqués.

May 20th, 12.30 a.m.—Hostile aircraft crossed the coasts Kent and Essex shortly after 11 p.m. to-night (May 19th), a proceeded towards London.

The raid is still in progress.

2.15 p.m.—Reports show that four of the enemy aeroplar which raided London and the South-East last night have be brought down.

The raid appears to have been on a large scale, and a co siderable number of bombs were dropped, but no details casualties or damage are yet available.

May 20th, 11.55 p.m.—A considerable number of Gotha aer planes appear to have taken part in last night's raid. It is r possible to give an exact figure, but probably between 20 a 30 machines participated.

A group of machines came in up the Thames Estuary abo 11 p.m., and skirted the North Kent coast on their way to Lo don, being heavily engaged by the A.A. Defences on their w inwards.

One of these machines was engaged at about 11.30 by British aviator, who fired at the raiders at close range until t machine disappeared from view in the clouds. Shortly afte wards she burst into flames at a height of about 7,000 feet, a fell a blazing wreck to earth.

The remaining other machines passed inland over Kent, dro ping bombs at various places without doing material damage.

Another group of raiders crossed the Essex Coast and ma its way towards London, where one machine was brought dow by gunfire. A few dozen bombs were dropped promiscuously certain parts of the London district, doing, in a few cases onl no inconsiderable damage to small dwelling-house property.

The casualties were, however, by no means heavy or propo tionate to the material damage.

All the raiders were hotly engaged by the A.A. defence Some of the enemy machines attempted to make their way dow the Thames Estuary, others proceeded eastwards overland; son may have been severely damaged during their attempt to pen trate the London defences. At least three more of them faile to effect their escape. Two were brought down before they ha crossed the coast, one of these being destroyed by a British avi tor. A fifth machine came down in flames into the sea and sixth is also reported to have been observed falling into the se though this report is not yet definitely confirmed.

Further reports make it appear that yet a seventh raider faile to reach home, but fell burning into the sea. This statement not yet corroborated by any more material evidence.

There is no further material change to record in the casualt list as given this afternoon; it now stands at 37 killed and 1 injured. Except for two outbreaks of fire occasioned in large premises, which were soon got under control, the damage wa confined to the wrecking of some small dwelling-houses by forc of explosion as well as to the breakage of much glass.

May 20th, 4.30 p.m.—The following are the casualties so fa reported in last night's air raid:—

LONDON METROPOLITAN POLICE DISTRICT AND CITY.

Killed.

Men	17
Women	14
Children	6
Total	37

Injured.

Men	83
Women	49
Children	23
Total	155

PROVINCES.

Killed.—Nil.

Injured.—Men, 2; women, 3; child, 1—total, 6.

Considerable damage to house property is reported.

Burberry R.A.F. Safeguards

made in materials which are as impenetrable as leather but ventilate naturally and avoid condensed moisture, which is produced on the inner surface of air-tight fabrics.

The BURBERRY AIR-WARM

provides a lightweight, yet warm and dependable, defence against rain, mist or cold wind.

The inside is of luxuriously soft, thick Camel Fleece. The coat is workmanlike in every detail, and has nothing about it to catch in any part of the machine.

Its two parts can be worn separately or together—the outside alone providing a Weatherproof that excludes wet or wind without rubber or other airtight material; the Fleece lining, a smart British Warm; and the two together the staunchest self-ventilating safeguard possible.

Military Catalogue sent on request.

JOSEPH SANKEY & SONS Ltd

Hadley Castle WELLINGTON Shropshire

war broke out he was at Penang, in the Malay Straits, where he had been for some time in a machine-gun section of the Malay States Volunteers. As soon as he was able to settle up his business affairs he sailed for England and in January, 1915, was given a commission in the Queen's. In July, 1915, he went to Gallipoli with his battalion, and was in the landing at Suvla Bay and the battle of Chocolate Hill. He remained in the Peninsula till the evacuation, and was during the greater part of the time brigade staff captain. He was mentioned in dispatches, and was awarded the Military Cross. On leaving Gallipoli his battalion went to Egypt, where he was given command of a company and the acting rank of captain, which he held for over two years. In September, 1917, he transferred to the R.F.C., and was posted to a squadron last March.

LORD and GEORGE.—Lt. John Stone William Lord, R.A.F., and Lt. Leslie George, R.A.F., both of Sydney, New South Wales, were killed on May 12th near Winchester They enlisted together, served in Egypt with the Australian Light Horse, and afterwards transferred to the R.F.C.

LUTYENS.—Lt. L. F. Derek Lutyens, R.A.F., whose death was announced last week, was educated at Elstree and Aldenham, and enlisted in the Royal Fusiliers (10th Battalion) in August, 1914, shortly afterwards obtaining his commission in the same regiment. He went to France with his regiment in 1915, and remained there as bombing officer until after the battles of Pozières and La Boiselle, when he transferred to the Royal Flying Corps. He fought many engagements as "observer," and was eventually appointed to an experimental squadron.

The body of David Hugh Pinsent, a civilian observer, who was killed while flying with Lt. Lutyens on an experimental flight a week ago, was found on May 14th in the Basingstoke Canal.

MOORE.—Lt. Clive Goulding Moore, Royal Fusiliers and R.F.C., who was posted as missing on Aug. 15th, 1917, and is now reported to have been killed on that date while flying over the German lines, was the son of Mr. R. E. Moore, barrister, of the Middle Temple, and 42, Acacia Road, and Mrs. Moore. He was educated at Loudoun House School, N.W., and Radley College, whence he was to have passed on to Trinity College, Cambridge. But on the outbreak of war he at once decided to join the Army. After a few weeks in the Inns of Court O.T.C., he was granted a commission in the Royal Fusiliers, and went out to France with his battalion in November, 1915. After five months in the fighting line he contracted diphtheria and was invalided home. On recovering, he joined the R.F.C., got his "wings," and again went out to France. He met his death when engaged on the dangerous task of flying low over the German lines to disperse with machine-gun fire the enemy troops massing for a counter-attack. He was a keen oarsman, and while at Radley won several rowing trophies, including the "silver sculls." He was a corporal in the school O.T.C. and an excellent shot, and both in 1913 and 1914 was a member of the team chosen to represent the school at Bisley.

SANKEY.—Sec. Lt. C. M. Sankey, M.C., The Buffs, attd. R.A.F., who was accidentally killed on May 15th whilst flying, was the only son of Major and Mrs. W. Sankey, of Wouldham, Tring Avenue, Ealing, and dearly-beloved brother of Mrs. Charles Cock. He was 21 years of age.

SOTHAM.—Lt. R. C. Sotham, R.W. Kents, attd. R.F.C., who was previously reported missing on Jan. 9th, has been reported killed in action on that date. He was the youngest son of the late George Sotham and Mrs. Sotham, of Horley, Surrey, and was 23 years of age.

VON POELLNITZ.—Major Herman Walter von Poellnitz, Lincolnshire Regt. and R.A.F., who died on May 11th abroad as the result of a motor accident, was the only child of Baron and Baroness Poellnitz, Blacklee, Sidcup, and grandson of the late Sir Walter Elliot, K.C.S.I., of Wolfelee, Hawick. He was 27 years of age.

WADE.—Lt. Richard Curtis Wade, R.F.C., whose death was announced recently, joined the King's Shropshire L.I. in September, 1914, and served for 13 months at the front. He was gazetted to the R.F.C. in September, 1917, and returned to the front the same month.

WINMILL.—Lt. Westropp Orbell Peyton Winmill, Bedfordshire Regt., killed on March 22nd, aged 23, was the elder son of the late George Winmill and Mrs. Winmill, Bedford. He was educated at the Bedford School, which he entered in 1903 and left in 1911 to join the engineering department of the Great Eastern Railway. When war broke out he enlisted in the Essex Regt., and in January, 1915, was nominated by the Army Council to the Royal Military College, Sandhurst. Passing out in May, he was gazetted to the Bedfordshire Regt., and went to France in June, 1915. After seven months in the trenches he was attached to the R.F.C., and was out there five months as observer. In June, 1916, he came home and gained his pilot's certificate in November, 1916, and took a course in aerial gunnery. On account of his nerves he was told that he must not fly for some time and was appointed an instructor. In October, 1917, as the Medical Board still would not permit him to fly, he asked and obtained permission to rejoin his old regiment, and went back to the front in December, 1917. Mr. Winmill married in 1917 Myfanwy, daughter of Mr. R. Clarke and the late Mrs. Clarke, of Reading.

MARRIAGE.

SELBY—BARTRUM.—On May 15th, at the Chapel Ro Savoy, Capt. J. G. Selby, M.C., R.F.A., R.F.C., son of and Mrs. H. T. Selby, of Northfield, Bromley, Kent, married to Dorothy, younger daughter of Mr. and Mrs. Bartrum, of Coniston, Bromley, by the Rev. Hugh B. Chapm

BIRTH.

* * *

The appointment of Brevet Lieut.-Col. W. G. H. Salmo D.S.O., R.A., to be temp. Major-General, as notified in "Gazette" of May 17th, will be welcomed by all who h served under that able officer. As various dispatches from cessive General Officers Commanding the British Army in Eastern Mediterranean have shown, General Salmond has b for a considerable time in command of R.F.C. units in Eg and in the various forces which come under that comma Under his leadership the work of the R.F.C. in that area been uniformly good, and besides controlling troops in the f he has organised vast training establishments with complete cess. None is better qualified than he for the command of increased forces which he now has under him, and all will h that his recent promotion may be merely another step forw in his distinguished career.—C. G. G.

FOREIGN COMMUNIQUES.

FRANCE.

May 14th.—Army of the Orient.—Allied aviators bombed the depots at Demirhissar and the aviation grounds at Resna. An enemy machine was brought down by British aviators near Livunovo.

May 15th.—Two German aeroplanes were brought down on the 12th and two others on the 14th inst.

During the night of the 14th one of our squadrons bombarded the railway station of Chatelet-sur-Retourne (Ardennes), on which 7,000 kilograms (about seven tons) of projectiles were dropped.

The same night German aeroplanes bombarded the region of Dunkirk. The damage done was of slight importance, and there were no victims.

Army of the Orient.—In spite of unfavourable weather British aviators bombed depots in the region of Seres, and forced two enemy machines to descend, wrecked in their own lines.

May 16th.—On the observation posts of the fortified zone of Paris notifying that enemy aircraft were making for Paris the alarm was sounded at 10.12 p.m. Fire was opened by the artillery posts, and the aircraft assigned to the defence of the city took to the air. No enemy machine succeeded in reaching Paris, but several bombs were dropped in a large suburb. The "All clear" signal was given at 11.55 p.m.

An alarm was given towards midday yesterday in the district north-east of Paris. An enemy aeroplane was making for Paris, but the defence batteries immediately came into action and French aviators went in pursuit of the German, who changed his direction and fled without dropping bombs. The "All clear" was sounded 45 minutes later.

On the 15th, during the day our chasing aeroplanes, favoured by the fine weather, were extremely active. Seventeen German aeroplanes were brought down by our pilots, and an 18th was accounted for by the anti-aircraft defences. In addition, four enemy captive balloons were set on fire.

May 17th.—During the night of May 14th-15th and during the day of May 15th numerous aeroplanes took part in the bombardments of the enemy zone. Thirty-six thousand kilogrammes (about 36 tons) of projectiles were dropped on the railway stations and aviation grounds of St. Quentin, Jassy, Flavy, Le Martel, Nesles, Ham, etc. A dump blew up at Nesles. Fires were observed at Guiscard, Le Chatelet, and Nesles railway station.

On the following night 30,000 kilogrammes of projectiles were dropped on the same region and 10,000 kilogrammes on the regions of Amagne-Lucquy and Montcornet

During the day of May 16th four enemy aeroplanes were brought down and three others seriously damaged.

During the night of May 16th-17th 35,000 kilogrammes of projectiles were dropped on the German railway stations and cantonments in the region of Chaulnes, Roye, Nesles, St. Quentin, etc. The explosion of a dump in the Bois de Champion and fires and explosions at Ecquilly, Villeselve, and Nesle railway station were observed.

Enemy aeroplanes crossed our lines and bombarded several districts at the rear of the front.

Some of the machines proceeded in the direction of Paris. The alarm was given at 10.32, and the "All clear" at 11.2 p.m. Bombs were dropped at various points in the outer suburbs.

Army of the Orient.—British aviators bombarded enemy establishments near Seres and Porna.

May 18th.—Between Lassigny and Noyon two enemy aeroplanes were brought down by our anti-aircraft defences, one during the day of May 16th and the other during the night of May 16th-17th.

May 19th.—On Friday and Saturday our pilots engaged in several fights, in the course of which 12 German aeroplanes and four captive balloons were destroyed.

Twenty-three enemy machines fell seriously damaged in their own lines. In addition three aeroplanes were brought down by our anti-aircraft defences, one by an American battery.

On the same days and on the following night 44,000 kilogrammes (about 44 tons) of projectiles were dropped by our bombarding squadrons on the stations, cantonments, and aerodromes of the enemy zone. Several fires, some explosions, and considerable damage were observed.

Army of the Orient.—To the west of Koritza, between the upper valleys of the Devoli and the Osum, French and Italian troops acting in conjunction carried out with complete success on Wednesday, Thursday, and Friday a series of operations with the object of reducing a very pronounced salient forming the line of position occupied by the enemy in this region and to bring the Allied front into a more advantageous line bounded by the localities of Protopapa-Cerevoda.

In the course of these operations the Air Service contributed brilliantly to their success. Our troops captured a certain number of prisoners. In the centre their advance extended to about 20 kilometres (12½ miles).

May 20th.—Army of the Orient.—The British Air Service successfully bombarded the enemy establishments in the reg of Demirhissar (Struma front).

GERMANY.

May 15th.—Yesterday our aviators shot down five enemy tive balloons.

Nocturnal aerial activity has been very lively on the fight fronts. We have dropped numerous bombs on Calais, Dunk and other rear munition depôts and railway establishments of enemy.

May 16th.—An extensive use of aviators on the fighting fr led to numerous aerial engagements. We shot down 33 en aeroplanes, 14 of which were brought down by the ch squadron formerly led by (the late) Rittmeister Capt. Baron Richthofen. Lieut. Windisch achieved his 20th aerial victory.

May 17th.—Yesterday 18 enemy aeroplanes and one cap balloon were shot down. Lt. Loewenhardt achieved his 2 aerial victory and Lt. Windisch his 21st.

May 19th.—Yesterday 16 enemy aeroplanes and one cap balloon were shot down.

May 20th.—Last night London, and also Dover and ot places on the English coast, were successfully attacked w bombs.

ITALY.

May 14th.—Eleven hostile aeroplanes were brought down in fighting. British aviators bombed successfully enemy hutme near Asiago.

May 15th.—In the early hours of May 14th, Lt. Comdr. Ma Pellegrini, of Vignola, and three men, with rare courage the greatest military and naval skill, penetrated into the strongly fortified military port of Pola. There they repeate fired torpedoes into a large cruiser of the Viribus Unitis type

At dawn our seaplane squadrons arriving in succession o Pola found enemy chasing planes already up. Our pilots brou down two enemy machines and forced another to land. All machines returned safely to their bases.

May 17th.—On May 14th a squadron of our seaplanes bo barded with good results the military works at Lissa Durazzo, causing visible conflagrations. The works at Dura were also bombarded on May 13th with good results by Brit aviators. In spite of anti-aircraft fire all machines retur undamaged to their bases.

During a reconnaissance over Durazzo our aviators establis the fact by means of photographs that the Austrian stean and torpedo-boat torpedoed by us on the night of December 1 are lying on the bottom of the sea and may be considered lost.

May 18th.—Three enemy machines were brought down alo the Middle Piave, two of which within our lines, and the th at Grave di Padadopili.

May 19th.—Aircraft activity was considerable along the wh front. A kite balloon and four enemy machines were broug down, two of them by British aviators.

U. S. A.

May 15th.—Two of our aviators to-day brought down th German machines.

May 19th.—There was reciprocal activity on the part of t aviation service of both sides. Our aviators brought down t enemy machines.

BELGIUM.

May 15th.—Numerous bombs were dropped by enemy aircra on our cantonments. To-day there were bombing duels towar Nieuport and north of Dixmude.

One of our aviators brought down in flames a German ballo towards the Houthulst Forest.

May 16th.—In the course of last night enemy aeroplanes bo barded our cantonments, and an enemy aviator dropped fo bombs on the hospital of Hoogstade.

May 17th.—In addition to the bombardment by enemy aer planes of the hospital at Hoogstaede German airmen during t night of the 15th-16th dropped bombs on the Belgian Hospit at Calais, where a dozen people were killed and twenty injure Several huts were destroyed.

Adjudant Demeulemeester brought down in flames his fir enemy aeroplane above Houthulst Forest.

May 19th.—Lt. Jan Olieslagers brought down his sixth enem machine, which fell in flames above Lake Blankaart. Adjuda Coppens brought down a German balloon in flames. Th aviator has brought down one machine and four balloons in th course of the last three weeks.

TURKEY.

May 13th.—East of the Jordan we repulsed a strong enem reconnoitring patrol. Beyond these actions there was only wea artillery fire and aerial activity.

BULGARIA.

May 15th.—In the valley of the Vardar there was lively aeri activity on the part of the enemy.

THE WAR IN REVIEW.

On the Western Front.

"Excelsior," Paris, May 8th, in reviewing the aviation work of the Allies for the month of April, remarks that this period was not more fortunate for the Germans than the first days of their offensive. April clearly confirmed the superiority of the Allies' aviation squadrons. French aviators brought down 63 enemy planes and eleven observation balloons, and forced 57 damaged aeroplanes to come down. American aviation has shown itself worthy of emulation by the Allies, and counts 14 victories.

The French Aces.

It is reported that Capt. Pinsart has scored his eighteenth victory by bringing down a German "Drachen," Lt. Hugues has brought down his twelfth enemy machine, Lt. de Slade and the American Serjeant Baylies their seventh each, and Serjeant Gerard, a pupil of Lt. Nungesser, his fifth.

A Variety of Experiences.

The "Times" correspondent with General Headquarters writes on May 7th as follows:—

One of our pilots had a thrilling experience a few days ago, when, falling in with an enemy patrol of 12 machines, he pluckily attacked the rearmost enemy, which was flying at the greatest height above and behind the others. The German dipped to avoid him, but he followed, and, firing into it at short range, sent it down, and saw it fall out of control to within 1,000 feet of the ground. Meanwhile six enemy machines turned on our man, who put his aeroplane into a spin, and went whirling down through the rest of the German formation, chased and fired at as he went. His control was shot away, and his machine plunged helplessly to within 100 feet of the earth, when it miraculously flattened out of its own accord so suddenly that it broke its own back, and snapped the fuselage in two immediately under the pilot's seat.

Seeing that the crash was coming the pilot had loosened his belt, and was jerked clear of the machine, to reach the ground unhurt. The enemy machines following saw that he was safe, and, swooping down, opened on him with machine-guns on the ground, and, as each came by, some within a distance of 30 feet, he answered with his revolver. Happily, the unequal duel was interrupted by some neighbouring British infantry, who started firing on the enemy with rifles and machine-guns, and made it so hot for them that they drew off, and left our man unhurt, after as dizzying an experience as man could well go through.

Interned in Holland.

A German biplane landed in Holland, near Uithuizen, in the province of Groningen, on May 11th. The two occupants have been interned.

A German naval lieutenant and a sailor were found on a sinking seaplane on May 11th by a Dutch lugger, six miles north-east of the Haaks lightship, and have been interned.

Exceeding the Mark.

Chelmsford's aeroplane week, held to raise £50,000 for the purchase of 20 aeroplanes, closed on May 11th, with a total of £86,830.

Frightfulness versus Frightfulness.

According to the "Telegraaf's" (Amsterdam, May 15th) frontier correspondent, bombs were recently dropped on the casino at Menin, and wrought havoc among a German band which was practising, few escaping alive.

Interned in Denmark.

It is reported that a German aeroplane landed near Kolding, Denmark, on May 16th, owing to engine disorder. The two aviators set their machine on fire.

A Peaceful Politician.

According to the "Kölnische Zeitung" and the "Rheinisch-Westfälische Zeitung," on April 23rd, in the Main Committee of the Reichstag,

Herr Mueller (Progressive) asked whether an agreement was not possible to preserve open towns behind the front from aerial attacks.

Von Stein, in reply to questions, said:—"So long as no proposal has been received from an enemy Government to restrict aerial attacks to fortified towns, we cannot undertake such an obligation alone."

An Allegation and a Denial.

The following statement was included in the official German Wireless news on April 24th:—

From papers found on American aviators who were shot down it has been proved that for their own sa many of them crossed over on hospital ships certified as m bers of the American Ambulance Service in France.

The Secretary of the Admiralty makes the following st ment:—

No hospital ship, British or American, has ever carried anyt but invalids and the necessary medical staff. Further, there no hospital ships working the cross-Channel route; the w statement is therefore a fabrication.

The American naval and military authorities state that have some few aviators who were in the Allied Ambulance vice in France before the United States came into the war; even in such cases these men crossed the Atlantic in the ordi ships taking their full chance of being torpedoed.

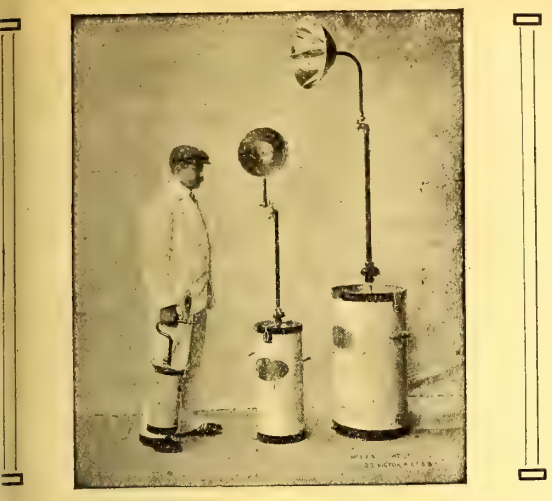
Brazilian Military Aeroplanes.

A message from Rio de Janeiro, dated April 20th, states authority has been received to build a large establishment for construction of war aeroplanes.

When the Cat's Away.

The "Morning Post" correspondent writes from the Bri Front on May 3rd as follows:—

One unusual feature of the fighting was the heavy att from the air. German aeroplanes attacked the French fro height of only 30 feet around Kemmel, and, taking their from our aviators, made daring assaults in mass formation. one time nearly 80 German aeroplanes were dropping bo and firing their machine-guns against a front held by French battalions.



[Presumably the local R.A.F. were busy elsewhere.—Ed.]

The Old Story.

A Berlin telegram to the "Rheinisch-Westfälische Zeitur states on May 3rd that the Government representative, repl in the Reichstag to further questions from three Dept regarding aerial raids, said:—"The question how enemy attacks on open towns outside the war zone can be preve has been repeatedly and thoroughly examined by all the dep

THE DAYS THAT WERE—AND OUGHT TO BE.—Some R.N.A.S. Officers and their dogs. Apparently, it was the custom for the size of the dog to be in the inverse ratio of the rank of the owner.

Large numbers of these three types have been supplied.

ments concerned. There are no absolutely certain means for warding off aerial attacks. The best means is a good anti-aircraft defence; then the threat of reprisal flights against enemy capitals. The Army authorities are making endeavours in both directions.

[Which is precisely what General Brancker said two years or so ago.—Ed.]

After referring to Paris, the Government representative added that if definite proposals were received the military authorities would consider them.

Healthy Optimism.

General Malaterre, at a banquet given at the Aéro Club in Paris in honour of the French aviators who have escaped from Germany, said—"French aviation, having won definite supremacy, will henceforth play an efficacious strategic rôle in the war, and should even lead us to the left bank of the Rhine."

Dutch Yarns.

The "Les Nouvelles" (Amsterdam, May 3rd) learns from a reliable source at The Hague that Allied aviators recently succeeded in sinking in a single day 23 Belgian boats laden with gravel and road metal destined for the German front in Picardy. The vessels were then seven or eight miles from the enemy rear lines.

"Three weeks ago," the journal adds, "the Luxemburg bridge at Namur was again badly damaged by aircraft. Two of its arches were destroyed, one boat was sunk, and three German soldiers on sentry duty on the bridge were killed.

The movement of vessels to the front has never been so intense as since the opening of the German offensive, and never have the destruction and devastation wrought by the Allied aviators been so great. The roads have been so cut up that the Germans experience great difficulty in bringing up gravel and stones in sufficient quantities to fill up the craters.

The Death of a Noted Austrian Pilot.

It is reported that Austria's most successful aviator, Lt. von Hillier Schönaich, has been killed on the Italian front.

Small Game.

It is reported that five Dutchmen, the crew of a small sailing vessel of about 100 tons, have been landed at a British port after escaping from an attack by four German seaplanes.

About 40 miles off the coast of Holland the aviators, who were without bombs, circled round the little vessel for nearly two hours, maintaining an incessant fire upon it with their machine-guns.

The crew when ordered to leave their boat took to the dinghy, and the wind took them towards the English coast. They were fortunate enough to be picked up by a small British craft, after pulling in a rough sea for hours and covering a distance of 60 to 70 miles.

On May 3rd the abandoned vessel was brought into the same harbour, having been found derelict in the North Sea by a British destroyer. It was literally covered with machine-gun bullet holes.

Cutting Off the Current.

The "Times" special correspondent at Italian Headquarters writes on May 5th, as follows:—

Italian and British airmen yesterday flew to Cavedine, north-east of Riva (Trentino), and dropped such a weight of explosives on the great water-power electricity station there that it will be some time before it can again supply a considerable amount of current.

The central power house was seen to be destroyed. The raiders flew in four rotating groups, one being British. The attack lasted from 8 a.m. till mid-day.

An important effect of the raid will be the stopping of the electric railway from Trent, up the Val di Sole, to Fucine, which is an important link in the Austrian Army's communication (for the Adamello sector).

The Zeebrugge Blockage.

It is reported by Reuter that the latest photographic and other evidence from Zeebrugge shows that the canal is still wholly blocked and is quite unusable.

The block ships are found to have been even better placed than was at first believed, and in consequence of British air activity and other causes the attempts to effect a clearance are meeting with no success.

For Nobler Sport.

It is reported that Capt. Mouronval and Capt. de France, commanding French Air Squadrons at the front, and who are both well-known football players, have been awarded the Legi of Honour.

The Bombardment of Cattaro.

A Reuter's message from Amsterdam stated that a Vien telegram says that six aeroplanes bombed the Gulf of Catta naval base on the afternoon of May 11th, but claims that no lo or material damage was caused. One machine fell, and occupants were captured uninjured.

A Paris Warning.

A Reuter's message from Paris, dated May 15th, states th an air-raid alarm was given here at 10 minutes past 10 th evening.

When Ace Meets Ace.

On May 14th M. Clemenceau personally congratulated th well-known "Ace," Lt. Fonck, on his feat in bringing dow six enemy machines within two hours.

The American Aircraft Scandals.

A Reuter's message from Washington, dated May 15th, stat that President Wilson has sent a letter to Mr. Martin, th Senate Democratic leader, opposing the extension of the aircra inquiry into a general investigation of war activities, as provided by the resolution now before Congress. Mr. Wils said he would consider the passage of a direct vote as one want of confidence in the Administration, and as an atten by Congress to take over the conduct of the war.

Judge Hughes has consented to assist the Attorney-General conducting the aircraft inquiry. The Senate has agreed to it, b prohibited the general war investigation objected to by M Wilson.

Air Diplomacy.

A Reuter's message from Rome on May 1st states that as t result of an agreement recently arrived at between the Briti and Italian Governments, it has been decided to establish t post of Air Attaché with the respective Embassies in Lond and Rome.

The new Italian Attaché, like his Military and Naval co leagues, will represent Italy with the British Government in questions concerning aeronautic organisation. The first occ pant of the newly-created post is Commandant Teodoro I Bonis.

"HOW AN AEROPLANE IS BUILT."

That excellent little book by Mr. Stepney Blakeney, "Ho An Aeroplane is Built," is already becoming popular amo many classes of people. Those engaged in aircraft work w want to know what part their products play in an aeroplan those who are learning to fly and want to know how the mounts are produced, those who hope some day to build aer planes themselves, are all acquiring the book.

It is entertainingly written, not in the least scientific, and c be thoroughly understood by anyone who is capable of takin a bicycle to pieces and putting it together again. Draughtsme newcomers to aeroplane works, pupils at aerodromes, intellige schoolboys, and so forth, will find it most useful, as will tho who possess workshops in other lines of business and are no taking on contracts for aircraft parts.

The book may be had for 5s. 4d. post free from Th Aeroplane & General Publishing Co., Ltd., 2, Breams Building E.C.4.

"THE AEROPLANE SPEAKS."

Quite one of the most successful books of modern times h been "The Aeroplane Speaks" by Capt. H. C. Barber, R.F.C Both in this country and in America it has been adopted u officially as the manual of instruction for beginners in practic aeroplane work, and consequently the demand for it has bee enormous, though by no means surprising when one conside the book on its merits.

As the result of this demand it has been necessary to produc a Sixth Edition of the book, and the publishers have bee fortunate in finding a sufficient supply of paper to make this goo work possible. The book has been revised and brought up t date, and it now contains, in addition to previous illustration plates of Allied and enemy machines in use down to the prese year.

"The Aeroplane Speaks" may be had, as usual, from Th Aeroplane & General Publishing Co., Ltd, 2, Breams Building E.C.4, at 8s. post free.

ON WASHING DIRTY LINEN.

Despite the heading which appears above, these notes ave but little to do with the subject of aeroplane fabric, ough in all conscience there is enough metaphorical irty linen in that department to keep a whole com-ittee of the usual official washerwomen busy for onths. Rather these notes are concerned with the bric of the Air Force, in the broadest sense of the ord.

On various occasions one has ventured to hint mildly at the essential evil in our national make-up is that rious psychological phenomenon which is known mmonly as the Nonconformist Conscience. Why onconformity in general should have been saddled with is particular national vice is rather hard to explain, cept that possibly the grocer who goes to Chapel ree times on Sunday, has prayers twice a day at home, d puts sand in the sugar systematically during busi-ss hours is a more contemptible person than is the ortsman who never goes to Church at all and makes living by open and honest swindling. One has no nplaint against the crook who makes no pretence righteousness.

Anyhow, that attitude of mind which is called for nvenience the Nonconformist Conscience finds its ex-ession in the proverb concerning the alleged evil effect washing dirty linen in public. The greatest crime this country is the crime of being found out. Con-quently, whenever there is official dirty linen to be shed, it is washed in private. Hence all the official uses, on the score of confidential documents, secret reements, and so forth, whenever a public enquiry demanded. And hence the outcry against damaging *moral* of troops or causing loss of confidence among people whenever too searching questions are asked either House of Parliament.

Of course, the true reason for refusing to wash official en in public is not that such a performance may have effects on troops or people, but that it involves the vitable exposure of the incompetent officials who e responsible for the dirtying of the linen. The th of this statement was excellently proved by the orious Air Enquiry of 1916.

he agitation which caused that enquiry began at a e when the *moral* of both the Flying Services was er than it has ever been, either before or since. If were possible for exposure of incompetence at ie to have evil effects on people in the field, then ainly the Flying Services, especially the R.F.C., ht, by all official theories, to have gone to pieces as n as the agitation showed how rottenly the affairs the Services were being managed in this country, as the agitation increased so the *moral* of the Ser-s increased with it.

The Simple Reason.

he reason was perfectly simple, and the same reasons as simple to-day and will be at any other period in the future when exposures become necessary. As Mr. Kipling has said:—

> "The toad beneath the harrow knows
> Exactly where each tooth-point goes.
> The butterfly upon the road
> Preaches contentment to that toad."

Toads and Butterflies.

The R.F.C. at the Front knew exactly where their troubles come in, and the gaily-tabbed, be-ribboned, brass-hatted officials in this country, or well behind the lines in France, preached contentment to them, knowing nothing from practical experience of their troubles—all except a few who made themselves mighty unpopular, and damaged their careers, by supporting the active-service aviators. This council of contentment got on the nerves of the fighting men worse than anything else. Preaching peace when there is no peace is the most irritating thing in the world.

Now, as soon as the active-service people found that some few of us at home knew about their trouble, and were, in their picturesque language, "kicking up a stink about it," they began to cheer up, for they saw that they had not merely been pushed out to France and forgotten. They felt that as soon as the people of this country knew that they were badly mounted something would be done about it, and they were right.

The Official Laundry System.

The Englishman is merely a fool; he is not bad at heart; and after a while, despite a Coalition Government, and a "doped" Press, and suppression of evidence, and all the usual cant about confidential documents, the ordinary common Englishman grasped the idea that something was wrong, and then the official people realised that it was time to get on or get out. So they went on, and formed the Air Board, with very good effect.

The dirty linen of the period was not washed in public. All the public heard was the process of washing going on behind closed doors. But the linen was hung out to dry in public afterwards—in a beautiful official report—which, at any rate, showed that something had been done about it. Some people said that it had not been washed, but merely whitewashed. Personally one believes that quite a deal of real washing was done, and that then it was glazed over with some of the dirt underneath the glaze—much as the highly scientific laundries of to-day treat one's pet collars.

Spring Cleaning.

Anyhow, the Flying Services were immensely braced by such exposures as did come out. And still more good would have been done if the Enquiry Committee had had the power to take evidence on oath and to subpœna witnesses, for then it would have been possible to have exposed still more dirty linen to be disinfected by full ventilation. As it was, quite a number of nasty

little microbes remained, and, though many have since been cleared out by the Air Board, their progeny remain in sufficient numbers to make it worth while for the Air Minister to institute a special Spring Cleaning of the Air Ministry as soon as he has settled down comfortably in his new office.

The present moment seems particularly opportune, for the *moral* of the Royal Air Force is so high that, even if the whole operation were carried out in public, it would not depress the active-service people in the least. Their tails were well up, as General Salmond put it, some months ago, and they are still better pleased with themselves to-day. Anything which would show them that still greater improvements are being made at home for their benefit would tend to increase their moral superiority over the enemy.

It might not inspire them to still greater efforts, for one believes that no human beings could do more than the R.A.F. people abroad have done during the past six months and more, but the knowledge that the production of still better machines, engines, and armament is being materially accelerated by the cleaning out of certain departments and by the reorganisation of bad systems would certainly enable them to go about their work of killing Huns with lighter hearts and a greater certainty of final victory.

An Example of Hypocrisy.

One of the characteristics of our racial hypocrisy is our habit of making a great parade of our cleanliness when we do a bit of washing. Take for example the Loch Doon affair. On Monday, May 20th, the "Times" devoted quite half a column of its precious space to extracts from the report of the Select Committee on National Expenditure, which showed in some detail how a trifle of £500,000 had been wasted on trying to build an aerial gunnery school at Loch Doon.

As a matter of fact the scheme was quite good. It was somewhat elaborately planned, and it might have been wiser to have started it in quite a small way, with seaplanes only, so that the expenditure could have been spread over several years. There was no real need for a big aerodrome for land machines, and apparently it was the attempt to make an aerodrome out of a peat bog which broke the scheme.

An Official Report.

The extracts from the "Times" report are of interest. The Committee state:—

> The only possible site for an aerodrome, and, indeed, the only place on the shores of the lake where an aeroplane could land without crashing was the peat bog on the western side. It was an essential part of the scheme to drain this bog to make it serviceable as an aerodrome. When this project came to the Director of Fortifications and Works at the War Office, Major-General Sir George Scott-Moncrieff, he wrote a minute in which he described this as "a very risky measure to attempt," and added, "This is a most serious matter, and I certainly think the scheme ought to be deferred until it is definitely ascertained whether no other alternative is possible." The Chief Engineer of the Scottish Command, however, reported favourably on the practicability of draining the area proposed for the aerodrome, and estimated that the work could be done within three months from the time the labour and materials arrived on the site. Meanwhile Sir David Henderson had written, "Loch Doon fulfils all our requirements, and if the engineering difficulties are not insuperable I would like it proceeded with at once." A rough preliminary estimate of £150,000 was made for the cost of the works as then proposed, it being added that the requirements would probably increase.
>
> In September a conference was held at the site, it was agreed that it was possible to prepare the site selected for the aerodrome by land drainage, and the works necessary for this and other purposes were planned. The Air Board approved the scheme, and in September, 1916, the work was begun. The Committee go on to say:—
>
> A contract for the greater part of the work was made with a large firm of contractors. As many as 3,000 men were employed, of whom about one-half were German prisoners. Roads were remade, and a temporary railway about 2½ miles long laid from Dalmellington towards the lake; 56 miles of pipes were laid to drain the bog. Soil to the depth of 3in. to 4in. was spread over a large part of it to form a new surface, and grass seeds were sown. Railways, to standard gauge, were made some miles in length, up and down the hills to the east of the lake, and by the waterside together with considerable lengths of steel constructions along which it was intended to run by electricity movable targets to be fired at from the air. An electric power-station was constructed and boilers and generators installed. Large hangars and a seaplane shed were erected there also, and a motor-boat dock was constructed. Waterworks and sewage works on the bacterial system were made for a population of 1,500. By May, 1917, the estimate of the cost had increased to £350,000.

The Air Ministry having been constituted in December, 1917, two members of the Air Council, Major Baird, the Parliamentary Under-Secretary of State, and Sir John Hunter, the Administrator of Works and Buildings, visited Loch Doon early in January, 1918. On their report, and on a consideration of all the circumstances, the Air Council unanimously decided that the whole enterprise should be abandoned forthwith, and the Army Council agreed. The dismantling of the works began at once, and the personnel and all movable materials have been or are being transferred elsewhere.

The following considerations combined to lead the Air Council to their decision:—

(1) The Commandant who had been in charge of the proposed school for nearly a year, Lieutenant-Colonel Gordon, reported that no flying would be possible on half the days of the year on account of climatic conditions. He stated that on many of the other days the conditions would not be good for instruction on account of the low clouds. The need for airmen at the front is always pressing. The weather at Loch Doon would cause the school to become a bottle-neck to the whole course of training, and would slow down the supply of airmen to the armies.

(2) It was represented that "bumps" were very bad on the targets, and that this would often interfere with the value of the practice.

(3) With the much faster machines which had come into use during the year and a half since Loch Doon was first planned it was doubtful whether it would be safe to fly at hill targets at all.

(4) For the same reason the speed of the movable targets, which varied from 25 to 60 miles an hour, had become too slow to represent fighting conditions.

(5) There was no place in the neighbourhood of the lake where a forced landing could be made without crashing except on the aerodrome itself, and the flying would frequently be at a height insufficient to allow the aerodrome to be reached in the event of engine stoppage.

(6) It was doubtful whether the drainage of the aerodrome would ever succeed in providing a place on which aeroplanes could land without danger and take off without difficulty. After a spell of wet weather it might still be found little better than a bog.

(7) Great sums had already been spent, and large further sums, for extension of Bogton aerodrome and for the railway were being asked for to complete the scheme. Materials and labour were urgently needed elsewhere. The date of completion seemed still remote. It was thought better to decide once to sacrifice what had been spent than to throw good money after bad.

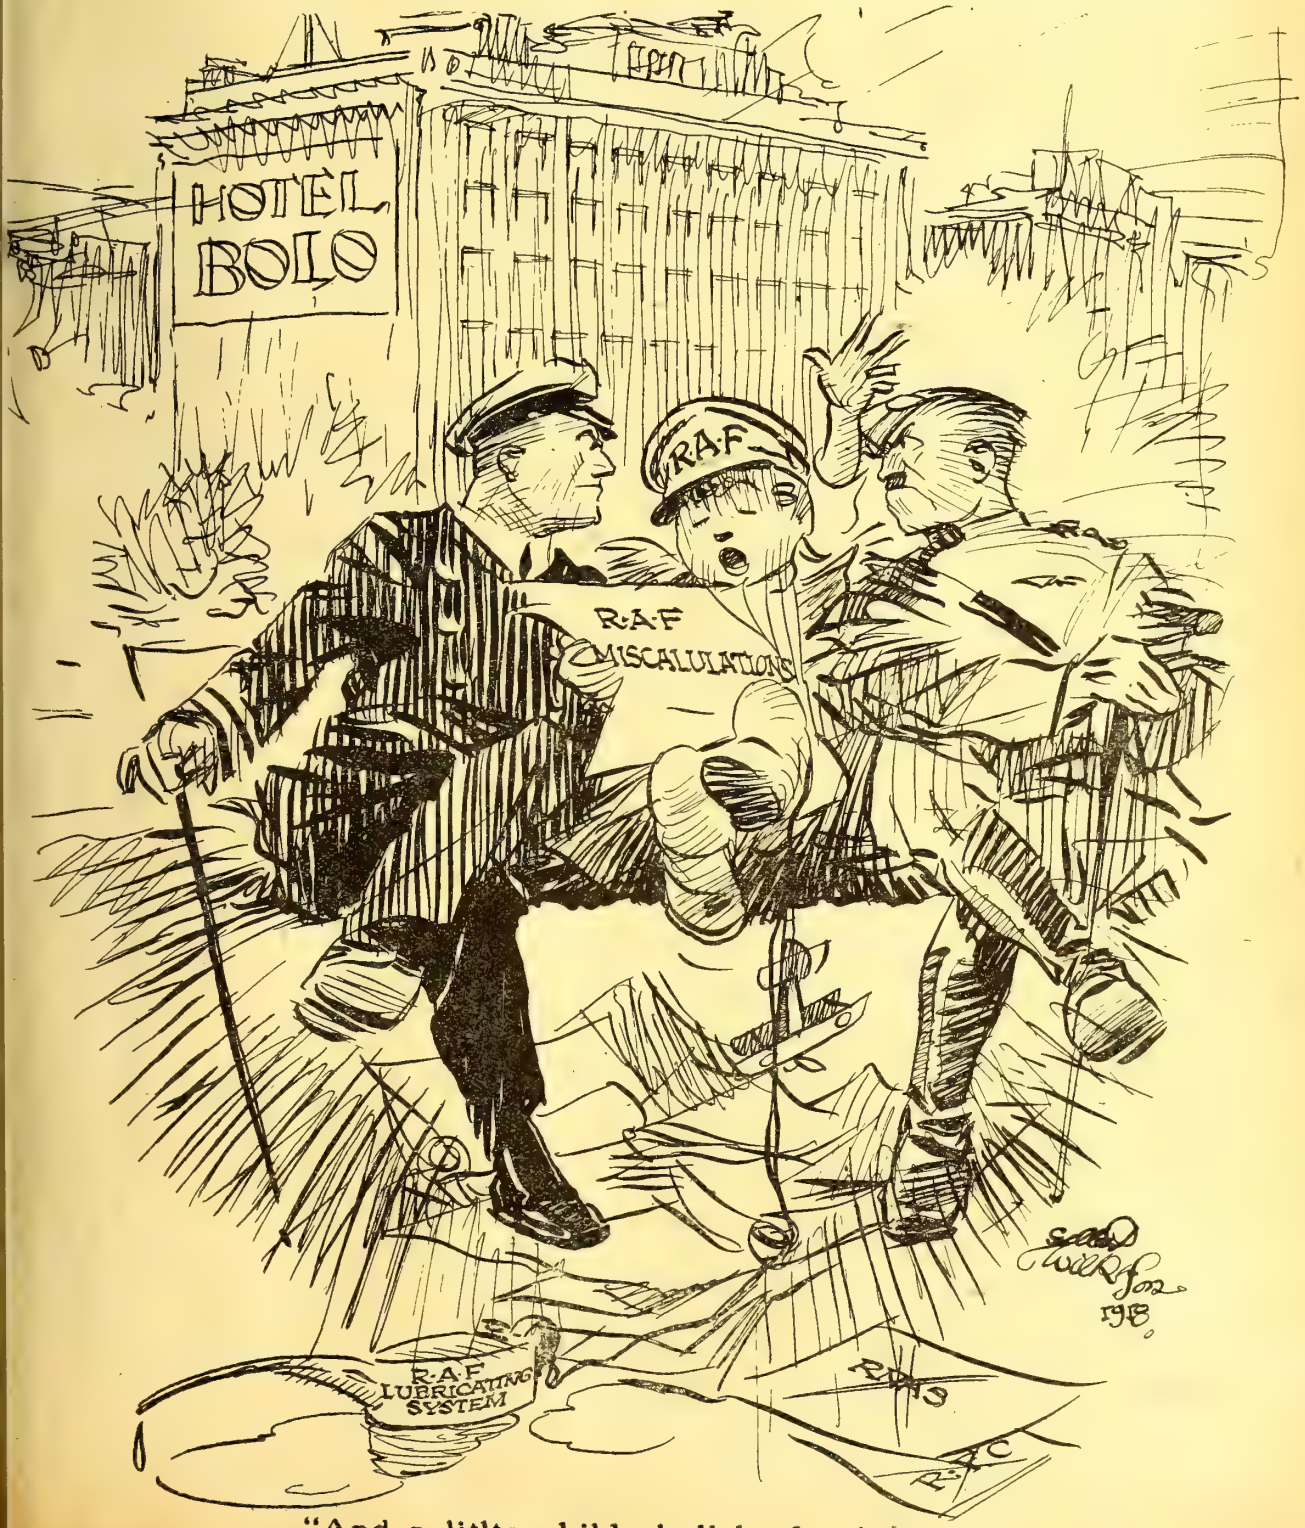
The Committee point out there is by no means unanimity of opinion on these points, and, while they refrain from expressing any opinion on technical questions, particularly on points on which the views of airmen and engineers are divided, the weight of evidence has led them to the conclusion that Loch Doon ought never to have been chosen as the site for the school that was projected.

How It Is Worked.

Now there you have an excellent example of official washing in public, when so disposed. Observe the frank and open honesty of it all. Observe how officialdom freely admits its error of judgment. No individual is pilloried, or court-martialled, or cashiered, or even Stellenbosched—so far as one can gather. The British taxpayer is told apologetically that he has lost half a million pounds, and officialdom, as represented by the Committee, admits the awfulness of the mistake.

But the real officialdom, which is Messrs. George & Co., know perfectly well that when the taxpayer is thinking in terms of war expenditure at the rate of six or eight millions a day he is not going to worry about half a million, any more than he is going to worry about losing sixpence if he is earning 8 shillings a day, or about losing half-a-sovereign if he is earning £8 a week.

t was a fairly safe subject on which to make a hypo-ritical parade of washing dirty linen in public.



THE OFFICIAL ADVISERS.

As a matter of fact, it would not be at all hard to ind excellent reasons for going on with the Loch Doon ob, if not on quite such an elaborate scale, and using he works already built or building for their proper urposes, instead of scrapping the lot.

It will be observed that the scheme was ultimately urned down on the advice of Sir John Hunter and Iajor Baird. So far as Sir John Hunter is concerned, ne believes him to be an honest gentleman with great nowledge of lands and buildings. As such he would e a fully competent authority concerning the drainage f peat-bogs, but one doubts whether he could judge the opographical or meteorological *desiderata* of a gunnery school, and the latter are, after all, the more important factors in this matter.

As regards Major Baird, what he does not know about flying, including aeroplanes, engines, armament, aerodromes, and air fighting—with the exception of hot-air fighting in the House of Commons—would fill pretty well every book ever written on those subjects. One would hesitate to condemn a dope-can, let alone a half-million pound gunnery school, on Major Baird's evidence or opinion.

Not that he lacks opinions, either of himself or of anything else in creation, but merely that whenever he has expressed an opinion in public he has been so amazingly wrong. Therefore the mere fact that Major Baird advised against the Loch Doon school predisposes one to believe that it must be of considerable value.

"And a litlte child shall lead them."

An Easy Camouflage.

However, all this parade of virtue over the Loch Doon affair serves as a very pretty camouflage for the far greater waste of money in other directions. Does anyone think, for example, that five hundred thousand, or five million pounds for that matter, would cover the waste of money on "dud" engines and "dud" aeroplanes in the first three years of the war.

At a rough guess one would say that the scrap needlessly produced in making R.A.F. engines and B.E. biplanes alone cost well over the Loch Doon half-million. It only takes 500 engines at £1,000 apiece to tot up to that amount, and it would not be difficult to find so many engines at such a price, apart from R.A.Fs., which if not absolutely useless have been so nearly so as to justify one as classing them also as scrap material.

Then one might start to count up the amount of perfectly good material, and partly manufactured components, needlessly scrapped by the A.I.D. There is the basis in that department alone for a searching inquiry on National Expenditure.

If one inquired as to the relative cost of the "90 per cent. clerk and 10 per cent. inspector" methods of the A.I.D. it should be possible to discover quite a considerable waste of public money in this direction. Even at the low rate of wages paid by this department, it does not take long for some few thousands of officials to absorb in a perfectly honest but utterly wasteful manner several hundreds of thousands of pounds.

Waste of Time.

There is also the subject of indirect waste to be considered. When a new aeroplane or new engine of recognised excellence is produced, it is wasteful to keep it hanging about before putting it into quantity-production and to go on turning out less efficient or less effective types.

It is a matter of history that the "1½ strut" Sopwith was produced in June, 1915, and only began to appear in quantities in France towards the end of 1916. It would have economised material and aviators if it had been delivered in hundreds in the early spring of 1916, as it might have been but for official blundering.

There seems to be a need even now for careful investigation into the time which elapses between the introduction of a new type and its adoption as a quantity-production proposition. One has already stated, some weeks ago, that too much time has been wasted in needless academic experiments with new machines and engines. And in war time is even more valuable than money. Only, unfortunately, there is no Select Committee on National Expenditure of Time.

An Opportunity for the Air Minister.

Here there seems to be another great opportunity for the Air Minister. A Committee, select or otherwise, might well be appointed to investigate and report upon the expenditure of time between the introduction of new types of machines and engines and their actual appearance on active service.

It would probably be found that the department which has to deal with the original designs of aeroplanes on drawing-paper, and with such things as stress-diagrams and so forth, is extraordinarily quick in making up its mind, and is very seldom wrong in its judgment. One can recall no complaint for a year or more from any designer that any really promising design has been turned down, nor that any unreasonable delay has been caused, nor that any irrational alteration has been demanded.

Everything possible seems to be done to encourage the building of promising experimental machines, and to expedite their production. The department seems to be composed of people with practical experience, common sense of the most uncommon kind, and an ardent desire to get on with the war.

It is only after the experimental machines are actually in being that the waste of the nation's time seems to begin. And it is only then, apparently, that the victims fall into the hands of people of the kind who made the R.A.F. such a national disaster when it was a power in the land. One has an uncomfortable feeling in fact, that many of the people who cause the trouble are, in fact, only the old R.A.F. crowd spread over new departments.

A Simple Shibboleth.

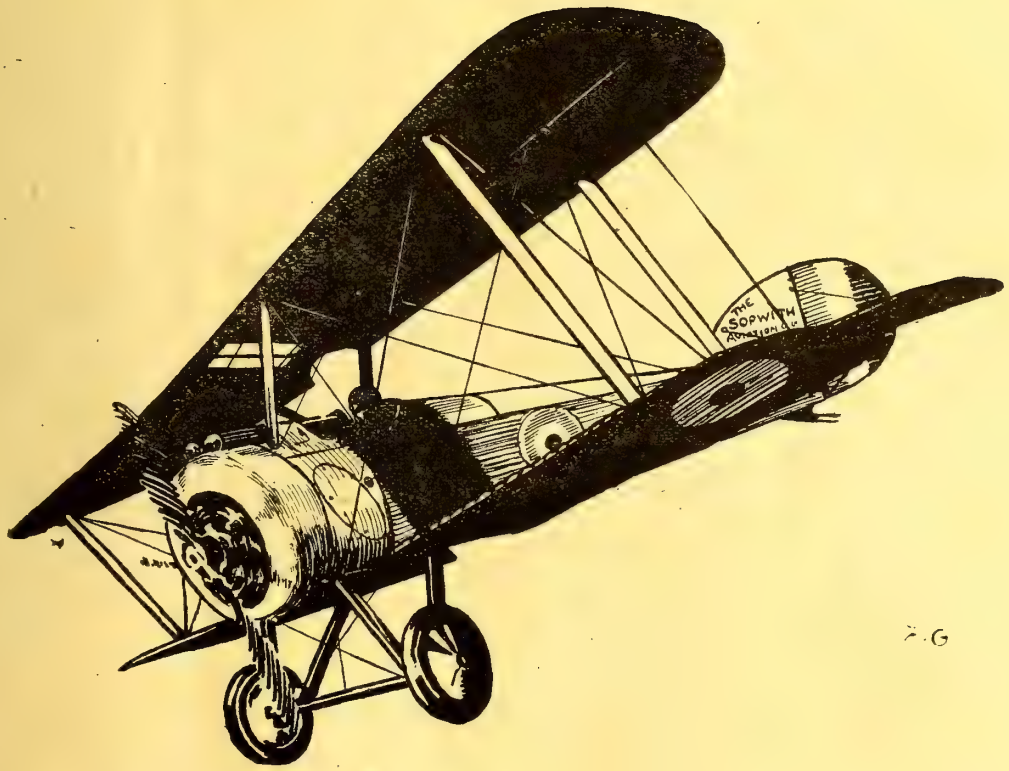
One would suggest to such a Committee as one has indicated, or to the Air Minister, if he takes unto himself the task of investigation, a simple test as to the suitability of an official for his job—as simple a test as the "*Shibboleth*" of the Hebrew Committee of Enquiry at the ford of Jordan. It is merely to ask each official whether he has been employed at the late Royal Aircraft Factory—now called the Royal Aircraft Establishment to distinguish it from the Royal Air Force.

If he has been there, then send him off to do twelve months on active service, just to enlarge his mind and impress on him that getting on with the war is more important than parlour tricks at an experiment station or in a London office. And apart from the actual R.A.F. people, every technical official or officer who has to do with aeroplanes, engines, or armament, should do at least a week on active service in every two months so as to keep his knowledge of aerial warfare right up to date.

A Chance for the Pilots.

One feels sure that active-service pilots would be delighted to take turns in giving the technical chiefs of the engine department, for example, two joy-rides a day—or preferably one per day and one per night—over the enemy's lines for a week on end, just to demonstrate to them the reliability or otherwise of the engines which they supply and the constant need for newer and better types. And one feels sure that such an elevating spiritual experience would greatly assist these gentlemen in accelerating the decisions which the High Authorities call upon them to make from time to time.

One mentions the engine department in particular because it has long been the outstanding example of misapplied official methods. Our pre-eminence in engines is due entirely to the obstinacy of our engine manufacturers, and has arrived in spite of, and not because of, the people who ought to have produced that pre-eminence.



The Personal Equation.

If some such system of education were instituted, one feels that there would be considerable acceleration in fixing and producing new designs, and much saving of the nation's time which is now wasted by officials who are concerned in looking after their own or their friends' interests or in downing some firm or individual for which they have acquired a dislike.

If all the officials of the Technical and Production Departments knew that in a few weeks' time they would have to fly over enemy fire on whatever type of machine happened to be current at the moment, they would be mightily concerned that the machines at the front should be of the most efficient, that the engines should be perfectly reliable and of the lightest for their power, that the timber should be quite trustworthy, that the fabric should be entirely fire-proof. They might even demand the use of parachutes.

And they would be equally concerned that when a new and superior machine or engine appeared it should be got out on active service at the earliest possible moment.

This simple scheme alone would save the cost of Loch Doon many times over in a year, and one recommends it strongly to the Air Minister or to any Committee which he may appoint to investigate the waste of time, and consequent waste of men and money, which occurs between the first appearance of a new machine and its production in quantities. There is no need for any vast amount of public washing, but the washing ought to be done.

Washing Out or Whitewashing.

Let it be freely admitted that very great improvements have taken place in the past 18 months, and that waste and delays are far less than they have been in the past. That is all the more reason for clearing up the dirty corners which remain. It is so much easier to find the bad spots now, when so much is good, than it was when Sir William Weir first began to evolve order out of chaos.

One gathers that certain new departmental chiefs are themselves busy doing their own bit of washing. It remains to be seen whether it consists in washing out the inefficients in their departments, or in whitewashing their departments in the eyes of the Air Council. There is much washing out to be done, some of it pretty high up in the official scale, and it must all be done before the Air Ministry, or rather that portion of it which is also under the Ministry of Munitions, can be considered worthy of the people on active service.

Also, one believes that Sir Arthur Duckham is the man to do the necessary washing out. There are those who say that the whips of Weir will become the scorpions of Duckham (*vide* the Scriptural analogy) when once the new Chief has had time to look around him, so inefficient, self-seeking, and self-satisfied officials will be well advised to keep an eye open for jobs somewhere else when the trouble begins. Possibly when he has done with the various departments there will be no need for washing dirty linen in public. A little strong acid and a power-driven vacuum cleaner applied privately to the whole Department of Aircraft Production in the bad spots may, after all, do the job better.

An Averted Storm.

There have been threats of another Parliamentary storm blowing up over some of the matters at which one has ventured to hint in these notes, but so far it has not developed seriously. The inclination seems to be rather to give the new people a fair chance of settling down to their jobs and making good. Which is obviously the right thing to do.

If the minor departmental chiefs avail themselves of this respite to put their departments in order, so much the better for them, as well as for the active-service people. But, because the active-service people are the only people who matter at all, and because the whole Air Ministry and all its departments exist solely for their good, one is fairly safe in promising a mighty uncomfortable washing day for any department which is run in its own interests rather than in the interests of the active-service aviators.—C. G. G.

THE BOMBING OF HOSPITALS.

The "Times" correspondent on the Western Front writes on May 23rd as follows:—

There is one place in France, far away from the battle area, where we have a large group of hospitals. The hospital tents there cover a great area of ground. The Germans are perfectly well aware of the character of the place, and they selected it as the object of a bombing raid last year. They have again been attacking it, and the size of the tract of ground covered with hospital outfits and the entire absence of any concealment make it a mark which no aviator could possibly miss. An aviator blind and drunk could let bombs fall from any height in any wind and weather, and they must land somewhere among the attendants' quarters or on the tents where the nursing sisters move among the rows of cots with their helpless occupants.

On Sunday night the Germans attacked the place with all the ferocity of which they are capable.

To my mind the thing is one of the most horrible episodes of the war, rivalling the sinking of hospital ships or the "Lusitania," and as damning of German character and ways of thought as the murder of Miss Cavell or the blackguardly treatment of helpless British prisoners. It is one more of those things by which the Germans proclaim themselves as lepers outside the pale of civilised nationalities.

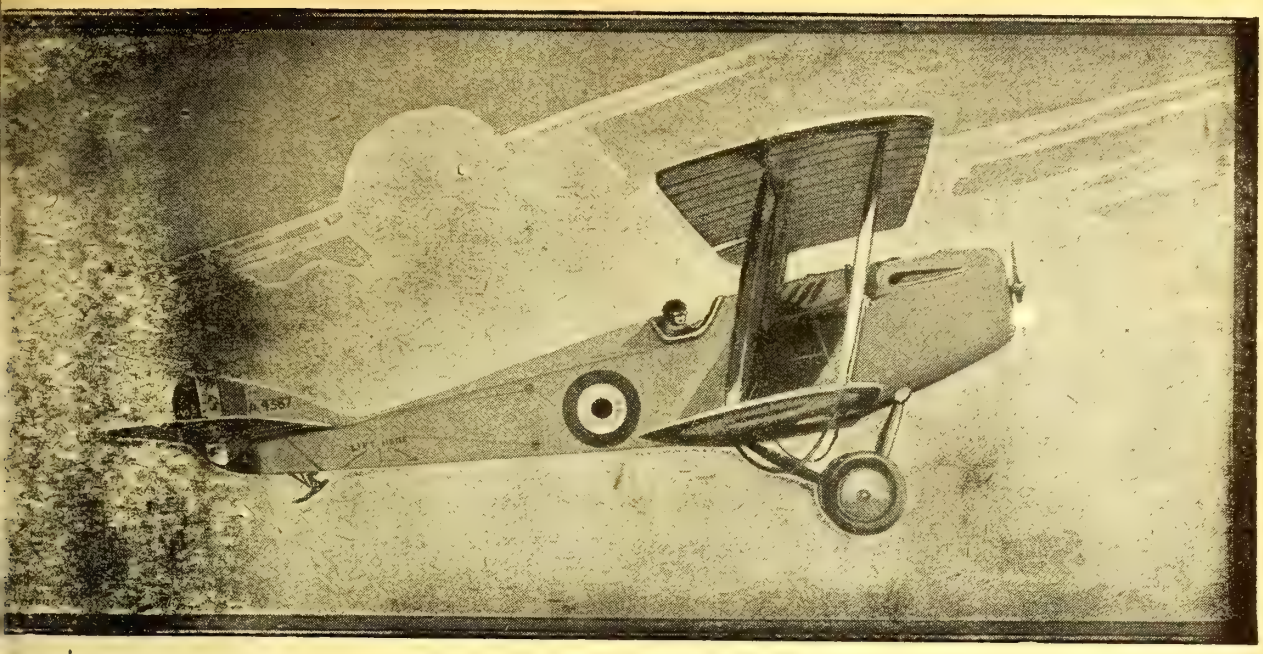
Sunday's raids lasted from soon after 10 at night till after midnight. There was a short interval at half-past 11, and evidently two separate parties were employed, numbering between them over a score of machines, from which a great number of bombs were dropped, many of the very largest size, making craters in the ground 15 and 20 feet across. The scenes inside the the tents were of the most piteous description, and the total casualties to patients, sisters, medical officers, and attendants must have far exceeded those of any London air raid. The redeeming feature of the whole horrible affair was the magnificent behaviour of the hospital staffs, including the nursing sisters.

Taught by the experiences of last year—which showed that the Red Cross, instead of being a protection against German barbarity, was rather an incitement to attack—the authorities had provided shelters to which the sisters and others could have gone for refuge and saved themselves. But the cots were filled with the helpless wounded, many hundreds of whom could not be moved, as they were obliged to remain in some fixed position. The attendants utterly refused to leave their patients, but all the while the dreadful carnage went on the nurses moved about among the beds, smiling and doing their best to keep up the courage of their poor charges. No single sister seems to have failed, but every one rose triumphantly to the ordeal. Too many of them paid the price of their heroism with their lives or by being wounded.

As a result of former experiences also, there are anti-aircraft guns in the neighbourhood, and one of these brought down one of the raiders, a Gotha with three occupants, two of whom were wounded and one uninjured.

Some of the enemy machines came down and used their machine-guns, raking the hospital tents and attendants' quarters with fire from low altitudes. No circumstance of savagery seems to have been omitted. If the members of some savage tribe committed against the Germans one tithe of the horrors which the Germans perpetrated on Sunday night, the Germans would consider themselves justified in wiping the whole tribe off the face of the earth, and the civilised world would probably approve of their action. It is impossible not to wonder when the Germans will awake to the extent to which they are crystallising the world's contempt and hatred of them as a people, so that their name will be a name of loathing for generations.

The captain of the machine brought down, who was wounded, and is now being cared for in the hospital he bombed, was formerly in the German Diplomatic Service. He tried at first to excuse himself by saying that he saw no Red Cross. When challenged with the fact that he knew that he was attacking hospitals he endeavoured to plead that hospitals should not be placed near railways, or, if they are, that they must take the consequences. Apart from the fact that hospitals must be near railways for the transport of their patients, in this case, as in the others, the raiders were not attacking the railways, but came deliberately to bomb the hospital area, and knew perfectly well what they were doing.



[One awaits with interest the German explanation of this affair. The Hun is not a nice person, but he is not a fool. He lacks chivalry, but he sticks strictly to the rules of war. One aviator, half fool half savage, might bomb a hospital on purpose, but a whole squadron would not bomb a whole hospital camp unless they were so ordered for some definite reason, or unless they were misled by their spies into thinking it was a camp full of troops.—Ed.]

THAT RED CROSS MARK.

The following is taken from the "Daily Telegraph" of May 27th:—

Attention has already been called to the photograph taken from the air by British airmen of the German aerodrome at Thionville, where the roof of the main building is conspicuously marked with the Red Cross. The explanation has not been long in coming to light. [The most rudimentary intelligence ought to be able to see that whatever the cross may be it is not on the top of a building, but is on the ground in the middle of an area surrounded by trees.—Ed.]

The Red Cross aerodrome connects itself with the German outrage on Sunday night, when low-flying German aeroplanes bombed a well-known group of hospitals far in the rear of British lines. The Hun tries to pave a way to his fiendish crime by seeking to establish a "tu quoque." He marks an active aerodrome with a lying Red Cross, hoping that the Allied airmen will ignore the obvious lie, bomb the aerodrome, and thus

give him a dialectical justification for referring to his own bombing as a reprisal in kind. He was not given that excuse. He bombed hospitals as he torpedoed hospital ships—because he is the Hun, and his air service has now degraded itself to the level of his navy.

[Opinions among aviators seem to vary as to whether the "red cross" on the "roof of the main building" is not really a cross-shaped fountain in the middle of a lawn, or some such equally exciting mark. The "smudgeographs" in the illustrated papers leave one in doubt. The colouring of the ground and the size of the cross as shown in the "Daily Mirror" and the "Daily Sketch" differ so much between the two papers that one or other appears to have been "faked." Therefore one is not prepared to accept the alleged explanation officially given. —Ed.]

THE VIEWS OF SIR WILLIAM WEIR.

Reuter's Paris correspondent, writing on May 20th, says:—

Sir William Weir, Secretary of State for the Air Force, has been interviewed by the London representative of the "Petit Parisien." He declared that never had the situation given greater cause for hope. In all the Allied countries production was being accelerated in a continuous manner. In England there was not a workman, not a member of the staff, who was not working day and night with the sole thought of surpassing the Germans.

Questioned as to the reality of the Allies' superiority in the air, Sir William Weir replied: "For the moment, yes, perhaps we do have it, and we shall continue to have it if we know how to keep it—so long as we stick to our work."

Sir William Weir does not agree with the views of M. Painlevé on the standardisation of aircraft. "We must continue to perfect every type of machine, whether observation, registering, bombing, or chasing planes," he said. With regard to unity of command in inter-Allied aviation, the Air Minister feared this would meet with many practical difficulties. It was, moreover, more or less realised already by the military unity of command, since all squadrons are attached to established divisions.

AN UNEXPLAINED MYSTERY.

The following appeared in the daily newspapers on May 24th, apparently from an official source:—

While the chief part played by the Navy in connection with the operations in German East Africa has already been made known in official dispatches, several instances of great gallantry have not hitherto been recorded.

Among minor exploits was the salving of a seaplane, which had come down in shallow water off the Rufiji delta. The pilot was captured, but prompt steps were taken to regain the machine. A tug went as near to the shore as her draught allowed, and opened fire on an enemy stockade, in which two guns were mounted. Meantime a motor-boat pushed on at high speed towards the spot where the seaplane was lying. The water was too shallow, so, returning, she obtained a long heaving line. With this and a signalman from the tug, who volunteered his services, the motor-boat went back. When the boat could approach no nearer the signalman jumped over, waded up to the seaplane in spite of hot rifle-fire, and made the line fast to the machine. Then he returned to the boat, which started to tow the seaplane back. The motor-boat grounded, but all hands at once jumped outboard and got her clear. The seaplane was salved. It had been struck by 60 projectiles, while the motor-boat and the tug had each been hit five times.

[This evidently refers to the days of 1914 when Mr. Cutler, one of the early followers of aviation from 1909, who had been flying at Durban, brought an old Curtiss flying-boat up to the East Coast. Mr. Cutler (who was a Flight-Lieut., R.N.) was then taken prisoner and nothing has been heard of him since. As the Admiralty has now dug up this bit of ancient history, perhaps it will now proceed to state officially whether Mr. Cutler is still a prisoner with von Lettow, whether he has died as a prisoner, or whether he has returned from captivity.—Ed.]

OVERSEAS PATRIOTISM.

Sir William Weir, the Air Minister, was on May 24th presented with a cheque for £13,000, representing the cost of eight aeroplanes, the gift of the members of the Overseas Club and Patriotic League. The formal presentation was made by Mr. Hewins, M.P., Under-Secretary for the Colonies, at the annual meeting of the Club at General Buildings, Aldwych. Mr. F. W. Hayne presided, and among others present were Lord Meath, Sir Owen Philipps, M.P., Lieut.-Gen. Sir R. Baden-Powell, Admiral the Hon. Sir E. R. Fremantle, Sir Ernest Birch, Sir Edward Rosling, and Dr. E. Lyttelton.

Sir William Weir said that it was not his intention to advertise the achievements of the Air Force, or to boast of its progress, or to make forecasts of its future successes. That would not be in accordance with the spirit of the Force, as he understood it, for, young as it was, its crowded life had already created a noble tradition and spirit of its own.

He was content to leave the public to judge of its achievements from the official records day by day in the Press. The enemy's judgment would be still more accurate, as it would be based on actual experience.

His policy and that of his colleagues on the Air Council was a comparatively simple one. Whatever the Air Force had done in the past, and was doing now in the face of the enemy, every effort and every energy would be directed to further development and acceleration in the many fields of aerial activity which could effectually contribute to the successful issue of the great cause in which we were fighting.

AMERICAN REORGANISATION.

The Washington correspondent of the "Morning Post" writes on May 21st:—

Immediately after signing what is known as the Overman Bill, which gives the President power at his discretion to consolidate existing Departments of Government or to transfer the functions of one Department to another, Dr. Wilson issued an Order, with the object of bringing about an important change in the Aeronautical Service which will make for efficiency and greatly expedite aircraft production.

Until the issue of the Order the Air Service was under the control of the Aircraft Board, the head of the Board being the Chief Signal Officer of the Army, who was responsible not only for production but also for the training of the personnel and all other matters connected with the Service. In fact, he virtually exercised the functions of a Minister.

The Chief Signal Officer [Brig.-Gen. Squier.—Ed.] now no longer has anything to do with aeronautics, and the manufacture of aeroplanes has been given over to the Bureau of Aircraft Production, of which Mr. John D. Ryan, a New York banker and mine-owner, who was recently appointed by the President with that purpose in view, is the Chief, while the military part of the Service has been placed under the Director of Military Aeronautics, to which position Maj.-Gen. William L. Kenly, who has a high reputation for executive ability and aeronautical knowledge, has been appointed.

With these changes and with the experience gained by manufacturers of aeroplanes during the last six months it is believed that the obstacles in the way of the quantity production of machines have been overcome and that machines should now be turned out in large numbers very rapidly.

The "Times" correspondent writes on May 21st:—

Mr. Hughes, after conference with the Attorney-General, has decided to begin an investigation into the aircraft charges immediately. The proceedings, necessarily in secret, will be in the nature of a Grand Jury inquiry.

A MARK TAPLEY.

In an address given by Mr. W. C. Redfield, Secretary of Commerce in the American Government, at the Canadian Club Ottawa, on May 20th, he is reported as having said:—

There were critics who related stories of failure. He asked the country not to worry about the reported failure of the American Aeroplane factories. He saw one factory recently where the raw material was going in at one end and the finished product coming out at the other.

[One admires the optimism of the speaker, but one does not understand that he should marvel at the spectacle of raw material entering a factory and the finished product leaving it. The phenomenon of finished products entering a factory and raw material leaving it would be more calculated to make the average person marvel.—Ed.]

A REUNION OF GASBAGS.

"Beachcomber" writes in the "Daily Express" of May 22nd as follows:—

I hear that several members of Parliament are urging the Air Ministry to invite our Allies to send representatives here during the summer to discuss aerial matters. Nothing definite has, I am informed, been settled so far.

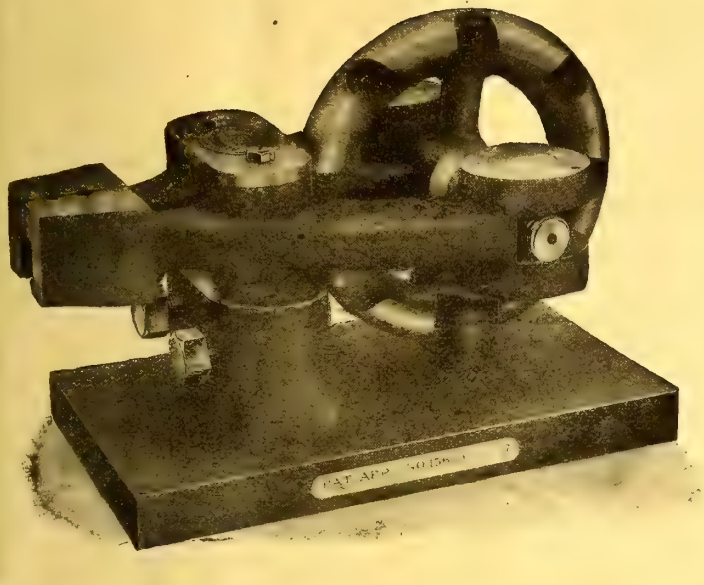
Provided, however, certain initial difficulties can be overcome, the visit will be arranged. It is felt that with the daily increasing importance of the Air Service a meeting of Allied Parliamentary representatives might be productive of much good.

[It would appear that so long as the soldiers of the Allied nations work together the activities of Parliamentarians are of little account.—Ed.]

INTERNATIONAL AIR TRAVEL.

The "Times" correspondent at Christiania writes:—

The news received from London that it is for the present impossible to grant the request of the Norwegian Air Route Company to start an Aberdeen-Stavanger mail service has caused general regret in the business community.



It had been hoped that the present highly unsatisfactory mail conditions, detrimental alike to British and Norwegian interests, would have convinced the British authorities of the advisability of this proposed service, the more so as few machines and no escort would have been needed. [One cannot comprehend the refusal to sanction so simple and so important an experiment. —Ed.]

THE RED AIR FIGHTER.

"The Red Air Fighter," the reminiscences of the late Rittmeister Baron von Richtlofen, is now ready and may be obtained for 2s. 9d. post free from the Aeroplane Publishing Office, 4 Breams Buildings, E.C.4.

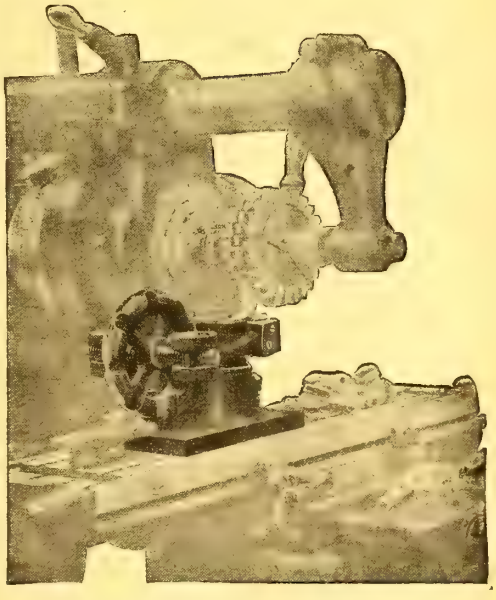
A wonderful Time-saver



The BLACKBURN PATENT UNIVERSAL JIG for MILLING, TAPPING and DRILLING

Why waste time in making a Jig for each job ?

The Blackburn Universal Jig has been specially designed to meet emergencies which arise in milling, tapping and drilling. It is always ready, and secures accuracy and quicker output.

Half a turn of the hand-wheel releases the fitting.

Jig on a Milling Machine.

FROM THE COURT CIRCULAR.

Buckingham Palace, May 24th.

The Lord Rothermere had an audience of The King this morning, upon relinquishing his appointment as Secretary of State for the Royal Air Force.

Buckingham Palace, May 25th.

The King held an Investiture in the Quadrangle of the Palace this morning.

The following officer was introduced into the presence of His Majesty, when the King invested him with the Insignia of

The Distinguished Service Order.—Lt.-Col. Richard Collie R.A.F.

The King then conferred the following decorations :—

A Bar to the Military Cross.—Lt. Sydney Jones, S. Lan R. and R.A.F.

The Military Cross and Bar.—Capt. Cecil Stevens, Duke Wellington's (W. Riding R.) and R.A.F.

The Military Cross.—Maj. Hector Robertson, R.A.F. ; Ca John Fox, R.A.F. ; Capt. Harry Rigby, R.A.F. ; Capt. Benjam Silly, R.A.F. ; Lt. William Aitchison, R.F.A., attd. R.A.F Lt. Jocelyn Bradford, Duke of Wellington's (W. Riding R.), att R.A.F. ; Lt. George Howsam, R.A.F. ; Lt. Stewart Roberts S. Lancs. R., attd. R.A.F. ; Sec. Lt. James Reeves, R.A.F.

OFFICIAL COMMUNIQUES.

NAVAL.

Admiralty Communiqués.

May 23rd.—During the period May 20th to May 22nd inclusiv Air Force contingents have carried out bombing operations agair Zeebrugge, the Mole, seaplane base, and enemy shipping in t vicinity, and also against Thourout and the enemy aerodrome St. Denis Westrem.

Two direct hits are reported on enemy torpedo-boat destroye with the result, according to photographic reconnaissance, th one destroyer has been sunk.

In addition, three enemy machines have been driven dov out of control.

All our machines returned safely.

May 27th.—During the period May 23rd to May 26th inclusi operations by Air Force contingents have been somewh hindered by unfavourable weather conditions.

Bombing operations have, however, been carried out agair Mariakerke (north-east of Ghent) and Zeebrugge, where bom were observed to fall close to the lock gates and car derivation.

Nearly three tons of bombs were also dropped on Brug Docks during the night of the 22nd-23rd.

All our machines returned safely.

In home waters, during the period, numerous flights in esco patrol, and other anti-submarine duties were carried out. Su marines were sighted and attacked, and enemy mines we located on several occasions. Our seaplanes have also carri out long reconnaissances over the North Sea.

On May 20th Allied aircraft made a successful bombing atta on the Austrian naval base of Cattaro (on the Adriatic). direct hit was obtained on the barracks, inhabited by submari crews, where a fire was seen to break out.

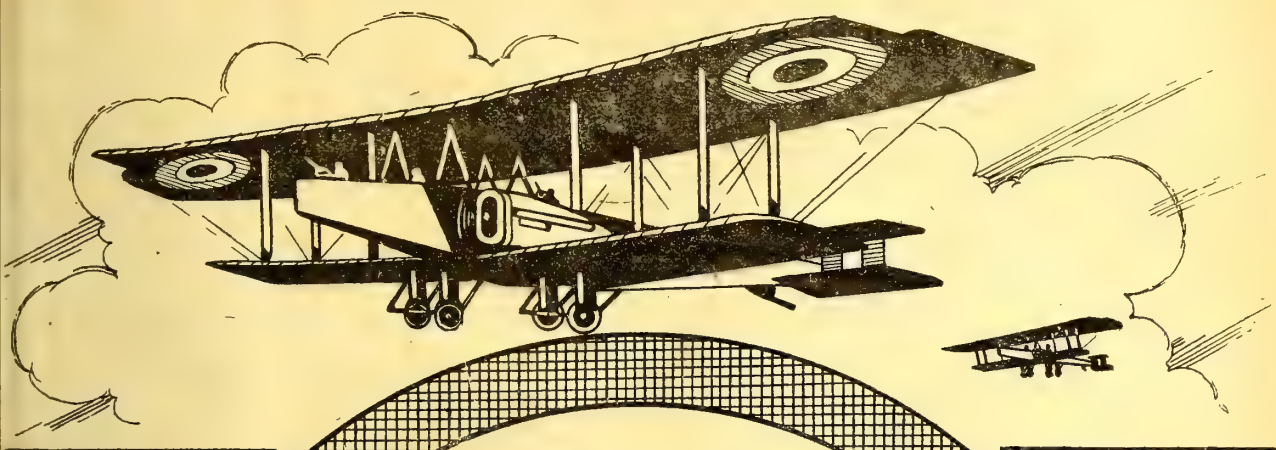
MILITARY.

G.H.Q. Communiqués.

May 21st, 10.45 p.m.—On the 20th inst. our observation b loons and aeroplanes were again very active. Several long-d tance reconnaissances were completed, many successful pho graphs were taken, and much observation work was done in operation with our artillery. During the day our bombing ae planes dropped a total weight of 22 tons of bombs on the enemy railway stations, aerodromes, and billets.

The enemy scout machines were chiefly employed in attacki our reconnaissance and bombing aeroplanes. In air fighting, German aeroplanes were brought down, and two others we driven down out of control. One hostile machine was shot do by anti-aircraft gunfire. Two hostile observation balloons we also destroyed by us.

Four of our aeroplanes are missing.



During the night the aerodromes in the neighbourhood Ghent, Tournai, and St. Quentin, used by the enemy's nig bombing machines, were heavily attacked. A total weight of tons of bombs was dropped on these targets. A further 4½ to of bombs were dropped by us on the railway stations at Thio ville, Metz and Coblenz, on the Rhine. At about 8 a.m. the 21st inst., 22 heavy bombs were dropped by our machines the railway stations at Namur and Charleroi.

One of our machines failed to return.

Since the commencement of the German offensive, exactly tw months ago, 1,000 German aeroplanes have been brought dow or driven down out of control by us, and more than 1,000 to of bombs have been dropped by us over the enemy's lines.

May 22nd, 9.45 p.m.—Reconnaissance and bombing by o aeroplanes and artillery and photographic work by our ae planes and balloons were continued uninterruptedly on the 2 inst. Some 1,200 bombs were dropped by us on various targe including four of the enemy's large aerodromes near Ghent a Tournai and billets in the neighbourhood of Armentière Bapaume, and Bray.

(*Continued on page* 2019.)

"I am returning herewith a pair of 'Triplex' Goggles, and shall be glad if you will kindly replace same for me .. I had a bad smash in a Nieuport Scout and **only for your goggles, should most certainly have lost an eye.**"

"You will be pleased to hear that **'Triplex' saved my eyes** from being badly cut, and will also be interested to learn that the **'Triplex' windscreen was unbroken,** though the immediate surroundings were battered."

100% Safety&Visibility

are the outstanding features of 'Triplex' Unsplinterable Safety Glass.

It has the unqualified approval of leading Aeronautical Engineers for Windshields, Observation Panels, Instrument and Map Covers, Goggles, etc.

AERONAUTICAL ENGINEERING

SUPPLEMENT TO "THE AEROPLANE"

INCORPORATING AIRCRAFT ENGINEERING, AERODYNAMICS, AND MATTERS PERTAINING TO THE AERONAUTICAL ENGINEER AND THE AIRCRAFT TRADER

THE 180 H.P. MERCEDES AERO ENGINE.

A Report issued by the Technical Department of the Department of Aircraft Production, Ministry of Munitions.

The following report on the design of the new 180-h.p. Mercédès engine is based on an examination of the engine (No. 35254) taken from the captured German Albatros biplane D.5.A. (G.97), which was shot down by anti-aircraft fire in a Brigade area on November 14th, 1917, and the accompanying data on the design of the engine and the particulars of its general performance, have been compiled from results of tests carried out at the Royal Aircraft Factory.

The 180-h.p. Mercédès engine is the first engine of a new type to be used in Service since the advent of the 260-h.p. Mercédès engines in the early part of last year. These 260-h.p. engines were apparently so successful that the 160-h.p. type have since been remodelled so as to introduce several of the leading features of the 260 h.p. practice. The result is seen in the 180-h.p. model, with which this report deals.

It necessarily follows from the above that this report will partake more or less of the character of a comparison between the 160-h.p. and 180-h.p. models. Frequent reference, therefore, is made in the text to the 160-h.p. engine, and in addition a table is given, showing the leading data of the two engines.

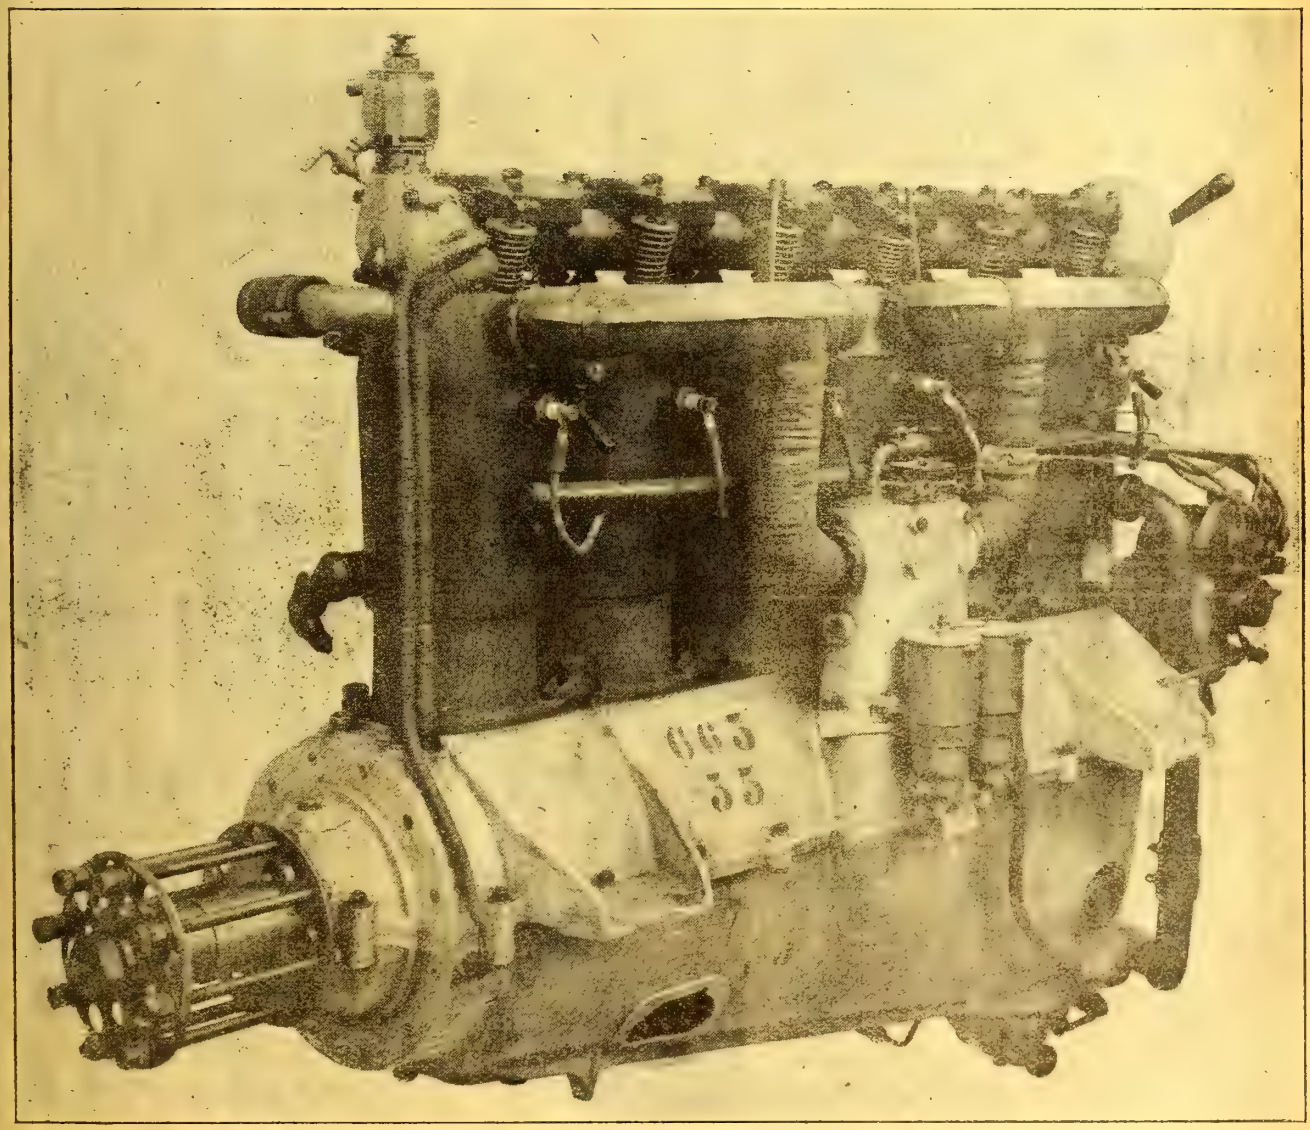

Fig. 1.—Inlet Side of the 180-h.p. High Compression Mercédès Engine.

In many respects the design of this new engine is similar to the 160 h.p. Mercédès, which is now obsolescent. The cylinders are of the same construction and of the same bore and stroke as the 160 h.p., i.e., 140 mm. × 160 mm., as also are most of the reciprocating parts; in fact, this engine might well be termed "The New 160-h.p. Mercédès."

Briefly described, the 180-h.p. Mercédès is a combination of the 160 h.p. and the new 260-h.p. Mercédès engines, and in view of this fact it will be unnecessary in this report to deal at length with the details of the design of those parts which are identical with the components of the above mentioned engines, of which fully detailed reports have already been issued, and the design of which is now well known in this country.

In comparison with the standard type 160-h.p. Mercédès, the new engine shows a marked improvement, both in the design as a whole and in its general performance during power and consumption tests, and as a comparison between the two engines the following comparative table of the leading particulars of the engines is herewith given :—

	160-h.p.	180-h.p.
Bore	140 mm.	140 mm.
Stroke	160 mm.	160 mm.
Compression ratio	4.50 :1	4.64 :1
Average B.H.P. and speed	162.5 at 1400	174 at 1400
B.M.E.P. (lbs. per sq. inch)	102.0 at 1400	109.1 at 1400
*Total weight of engine (dry)	618 lbs.	635 lbs.
Weight per B.H.P.	3.80 lbs.	3.65 lbs.
Fuel consumption per hour	94.2 pints.	94.83 pints.
Fuel consumption per B.H.P. hour	.58 pints.	.545 pints.
Oil consumption per hour	5.0 pints.	7.3 pints.
Oil consumption per B.H.P. hour	.031 pints.	.042 pints.
Inlet valve opens	2deg. L	T.D.C.
Inlet valve closes	35deg. L	40deg. L
Exhaust valve opens	63deg. E	40deg. E
Exhaust valve closes	13deg. L	10deg. L
Ignition timing (fully advanced)	30deg. E	30deg. E
Delivery of water pump		41.4 galls. per min

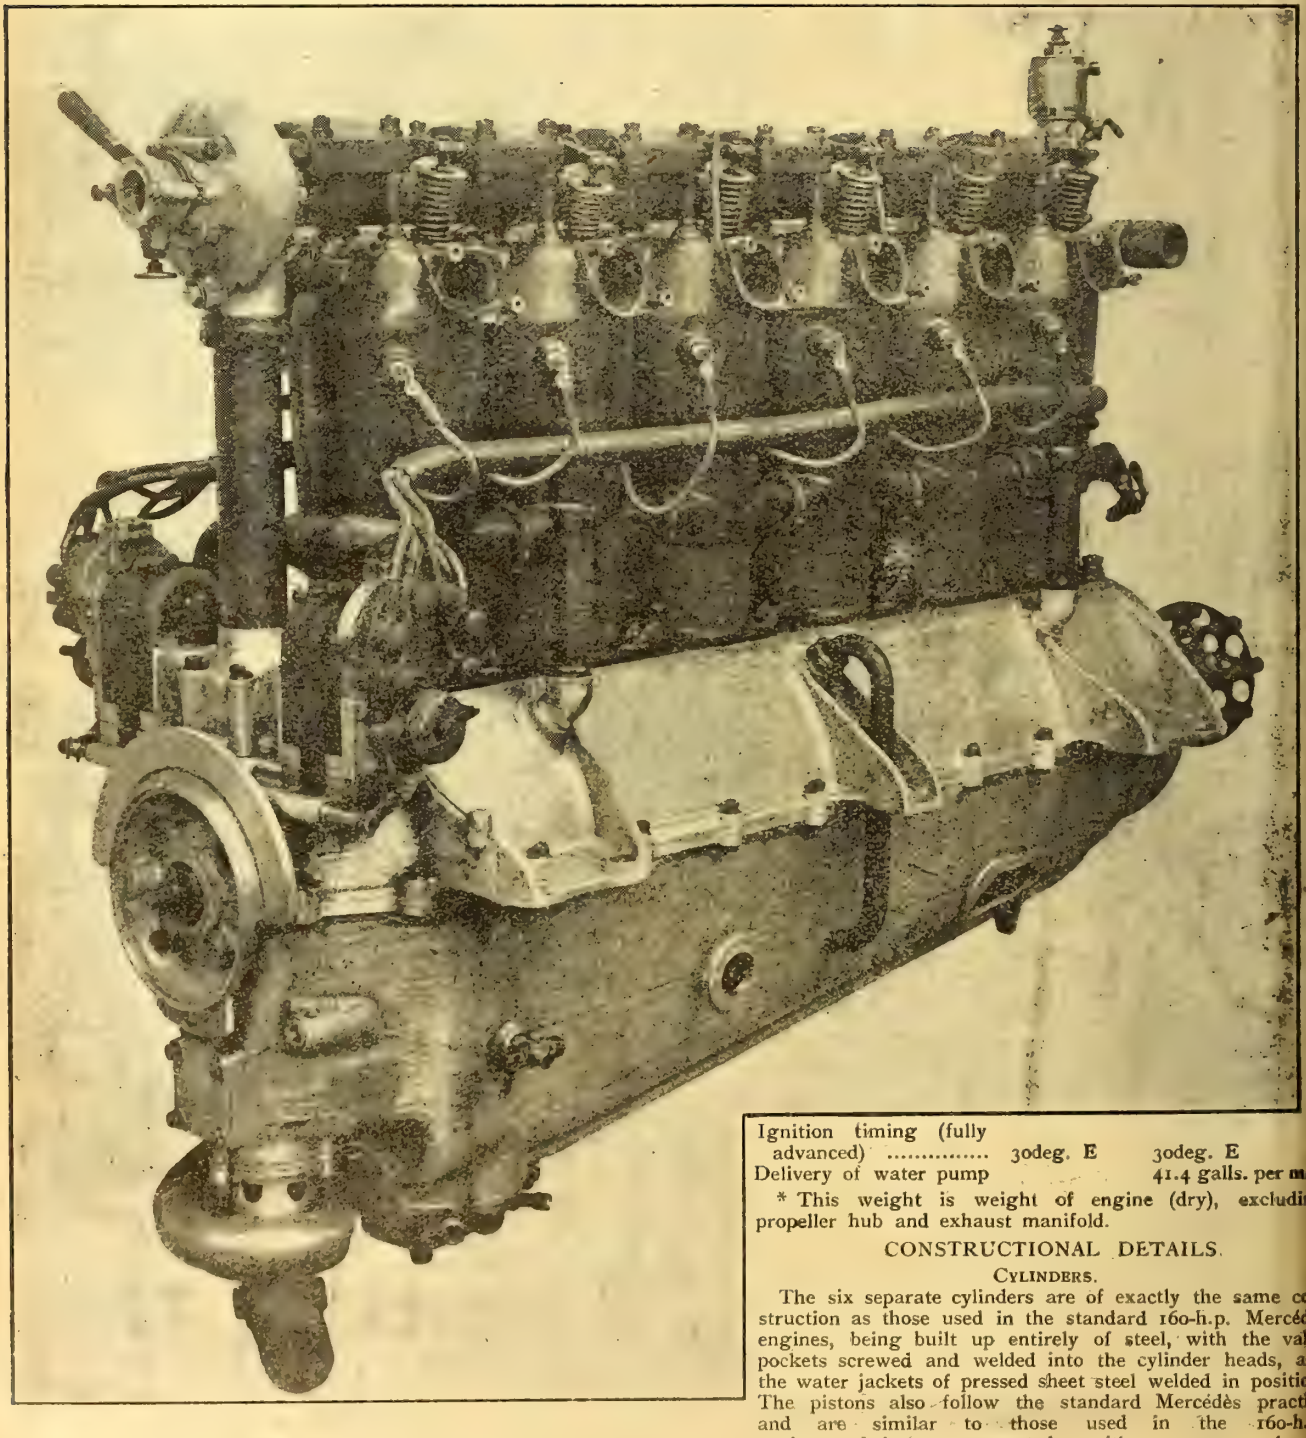

Fig. 2.—Exhaust Side of the 180-h.p. Mercédès.

* This weight is weight of engine (dry), excluding propeller hub and exhaust manifold.

CONSTRUCTIONAL DETAILS.

Cylinders.

The six separate cylinders are of exactly the same construction as those used in the standard 160-h.p. Mercédès engines, being built up entirely of steel, with the valve pockets screwed and welded into the cylinder heads, and the water jackets of pressed sheet steel welded in position. The pistons also follow the standard Mercédès practice and are similar to those used in the 160-h.p. engines being constructed with concave heads

ROLLS-ROYCE

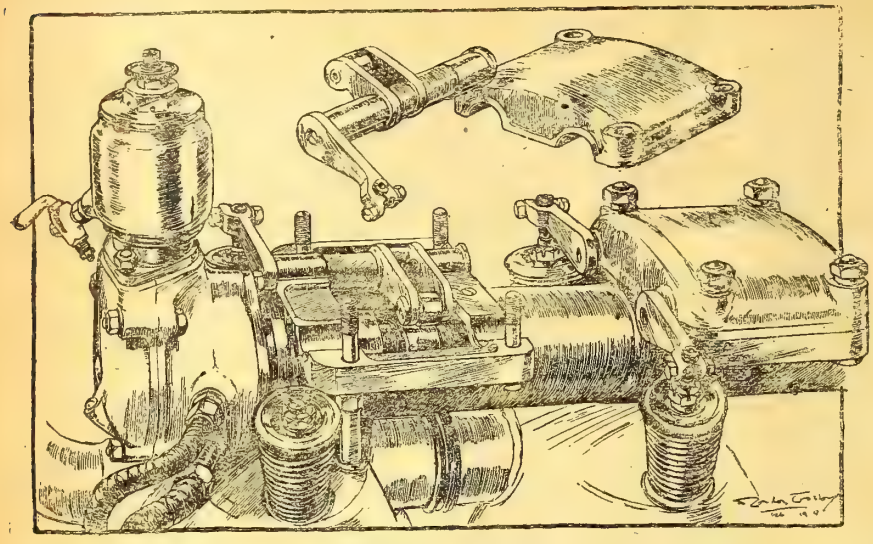

Fig. 4.—The Overhead Camshaft and New Valve Gear, showing Detachable Valve Pump.

machined from steel forgings, which are screwed into the cast iron skirts of the pistons and welded in position.

Three rings are provided above the gudgeon pins and one ring below which is situated at the base of the skirt. The gudgeon pins are carried in lugs machined in the lower part of the steel piston crown. The compression ratio it will be noticed is slightly higher in the new 180-h.p. engines, being 4.6 :1 as compared with 4.5 :1.

Connecting Rods.

The H section connecting rods with their floating cast iron gudgeon-pin bushes also follow the usual Mercédès practice and are identically the same as those used on the 160-h.p. engines, and the whole of the camshaft vertical driving shaft and also the water and oil pumps driving gear is similar to the 260-h.p. engines.

Crankshaft.

No alteration has been made to the general design of the crankshaft from the standard 160-h.p. type. The leading dimensions, clearances and method of lubrication of the journal and connecting rod bearing are the same, as shown in the general arrangement of the engine, Fig. 3, at end of report.

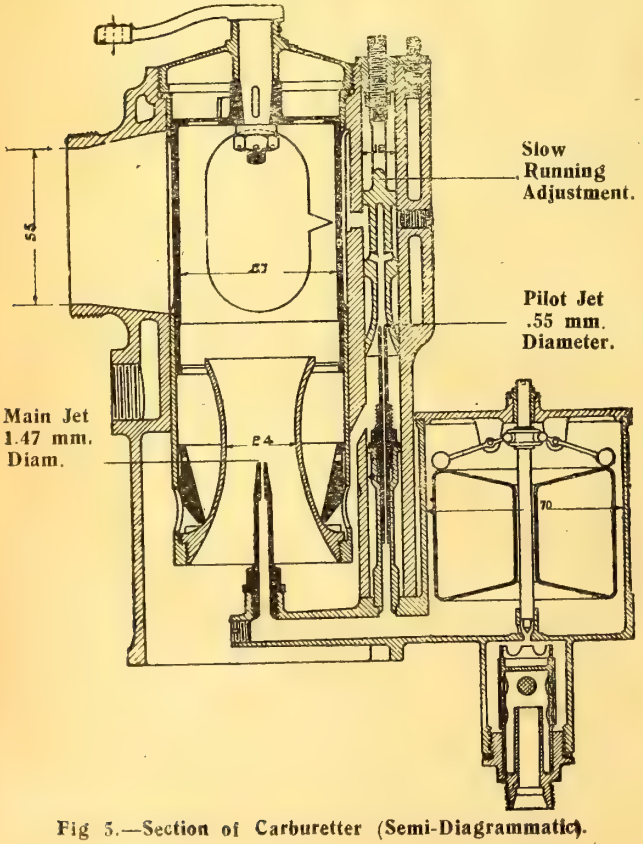

Fig 5.—Section of Carburetter (Semi-Diagrammatic).

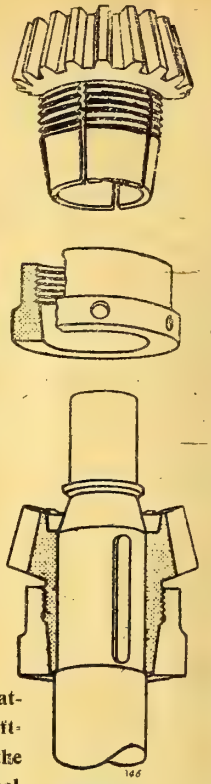

Fig. 6.—Method of attaching the Camshaft-driving pinion to the top-end of the vertical driving-shaft and the arrangement of the Skefko Twin race Ball-bearing on the bottom-end of the vertical shaft.

Crankcase.

The crankcase, whilst following the general construction of the 160-h.p. engines, also resembles in many ways the 260-h.p. type. The usual Mercédès practice of casting the lower half of the main bearing housings integral with the bottom half of the base chamber, and also the method of holding down the cylinders by long bolts which pass through the base chamber top half and secure the two halves of the crank-chamber, is adhered to.

Valve Gear.

The single inlet and exhaust valves of each cylinder, which work at an angle of 15 deg. to the central axis of the cylinder, are interchangeable as in the 160-h.p. engines and are of similar design; the valve operating gear is, however, of new design, and follows more the construction of the valve gear on the 260-h.p. Mercédès engines.

General details of this construction and working of the valve gear shown in the sketch, Fig. 4.

It will be noticed that the rocker arms and their spindles are now integral, being machined from steel forgings. The camshaft casing is constructed entirely from malleable-iron castings, and the valve rocker spindles work in direct contact with the malleable iron, no bronze bushes being provided as bearings for the rocker arm spindles, and the covers of the camshaft casing form the top portion of the rocker spindle bearings.

The rocker spindles are hollow, and are lubricated through two holes drilled radially in the spindles by oil thrown off the revolving cams into the two holes drilled in the rocker arm carrying the cam roller.

This design of valve gear is undoubtedly a great improvement on the arrangement adopted in the 160-h.p. Mercédès, the construction of which is well known, having the rocker arms working through slots in the camshaft casing, which are provided with felt-packing strips and baffle plates for retaining the oil in the camshaft casing.

Camshaft.

The camshaft is of similar design to the 160-h.p. Mercédès and the casing is supported on long studs which are screwed into the head of each cylinder.

With regard to the valve timing, this it will be noticed is different from the standard 160-h.p. Mercédès, as shown in the comparative list of leading particulars. The valve lift has been

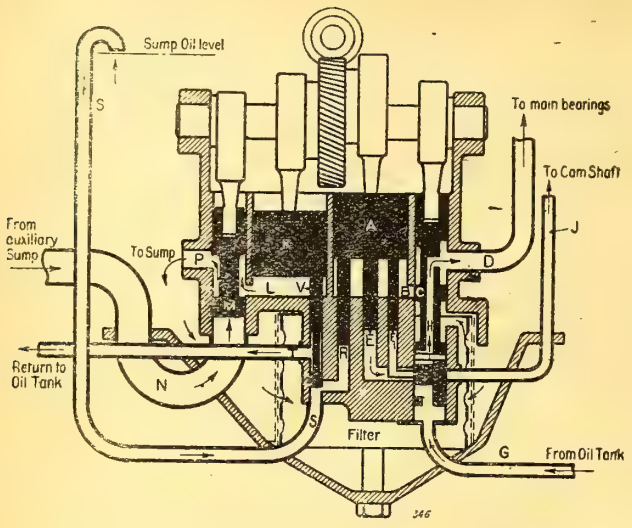

Fig. 7.—Diagrammatic Section of Oil Pump.

increased from 0.440in. on the 160-h.p. engines to 0.452in. Only very minor differences occur in the actual dimensional details of the half compression gear in the new engine. Details of this mechanism are now well known; the general design is, however, clearly shown in the general arrangement sectional drawing of the engine, **Fig. 3.**

Carburetters.

No alteration has been made in the design of the twin-jet dual carburetters. Both carburetters are enclosed in a cast aluminium water-jacket which is coupled at the bottom by a water-pipe to the delivery pipe of the water-pump and at the top to the water-jacket of the rear cylinder to the top portion of the water-jacket of the carburetters, as shown in Fig. 1.

Each carburetter feeds three cylinders through a branched induction pipe of steel tube, which is lagged with asbestos cord and bound with adhesive tape. The throttles are, of course, interconnected and are operated by a cable and also by a control lever and rod. The float chambers are of ordinary design, but are fitted with separate filters attached to the bottom of each float chamber, which are easily detachable. These filters are provided with needle-valve drain cocks. No compensating arrangement is provided for altitude control.

The bore of the main jets is 1.473 mm. and the bore of the pilot jets .558 mm., which is the same as in the 160-h.p. Mercédès carburetters. A semi-diagrammatic sectional view of one of these carburetters is reproduced in Fig. 5, for reference.

The air-intake to the carburetters is taken through the passage cast in the central portion of the top and bottom halves of the base-chamber, which forms an air chamber between the front and rear oil pumps in the lower portion of the bottom half of the base. Air enters the central air chamber through two holes cast in the sides of the chamber and also warm air through a large diameter pipe leading from the central portion of the top half of the crank-chamber.

Camshaft Drive.

The method of fixing the camshaft driving bevel at the top end of the vertical shaft, as shown in the sketch, Fig. 6, is unusual. This method is similar to that adopted in the 260-h.p. engines, and is so designed as to allow of a certain amount of vertical adjustment of the bevels. The driving end of the vertical shaft is machined and ground parallel, 21 mm. diameter, and is fitted with a key, which fits in a key-way in the driving bevel; a ground taper on the bottom extension of the bevel, which is split by four saw-cuts, and into which screws a ring nut, locks the bevel securely in position on the vertical driving-shaft.

In the old 160-h.p. Mercédès engines the camshaft driving bevel on the vertical shaft is fixed by two bolts in the split extension of the bevel which is fitted on to a ground taper on the vertical shaft.

Referring to the sketch of the vertical shaft, it will be seen that the bottom end of the shaft is carried on a "Skefko" universal bearing, which is mounted inside a steel sleeve, carried at the rear end of the crankcase, and is driven off the floating bevel gear on the rear end of the crankshaft in the usual way.

Lubrication.

The old 160 h.p. type multiple-plunger oil-pump has been replaced by the larger pump, similar in design to the 260-h.p. Mercédès pump. The oil pump is attached to the bottom of the rear oil sump or reservoir, at the rear end of the base chamber.

The functions of the oil-pump are perhaps most clearly demonstrated in the diagrammatic sectional drawing, Fig. 7, and in the sectional sketch of the pump, Fig. 8.

Briefly described, the functions of the oil-pump and the system of lubrication may be sub-divided into three circuits.

(a) The main pressure circuit, in which oil is drawn from the main oil sump at the rear of the base chamber and forced to the main crankshaft journal-bearings and connecting-rod bearings, and also to the camshaft bearings.

(*b*) The supplementary pressure system, which works in conjunction with the main high-pressure system, in which two auxiliary plungers of the main oil-pump draw a small charge of fresh oil from the service oil tank at every stroke of the pump and force the charge into the main circulation system.

(*c*) The suction or scavenger circuit, which supplies the main oil sump from the auxiliary drain sump at the front end of the base chamber, the working oil level being maintained in the rear sump by an auxiliary suction pump which draws off the oil above the oil level through an overflow pipe and returns it to the oil tank.

An oil sight level indicator is provided in the side of the rear oil sump.

Full details of the functions and operation of this somewhat complicated oil pump are given in the previous report on the 260-h.p. Mercédès engine.

Ignition.

Two Z.L.6 type Bosch magnetos are fitted at the rear end of the engine and are driven directly off the camshaft vertical driving-shaft by bevel gears, as in the 260-h.p. engines.

Ignition is by two Bosch 3-point plugs fitted to each cylinder one on either side of the cylinder below each valve head, and the H.T. cables are carried as usual in fibre tubes attached to the cylinders

The ignition timing is fixed at the same period as in the 160-h.p. engines, i.e., 30 deg. E., and the speed of the magnets is 1.5 times engine speed.

Firing order: 1, 5, 3, 6, 2, 4.

Water Circulation System.

The water-pump in the old type 160-h.p. Mercédès engines is situated above magneto drive, and is driven directly off the vertical camshaft driving-shaft. In the 180-h.p. engine the standard 260-h.p. type water-pump has been adopted. This is now driven, as in the larger engines, by a dog-clutch off the bottom end of the lower vertical shaft, which also drives the oil-pump worm driving-shaft, as shown in the sectional arrangement Fig. 3.

The water-pump spindle is provided with a spring-loaded fabric washer of steel in place of a gland, and the spindle is lubricated by hand, as in the 260-h.p. engines, by a large screw-down grease lubricator accessibly arranged on the pilot's seat. Details of this water-pump are clearly shown in the sketch, Fig.

The Air-Pump.

This is of new design, and is now driven off the front end of the camshaft, as in the 260-h.p. engines. The piston and bar

of the air-pump are made of cast iron, and the piston is operated by a small connecting-rod of bronze and a double-webbed crank, as shown in the sectional sketch, Fig. 10. The air-pump crankshaft is provided with four serrations which fit into the corresponding splines cut on the inside of the hollow camshaft. The bore of the pump is 40 mm., and the stroke is 40 mm.

Air inlet ports are drilled in the lower portion of the pump-barrel, and are uncovered by the piston at the bottom of its stroke, and the delivery check-valve is situated in the head of the pump-barrel. A regulating valve is provided directly above the check-valve, the released air escaping through the centre of the hollow adjusting screw, and also through six small holes drilled radially in the screwed cap which forms the seating of the regulating valve.

A self-contained oil-trap is provided by the gun-metal jacket which surrounds the barrel of the air-pump. This is fitted with a drain cock, as shown in the sketch. The air-pump piston and crankshaft are lubricated by the excess oil in the camshaft casing.

The main oil-lead from the oil-pump to the hollow camshaft is taken through a passage drilled in the crank-chamber of the air-pump, the oil entering the camshaft through four 5 mm. holes drilled radially in the hollow air-pump crankshaft, which register with a groove cut in the inside of its bearing.

Sq. in. of piston area per B.H.P....	0.823 sq. in.
B.H.P. per cu. ft. of stroke volume	334.0
B.H.P. per sq. ft. of piston area....	175.0
Direction of rotation of crank and airscrew	Anti-clockwise facing airscrew.
Lubrication System	Forced, multiple plunger pumps
Oil consumption per hour	7.3 pints = 8.21 lbs.
Oil consumption per B.H.P. hour...	0.642 pint = 0.047 lb.
Oil pressure	20 lbs. sq. in.
Volume of oil carried in base chamber	17 pints.
Number and type of carburetters.....	One dual Mercédès, twin jet.
Diameter of chokes	0.945 in. = 24 mms.
Bore of main jets	0.058 in. = 1.472 mms.
Bore of pilot jets	0.022 in. = 0.559 mms.
Fuel consumption per hour	94.83 pints = 85.32 lbs.
Fuel consumption per B.H.P. hour	0.545 pint = 0.491 lb.
Inside diameter of induction pipes...	2.126 ins. = 54 mms.
Number and type of magnetos	Two, Bosch, Z.L.6.
Firing sequence of engine	1, 5, 3, 6, 2, 4.
Ignition timing (fully advanced)	30 deg. early.
Speed of magnetos	1.5 engine speed.
Inlet valve opens	Top dead centre.
Inlet valve closes	40 deg. late.
Diameter of inlet valve (smallest diam.) = d.	2.677 ins. = 68 mms.
Lift of inlet valve = h	0.453 in. = 11.5 mms.
Area of inlet valve opening (π.d.h.)...	3.81 sq ins. = 24.58 cms.
Mean gas velocity through inlet valve	153.4 ft. per sec.
Clearance of inlet tappet	0.017 in. = 0.432 mms.
Exhaust valve opens	40 deg. early.
Exhaust valve closes	10 deg. late.
Diameter of exhaust valve (smallest diam.) = d.	2.677 ins. = 68 mms.
Lift of exhaust valve = h.....	0.453 in. = 11.5 mms.
Area of exhaust valve opening (π.d.h.)	3.81 sq. ins. = 24.58 cms.
Clearance of exhaust tappet	0.014 in. = 0.355 mms.
Diameter of inlet and exhaust ports	2.165 ins. = 55 mms.
Diameter of water-pump inlet.....	1.692 in. = 43 mms.
Diameter of water-pump outlet	1.575 in. = 40 mms.
Ratio of water-pump speed to crankshaft speed	1.5 :1.
Delivery of water-pump at normal speed	41.4 gallons per min.
Inlet water temperature	64 deg. Cent.
Outlet water temperature.....	74 deg. Cent.
Water-jacket capacity of one cylinder	1280 cu. cms.

ENGINE DATA.

Number and arrangement of cylinders...	Six, vertical, separate.
Bore	140 mms. = 5.51 ins.
Stroke	160 mms. = 6.30 ins.
Stroke/bore ratio	1.142 :1.
Area of one piston...	23.84 sq. ins. = 153.9 sq. cms.
Total piston area of engine	143.04 sq. ins. = 924 sq. cms.
Stroke volume of one cylinder	150.28 cu. ins. = 2463 cu. cms.
Total stroke volume of engine	901.68 cu. ins. = 14778 cu. cms.
Volume of clearance space	41.3 cu. ins. = 676.64 cu. cms.
Compression ratio. Total volume / Clearance volume	4.64 :1.
Normal B.H.P. and speed	174 B.H.P. at 1400 r.p.m.
Piston speed	1470 ft. per min.
Brake mean pressure	109.1 lbs. sq. in.
Cu. ins. of stroke volume per B.H.P.	5.18 cu. ins.

General Analysis of Weights.

Description of Part.	No. per set.	Average unit weight.	Weight of complete set.	Percentage of total weight.
Cylinders (bare)	6	19.25	115.50	17.5
Pistons, complete with rings and gudgeon pins	6	6.85	41.10	6.23
Connecting rods, with gudgeon pin bushes	6	5.00	30.00	4.55
Valves, complete with springs, etc.	12	1.31	15.74	2.39
Crankshaft (bare)	1	70.00	70.00	10.60
Camshaft (bare)	1	7.75	7.75	1.17
Camshaft casing with bearings and covers	1	27.63	27.63	4.18
Valve rockers	12	.87	10.50	1.59
Half compression gear (complete)	1	7.00	7.00	1.06
Vertical driving shaft (complete, including casing, oil pump, drive, and floating bevel	1	17.50	17.50	2.66
Base chamber (top half)	1	72.25	72.25	10.92
Base chamber (bottom half)	1	100.00	100.00	15.16
Carburetters	one dual	16.75	16.75	2.54
Induction pipes (lagged asbestos)	2	5.00	10.00	1.52
Water pump (complete)	1	7.75	7.75	1.17
Oil pump (complete)	1	13.25	13.25	2.00
Air pump (complete)	1	4.75	4.75	.72
Magnetos (complete)	2	14.00	28.00	4.25
Water piping	—	3.25	3.25	.49
Propeller hub (complete)	1	12.50	12.50	1.90
Ignition wiring (complete)	2	2.00	4.00	.61
Exhaust manifold	1	13.00	13.00	1.97
Miscellaneous parts	—	31.78	31.78	4.82
Total weight of complete engine (dry) (with propeller hub and exhaust manifold)	660 lbs.			100.00

Weights.

Weight of engine complete, dry, including propeller hub and exhaust manifold	660.0 lbs.
Weight per B.H.P.	3.79 lbs
Weight of exhaust manifold	13.0 lbs.
Weight of oil carried in engine	19.125 lbs.
Weight of fuel and oil per hour	93.53 lbs.
Gross weight of engine in running order, less fuel, oil and tanks, but including cooling system at 0.65 lbs. per B.H.P.	773.0 lbs.
Weight per B.H.P.	4.44 lbs.
Gross weight of engine in running order, with fuel, oil and tanks for six hours. (Tanks at 10 per cent. weight of fuel and oil)	1390.3 lbs.
Weight per B.H.P.	8.00 lbs.

Test Report.

The following is a summary of a report on tests of the 180-h.p. Mercédès engine carried out at the Royal Aircraft Factory, February 6th, 1918.

The engine was erected on test-bed, and coupled to a Heenan and Froude dynamotor, and power readings taken at various speeds, simultaneous fuel and oil consumption readings being taken. The results of these tests are shown graphically on the curves reproduced on page 2012.

These curves show the following readings:—

R.P.M.	1300	1400	1500
B.H.P.	165	174	180
B.M.E.P.	112	109	105.5
Fuel consumption in pints per B.H.P. hour	.540	.545	.555

Normal engine speed ... ... 1400 r.p.m.
Average B.H.P. 174
Average petrol consumption ... .545 pints per B.H.P. hour.
Average oil consumption ... ... .042 pints per B.H.P. hour.

During a previous test, the engine was run up to 1,700 r.p.m., at which speed 197.5 B.H.P. was recorded, but at this speed the engine was found to be incapable of giving constant power.

The engine was run at 1,400 r.p.m. for the purpose of calibrating the output of the water pump, which delivered into a graduated tank at the rate of 41.4 gallons per minute.

Owing to the fact that during the above test it was found to be impossible to tune up the engine, the power developed does not probably represent its best performance, as from other data and tests of the engine a normal B.H.P. of 179.5 at 1,400 r.p.m. and a maximum B.H.P. of 188 at 1,500 r.p.m. has been recorded.

An interesting streamline radiator is fitted in the centre section of the top plane, details of which are being issued in a separate report on the Albatros biplane.

F. G. C.
27/2/18.

THE 240 H.P. (8 CYLINDER) MERCEDES.

Bore 140 m.m. Stroke 160 m.m.

The following detailed report on the design of the 8-cylinder Mercédès engine is based on an investigation of the engine (No. 23,003) taken from the German two-seater Albatros Biplane (G.37) which was brought down by anti-aircraft guns near Armentieres on the 12th of May, 1917.

This engine has been tested at the Royal Aircraft Factory and results of B.H.P. developed, petrol and oil consumption, etc., during tests are given herewith, together with details of the engine design and the leading particulars of the engine. Although this engine, according to reports, is now obsolete, the design having been abandoned in favour of the German standard six-cylinder vertical type, details and illustrations of the engine will no doubt prove of considerable interest, more particularly to those interested in the design of the special engines used for airship work.

In its general details this engine follows closely the design of the 160 H.P. Mercédès engines as regards the construction of the cylinders, pistons, valve gear, etc., and also in the lubrication system. It is therefore very similar to the 160 H.P. engine, with an extra pair of standard cylinders and a massive propeller shaft reduction gear, and the necessary alterations to the design of the crankshaft and the induction system, and in consequence of this similarity in detail to the 160 H.P. Mercedes, it will be unnecessary to deal at any length in this report with the design of those parts of the engine which are identical, a report on the former having already been issued, and the design being now well known in this country.

During calibration tests at the Royal Aircraft Factory, the engine showed a very good general performance, developing a maximum of 286 B.H.P. at 1,750 r.p.m. and an average of 242 B.H.P. at a normal crankshaft speed of 1,350 r.p.m.

Summary of Test.

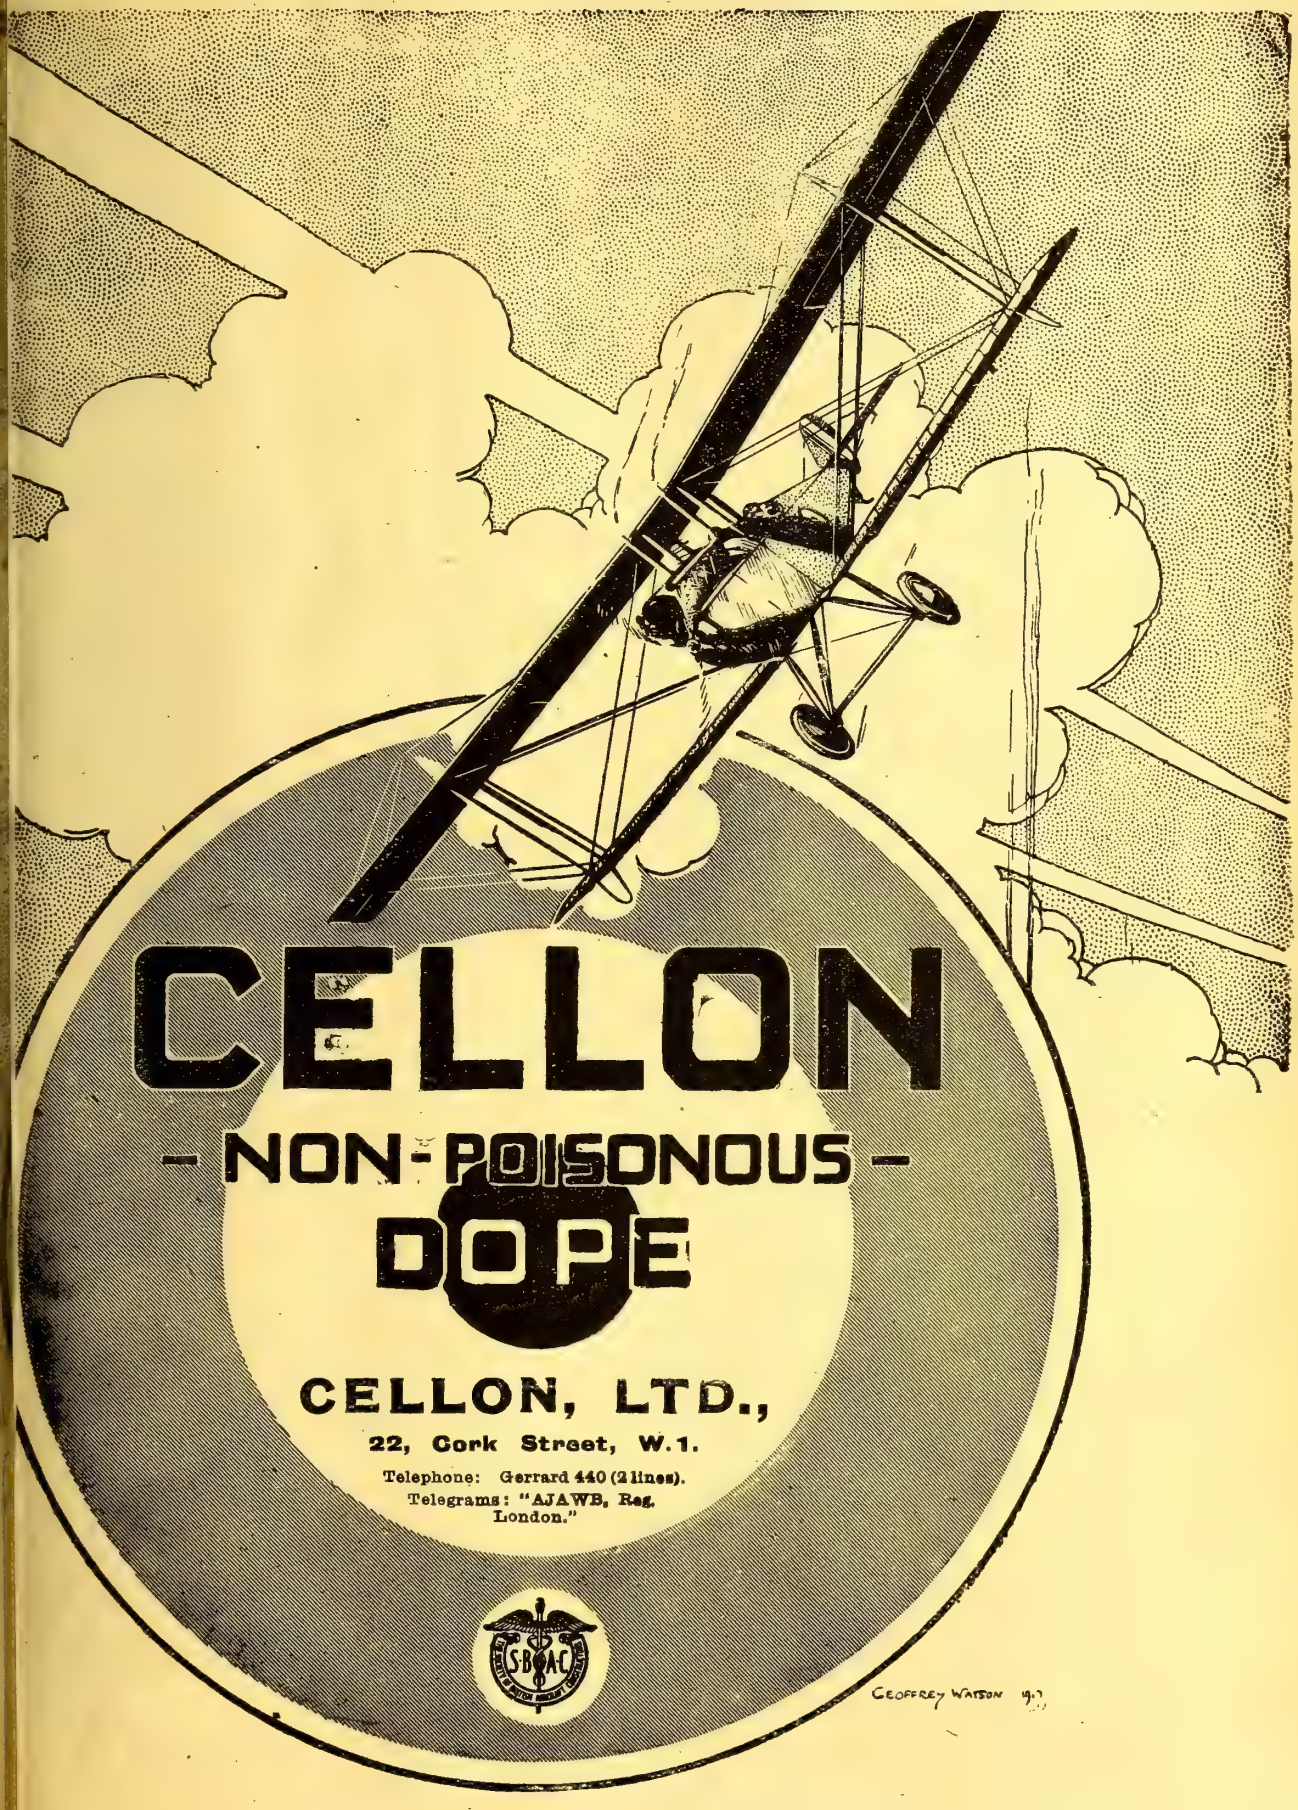
Average petrol consumption per hour	141.3 pints.
Average petrol consumption per B.H.P. hour	.582 pints.
Average oil consumption	.042 pints/B.H.P. hour.
Oil temperature	37½°C.
Max. B.M.E.P. at 1,100 r.p.m.	120 lbs./sq. in.
Average B.M.E.P. at 1,350 r.p.m.	118 lbs./sq. in.
Compression ratio	4.73 :1.

Water pump delivery at normal engine revs. against a pressure of 2 lbs. per sq .in. = 91 galls./min.

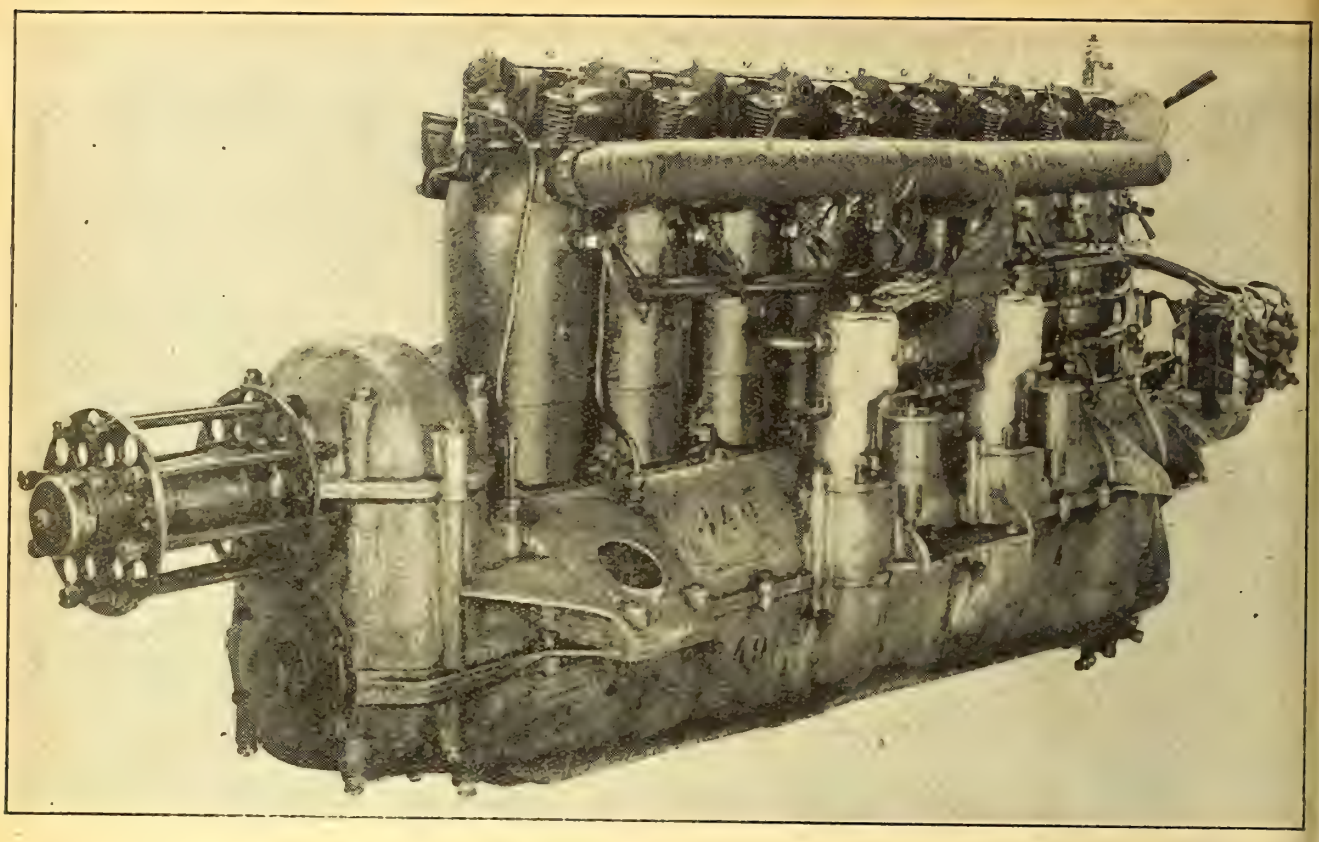
The total weight of complete engine, dry including propeller hub and exhaust manifold = 900 lbs., equivalent to 3.72 lbs per B.H.P.

An attempt was made to throttle the engine below 900 r.p.m. but the running was irregular.

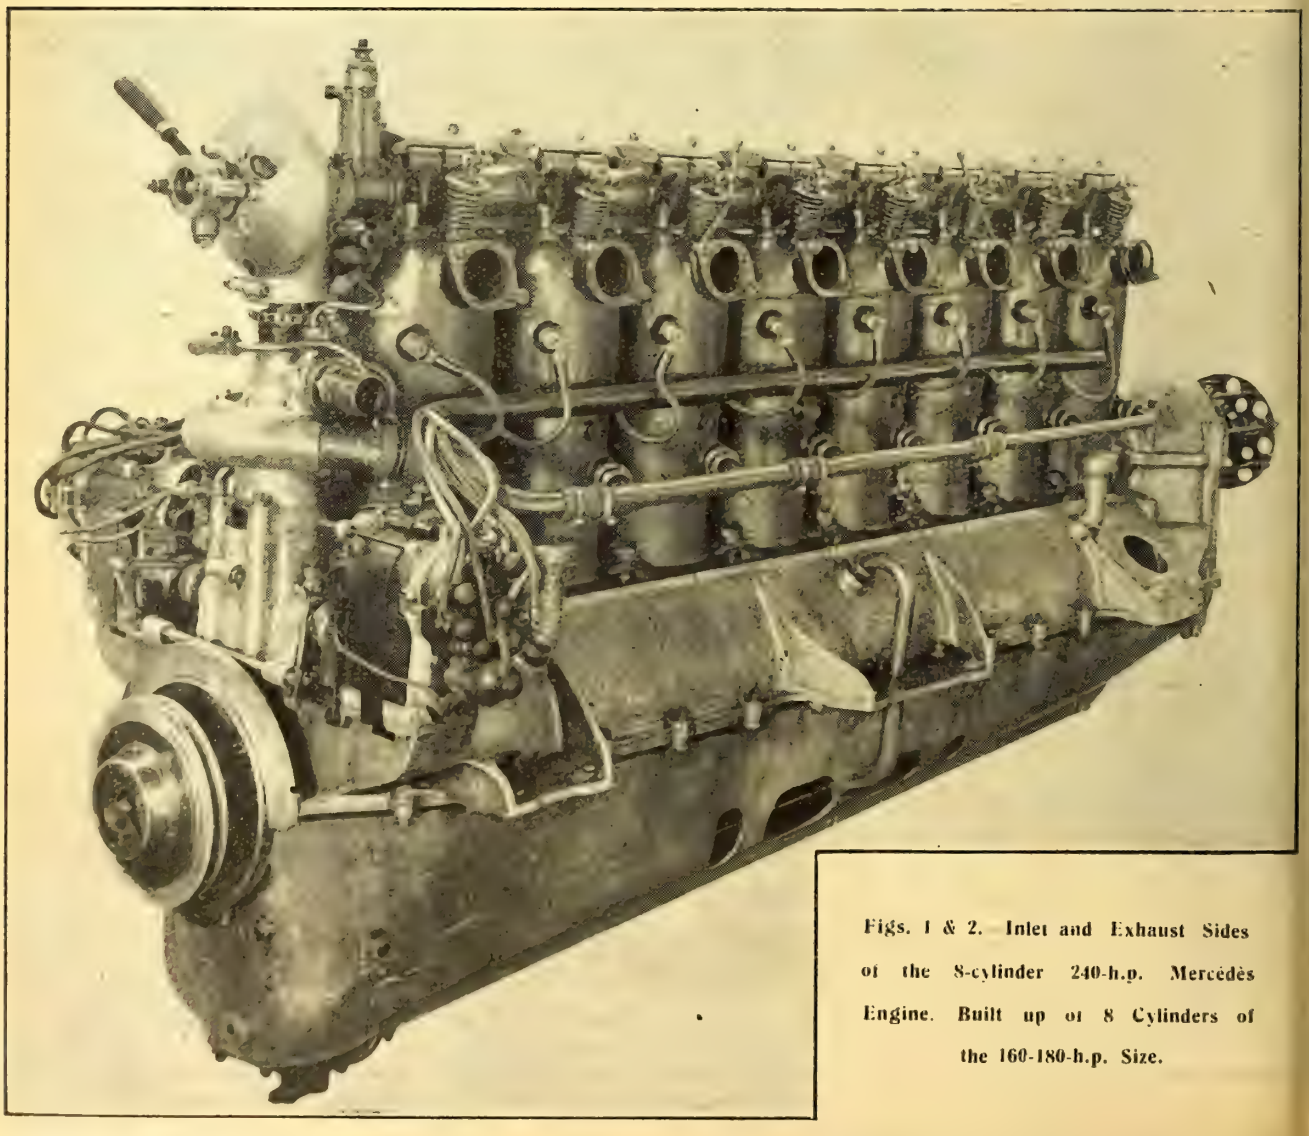
During a power and consumption run of 1 hour's duration an average of 267 B.H.P. was developed, at an average speed of 1,550 r.p.m., and at an average petrol consumption of 155 pints per hour = .582 pints per B.H.P. hour.



Oil consumption = 10.10 pints per hour = .042 pints per B.H.P hour.



Water temperature, inlet = 65°C; outlet = 78°C.



This test should not, however, be taken as representing the normal performance of the engine, as the average speed at which it was run, namely 1,550 r.p.m., is higher than that which would be obtained for any length of time in the air.

Details of Construction.

Cylinders.—These, as already stated, are of the standard 160 H.P. type, and are made entirely of steel, being built up of

BELLING ELECTRIC GLUE POTS

for Aeroplane and other work

List No. 38.
Price 32/-
(Spare Elements 3/6 each)

Strongly made in cast iron, the Glue container being tinned.
CAPACITY: 2 pints of glue.
LOADING: 900 watts.
3 elements, 3 heats, 3 loose connectors for attaching the cable to.
WEIGHT: 14 lbs.
For use off a power circuit.

List No. 39.
Price 35/-
(Spare Elements 3/6 each)

As above, but with a loading of only 600 watts so that it can be used off an ordinary lamp socket.
Complete with connectors, 2 yards flex, and lamp holder adaptor.

List No. 40.
Price 47/6
(Spare Elements 3/6 each)

Similar to List No. 38, but fitted with a 3 heat switch on a separate panel, which is connected to the Glue Pot by 4 feet of metallic flexible tubing.
For use off a power circuit and recommended for Factory work.

All prices are subject to 25% advance.
Carriage extra on orders under £3 net value.

MANUFACTURING ELECTRICAL ENGINEERS
EDMONTON, LONDON, N.18.

¶ IF we could reconstruct as easily as we can talk of reconstruction we could afford to wait until the War **is** *over—*

But reconstruction means an infinite amount of thought and labour, therefore, we strenuously endeavour never to lose sight of the future in dealing with present evolutions in our factory.

During the War we have learned much, and the soundest way to recompense for the necessary dislocation of ordinary business is to build on our experience and bring it to bear on all our future programme.

And you can help us—we want you to—by the simple process of collaboration.

Remember our Machinery efficiency will be infinitely greater—better organised than before.

And, incidentally, better able to execute your requirements.

LET US TALK IT OVER.

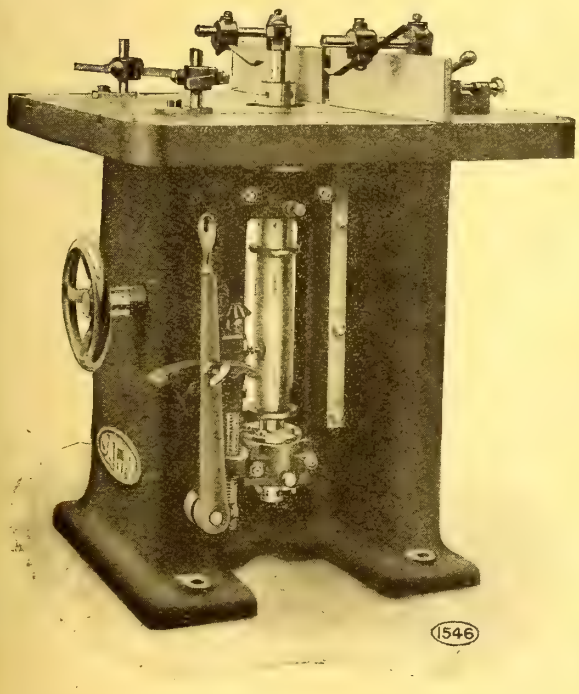
SIR JOSEPH JONAS, COLVER & Co., LTD.

Manufacturers of Steel of every description, including

HIGH GRADE NICKEL STEEL & FORGINGS

for Naval and General Marine Purposes.

Special Heat Treated Alloy and other Steels for Aircraft and Automobile Purposes



IMPORTANT SPECIALITIES:

S.S.G. **A SPECIAL NICKEL CHROME GEAR STEEL.**
FOR AIR OR OIL HARDENING. When treated this steel has exceedingly tough properties and is specially suitable for Gear Wheels, Connecting Rods, etc.

S.G.W. **A NICKEL CHROME STEEL IN FOUR GRADES.**
Eminently suitable and strongly recommended for Gears, Crankshafts, and other highly stressed parts, and having exceptional machining qualities. Combines unusually heavy shock-resisting and wearing properties with silent running.

G.P.S. **A HIGH GRADE ALLOY CASE HARDENING STEEL**
for severely strained parts, such as Gear Wheels, Gudgeon Pins etc.

SHEFFIELD.

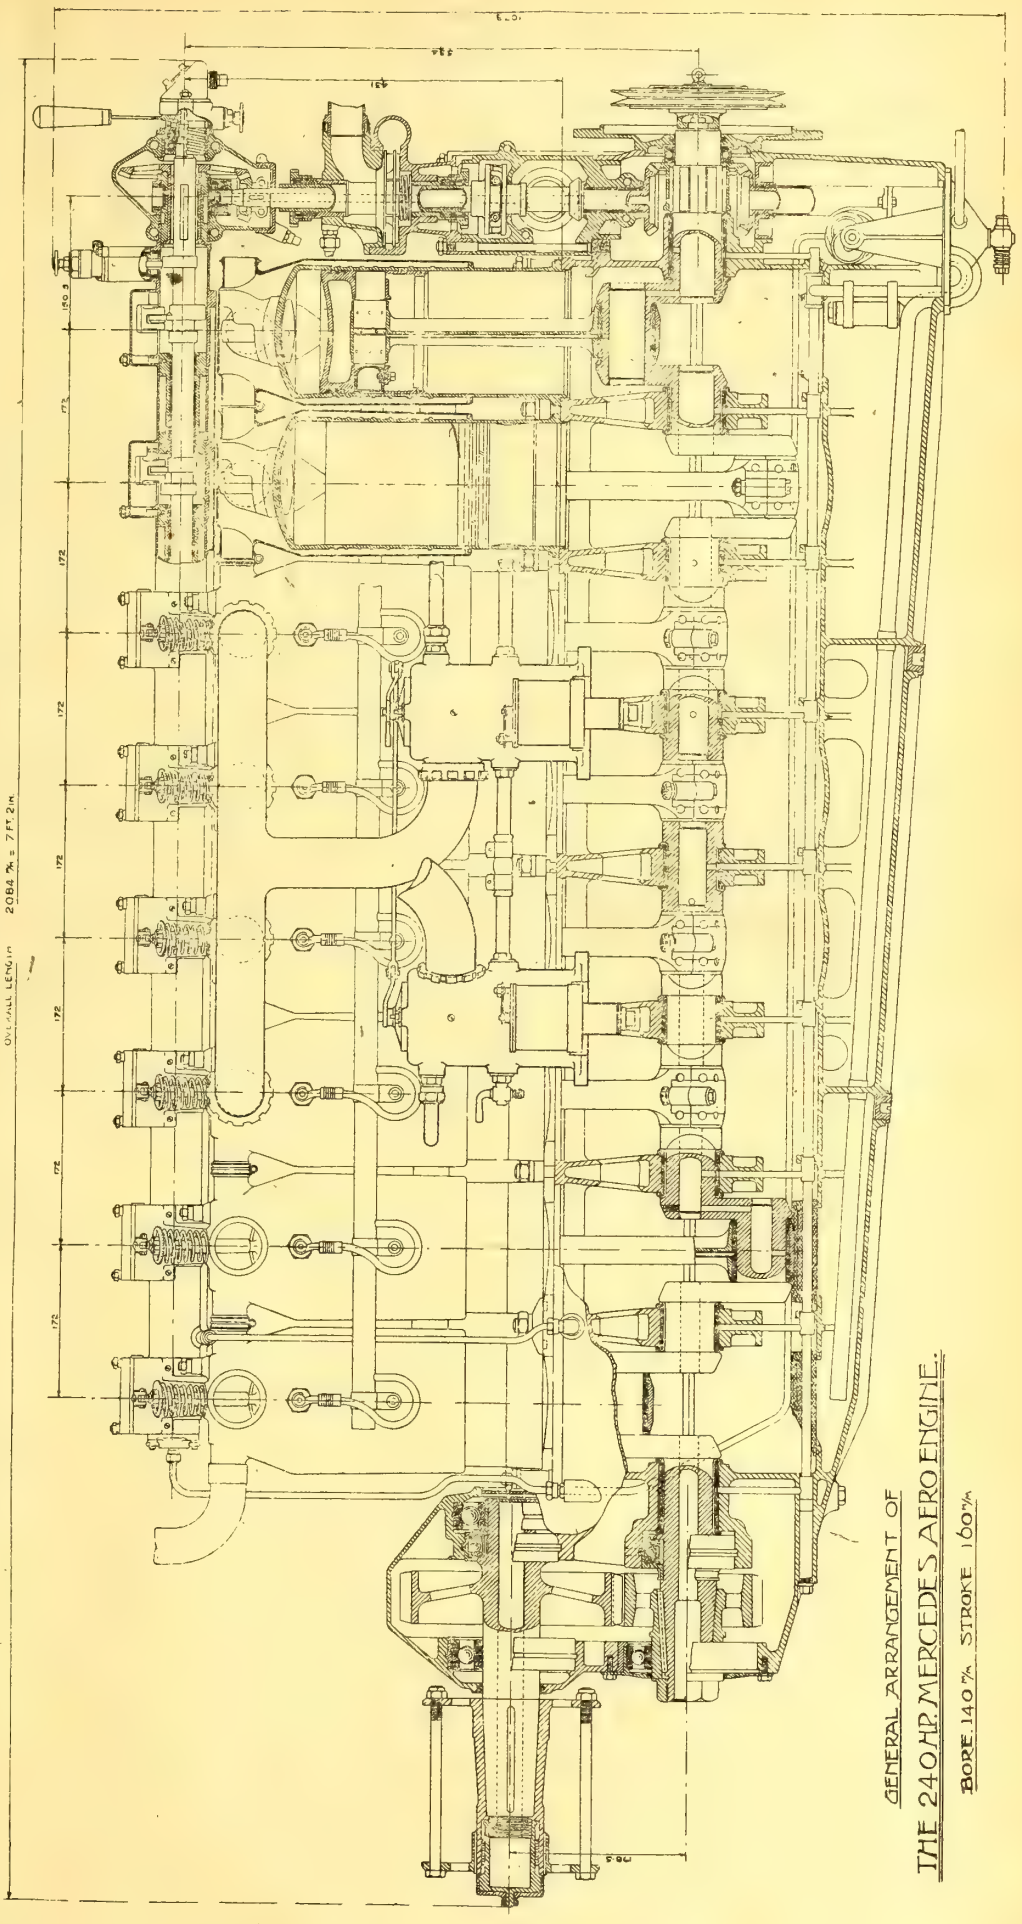
machined steel forgings with the valve pockets screwed and welded into the cylinder-head. The water jackets are of sheet steel, 1.5 mm. gauge, all joints being acetylene-welded in position.

The single inlet and exhaust valves are operated by the usual Mercedes type overhead camshaft and valve gear, which is fitted with the well-known half compression gear at the rear end of the camshaft casing. This design of half compression gear is used on all types of Mercedes engines, including the 260 H.P., and the latest 180 H.P. Mercedes engines. [As already seen.—Ed.]

NOTE.—The sectional view of the connecting rod is shown at right angles to its correct position in the cylinder. (Fig. 4.)

Pistons.—Standard 160 H.P. pistons are used with concave steel crowns, screwed and welded into the cast iron skirts, which are fitted with three rings above the gudgeon pin, and one at the bottom of the skirt.

Connecting Rods.—The H. section connecting rods and floating small-end bushes are similar to those used on the 160 H.P. engines except that the big-end bearings are 3.5 mm. shorter in the 8 cylinder engines. This reduction in the length of the big-end bearings has been effected by turning off the outer faces of the connecting rod big-end brasses, evidently with the idea of reducing as much as possible the overall length of the engine.



CRANKSHAFT.

The exceptional length of crankshaft and the disposition of the cranks is shown in Fig. 8. The crankshaft runs in 9 plain white metal bearings, and is fitted with a thrust ball-race at the front, at which end the driving pinion is supported by a large ball-bearing, mounted on an extension of the driving pinion.

The firing sequence occurs alternately through the first and last sets of four cylinders, i.e., 1, 3, 2, 4, 8, 6, 7, 5. It will be noticed that numbers 1 and 2 cranks are at 180° to each other, as are the cranks Nos. 7 and 8, whilst cranks 3 and 4, 5 and 6, are also set at 180° to each other respectively, but are at 90° to the front and rear pair of cranks.

The external diameter of all the journal bearings is 55.9 mm. The length of the front bearing, next to the reduction gear, is 90 mm.; all the other journal bearings are 56 mm. long, with the exception of the rear bearing, which is 80 mm. long.

The bottom halves of the main bearing housings are cast integrally with the bottom half of the base-chamber, and, as usual, are secured by long bolts passing through

GENERAL ARRANGEMENT OF THE 240 H.P. MERCEDES AERO ENGINE.
BORE 140 m/m STROKE 160 m/m

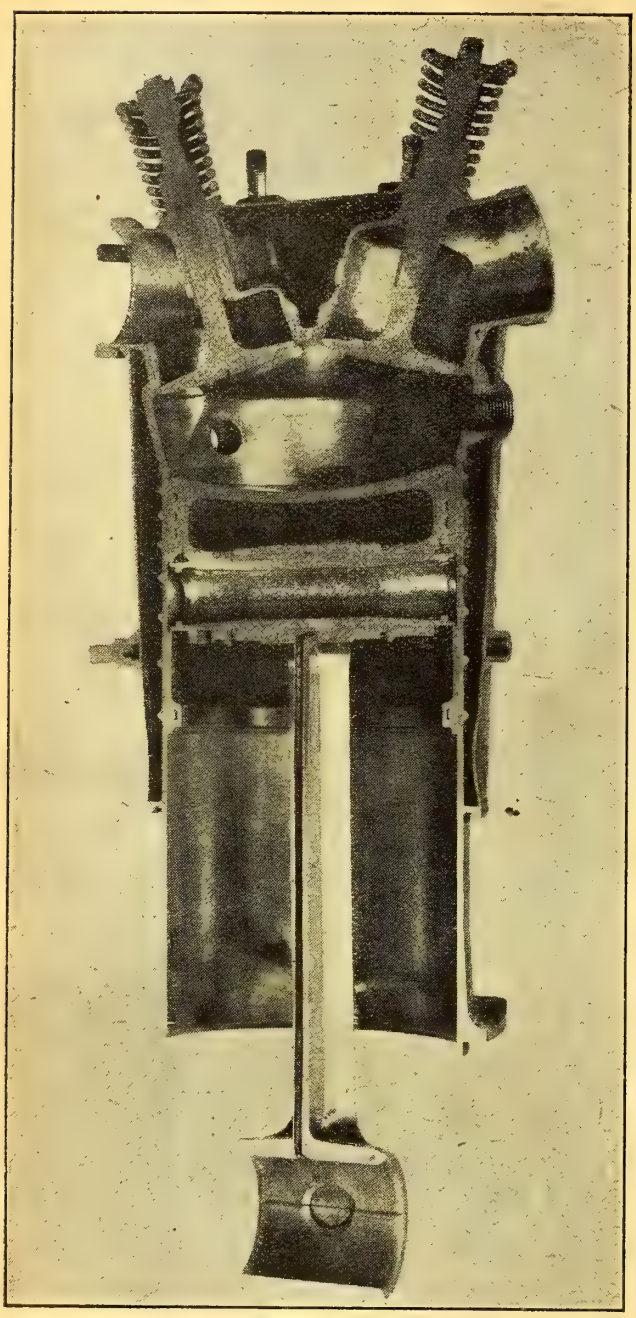


Fig. 4.—Sectional View of Cylinder, Piston, Gudgeon Pin, Connecting Rod, and Valves, showing Water Jacket Spaces and Method of Cooling Exhaust Valve Stem.

the top half of the crankchamber, and acting as the holding down bolts for the cylinders.

Following the usual Mercedes practice the crank webs are made slightly heavier in cross section towards the front end of the crankshaft. The external diameter of the crank pins is 55.9 mm., and the length of the crank pins 70 mm.

The decreasing internal diameters of the hollow crank pins and journals follows the standard Mercedes practice, the holes bored in the rear end crank pins and journals being 40 mm., whereas the internal diameters of the crank pins and journals are gradually reduced throughout the length of the crankshaft to 22 mm. at the front end.

The thrust ball race at the front end of the crankshaft is situated directly behind the reduction gear pinion, and is held in position in the two halves of the crankchamber housing, the thrust race being located by a double flanged ring, and also by a split bush and gunmetal collar on the crankshaft.

Full details of the crankshaft design are given in Fig. 8.

Reduction Gear.

In view of the fact that this engine is apparently the first attempt to introduce an indirect airscrew drive on any enemy aero engine in service, the construction of the reduction gear, as fitted to the 8-cylinder Mercedes engine, is of considerable

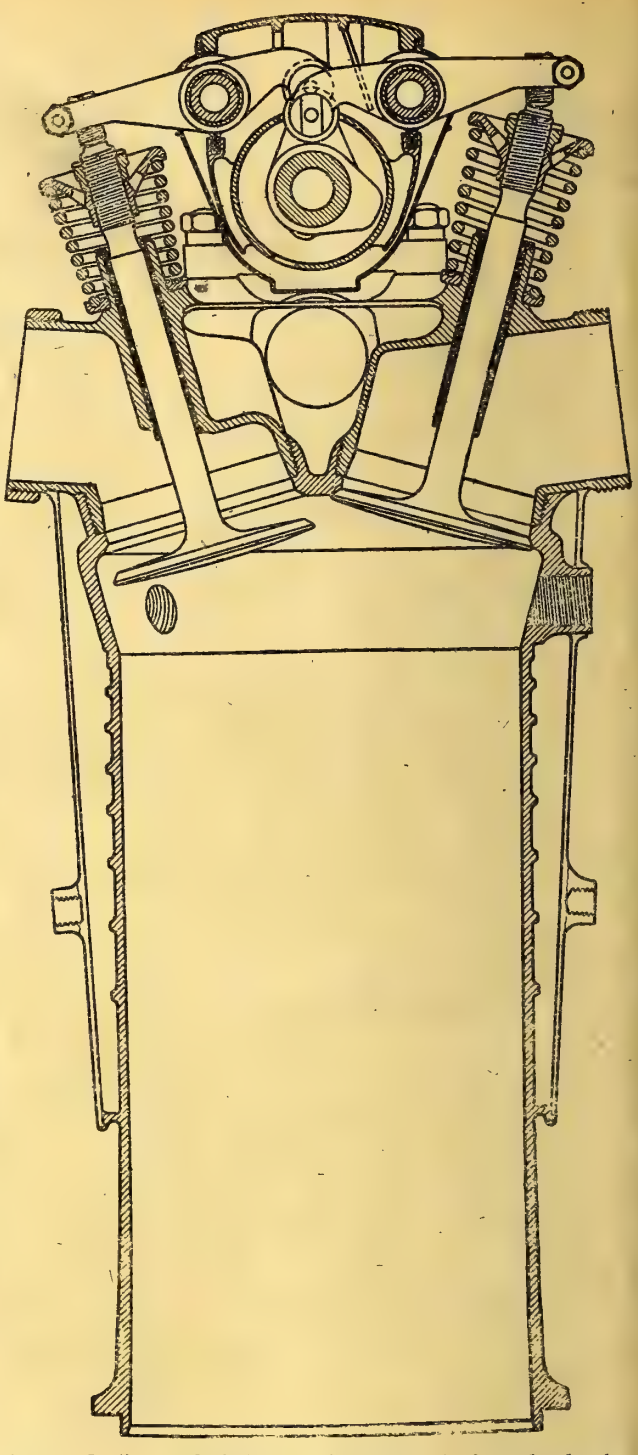

Fig. 5.—Section of Cylinder and Arrangement of overhead valve gear and cam-shaft casing.

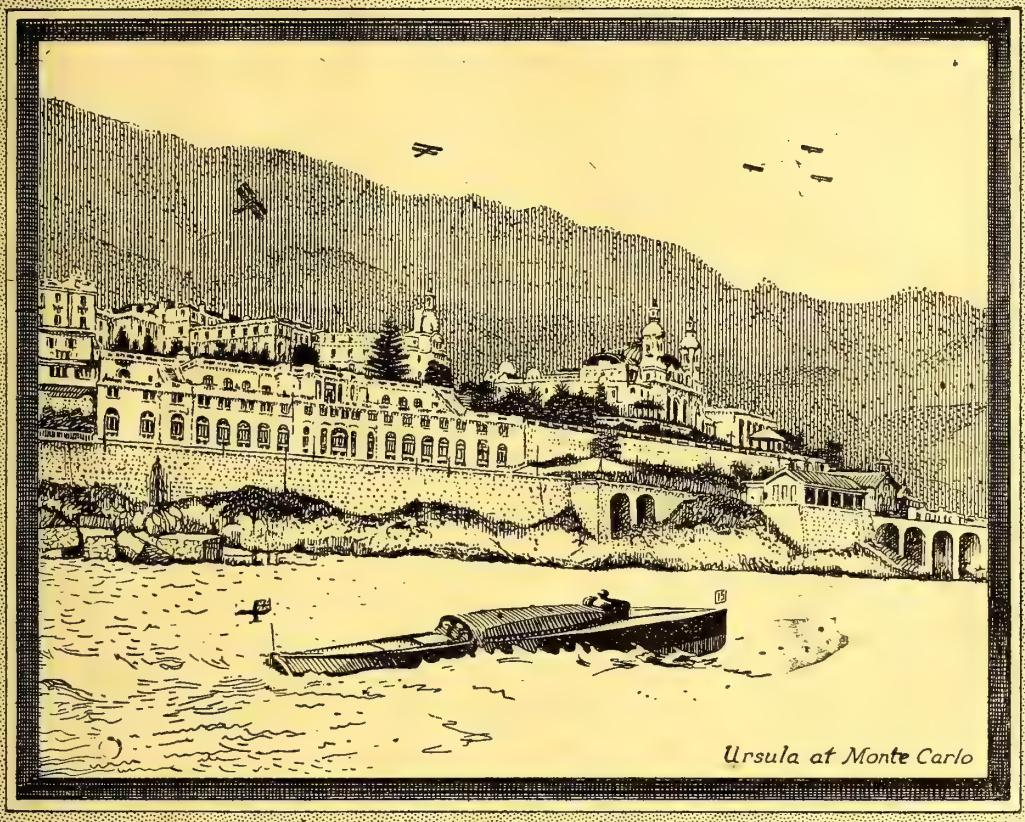

interest. The general lay-out is shown in Fig 3, and most of the details of construction in Fig. 9.

The smaller, or driving, pinion of the reduction gear is keyed to the tapered extension of the crankshaft, the key being fitted parallel to the taper on the crankshaft. The driving gear is held in position on the shaft by a large locking nut, fixed by a grub screw.

As already stated, the front end of the driving pinion is supported on a large ball race, 148 mm. dia., carried on an extension of the boss in front of the pinion.

The larger, or driven, pinion is integral with the airscrew shaft, and is machined from a solid forging, the gear wheel having holes drilled through the dished webs of the wheel to save weight. The number of teeth on the driving pinion is 26, and on the driven pinion 40, giving a speed ratio of 1.54 :1. The diameter of the crankshaft pinion is 168 mm., and that of the airscrew shaft pinion is 250 mm.

The airscrew shaft is mounted on two large ball bearings, and is provided with a thrust ball-race, which is located by a double flanged ring, registering with a groove cut in the bearing

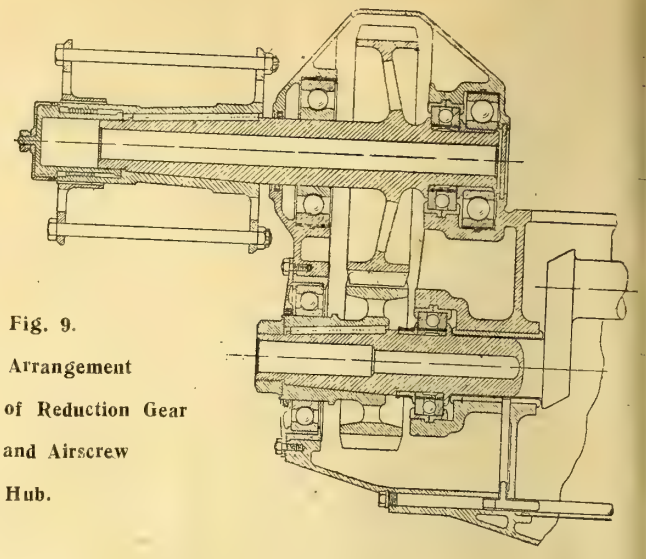

Fig. 9. Arrangement of Reduction Gear and Airscrew Hub.

housing. The diameter of the front ball-bearing of the propeller shaft is 136 mm., and of the rear ball-race 128 mm.

The method of mounting the rear ball-bearing, and also the two thrust-races, of the reduction gear shafts is unusual. The thrust ball-race behind the crankshaft pinion is mounted on the shaft on the two halves of a steel split bush, over which a gunmetal collar fits tightly. The two rings of the thrust race fit on the outside of the gunmetal collar. The thrust race is then located by a second split bush of steel, the halves of which are also held together by a collar, the split bush being in turn located by a shoulder machined on the crankshaft. The rear ball-bearing on the airscrew shaft, with its thrust race, is mounted in a similar manner, as shown in Fig. 9.

The reduction gear bearings are enclosed in gunmetal locating bushes fitting into recesses machined in the aluminium casing, which forms an extension of the crankchamber, and the two halves of the casing are held in position by six long bolts, passing through the two halves of the airscrew shaft bearing housings.

The airscrew hub is mounted on the tapered extension of the airscrew shaft extension, and is secured as shown by a key, and also by the usual Mercédès airscrew hub locking nut, which carries a flanged locking plate on a stud in front of the nut. This flanged plate, or cup, is provided with notches, cut on the inside of the flange, registering with the flats of the hub locking nut, and also with the serrations cut on the outer surface of the airscrew hub, onto which the front flange of the hub fits.

A conical metal cap was fitted in front of the airscrew hub.

Carburetters and Induction System.

Two standard 2 jet 160 H.P. Mercedes carburetters are fitted as shown in the photograph of the engine (Fig. 1). The two throttles are, of course, interconnected.

The left hand carburetter feeds cylinders 1, 2, 7, and 8, whilst the right hand carburetter feeds the four central cylinders. The induction pipes are of copper, lagged with asbestos cord and bound with adhesive tape. The internal diameter of the induction pipe is 54 mm., and the smallest diameter of the choke is 24 mm.

The air intake to the carburetters is through the large passages cast in the top half of the crankchamber, which lead to the central portion below the false bottom of the base chamber between the front and rear oil sumps, as in the 160 H.P. engines. Details of the water piping to the water jackets of the carburetters are shown in the photograph (Fig. 10).

G. H. MANSFIELD, MANAGING DIRECTOR.

SBAC THE SOCIETY OF BRITISH AIRCRAFT CONSTRUCTORS

KINDLY MENTION "THE AEROPLANE" WHEN CORRESPONDING WITH ADVERTISERS.

According to a report on the aeroplane from which this engine was taken, the main petrol tank (forming the pilot's seat), had a capacity of 50 gallons, and the machine carried an auxiliary tank of 6½ gallons capacity, situated between the pilot's and observer's seats.

[The carburetter is of the same type as in the 180-h.p., but the pilot jet is .5 mm. diameter and the main jet 2 mm. diam.—Ed.]

Crank-Chamber.

Apart from the additional length and the extension of the crankcase casting for the reduction gear, the crankcase, in its general construction, follows the design of the 160 H.P. Mercedes, the bottom half being constructed with a false bottom, below which are the two oil sumps, one at the front and one at the rear end of the base chamber, as shown in the sectional arrangement of the engine (Fig. 3).

Three breathers are provided in the top half of the crank-chamber on the exhaust side. The central breather is connected by a large diameter pipe to the air chamber, between the two oil sumps in the bottom half. This air chamber (as shown on Fig. 2) is open on the exhaust side, and communicates with the air intake passages to the two carburetters

Vertical Driving Gear.

The method of driving the camshaft vertical driving spindle

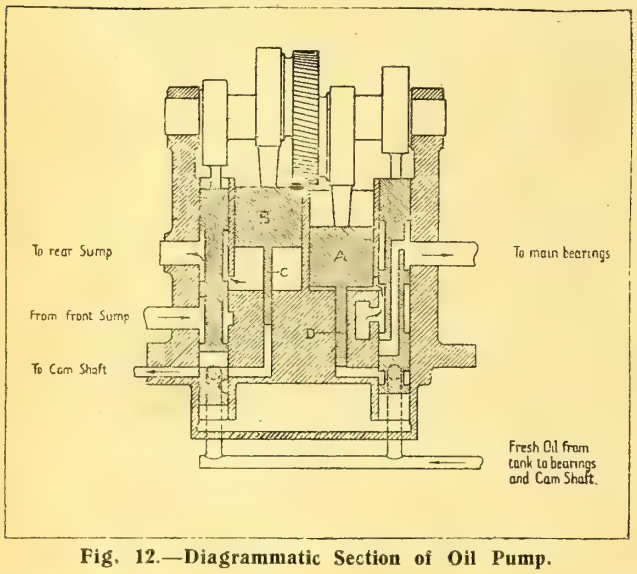

Fig. 12.—Diagrammatic Section of Oil Pump.

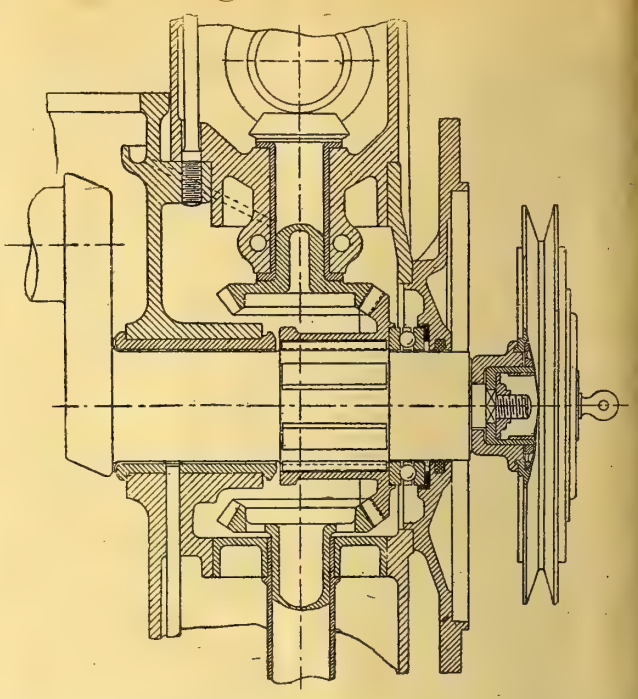

Fig. 11.—Arrangement of Floating Bevel Gear and Wireless Clutch Pulley on Rear End of Crank-Shaft.

(which also drives the magnetos and water-pump, by means of the floating bevel pinion fitted on the rear end of the crank-shaft) follows standard Mercedes practice. The details of the construction of the floating pinion with its thrust race, permitting slight longitudinal movement of the crankshaft without disturbing the mesh of the driving bevels, is well known. The general arrangement of the complete driving gear, including the vertical spindle driving the oil pump worm gear, is clearly shown in the sectional arrangement of the engine (Fig. 3), and also in the detail sketch of the floating pinion (Fig. 11).

Lubrication.

A diagrammatic sectional view of the standard 160 H.P. Mercedes oil pump, used on the 8-cylinder type, showing the various leads, and demonstrating the functions of this somewhat complicated pump is given in Fig. 12.

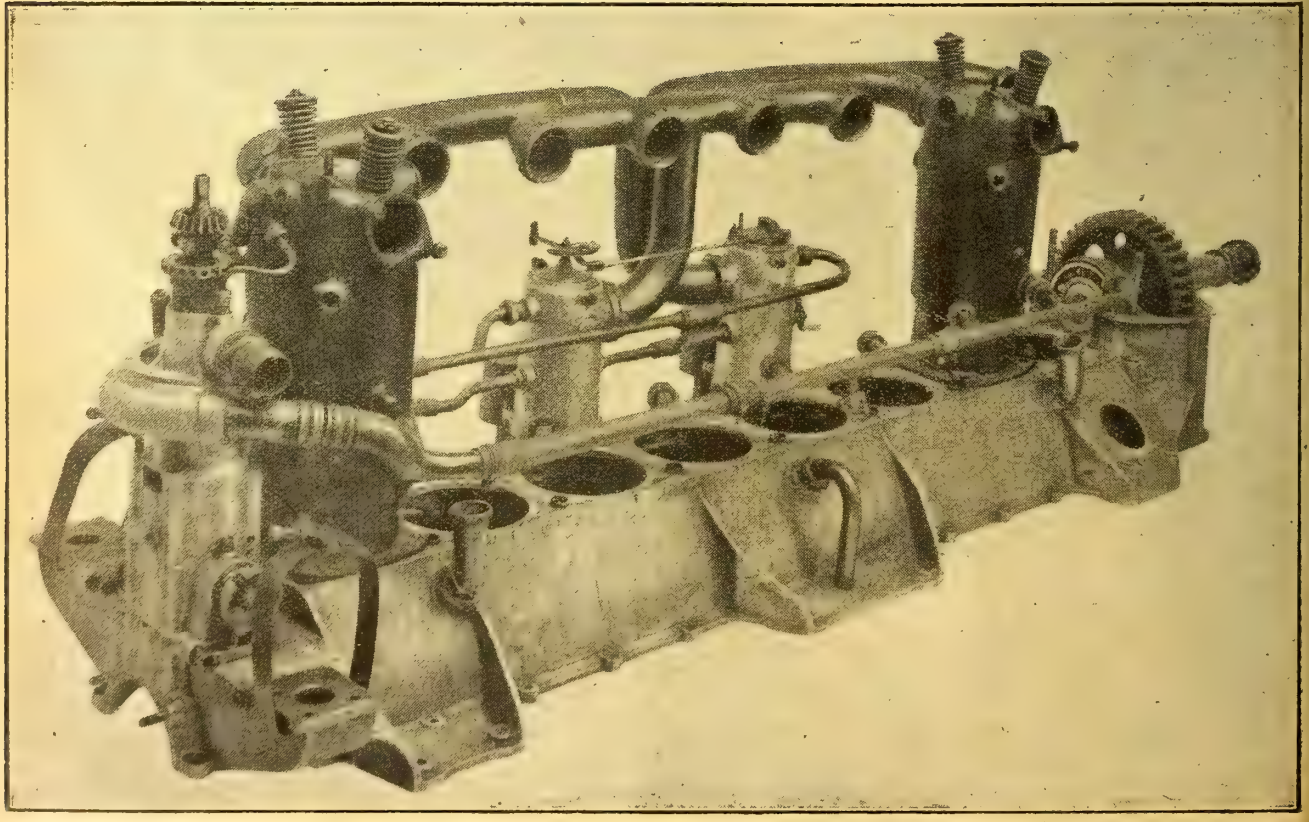

Fig. 10.—Cylinder Section of Crank-Chamber, showing Carburetters and Inlet Pipes and Arrangement of Water-Piping, etc.

KINDLY MENTION "THE AEROPLANE" WHEN CORRESPONDING WITH ADVERTISERS.

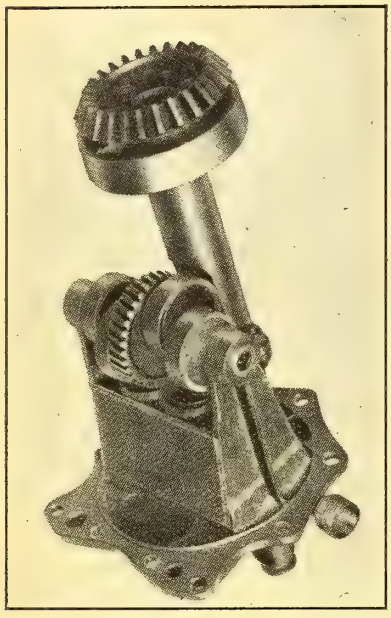

Fig. 13.—View of Complete Oil Pump.

The oil-pump is attached by studs through a flange to a face machined at the end of the bottom half of the base-chamber, and is easily detachable. It is actuated through worm-gearing by a vertical shaft, driven off the rear end of the crankshaft. In its functions this oil-pump is somewhat similar to the pump used on the 260-h.p. Mercédès, already described in detail in a previous report. Briefly described, the 160-h.p. type of oil-pump embodies three main functions, i.e.,

(*a*) Delivery of oil under pressure from the rear sump, formed in the bottom of the base-chamber to the crankshaft, and connecting-rod bearings by main plunger A.

(*b*) Delivery of a charge of fresh oil at every stroke of the two auxiliary plungers (C and D) from the oil service tank to the main-bearings, camshaft bearings, and valve gear through the hollow camshaft.

(*c*) Suction from front sump in base chamber to rear sump by the plunger B.

Surplus oil returns to the front and rear sumps in the crank-chamber through perforated steel plates from the overhead camshaft casing through a long trough of sheet brass attached to the underside of the camshaft casing, and through copper pipes leading from the front and rear ends of the trough to the crank-chamber. The reduction gears are lubricated by oil retained in a trough, formed in the lower portion of the reduction gear casing.

Water Circulation.

The water pump driven from the camshaft vertical

Edgar Allen & Co. Ltd
Sheffield.

driving-shaft differs slightly from 160-h.p. Mercédès pump, chiefly in the drive. In the 160 H.P. pump the rotor is fixed directly to the vertical camshaft driving spindle by six serrations. In the 8-cylinder Mercedes pump the spindle of the pump rotor is hollow and is driven from the lower part of the vertical driving-shaft by means of a dog clutch. There is a clearance of 2 mm. between the internal diameter of this hollow spindle and the vertical shaft. The rotor floats upon this hollow spindle, and is attached by means of six serrations, which allows a slight vertical movement between the spindle and the rotor. The latter is kept in close contact with the lower face of the upper bearing of the pump spindle by a coil spring.

The diameter of both the inlet and outlet passages of the water pump is 35 mm.

The water jacket capacity of one cylinder is 1,280 c.cs.

In the aeroplane from which this engine was taken a small radiator was fitted in the centre of the top plane, having its intake pipe leading from the front cylinder of the engine and its outlet leading through the right hand strut of the cabane. Further details of the construction of the water pump are illustrated in the sectional arrangement of the pump (Fig. 14).

Water Pump Test Report.

The water pump was detached from the engine and tested separately, coupled to an electric motor. Separate delivery curves were taken against varying pressure. The results of these tests are given in the diagram, Fig. 26.

At a pressure of 2 lbs. per sq. in. it was found that 1,000 r.p.m. was the lowest speed at which delivery occurred, and similarly at 4 lbs. per sq. in. and 6 lbs. per sq. in. the lowest delivery speeds were 1,400 r.p.m. and 1,700 r.p.m. respectively. As the ratio of the pump speed to crankshaft speed is 1.5—1, these figures correspond to engine speeds of 667, 934, and 1,133 r.p.m. respectively.

At the normal engine speed of 1,350 r.p.m. the pump is delivering approximately 91 gallons per minute, this figure being estimated from the curves.

On dismantling the water pump it was found that the hollow driving spindle of the rotor was binding on the vertical driving shaft, in spite of the clearance allowed, and also the pump rotor was binding tightly with rust and mud upon its serrations on the hollow spindle, so that no floating action of the rotor or movement of the spring were possible.

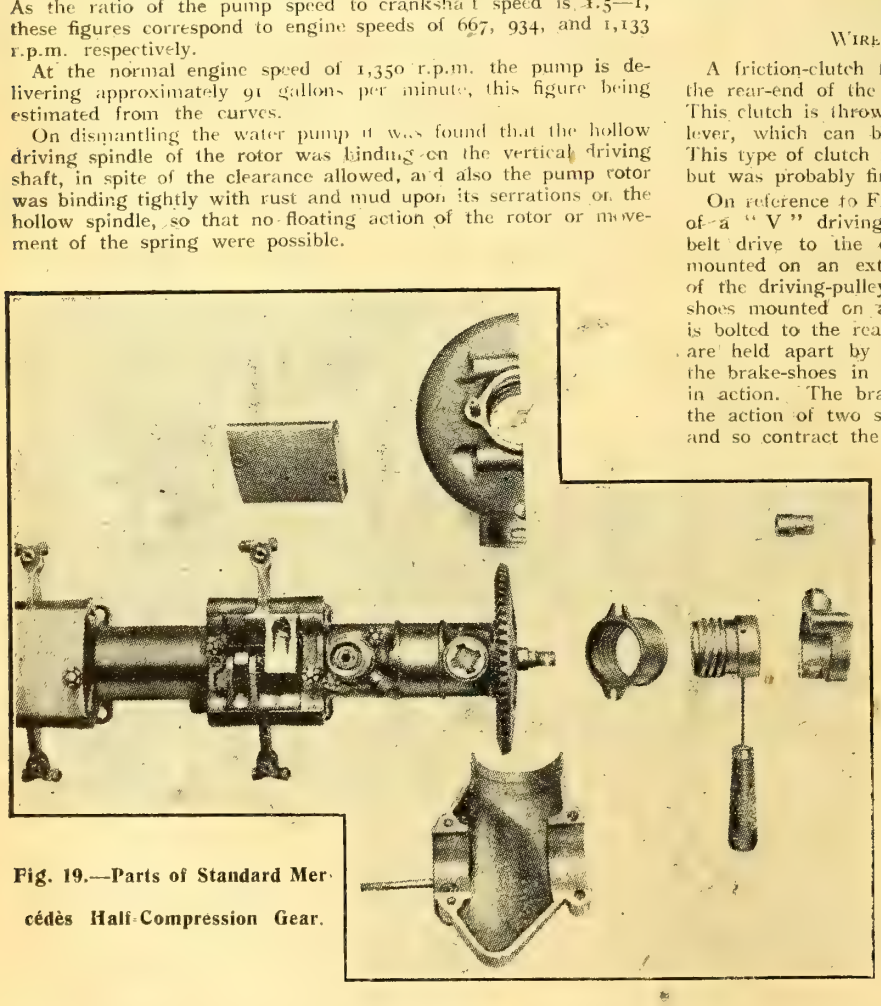

Fig. 19.—Parts of Standard Mercédès Half-Compression Gear.

Ignition.

Two H.L.8 type Bosch magnetos are fitted transversely on brackets at the rear end of the engine, and are driven as in the 160 H.P. engines, through dog clutches, directly off the camshaft vertical driving-shaft through bevel gears below the water pump, as shown in Fig. 2. The magnetos run at engine speed, and the unusual firing sequence, as already mentioned, is as follows:—1, 3, 2, 4, 8, 6, 7, 5.

The ignition timing is 30° early fully advanced

Two Bosch 3 point plugs are fitted, one on either side of each cylinder, opposite and below each valve.

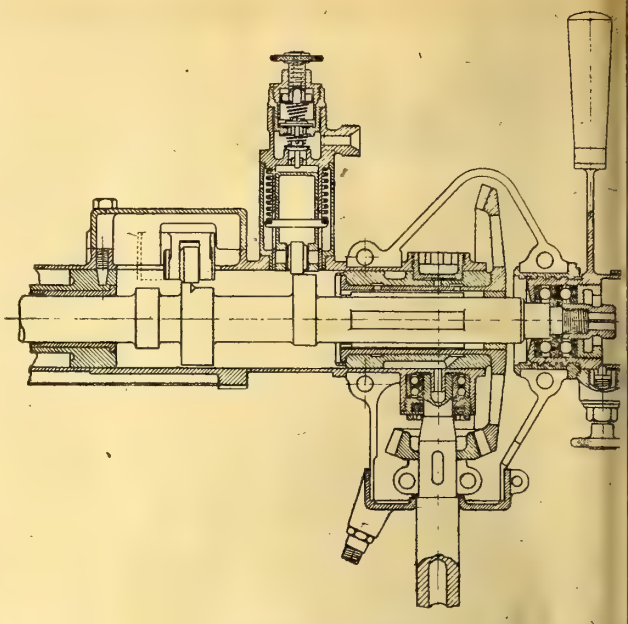

Fig. 18.—Arrangements of half-compression gear camshaft dri and details of air-pump.

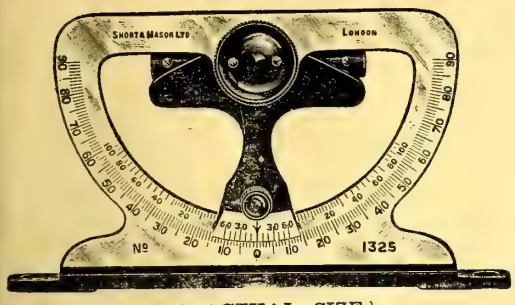
Wireless Dynamo Clutch-Pulley.

A friction-clutch for driving the wireless dynamo is fitted the rear-end of the crankshaft, details being shown in Fig. 2 This clutch is thrown in and out of engagement by a cable a lever, which can be operated either by the pilot or observe This type of clutch is now fitted on most of the enemy machine but was probably first used on the 8-cylinder Mercedes engines

On reference to Fig. 16, it will be seen that the clutch consis of a "V" driving pulley made of aluminium for taking t belt drive to the dynamo, running upon a double ball rac mounted on an extension of the crankshaft. Inside the ri of the driving-pulley is arranged a pair of semi-circular bral shoes mounted on a plate forming part of the extension whi is bolted to the rear end of the crankshaft. These brake-sho are held apart by two strong coil springs that serve to ho the brake-shoes in close contact with the driving-pulley whil in action. The brake-shoes are thrown out of engagement the action of two small levers which compress the coil spring and so contract the brake-shoes. The brake levers are operat by two striking wedges that are pushed or out of engagement by the action of t operating rod controlled by a cable a spring from the pilot's seat. To lock t brake-shoes in the "in" or "out" po tions, steel balls are used between t ends of the striking levers and wedg fitted with locking grooves as shown the sectional drawing.

The brake-shoes are constructed of st forgings lined with bronze on their out faces, which bear directly on the insi of the cast aluminium driving-pulley ri



Air Pump.

The air pump of the spring load plunger type is fitted towards the re end of the camshaft casing between t half compression gear and Number cylinder valve-rockers. The pump operated by a cam formed on the end the camshaft. Further details of the pump are shown in the arrangement of half compression gear (Fig. 18).

Type P.L.R.

Type P.M. 6.

All-British
Magnetos
for
Aircraft.

THE strong features of M-L All-British Magnetos which have made the aero types so successful are lightness, efficiency and effective sparking at very low speeds.

M-L Magnetos are smaller, lighter and stronger, and are more efficient than any pre-war magnetos of equal electrical output. All parts are interchangeable, "spares" can be quickly supplied.

The M-L Magneto Synd., Ltd., have been making magnetos for Aero Engines since 1914.

The illustrations show some of the M-L All-British Magnetos for Aircraft. Types A. D. S. and P. L. R. are designed for Rotary Engines. Types P. L. 6 and P. L. 7 are for 6 and 7 cylinder Radial Engines. Types P. L. 6 and P. M. 6 are for Vertical and V Type Engines.

SOME USEFUL CONVERSION TABLES.

The Hoffmann Manufacturing Co., Ltd., has issued a sheet extremely useful tables as an aid to converting British standar of weights to French standards and vice versa. The ratios a carried out to several places of decimals, and therefore the tabl should be of considerable value to those who have to transla accurately dimensions from one standard to another.

Readers of The Aeroplane to whom these tables would be use are invited to apply to the Hoffmann Manufacturing Co Ltd., Chelmsford, for a copy free of charge.

The D.V. Type Albatros Chaser from which the 180-h.p. Mercédès engine illustrated in this article was taken.

Where Flying Men are fitted out.

ONE SERVICE

Uniformity of custom and kit; on land, on sea and in the air one organisation only—unity of control centring on one ideal—efficiency. That is the ideal aimed at by the R.A.F. It also summarises the policy of Dunhills; as the R.A.F. have co-ordinated all the efforts and abilities of its two parent services for the better 'strafing' of the Hun so is every idea, every thought and every effort concentrated by the House of Dunhill on the problem of eliminating weather.

The land crab knows nothing of weather inconvenience—it is left to men of the R.A.F., who fight it in its own headquarters, to feel the full fury of its All Highest displeasure.

But Dunhills know and have provided for the worst to the last little detail; and it is just this expert "understanding" knowledge that made them so indispensable to men of the old Air Forces.

The new Force still has the old traditions, the old enemies and now they are one service they still have Dunhills for equipment—the one service that will never fail them.

Call in, if you can, at our well-known "base" in Conduit Street—a few paces from Regent Street—and inspect the full kit. Or, if London is "out of bounds," drop a line for patterns and full details which will be sent gladly on request.

MARKET TOPICS.

(Prices are for quantities on usual terms.)

COPPER.—The output of the mines is most satisfactory and is exceeding anything which was expected last January, when the official price was fixed. The majority of producers are making a very good profit. In fact, it is stated that a few are making a profit of 8 cents per lb., and although one or two are agitating for an increase to come into effect on June 1st, there does not appear to be much prospect of their efforts meeting with success.

At one time it was feared that owing to the consumption of Copper increasing so rapidly a shortage was inevitable. This position, however, appears to have considerably improved.

Both buyers and sellers in U.S.A. are holding back until the Government announce their decision on the price question; it is understood that this has been held in abeyance. There is now a strong feeling that the agitation for an advance in price is really being engineered with the object of counteracting any possibility of a reduction in price, and is not intended to secure an advance on the present official price; in any case the majority of producers are under the impression that the present price will remain unaltered.

The price of brazed brass tubes has been reduced 1d. per lb.

TIN.—This market is in a very perplexing condition, prices in the East soaring to an unprecedented height, America having paid more than £500 per ton in order to secure supplies.

The situation has certainly been a little easier during the last few days, due primarily to large shipments having recently been received here; the outlook is, however, very obscure, and it is impossible to foresee what will happen. The authorities are apparently determined to put an end to speculation, and one understands that they are endeavouring to bring the Eastern market down to a reasonable figure.

An order has also been issued by the Ministry dated April 26th, 1918, and the chief points which affect consumers are as follows:—

1. No Tin may be used, except under licence, for the purpose of any manufacture or work except for the purpose of a contract or order for the time being in existence certified to be within Class A in the order of the Minister of Munitions as to priority dated March 8th, 1917.

The following monthly returns to be sent to The Director of Tin Supplies, 1, Metal Exchange Buildings, Whittington Avenue, E.C.3, in the first seven days of each month, commencing May, 1918.

2. All Tin held by them in stock or otherwise under their control on the last day of the preceding month.

3. All Tin purchased or sold and not yet delivered on such last day. The following particulars to be given:—

A. Names of sellers or purchasers.
B. Quantity.
C. Quality.
D. Time and place of delivery.
E. The position of the Tin at date of return.

4. All Tin delivered to them during previous month, and from whom purchased.

5. All contracts or orders existing on the last day of, or entered into during, the preceding month requiring for their execution the use of Tin, specifying the purposes thereof and the quality of the Tin to be used.

No return is required if the purchases or stocks do not exceed 5 cwt.

Comparative Prices.

To-day	£375	0	0
A week ago	£380	0	0
February 14th	£323	0	0
Highest price, 1917	£309	0	0

LEAD.—There are still ample supplies to be obtained for munition purposes, and prices remain unaltered.

STEEL.—Works extensions are still being made and the mills are working at top pressure, especially on shell, shipbuilding and aircraft steels. Good supplies of the latter are now obtainable, and there is no fear of a shortage.

Official prices remain unaltered. It is still difficult to obtain deliveries of H.S. Steel, and although it is a little easier to obtain Cast Steel it is most difficult to obtain certain sizes which are necessary for aeroplane work.

TIMBER.—One understands that the shortage of Timber is being very seriously tackled by the authorities. The situation is regarded with great anxiety by constructors.

It is no use labouring past blunders now. What is wanted immediately is an ample supply of Silver Spruce substitute in quantities sufficient to enable factories to give the country all the machines required during the next six months.

It is understood that a very large quantity of Plywood was used in the construction of a recently captured German aeroplane, and seeing that the Plywood output is gradually increasing, the more extensive use of this material in lieu of Spruce on certain parts of machines is certainly worth serious consideration.

Supplies of Mahogany are fairly easy to obtain. The Plywood situation appears to be improving; in fact, one would be tempted to become very optimistic were it not rumoured that the Government are contemplating controlling production and supplies.

Prices remain unchanged.

FABRIC.—Supplies are very satisfactory. The official prices are as follows:—

36in. wide .....3/1 per lineal yard.
38in. wide .....3/3 per lineal yard.
42in. wide .....3/7 per lineal yard.

A CAUDRON HOLIDAY.

Saturday, the 18th May, was the date for the opening of the British Caudron Co.'s New Sports Grounds at Preston Road, near Harrow. The weather, which is almost as famous as the British Government for doing the wrong thing, turned up trump for once and favoured the function with a perfect day.

Col. Alderman Pinkham, J.P., M.B.E., M.C.C., Chairman of the Willesden District Council, performed the opening ceremony, supported by Mr. R. H. Simpkin, Director and Manager of the London Company. Sir William Ramsay was unable to be present, but wrote to say that he was deeply interested in the project and regretted very much that he could not attend. Mr. A. W. Ramsay, General Manager of the Company, was also unable to be present, being out of town on urgent business.

The afternoon's proceedings were a great success and spoke well for the organising ability of Mr. Ferrier, Chairman of the Sports Committee, and Mr. W. Newman, Secretary of the Sports Committee.

A feature of the afternoon was the double cricket match between the Integral Propeller Company and the British Caudron Company, the two first elevens and the two second elevens, each match being won by the British Caudron Company by 95 to 45—the similar scores being a remarkable coincidence.

The sports were followed by a concert in the evening, which was held in the concert marquee on the grounds, and the programme proved to be excellent, and reflected great credit on Mr. Ross-Oliver, who organised this part of the day's proceedings.

A very pleasant day came to an end about 9.30, when a vote of thanks was proposed to Mr. Simpkin, who, as the only representative of the higher command to have taken an active part in the proceedings, had put in a lot of real hard work in his modest and quiet way, and contributed in no small way to the success of the whole affair.

A number of wounded soldiers were the guests of the Caudron Company during the afternoon, some of whom had to be brought from Harrow, and their transportation would have presented some difficulty but for the assistance of Mr. Arundel, of the Regent Carriage Company, who very kindly lent a large lorry specially fitted up with seats for the occasion.

ELECTRICAL INSTALLATIONS.

Johnson and Phillips, Ltd., of Charlton, London, S.E.7, the well-known electrical engineers and cable makers, have issued an interesting catalogue of special safety truck type switchboards, the use of which practically eliminates any danger of accident and in which accessibility has been studied throughout.

Aircraft constructors who are putting up new plant will be well advised to send for a copy of the catalogue, as it contains many things which are quite new in electrical installations.

INTEGRAL CHANGES.

It is difficult to dissociate Mr. and Mrs. Latimer-Voight from the Integral Propeller Company, Ltd., which they founded in August, 1912, and which went through the same struggles in the early days as so many other pioneer firms. The Integral Company's order book of those days affords amusing reading now when contracts are placed for hundreds of airscrews at a time; in 1912 there was great excitement when an order came for a single propeller (with even chances against it ever being paid for). Mr. and Mrs. Voight can remember their joy when an order came for five propellers from a reputable firm.

Having built up the present huge business (which readers will recollect was visited by the King and Queen last December) Mr. and Mrs. Voight have now retired from the company, which has been acquired by the Aircraft Manufacturing Company, Ltd., M. Chauvière having severed his connection with the firm.

Mr. and Mrs. Latimer-Voight.

Mr. and Mrs. Voight have established the Pegasus Aircraft Company, Ltd., with offices at Totterdown Street, Tooting, S.W.17, whence they will continue the design and manufacture of airscrews.

Mr. Lancelot Saunders, the able works manager of the Integral Company (a brother of Mrs. Latimer-Voight), who joined the firm in 1915 after having fought against the Germans in the successful campaign in S.W. Africa, also retires from the Integral Company.

Various interesting ceremonies took place in connection with the departure of Mr. and Mrs. Voight and Mr. Saunders. The office staff presented Mr. and Mrs. Voight with a handsome pair of old English cut-glass vases, with gold mounts, and a magnificent bouquet for Mrs. Voight. Subsequently the men and women in the works presented Mr. Voight with a beautiful pair of gold sleeve links and Mr. Saunders with a meerschaum pipe. Appropriate speeches were made in each case, and many of those present were deeply affected, for there are few more popular employers in the industry than Mr. and Mrs. Voight and Mr. Saunders.

The "old guard"—those who worked for the firm before the war—were most moved to see their old "bosses" go.

In the afternoon Mr. Voight, who has always been an enthusiastic cricketer, and in his day a good player, captained the Integral Cricket XI. (the committee having generously requested Mr. Voight to lead the men on that occasion) in the league match v. Becks C.C. It was an exciting game, the visitors winning by 16 runs. After the match Mr. and Mrs. Voight entertained the team and committee, as well as the office staff, several of the charge hands, and others to tea on the ground, after which the whole party proceeded to the Kilburn Empire, where Mr. Voight had booked seats. Afterwards there was an all-round leave-taking, Mr. and Mrs. Latimer-Voight being given a hearty send-off. Thus ended a happy but sad day.

AERIAL TRANSPORT IN THE WEST INDIES.

A company has been registered in the British West Indies which one sincerely trusts is only the first of a series of syndicates whose work in life will be to develop commercial aeronautics in the Colonies.

The head offices of this new company, which is registered as the West Indian Aerial Transport Syndicate, Ltd., are at 65, Marine Square, Port of Spain, Trinidad, B.W.I. The company, which is actually in process of formation, will have a capital of 70,000 dollars in 10 dollar shares.

It is intended to start a weekly seaplane service between Trinidad and St. Kitts, calling at all the islands en route, viz., Grenada, St. Vincent, Barbados (depôt), St. Lucia, Martinique, Dominica (depôt), Guadeloupe, Montserrat, and Antigua. Later on it is hoped to establish a seaplane service twice weekly between Georgetown, British Guiana, and Oyster Bay (Florida), calling at a number of islands in the West Indies.

The promoters wish to employ seaplanes able to carry a useful load of five tons at a speed of 100 miles per hour, and it is hoped that it may be possible to get official sanction for the machines to be constructed in and exported from England, a hope which one is afraid will not be realised during the war.

The managing director of the concern, Mr. R. E. Davis, is a nephew of Sir Marcus Samuel, Bart., chairman of the Shell Trading and Transport Co., Ltd., and of Samuel Samuel, Esq., M.P. for Wandsworth, so the new effort will be controlled by one who has considerable and definite connections with England. The further proceedings of the company will be watched with interest.

A BRAVE WATNEY LAD.

From the "Daily Chronicle" of May 28th:—

A modest boy who kept as a secret from his workmates the fact that he saved the lives of two wounded soldiers has just been rewarded, as a result of an anonymous letter. The soldiers were in a canoe which capsized at Weybridge, throwing them both into deep water. Neither could swim. Kenneth Puttock, aged 16, saw the accident and dived after the men. He held up one soldier till a punt containing three women arrived and then brought to the surface the other man, who had gone under for the third time. Both soldiers have since recovered.

It was not till several days afterwards that Puttock's fellow workers heard of the affair through an anonymous letter. Major Gordon Watney and his co-directors then publicly presented their young apprentice with a silver watch in recognition of his bravery.

Puttock, who was formerly a Boy Scout, holds the junior championship of Weybridge Rifle Club, and has also won the Lord Roberts' Medal and other prizes.

WOMEN'S WORK.

Two hundred specimens of parts of engines for aircraft, on which women are doing work of high precision, are among the objects shown at the exhibition, organised by the Ministry of Munitions, which was opened on May 22nd at the Whitechapel Art Gallery.

The exhibition gives a comprehensive idea of the work of women on munitions of war. At the opening of hostilities engineering pessimists were certain that women would not be successful in:—

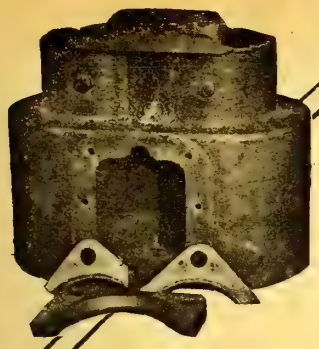
Non-repetition work; setting tools; gauge making.

Photographs at the exhibition show women doing this and other work, and the display of shining nuts, bars, bolts and cylinders, aeroplane fittings and optical exhibits, proves the success of their labours.

Mr. F. G. Kellaway, Parliamentary Secretary to the Ministry of Munitions, who opened the exhibition, said that he asked one of the officials of the Ministry if it would be true to say that all offensive and defensive measures against the raid on London the other day were carried out by women, except the actual fighting of the machines. The official replied that it would be literally true to say that in every part of the material side at the disposal of our aviators that night the women of this country had made their contribution.

[And why not give them credit for the personnel also?—Ed.]

HELPING THE DISABLED.



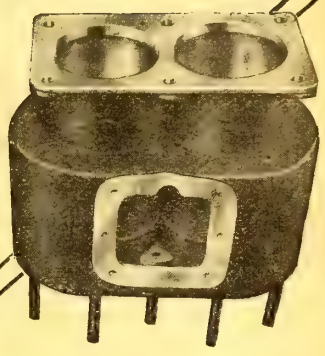
It is good to learn that some who share in the world war which keeps them comfortably, if busily, employed in England are not unmindful of the sufferings of those who have participated in more dangerous if more glorious work on active service. That such consideration exists is proved by a movement which has risen in the works of William Cole and Sons, Ltd., to establish on a National basis a fund with local committees all over the country to administer help to disabled soldiers and sailors who require assistance.

It will readily be appreciated that the official pension which is awarded to a man who is unable to earn his living is inadequate, especially if constant medical attention is necessary.

It is suggested that such a fund should be collected locally in each borough or district, which would be responsible for assisting cases in its own district. In this way it is felt that cases of distress would be more easily and adequately met than if they had to be investigated by a central organisation in a distant part of the country.

It is proposed that all work done in connection with the fund shall be voluntary, in order to assure that every penny subscribed shall go to soldiers and sailors or their dependents. The desire of the promoters is to encourage workers all over the country to subscribe 3d. a week per head. Wm. Cole and Sons, Ltd., have set the ball rolling with a donation of 100 guineas, and their employees *en masse* have agreed to subscribe 3d. a week each.

The management and staffs of aircraft firms who would like to assist the movement are invited to apply to Mr. Allen Cole, at the firm's offices at 235, Hammersmith Road, W.6. He will be pleased to give further particulars concerning the fund.



"The best job I have ever had done."

This is what the man to whom these agricultural tractor engine cylinders belonged said, when he came to collect his repair. This is what everyone either thinks or says about the job he sends to:—

THE NEW WELDING Co.

Ask any Engineer

in your neighbourhood where he sends his welding repairs, and send yours to where ninety-nine out of every hundred send theirs—THE NEW WELDING CO. The Engineer has proved for himself that there is no repair service in the country where he can obtain a better job, at a more reasonable price, or in quicker time.

Gen. Hoppner: "The British have discovered the secret which we have been seeking for months."
Vide "Daily Mail," see above.

A BRITISH FIRM BEATS THE GERMANS

THE SECRET

THE HANDLEY-PAGE...
After the two royalties had descended from the machine it was loaded with dummy bombs in preparation for a flight. The now famous German flying officer Richthofen took the seat which the Kaiser had vacated, and two other officers also boarded the plane. With a terrific roar the two engines were started, and like a bird the aeroplane rose in the air. It climbed rapidly to about 10,000ft., and the Kaiser turned to General Höppner, saying:
"How is it that, at such a height and on so cold a morning, the lubricants do not freeze?"
"The British have discovered the secret which we have been seeking for months," replied the general. "Our great difficulty is now surmounted. It ...

(*Continued from page* 1966.)

A good deal of fighting again took place around our bombing machines. Sixteen German aeroplanes were brought down, and two others were driven down out of control. Two of the enemy's observation balloons were also destroyed.

Three of our aeroplanes are missing.

During the night both our own and the enemy's bombing aeroplanes were active. Over 12 tons of bombs were dropped by us on aerodromes used by the enemy's night-flying machines and on billets at Bray and Bapaume.

All our machines returned. Two German machines were brought down by gunfire behind our lines.

A further two tons of bombs were dropped by our aeroplanes on the chlorine factory at Mannheim, on the Rhine, causing three large fires, and another two tons on the railway stations at Thionville and Karthaus (just south of Trèves), in Germany.

One of our machines failed to return.

At dawn on the 22nd inst. two formations set out on a long-distance raid to bomb the important military triangle at Liége. All machines reached the objective and dropped 22 heavy bombs. Those dropped by the first formation caused three very large fires, which were still burning fiercely three-quarters of an hour later, when the second formation flew over Liége.

Other machines dropped 12 heavy bombs on the railway stations at Metz.

All machines returned.

May 23rd, 10.12 p.m.—On the 22nd inst. artillery work, photography, and bombing were continued by our aeroplanes. Aerodromes used by the enemy's night-flying machines were again attacked, and over 18 tons of bombs were dropped on these targets and on hostile billets.

In air fighting 13 German machines were brought down and two others were driven down out of control. One hostile machine was shot down in our lines by machine-gun fire from the ground.

Three of our aeroplanes are missing.

After dark 11 tons of bombs were dropped by us on hostile aerodromes, the docks at Bruges, and on billets in the Somme area. Several direct hits were obtained on a train, causing it to burst into flames.

In addition, our machines again attacked Mannheim in Germany, and dropped 24 heavy bombs on the chlorine factory, causing two large fires.

The blackened girders of the buildings gutted by the fires started by us in the factory by the bombs dropped on the preceding night were clearly visible in the moonlight.

At the same time, four tons of bombs were dropped on the very important electrical power station at Kreusewald (just east of Saarbrücken). A boiler house was hit by one bomb, and another bomb caused a large cloud of steam to arise from one of the buildings.

All our machines returned.

At about 11 a.m. on the 23rd inst. the Metz-Sablon railway station was heavily bombed by our machines. Bombs were seen to burst on the engine sheds and the railway.

Hostile anti-aircraft gunfire was considerable, but all our machines returned safely.

May 24th.—9.37 p.m.—The long spell of fine weather came to an end about 11 a.m. on the 23rd inst. Before this hour several reconnaissances were carried out by our aeroplanes, and eight tons of bombs were dropped on aerodromes in the neighbourhood of Tournai, used by the enemy's night-flying machines, and on hostile billets.

Three German machines were brought down in air fighting and two others were driven down out of control.

Three of our aeroplanes are missing.

During the night, in spite of a very high wind, our machines dropped over seven tons of bombs on billets in the neighbourhood of Péronne, Fricourt, and Bapaume, and on hutments and woods in the Somme area.

All our machines returned.

On the 24th inst. nearly a ton of bombs was dropped on the railways and factories at Hagendingen, 12 miles north of Metz. When over their objective, our machines were attacked by hostile scouts, and the enemy's anti-aircraft gunfire was considerable.

All our aeroplanes, however, returned safely.

May 26th, 8.50 p.m.—On the 25th inst. flying was only possible during a few fine intervals. Advantage was taken of these periods to drop over 300 bombs on billets in the neighbourhood of Armentières and Merville, on an ammunition dump at Varssenaere (south-west of Bruges), and on Bruges Docks.

In air fighting, eight hostile machines were brought down, and two were driven down out of control. Another German machine was shot down by machine-gun fire from the ground.

None of our aeroplanes is missing.

During the short period of the night in which bombing was possible, over six tons of bombs were dropped by us on Péronne, Bapaume, and Maricourt (north-west of Péronne).

All our aeroplanes returned.

May 27th, 9.45 p.m.—On the 26th inst. little flying was possible till the evening owing to low clouds and a dense mist. Four tons of bombs were dropped by us on targets in the neighbourhood of Armentières and Fricourt. Six hostile machines were brought down in air fighting.

None of our aeroplanes is missing.

On the 27th inst. Bensdorf railway station was bombed by our aeroplanes. Twenty heavy bombs were dropped, and bursts were seen on the railway sidings. Our bombing machines were heavily attacked by hostile scouts over their objectives, and one of our machines was seen to go down under control.

All our other aeroplanes returned safely.

War Office Communiqués.

May 24th.—The G.O.C. Salonika reports :—

The Naval Contingent of the Royal Air Force carried out a successful raid on Drama aerodrome on the evening of May 12th. One enemy machine was observed in flames, and two others enveloped in smoke.

On the same day a hostile aeroplane was driven down near Livunovo (Upper Struma Valley). Two other machines were driven down west of Lake Doiran on May 15th and one near Hudova (Vardar Valley) on May 21st.

The aerodrome at Hudova was bombed by our machines on May 24th. All bombs were observed to burst near their objectives, and obvious damage was caused to the hangars.

May 24th.—The G.O.C. Palestine reports :—

On May 23rd three enemy aeroplanes were brought down by our machines, two falling in the vicinity of Nablus (Shechem) and one near Latrun (within the British lines).

May 25th.—The G.O.C. British Forces in Italy reports :—

Since the 18th instant the Royal Air Force has carried out numerous reconnaissances far behind the enemy lines and collected much useful information. Many bombs have been dropped on enemy hutments and dumps.

In air fighting since May 18th 24 enemy aeroplanes have been destroyed. In addition, one enemy observation balloon has been burnt. During this period we have not lost a single machine.

WOUNDED.—Edwards, Sec. Lt. A. G., R.A.F.; Gardner, Lt. D. (M.C.), Dragoon Gds., attd. R.A.F.; James, Sec. Lt. M. L., R.A.F.; Rolandi, Sec. Lt. V. F. A., R.A.F.; Spurr, Sec. Lt. N. F., R.A.F.; Walton, Sec. Lt. J. L., R.A.F.; Windsor, Capt. J. S. (M.C.), S. Wales Bord. and R.A.F.

MISSING.—Cuttle, Lt. G. (M.C.), R.F.A., attd. R.A.F.; Leckie, Sec. Lt. G. A., R.A.F.; Newton, Sec. Lt. F., R.A.F.; Ratcliffe, Sec. Lt. T., R.A.F.; Whitford-Hawkey, Lt. A. M., R.A.F.

PERSONAL NOTICES.

NAVAL.

DEATHS.

CARTMEL.—Lt. George Musgrove Cartmel, R.A.F., reported missing on April 6th and now officially reported to have been killed in action on that day, aged 19, was the eldest son of Mr. G. E. Cartmel, coroner for Westmorland, and Mrs. Cartmel, of The Meadows, Kendal. He was educated at Rossall and joined the R.N.A.S. from the school O.T.C. in June of last year. After undergoing training in England and France, he was gazetted flight sub-lieutenant in the Royal Navy in December of last year. He was wounded in action on March 16th, and had only just returned to duty when he was killed. He was a good all-round athlete and won his colours at school for both cricket and football.

HALL.—Lt. Frederick Vincent Hall, R.A.F., formerly Sub-Lt., R.N.A.S., was killed on active service on May 15th. He was the only child of Mr. and Mrs. F. W. Hall, of Elmcroft, Muswell Hill Road, N., and 89, Charterhouse Street, E.C. He was 20 years of age. Mr. Hall was awarded a medal by the citizens of Dunkerque for bravery in defending them from hostile aircraft on May 2nd, 1917, and was wounded whilst flying over the enemy a few days later.

HYDE-THOMSON.—Lt.-Col. Douglas Hyde Hyde-Thomson, R.A.F., formerly Wing Comdr., R.N.A.S., was killed at a south-eastern aerodrome on May 21st.

At the inquest it was stated that he landed at an aerodrome to remedy some slight engine trouble. On resuming his journey he had risen about 50 feet, and in making a turn did not have manœuvring room, with the result that his machine nose-dived to earth.

Douglas Hyde-Thomson was born on January 18th, 1891, at Coalville, Leicester. He passed his tests for his aviator's certificate on a Wight seaplane at Calshot, and qualified again at a later date on a Bristol biplane at Chingford, his certificate, No. 1245 being dated May 15th, 1915.

In 1911 he was a lieutenant R.N. on H.M.S. "Swiftsure," and later joined the Naval Wing R.F.C. When the R.N.A.S. came into separate being on July 1st, 1914, he was a Flight Lieutenant, and was promoted Flight Commander on October 13th, 1914.

The Navy List of 1914 shows him as at the Central Air Office for torpedo duties with aircraft. It was he who was responsible for all the early experiments with torpedo-carrying seaplanes, and for their ultimate success. Though a specialist on torpedo work he later devoted his attention to wireless, and did much to bring the wireless branch of the R.N.A.S. to its present high state of efficiency.

On July 28th, 1916, he was promoted Squadron-Commander, and was promoted Wing Commander on December 31st, 1917.

In Douglas Hyde-Thomson the Navy has lost a most valuable officer, who by his intense keenness, his unusual foresight, and his unlimited faith in the future of Naval aviation has done much to bring the Naval side of British aviation to the pre-eminent position which it now occupies despite years of systematic dis-

couragement by senior naval officers and of dislike by their juniors. His great personal charm won for him many friends, and his evident mental capacity and service ability equally won for him the respect and appreciation of all who served with him.

His work in developing torpedoes and wireless in the R.N.A.S. by itself entitles him to a place of honour in the history of the Flying Services, quite apart from the good work which he did in importing into the R.N.A.S. all that was best in the manners and customs of the Royal Navy. He was a Naval officer of the finest type, an educated gentleman of broad outlook unspoiled by routine, and as such he can ill be spared.

Commander Hyde-Thomson was the son of Mr. and Mrs. Robert Donald Thomson, of Pool House, Groby, Leicestershire. He was to have been married in June this year. To his parents and fiancée all will offer their sincere sympathy.

* * *

Flt. Lt. Osborn Groves, R.N., arrived in Switzerland from Heidelberg Camp, Germany, on May 16th. Lt. Groves while in Germany made three attempts to escape into Holland. He was caught, however, each time and sent to punishment camps, where his treatment was very bad, particularly while he was at Holzminden.

MILITARY.

Deaths.

GEIDT.—Lt. C. N. Geidt, Cameron Highlanders, and R.A.F., who has been killed in an aeroplane accident in Egypt, was 23 years of age, and the son of the late Mr. B. G. Geidt, I.C.S., of Bayshill House, Cheltenham.

GLANVILLE.—Capt. Hugh Fanshawe Glanville, West India Regt., attd. R.A.F., has died from injuries sustained while flying on the Scottish east coast. He was 33 years of age, and a son of the Rev. R. O. F. Glanville, of South Brent, Devonshire.

Capt. Glanville was born in 1884, and had his commission in the West India Regiment in January, 1905. Transferring to the R.F.C. in 1913, he reached the rank of Flt. Commander in Sept., 1915.

HEARD.—Lt. Edward Terence Heard, R.A.F., formerly of King Edward's Horse, and of Bahr-el-Ghazal, Sudan, who has died from injuries received while flying on May 17th at Weeley, Essex, was 28 years of age, and only son of the late Edward Heard and of Mrs. Heard, of 31, Dorset Square, N.W.1. He had his "wings" in October last year.

HOUGHTON.—Lt. Frank Magens Caulfeild Houghton, R.A.F., who was accidentally killed while flying on May 6th, was the eldest son of Mr. Frank Edwin Caulfeild Houghton, of the Old Hall, Dorrington, Shrewsbury, was born in 1895, and was educated at Magdalen College School, Oxford, and Denstone College, Staffs. Leaving school on August 1st, 1914, he received his first commission in the Shropshire Light Infantry the following September, afterwards transferring to the Army Cyclist Corps, and in May, 1916, he became an observer in the R.F.C., in which force he served continuously for 18 months in France, obtaining his wings in 1917.

HOWELLS.—Sec. Lt. G. J. Howells, R.F.C., previously reported missing and now presumed killed, was before joining the R.A.M.C. (from which he afterwards obtained a commission) head dispenser to a leading firm of Cheltenham chemists.

LACEY.—Lt. F. P. Sleigh Lacey, A.S.C., attd. R.F.C., who died in hospital on March 29th of pleuro-pneumonia, was 26 years of age.

LANGLEY.—Lt. John Basil Robert Langley, R.A.F., who was killed on May 15th, was 29 years of age and was the eldest son of the Rev. John and Mrs. Langley, of North Wraxall, Wilts. He came over with the 19th Alberta Dragoons in the First Canadian Contingent, with which he served in France, and subsequently joined the R.F.C. For seven months he was an artillery observer at the front. He came home and, showing extraordinary facility in handling an aeroplane, became almost at once an instructor in special flying. It was in this capacity that he met his death. Mr. Langley had always maintained that it was possible for a particular make of machine to roll to the left, and in support of his contention had already twice successfully performed this evolution, but on the third attempt his machine nose dived and crashed. He was considered one of the most accomplished and careful pilot instructors in the Royal Air Force, and was universally beloved. He was married to Lorna, daughter of Sir Oliver and Lady Lodge, on July 28th last, and he leaves a son a few weeks old.

MACINNES.—Brig.-Gen. Duncan Sayre MacInnes, C.M.G., D.S.O., R.E., who was killed in action on May 23rd, was born in 1870, and was the son of the late Donald MacInnes, of Hamilton, Canada, a member of the Senate.

He entered the Army in 1890, and served with the Ashanti Expedition of 1895-6, for which he received honourable mention and the Star. He had a great deal of Staff service in the South African War of 1899-1902. He was in the Defence of Kimberley, and was mentioned in despatches in 1900 and again in 1902, and for his services received the D.S.O., the Queen's medal with three clasps, and the King's medal with two clasps.

Having graduated at the Staff College, Camberley, he was appointed a General Staff officer in the Department of the Director of Military Training at the War Office, and was also one of the War Office members of the Royal Engineer Committee. Subsequently he was appointed a member of the Directing Staff of the Staff College, an appointment he was holding when the present war broke out.

He saw much service in France in the present campaign. He went to the front in the early days of the war, and was wounded in November, 1914.

In the following year he served as an Assistant Director in the Department of Military Aeronautics at the War Office, and in 1916-17 was Director of Aircraft Equipment. For his services he received the C.M.G. As Director of Aircraft Equipment Gen. MacInnes had to face a most arduous task. It fell upon him to evolve from the formless muddle of 1915 some regular scheme for organising and increasing aircraft production simultaneously. All those who served with him at that period bear witness to his unflagging zeal and to the amount of personal effort which he expended. If hard work on the part of one man could have produced the necessary aeroplanes and engines Gen. MacInnes would assuredly have obtained them. Despite an infinity of natural obstacles and personal hindrances he succeeded in effecting remarkable increases in output, and, at the same time, he won the personal affection of all those who worked with him or under him.

The intensity of his efforts nearly broke down his health, but before he left the War Office to take a command in the field he had done much spade work which afterwards proved of high value. Full recognition was given to his services when, at a dinner given to him on his departure, the present Air Minister, then only recently appointed Director-General of Aircraft Production, referred in the highest terms to the worth of his achievements in laying the foundations of aircraft production on a thoroughly sound basis. His name deserves to live in the history of military aeronautics as one of those who helped the R.F.C. out of its blackest days.

Gen. MacInnes, who married in 1902 the daughter of Mr. F. Wolferstan Thomas, leaves a widow, one son, and one daughter.

MITCHELL.—Sec. Lt. E. P. H. Mitchell, Border Regt., attd. R.A.F., who was accidentally killed whilst flying abroad on May 7th, was the only son of Dr. and Mrs. Mitchell, Ambleside. He was 20 years of age, and was an instructor.

MORGAN.—Lt. Frederick J. Morgan, Royal Fusiliers and R.A.F., who died on May 16th of wounds received in action on May 14th, was the only son of Mr. and Mrs. F. Morgan, 46, Beauval Road, East Dulwich, S.E.

ROWDEN.—Maj. C. R. Rowden, M.C., Worcester Regt. and R.F.C., whose name appeared in the list of killed in the Casualty List of May 25th, met his death in an unexplained accident at a South Coast aerodrome.

He had seen much active service, and was regarded by all who served with him as a first-class pilot and a very able commanding officer. He was both popular with and respected by officers and men alike, and his death has been deeply felt by his squadron.

Maj. Rowden was gazetted Second Lieutenant to the 5th Reserve Battalion the Worcester Regt. with seniority of Nov. 11th, 1914.

SANKEY.—Lt. Cecil Martin Sankey, M.C., The Buffs, attd. R.A.F., whose death was announced last week, was educated first at Dumpton House, Broadstairs, and later at Westminster School, where he was in the O.T.C. He received a commission in Queen Victoria's Rifles before he reached the age of 18.

After serving in that regiment for several months, he received from the Headmaster of Westminster (Dr. Gow), in January, 1916, a nomination to Sandhurst. There he reached the rank of Serjeant in the following April, and passed out in August, being then gazetted to The Buffs (E. Kent Regt.). He went to the front in Sept., 1916, and on Jan. 27th, 1917, was awarded the Military Cross for conspicuous gallantry and devotion to duty while leading his men in a successful attack against the enemy at the battle of Locs, receiving the decoration from the King some months later at Buckingham Palace. Last December he was transferred to the R.A.F., and only a fortnight ago qualified as pilot.

THOMSON.—Capt. George Edwin Thomson, D.S.O., M.C., R.A.F., who was accidentally killed while flying in England on May 23rd, in his 21st year, was the only son of Mr. James Thomson, of Rangoon, Burma. He was educated at Glenalmond and Glasgow University, where he was studying with a view to a Civil Service appointment. On the outbreak of war he was gazetted second lieutenant in the K.O.S.B., and in 1916 he became attached to the R.F.C. In August, 1917, he went out to France, and in recognition of his services was appointed flight commander in November of the same year. In March, 1918, Capt. Thomson returned to England, having brought down 21 German aeroplanes, and having throughout displayed exceptional gallantry on patrol. He was awarded the M.C. during the same month, and in April he won the D.S.O. In May he was appointed second in command of a T.D.S., and only a few weeks later he met his death on a cross-country flight. Capt. Thomson was a keen aviator and an excellent Rugby player and swimmer.

TOUCHE.—Sec. Lt. Eric Percy Johnstone Touche, R.A.F., killed in an aeroplane accident on May 17th, aged 21, was the only son of Mr. Percy Touche, of Simondium, South Africa, and grandson of the late Edward Touche, M.D., Staff Surgeon, 92nd and 83rd Regiments, who rendered distinguished service in the Indian Mutiny, and a great-grandson of the Rev. John Edward Touch, formerly minister of Kinnoul, Perthshire, another of whose sons was the late General John Gray Touch. (The name which, in Scottish usage, had become Touch was restored to its original spelling of Touche by Royal Licence.)

Eric Touche volunteered for service in South Africa in 1914, when in his 18th year. He served first in Egypt, then in France, where he was wounded in the head. In March, 1917, he received a commission in the 3rd Essex Regiment, and returned to France, but was invalided home with trench fever in June, 1917, and volunteered for the R.F.C. in October, 1917. He had just qualified as pilot and received his wings.

VON POELLNITZ.—Maj. H. W. von Poellnitz, Lincolnshire Regt. and R.A.F., whose death was announced last week, was educated at Repton, where he was in the shooting team for four years and captain for two years. From there he passed into Sandhurst in 1910, where he was captain of the cricket eleven.

He received his commission in 1911 in the 2nd Lincolnshire Regt., and went to Gibraltar in January, 1912, and to Bermuda in January, 1914. In both these places his company won the Rifle Cup. He went to France in November, 1914, was wounded in April, 1915, and, on his recovery, joined the R.F.C. in October.

He obtained his wings on January 20th, 1916, and went to France in May. He flew over the Somme battlefields from July, 1916, to April 18th, 1917, obtained his flight in October, 1916, and was made major and squadron commander on July 2nd, 1917. He took his squadron to another front last January.

On May 10th he met with a motor accident, and died on the following day. He was a good sportsman all round, an excellent rider and shot, and good at all games. It was rumoured some time ago that he had been drowned, and great relief was felt by his many friends in the R.F.C. when this story was contradicted.

As a leader of men, as a fighting man, and as an organiser he displayed marked ability, and his death is a great loss to the Service whose high reputation he did so much to build up and maintain.

ENGAGEMENTS.

ELLIS—MACKENZIE.—The marriage will take place on Saturday, June 1st, at the Chapel Royal, Savoy, at 2, of Lt. S. Howard Ellis, Northumberland Fusiliers and R.A.F., eldest son of Mr. Howard Ellis, of Auckland, New Zealand, and Mary, daughter of the Hon. Sir Thomas Mackenzie, K.C.M.G., High Commissioner for New Zealand, and Lady Mackenzie. There will be no reception, but all friends are cordially invited to the church.

LANE—HILL.—The engagement is announced between Lt. J. A. B. Lane, Hussars, attd. R.F.C., son of the late Mr. F. G. Lane, of the Stock Exchange, and Mrs. Lane, of 2, Weymouth Street, W., and Kathleen Hill, only daughter of Mr. and Mrs. F. H. Hill, of Ilkley and Bradford.

BIRTHS.

GILL.—On May 11th, at Merton House Nursing Home, Reading, to Cherrie (*née* Burke), wife of Donat Gill, Lt. R.E., attd. R.A.F., a son (Peter Donat).

ROWBOTHAM.—On May 16th, at 5, Rayleigh Road, Basingstoke, to Coralie (née Malet Veale), wife of V. S. Rowbotham, Lt. R.F.A., attd. R.A.F.—a son.

* * *

The Earl and Countess of Limerick have received news that their only son, Capt. and Flt. Comdr. Viscount Glentworth, Warwick Yeo. and R.A.F., has been missing since May 18th.

* * *

It is reported that Capt. T. S. Sharpe, Gloucester Regt., attd. R.A.F., is wounded and a prisoner in German hands.

AIR FORCE.

DEATHS.

BEVINGTON.—Sec. Lt. Colin Corry Bevington, R.A.F., who was killed whilst flying in Yorkshire on May 22nd, was the youngest son of Alex. and Margaret Bevington, of Silverwood, Pyrford, near Woking. He was 18 years of age.

FLOWER.—Lt. Charles Renyon Flower, R.A.F., who has been killed in action, was the eldest son of Mr. and Mrs. H. Flower, of 3, Orrisdale Terrace. He was 21 years of age.

GRAHAM.—Sec. Lt. W. J. R. Graham, R.A.F., met his death on May 17th while flying at Montrose. When at a height of 1,000 ft. the aeroplane took a nose dive to the earth, and the aviator was killed instantaneously. Deceased, who was an experienced flyer, was 20 years of age. He belonged to Canada.

HOUGHTON.—Lt. Frank Magens Caulfeild Houghton, R.A.F., who was accidentally killed on May 6th, was the son of Frank Edwin Caulfeild Houghton, of Dorrington, Shrewsbury.

MORGAN.—Lt. Edward Percival Morgan, R.A.F., who died of wounds received in action on May 23rd, was the son of Mr. E. Strachan-Morgan, of 56, Boundary Road, N.W.

MOSSMAN.—The sudden collapse of a wing while flying over Lincolnshire resulted in the death of Sec. Lt. Charles Frederick Mossman, R.A.F. An inquest on the body of deceased, who was 20 years of age, and belonged to North London, was held on May 15th, when it was shown that the wing broke off at a height of 1,000ft. The machine crashed on the marsh near the sea coast, and the aviator was found dead among the wreckage. A verdict of accidental death was returned.

PRESTON.—Sec. Lt. Harry Dennis Preston, R.A.F., who was killed on May 14th whilst flying in Wiltshire, was the youngest son of Robert K. Preston, of Chicago. He was 22 years of age.

TRUBRIDGE.—Lt. Roland W. Trubridge, R.A.F., who died of wounds on May 6th, was the son of Mr. and Mrs. H. W. Trubridge, formerly of Gosforth, Newcastle-on-Tyne.

ALLEN.—On the 17th inst., at Chiddingfold, Surrey, Elizabeth Jane, wife of John Philip Allen, R.A.F., the eldest son of Mr. and Mrs. T. Y. Allen, 22, Flodden-road, Camberwell.

ENGAGEMENTS.

GRAHAM—GASKELL.—The marriage arranged between Mr. Robert C. Graham, R.A.F., and Miss Florence C. Gaskell will take place quietly at St. Matthew's Church, West Kensington, on Tuesday, June 4th, at 1 p.m. All friends are invited to the church.

SCARAMANGA—BEVAN.—An engagement is announced between Capt. G. J. Scaramanga, R.A.F., elder son of Mr. and Mrs. John Scaramanga, of 259, St. James' Court, and Ursula Constance, younger daughter of Mr. and Mrs. O. G. Bevan, of Margery Wood, near Reigate.

MARRIAGES.

DE PUTRON—BESTOW.—On May 18th, at St. Stephen's, Norbury, Lt. Owen Washington de Putron, R.A.F., son of the late Capt. Beaumont de Putron and Mrs. de Putron, was married to Phyllis Patricia, second daughter of Mr. and Mrs. Frederick Wm. Bestow, of Thornton Heath.

TYNDALE-BISCOE—CRONE.—The marriage arranged between Capt. Harold L'Estrange Tyndale-Biscoe, R.A.F., eldest son of the Rev. C. E. and Mrs. Tyndale-Biscoe, Srinagar, Kashmir, and Elsie May, eldest daughter of Maj. J. S. and Mrs. Crone, Wivenhoe, Coatham, Redcar, Yorks, took place quietly at Christ's Church, Coatham, on Saturday, May 25th.

VARLEY—GOUGH.—On May 10th, at Wolverhampton, Lt. Rowland Varley, R.A.F., second son of Mrs. K. Varley, of Wolverhampton, was married to Ileene Josephine, second daughter of Mr. and Mrs. J. Gough, of Southampton.

VILLIERS—PERCY.—The marriage arranged between Maj. Oliver Villiers, D.S.O., R.A.F., son of the late Rev. H. M. Villiers and of Mrs. Villiers, and Aleen Judith, second daughter of the Rev. and Mrs. H. V. Heber Percy, of Leasingham Rectory, Sleaford, Lincolnshire, is arranged to take place at St. Paul's Church, Knightsbridge, on the 6th of July, at two o'clock. No invitations will be sent, but all friends will be welcomed.

BIRTHS.

ANNS.—On May 23rd, at Ravenswood, East Molesey, the wife of Captain H. F. Anns, R.A.F.—a daughter.

ECKERSLEY.—On May 18th, at 42, Hawes Road, Bromley, the wife of Capt. P. P. Eckersley, R.A.F.—a son.

PRITCHARD.—On May 19th, at 1, Sloane Court, S.W., the wife of John Edward Maddock Pritchard, R.A.F., of a son.

FOREIGN COMMUNIQUES.

FRANCE.

MAY 21ST.—On May 19th during the daytime our chasing pilots brought down six German aeroplanes. Nine other enemy machines fell in their own lines badly damaged after fighting.

Great Charles Street, Birmingham.

1336

On the same day and during the following night 25,000 kilogrammes (about 25 tons) of bombs were dropped by our bombarders on the cantonments at Rosières en Santerne, the aviation grounds of Villeselve and Vauvillers, and the railway stations of Péronne, Nesle, Chaulnes, etc. A big fire broke out at Rosières.

In addition, during the same night, some Italian machines bombarded the railway station of Montcornet and the aerodrome of Ville aux Bois, where great damage was observed.

Army of the Orient.—Allied aviators bombarded the stations of Angista and Hadji Beljik on the Seres-Drama line, the aerodrome of Resna (to the north of Lake Prespa), and the encampments of Gransi (on the Devoli). In the course of these air fights one enemy machine was forced to descend.

May 22nd.—Army of the Orient.—In spite of the unfavourable weather, the Allied air squadrons bombed the depôts of Demirhissar and Ochrida.

Enemy aeroplanes having been reported by our signal stations to be proceeding in the direction of Paris, the alarm was given at 10.40 p.m. last night. The various means of defence were brought into action. A violent artillery barrage was put up, and our flying men went up. A certain number of bombs were dropped in various suburban districts, and a few casualties and material damage are reported.

None of the enemy machines succeeded in reaching Paris. One of them was hit by artillery fire from the entrenched camp of Paris, and was brought down in flames north of the capital. The "All clear" was sounded at one a.m.

May 23rd.—On May 20th an enemy aeroplane was brought down in an air combat. It is confirmed that eight German machines were destroyed by our pilots, one on May 15th, another on May 16th, and six on May 19th. In addition two machines were brought down by the anti-aircraft defences on May 20th and May 21st.

On May 20th and the following night our bombing squadrons dropped 17,000 kilogrammes (17 tons) of projectiles on the region of St. Quentin, Noyon, and Tergnier, the stations of Péronne, Rosières, Nesles, and the aviation grounds of Villeselve.

Two large fires followed by explosions were observed at St. Quentin and at Nesles.

On May 21st and the following night our aeroplanes dropped 30,000 kilogrammes (30 tons) of bombs on the same regions, causing numerous fires. Cantonments and stations in the region of the Ville Aubois, Hirson, Le Cateau, Aulnoye, etc., received during the same period 11,000 kilogrammes (11 tons) of explosives.

Italian aviation crews took part in these expeditions.

May 24th.—Army of the Orient.—Allied aviators bombed the aerodrome of Hudovo and the enemy encampments to the northwest of Nonte and in the region of Ochrida.

May 25th.—During the days of May 22nd and 23rd four enemy aeroplanes and two captive balloons were driven down by our fire. It is confirmed that five more German machines were destroyed in aerial combats during May 16th, 19th, and 21st.

Between May 21st and May 23rd inclusive, our bombarding squadrons dropped 30 tons of projectiles on railway stations, cantonments, and aviation grounds in the enemy zone. Fires were observed in the railway stations of Montescourt (south of St. Quentin) and Hirson (south of Maubeuge), and serious damage was apparently caused in the aerodrome at Cappy (south-east of Albert).

May 26th.—Army of the Orient.—Allied aviators dropped over 13,000 kilogrammes (about 13 tons) of explosives on the enemy's establishments. In the course of the air fighting on the 25th two enemy machines were forced to descend.

GERMANY.

May 21st.—During the last three days 59 enemy machines and three captive balloons were brought down. Lt. Loewenhardt obtained his 24th and Corp. Rumey his 20th and 21st victory in the air.

May 22nd.—During the night of May 20th-21st one of our bombing squadrons destroyed extensive French munition depôts near Blargie.

Lt. Mekhoff achieved his 27th aerial victory, and Lt Puetter his 23rd and 24th.

May 23rd.—On the Lys battlefield three American aeroplanes, amongst others, were brought down yesterday.

The enemy aerial attacks against Belgian territory, which have increased in frequency of late, have inflicted heavy damage

and losses on the civilian population. No military damage has been caused.

By successful bomb-dropping large enemy munition depôts to the north-west of Abbeville were destroyed. Bombs were also dropped on Paris.

May 25th.—On May 23rd the crew of an observation aeroplane, Lt. Eisinmonger and Serjt. Gund, shot down four machines out of a chain of six British one-seater battleplanes

AUSTRIA.

May 25th.—Over 20 enemy aeroplanes dropped bombs on Feltre. One civilian was killed and eight wounded. Otherwise only slight damage was caused. Field-pilot Temp. Officer Kiess, one of our most successful pilots, was brought down in aerial battle and was found dead.

ITALY.

May 21st.—Our own and British aviators brought down eight enemy aeroplanes; a ninth machine, hit by the artillery, fell in flames.

On Saturday our seaplanes reconnoitring in the Upper Adriatic had a desperate fight with a number of enemy machines about 15 miles west of Pola. One enemy machine was brought down and one of ours had to alight on the sea after being hit. To prevent its falling into the hands of the enemy it was destroyed by the pilot, who was rescued by another of our seaplanes.

Yesterday, in the Southern Adriatic, our seaplanes bombed simultaneously the military works at Durazzo and those at Lagosta (Dalmatia) with visibly good results. Despite intense anti-aircraft fire, all our machines returned uninjured to their bases.

May 22nd.—The activity of our own and Allied aviators was considerable. Eight enemy machines, two of which were accounted for by anti-aircraft batteries, were brought down.

May 22nd.—During the day of May 20th a British air squadron bombarded the seaplane station and submarine base at Cattaro. A fire was observed in buildings near the landing-stages and in the barracks. In spite of intense anti-aircraft fire and the action of enemy machines, which gave chase, the British squadron returned undamaged to its base.

May 23rd.—Our own and Allied aviators brought down three enemy aeroplanes and forced two others to land. The enemy aviation camp near Motta di Livenza and troops and wagon transport on the march on the Asiago Plateau were bombarded with effective results. Major Baracca has gained his 32nd victory.

May 24th.—Intense aerial activity; five enemy machines were brought down. The aviation camps at Feltre and Motta di Livenza were successfully bombarded.

May 25th.—British aviators bombed enemy troops in the lines of communication on the Asiago Plateau. Five machines were brought down, and a sixth forced to land.

May 26th.—Our own and Allied planes, flying low, fired with machine-guns on and bombarded enemy troops, batteries, and billets in the Asiago basin and along the Piave.

May 27th.—Aerial activity was partially limited by bad weather. Eight enemy aeroplanes were brought down.

On May 24th our hydro-aeroplanes bombed the enemy hangars at Lagosta, in the island of Curzola (Adriatic) with visibly good results. Despite intense anti-aircraft fire they all returned uninjured to their base.

U. S. A.

May 24th.—It is established that our aviators shot down two hostile machines on May 21st.

BELGIUM.

May 21st.—We engaged in destruction fire as well as counter-battery work. Our aeroplanes and balloons lent valuable assistance in observing for our batteries.

The enemy indulged in long-range fire, and bombs were dropped by his aviators on our cantonments in the back zone. We engaged in reprisals on similar objectives in the enemy's zone.

May 22nd.—As a reprisal for bombardments carried out by enemy aeroplanes our aviators dropped some bombs last night on sheds in the railway station of Zarren and on sheds at Laffinghe and Leke.

BULGARIA.

May 22nd.—In the Monastir region German aviators brought down three enemy machines, which were destroyed by the fire of our artillery.

TURKEY.

May 19th.—In the Aegean one of our aeroplanes attacked the enemy artillery positions in the island of Meis, and the good effects of this attack were observed. Despite the enemy's counter-action, our aeroplane returned undamaged.

May 22nd.—Our aviators attacked with success enemy camps on the sector of the Jordan west of Jericho and the Wadi-Auja.

May 23rd.—There is continuous lively aerial activity

May 25th.—Our aeroplanes dropped a quantity of bombs on a rebel camp in the neighbourhood of Kerak (east of the Dead Sea).

First-class Sheet Metal workers and Foreman required, thoroughly used to aircraft work, for Government controlled establishment in London area. Top rate of pay for good men. No one residing more than 10 miles away or already engaged on Government work need apply.—Box No. 3627, THE AEROPLANE, 166, Piccadilly, W.1.

Wanted Machinist for spindle and planing machines on aircraft work. No one on Government work will be engaged.—State age, experience, and wages required to your nearest Employment Exchange, mentioning this paper and No. 3624.

Experienced Man with engineering knowledge wanted to control and organise progress department of large aircraft works, and to be responsible for distributing work in shops. Must have had similar experience with an up-to-date firm.—Apply, stating age, experience, and salary required, to nearest Board of Trade Employment Exchange, mentioning this paper and No. 3637. No one already on Government work can be engaged.

SITUATIONS WANTED.

Works Manager, or position of trust, 37, practical engineer, invaluable experience both aeroplanes and seaplanes. Tactful, energetic, methodical organiser, accustomed to latest service methods and capable of economically increasing production.—Box 3284, THE AEROPLANE, 166, Piccadilly, W.1.

Works Manager, free to re-engage immediately. Twenty years motor, five years aero engines and planes; British, American, and Continental experience. Guarantees rapid, up-to-date and economic production. No service obligations.—Reply, Box No. 3551, THE AEROPLANE, 166, Piccadilly, W.1.

Foreman, experienced, used to Handley Page main planes, etc., requires similar position or as firm's inspector. Good organiser.—Box No. 3643, THE AEROPLANE, 166, Piccadilly, W.1.

Buyer, with wide continental and British aeronautical and automobile commercial experience, desires appointment with financially sound company. Thorough knowledge of all markets, materials, machines, tools, fabric, etc. Substantial range of sub-contractors at command. Keen and proved organiser. Experience includes both sea and land machines. —State salary and particulars, Box No. 3642, THE AEROPLANE, 166, Piccadilly, W.1.

Assistant Manager of metal fitting department seeks similar appointment; three years in above capacity with a leading firm of aircraft manufacturers. Thoroughly conversant with organisation and modern methods for quick and accurate production.—Box No. 3638, THE AEROPLANE, 166, Piccadilly, W.1.

First-class Woodworking Machinist requires immediate employment. Thorough good spindle hand and cutter maker. Used to aircraft and general accurate work.—Box No. 3636, THE AEROPLANE, 166, Piccadilly, W.1.

Mill Foreman requires situation, thorough practical knowledge of woodworking machinery, economical conversion of timber. Used to large output. Good organiser and tactician. Capable of increasing production.—Please reply to Box No. 3635, THE AEROPLANE, 166, Piccadilly, W.1.

Commercial Man, good organiser, 15 years' secretarial and accountancy experience, disengaged, seeks situation on national work; some knowledge of aircraft routine, A.I.D., and dealings with sub-contractors. Capable of handling heavy correspondence, or costing, progress, etc.—State wages, etc., to Box 3632, THE AEROPLANE, 166, Piccadilly, W.1.

Lady, with good factory experience, desires post as welfare supervisor. Good organiser, capable manager and strict disciplinarian, excellent testimonials.—Box No. 3626, THE AEROPLANE, 166, Piccadilly, W.1.

Foreman, free re-engage immediately. Five years' experience various types; could start new work. Distance no object.—Box No. 3622, THE AEROPLANE, 166, Piccadilly, W.1.

Engineer, with specialised experience in the design of aeroplane engines, wishes to communicate with enterprising engine manufacturer requiring the services of competent and original designer. Advertiser capable of taking charge of design of all types of high-speed petrol motors.—Box No. 3621, THE AEROPLANE, 166, Piccadilly, W.1.

Superintendent of aircraft factory open to receive new appointment. Sound knowledge of timber, woodworking machinery and jigs in all departments for producing maximum output. Most capable organiser and controller of male and female labour. Conversant with all types of machines. Best references.—Box No. 3620, THE AEROPLANE, 166, Piccadilly, W.1.

WANTED.

Wanted Woodwork for aeroplanes, very large up-to-date factory, fully equipped with latest machines; any class of aircraft work undertaken; prompt deliveries; best work.—Apply Box 3030, The Aeroplane, 166, Piccadilly, W.1.

Wanted one copy of The Aeroplane for Jan. 9th, 1918; also three copies for March 20th, 1918.—G. E. Stechert and Co., 2, Star Yard, Carey Street, W.C.2.

Jig Saw for wood wanted immediate for cash.—Box No. 3634, The Aeroplane, 166, Piccadilly, W.1.

Engineering Works wanted in S.W. district, equipped and running, suitable for aircraft fittings, assemblings, etc.—Send full particulars as to capacity, price, etc., in confidence to "Engineer," Box 433, Sells, Ltd., 168, Fleet Street, E.C.4.

Wanted, half-board and lodging within 5 miles Kingston. Advertiser, a B.Sc., would give tuition aerodynamics, mathematics, and all mechanical engineering subjects in return for slight reduction or gratis to right place.—Box No. 3641, The Aeroplane, 166, Piccadilly, W.1.

TO CONTRACTING FIRMS.

Materials Immediately Required.

Odd Quantities of 3-ply (various thicknesses) fabric, dope, spruce, ash, substitute woods, etc., M.S.P. and aluminium sheet (various gauges), tubing (various diams.), etc., etc. Must be serviceable, but not necessarily to A.I.D. requirements.—Write, giving list for disposal, quotations, and where same may be inspected, to the Cambridge School of Flying and Aerodrome Co., Ltd., 30B, St. Andrew's Street, Cambridge.

WORK WANTED.

Strut Sockets, fitting and assembling; also bench work on aircraft fittings, brazing, case hardening, etc.; also tube bending. Works in S.W. district open to accept further contracts, accurate work, and good deliveries.—"Promptitude," Box 432, Sells, Ltd., 168, Fleet Street, E.C.4.

HAULAGE.

Steam and Petrol Motor Wagons for Hire, for timber transport.—Apply, Silwood Storage Co., Ltd., 7, Victoria Street, Westminster, S.W. Telephone, Victoria 6882.

MISCELLANEOUS.

MAKE MONEY BY WRITING.

£50 PRIZE. Send postage (2d.) for particulars and copy of "How to Earn Money while Learning How to write for Newspapers and Magazines." Practical and Comprehensive Correspondence Courses—Fiction and Articles, etc. Expert Literary Directors. Constructive Criticism. Beginners taught how to make work saleable. Exceptional testimonials. Address "Editorial" (Dept. A), 22, Chancery Lane, London, W.C.2.

FINANCE.

Late Managing Director of well-known Aeroplane Company is desirous of taking a financial and active interest or purchasing outright Aircraft Manufacturing business.—Box No. 3608, The Aeroplane, 166, Piccadilly, W.1.

AIRCRAFT PARTS.

Hardwood for Aeroplanes.—Specially Selected air-dried timber as supplied to leading constructors in Britain and the Continent. Silver Spruce, Ash, Poplar; Hickory and Ash Skids; Three-ply; Thin Cedar and Mahogany for Floats; Walnut for Propellers.—William Mallinson and Sons, Ltd., Hackney Road. 'Phone, 3845 Central, 4770 Wall.

Tapes, Webs, Cords and Threads in all qualities, suitable for Aircraft Work. Delivery from stock.—John MacLennan and Co., 30, Newgate Street, London, E.C.1. (See Advertisement Page IV.—of cover and Buyers' Guide).

Aeroplane Seats. We can give quick delivery of cane seats, A.G.S. 264, or other patterns, guaranteed pass inspection. Write us for anything required in cane work.—The Willowbrook Company, Leicester.

Cane Seats Immediate delivery. A.G.S.264, other patterns to specification.—Edward A. Day, Elite Works, Basford, Nottingham.

Hexagon Nuts, castellated and plain. We specialise in nuts. Inquiries solicited.—Carleton Manufacturing Co., Ltd., Moseley Road, Birmingham.

FOR SALE.

5,000,000 new bright steel engineers' hexagon bolts, nuts, studs, metal screws available. Send 10s. for parcel of 250 assorted useful sizes, Whitworth, Metric, B.S.F.B.A. threads, guaranteed perfect goods. Sent carriage paid.—Write for full catalogue, Palmer's Garage, Tooting, S.W.

100,000 shop-soiled and second-hand files, 6in.-16in., genuine salvage stock, all guaranteed usable. Send 12s. 6d. for 3 doz. assorted; carriage paid. Approval.—Palmer's Garage, Tooting, S.W.

Tarpaulins.—New waterproof khaki sheets for sale. Also second-hand railway truck sheets, repaired and redressed. London works.—For prices, etc., write Johnston, 12, Broughton Road, Croydon.

TO LET.

Convenient Workshop to let in the western district to accommodate 30-35 workers, fitted with electric power and light, also gas. Good benches.—Apply, Box 3625, The Aeroplane, 166, Piccadilly, W.1.

ENGINEERING.

British School of Aeronautics. — Air Engineering Course; Aero Design; Aero struction; Aero Draughtsmanship; Mecha Engineering. — Pennington's, 254, O Road, Manchester.

MODELS.

Model Aeroplane, flies ¼ mile circular fl carriage paid, 3s. 6d. "I can thorou recommend your machines." Testim from Dr. Adams, Union Road, Shef Thousands satisfied, testimonials from parts.—Dept. C., Bristol Model Aero Depôt, Eastville, Bristol.

ON WINNING THE WAR.

One is fairly safe in assuming that the vast majority people in this country honestly want to win this war, id want to win it soon. The minority who do not e the international financiers, largely German Jews, ho find all the belligerent countries being more and ore heavily mortgaged to them as the war goes on, id the Bolsheviks posing as Trade Unionists who erely desire universal anarchy in the hopes of acquir- g loot for themselves.

There is perhaps a third section, also a minority, who int to win the war, but not too soon. They are the ir profiteers, employers and workmen alike, who would gard an early return to the pre-war standard of profits, fore they have pouched their wealth, as a greater igedy than the deaths of the men who are dying at e rate of an unestimated number per minute on active vice.

Of the three sections, the last are the people who are ost likely to see their wishes gratified, though they ay possibly see their profits and savings vanish entirely fore the war is won, for it is gradually becoming dent to the meanest intelligence that this is going to a very long war.

We might have won the war this year had it not been for e treachery of Russia. But we have only ourselves to me for the blow we have suffered through this cause, d we may well regard it as a just punishment for er having formed an unnatural alliance with the Slav e, which all our real statesmen in the past, and until matter of twelve years or so ago, regarded as our atest enemy.

Happily the natural alliance with America—that least mocratic of all nations—will in time restore the ance of strength in men and material. But it is well consider the possible course of events before con- tulating ourselves on the certainty that America's p will enable us to win the war.

Our Growing Strength.

merica has done wonders in sending men and food Europe. It was stated recently that there are already a lion American troops in France. They should be trained, ipped, and in the fighting line before the end of this r. Already many thousands of them have proved ir high quality as fighting men. In direct opposition the Englishman's idea of the American, obtained efly from the get-rich-quick Yankee drummer *glicé*, commercial traveller), the war American is a et, clever, and earnest young man, fully cognisant is own ignorance and very anxious to learn all about . With the aid of the American troops the Hun will successfully held and ultimately defeated in France. t the same time our own increasing efficiency in culture and the production of war material, together h the growing strength of our anti-submarine forces, our greater output of shipping, will remove all fear of our breaking down owing to lack of food or munitions of war. The same argument applies to France and probably to Italy.

No conceivable death-rate in the field could equal the number of young men who come into the Armies of the Allies automatically on reaching military age each year, so that there seems no possible prospect of a break- down owing to shortage of men. Therefore the Anglo- Franco-American-Latin alliance can apparently keep the war going for ever, if necessary.

The Enemy's Increase.

Germany may or may not be as short of food as we are led to believe. Stories published in German papers by prisoners or internees returned from England read exactly like the opposite versions published in this country from people who have returned from Germany. And it is said by people who have to do with German prisoners that their parcels from home contain "delica- tessen" and more solid provender on a scale which is as incompatible with the alleged starvation of Germany as are the parcels which go from this country to British prisoners in Germany with the food situation in England as depicted in German papers.

Moreover, Germany is now master of the most fertile food-producing areas of what were Russia and Roumania. When the German wants anything, being wise, he takes it, whoever else has to go without it. So, if there is corn in Russia, failing the ability to find corn in Egypt, thanks to our Army in the Near East, the Hun will have it. Thus he will counter our blockade, by way of balancing up our ultimate defeat of his submarine cam- paign. So neither belligerent alliance will succeed in starving the other.

In the matter of man-power the German is also situ- ated much as we are. Even if his vassal States, Austria and Turkey, fail to find the necessary men, owing to the need for looking after their own troubles, the Ger- man can always conscribe Russians. The ignorance of the Russian peasant is so abysmal, his mentality so entirely animal, and his amenity to discipline so great, that when once impressed by the idea that he has found his master he would probably fight as loyally for Ger- many as for Russia, and being properly organised, armed, and fed, he would certainly make a better soldier of the Kaiser than he did of the Czar. So probably the addition of Russian troops—to be carefully distinguished from the independent Cossack, Caucasian, and Turco- man tribes, who will doubtless remain independant— will balance up on the German side the addition of the Americans on ours. Therefore there seems no particular reason why Germany also should not carry on the war for ever.

Doubtless this would suit admirably the game of the German-Jew International Financiers, who would be making a profit out of both sides. That is unless the

populations of the various belligerent nations became really annoyed with the whole Jewish race and started a pogrom in the approved Russian fashion. Which would probably begin in this country from some really important cause, such as a row over a season ticket to Brighton, or confusion in a costermonger's mind over the difference between spreading Bolshevism or botulism from a Jew butcher's shop in Mile End. Such are the vital root-causes which alter the face of History, and cause her to wear so much artificial complexion.

The Quickest Way Out.

The world has had the Hundred Years War, and the Thirty Years War, and various other lengthy wars, but one assumes that we of the present generation have no particular desire to go down in history as the originators of the Eternal War. Therefore the sensible way out seems to be the organisation of some sound scheme for stopping the war.

We might have gone a long way towards doing so if we had started in 1915 by turning on a few really capable engineers to produce land-battleships instead of allowing a gang of monumentally incapable bunglers to waste time and labour and money in turning out the clockwork sardine-tins which they called "tanks." We lost that chance in a manner which can only be fully described when D.O.R.A. ceases her all-embracing autocracy.

Now we have another chance if we are sufficiently awake to seize it. To-day, if we do not hold the absolute command of the air, we have, at any rate, the upper hand of the Hun to such an extent that we may honestly claim the mastery in the air, although so distinguished an officer as General Henderson and so undistinguished a person as Major Baird agree in disagreeing with Sir Douglas Haig as to the possibility of such mastery existing. It seems, therefore, as if the development of aerial warfare to its fullest extent may just turn the balance of the war in general to such an extent as to enable the Western Allies to put an end to the war in the manner which they desire. Which means a complete victory.

Fanatics and Unbelievers.

One has never been among those enthusiasts—generally recent converts who have become fanatics in accord with historic precedent—who prate about winning the war in the air. None the less, it may be well to restate the axiom that the only thing which wins a war is an army of occupation standing on its own flat feet in enemy territory. The most that aircraft, or the Royal Air Force, can do is to make it a trifle easier for the Poor Blessed Infantry to reach enemy territory and stop there.

But, if that necessary aid can be given, it is everybody's job to help, and one way in which even those who are not directly concerned can help is by preaching the gospel of sane enthusiasm. Those who are over-enthusiastic are as dangerous as those who still disbelieve in the power of aircraft. And the disbelievers are even to-day more numerous than one might think.

An Ill-Timed Attack.

For instance, early last month Mr. Holt Thomas, one of the most knowledgeable as well as one of the most successful pioneers of aviation in this country, delivered a short address to an organisation called the American Luncheon Club. He was reported—possibly with the degree of accuracy or the reverse habitual to the Fleet Street reporter—as having said that "the German Offensive could have been frustrated had we possessed sufficient fighting aircraft." Forthwith the statement is seized by a not particularly knowledgeable writer in "The Field" and pilloried under the somewhat offensi heading, "The Folly of Exaggeration," on the groun that "It is a matter for regret that people of ackno ledged position and authority in the aeroplane moveme should express opinions so wide of the mark."

"The Field" is an excellent paper, so firmly esta lished and so satisfied with its own position that its su title is "The Country Gentleman's Newspaper." O grants its right to the title without question, and j because, by the grace of God, the country gentlem is still a greater force in the nation than either the G man Jew or the Bolshevik, it is the more to be regrett that so estimable a paper should not provide its influential readers with better education in aeronauti affairs.

Apparently what Mr. Holt Thomas did say was t if we had had sufficient aircraft the German offens could not have taken place. Which seems a fairly s evident proposition, for if we had had enough fighti machines to clear the Hun out of the air, and had a had a sufficiency of bombing machines, various thi could have been done to make the advance impossi And those things can still be done in the future frustrate future enemy attacks.

Things Which Can Be Done.

Knowing something of what we have up our slee in the way of aeroplanes and engines, if only our br storm merchants in the Technical, Production, Equipment departments will allow them to be used reasonable time instead of playing with them as t own particular toys for a year or so, one has no hes tion in saying that the Hun can be absolutely beate the air long before the end of this year. And when Hun air-fighters are beaten, then we can turn the at tion of the Royal Air Force properly and for the time to his people on the ground.

As Mr. Holt Thomas himself pointed out, in a l to "The Field," if we had sufficient bombing mach we "could guarantee that a railway was permane out of action, that it would be impossible for con or troops to traverse roads, that the preparatio bringing up guns and providing dumps of ammuni etc., would be impossible."

Over and above this, the enemy gunners coul blinded, both by the complete abolition of his arti observation machines and by continual bombing o gun positions. All aerial reconnaissance and p graphy would be impossible for him. Therefore whole of the preliminary ground work on which attacks are based would, of necessity, be non-exis So much, at least, could be done to hold up and we the enemy attacks, without ever going outside the b area, or departing from what is coming to be know "Tactical Bombing."

Strategic Bombing.

As that authoritative writer Mr. Henry Forester pointed out, Sir Edward Hamley has defined Str as affecting the Theatre of War, and Tactics as con ing the Field of Battle. In these days of guns w 75-mile range, the field of battle is somewhat exte and the theatre of war may be taken as including square mile of enemy territory, with all that in Therefore, tactical bombing covers everything w what the French call "the Zone of the Armies," if effectively carried out will come near to paral the action of enemy troops within that zone.

Strategic bombing then covers everything else, it is here that the Royal Air Force has its great o tunity of winning the war by attack from the ai sufficient bombing machines are available, if the

lequately organised and directed, if the machines are the best, if the personnel is fully trained in dropping mbs with precision—and not merely in pulling the igger and hoping for the best—it is possible to put the hole of Germany's immense production centres along ie Rhine out of action and keep them out of action.

Cutting off all supplies from every source within 200 iles of the Eastern French Frontier is purely a matter arithmetic in production and common sense in administration. Never has there been a simpler proposition war, and never has a nation had a finer opportunity success than we have to-day. If we fail in this, then e thoroughly deserve to be beaten, for it will be *prima cie* evidence that it is time for England to be conquered id to be reorganised by some race with greater ability.

It is hard to believe that the German Armies could main in France if once its supplies from the Rhineland ere cut off. And the moral effect of a withdrawal from rance to a defensive line along the Rhine should be ough to cause revolution even among so well-sciplined a people as the Germans. Such are the ssibilities of strategic bombing, and it will be criminal we miss this opportunity.

The Corpus Christi Affair.

Nothing could be better proof of our superiority in e air than the affair of the Corpus Christi processions Cologne. And incidentally nothing could demonrate better the folly of democracy and the benefits of istocracy. Strings of letters have appeared during the ıst week in the "Daily Mail"—which, if one may dge by these letters, seems to have become the recogsed organ of the cad-in-the-street—raving against the reign Office for acceding to the request of the Archshop of Cologne that his city should not be bombed that Holy Day. It never seems to have occurred to e writers that the request was a confession of weakss and that the granting of it was evidence to the rld of our strength. The incident merely proves to erybody that we can attack aerially when and where e will, just as the German Army can do, apparently, the ground.

Despite the fact that Austria represents the remnants the Holy Roman Empire, that Prussia's subject State, varia, is entirely Roman Catholic, and that the Rhinend and Alsace are largely Roman Catholic, yet the ipal interests could not prevent the shelling of Paris on Good Friday and Corpus Christi day by the Lutheran Prussian—king of iconoclasts.

Yet, when British gentlemen—who, curious though it may seem, appear still to have some influence in minor matters with a Cabinet which includes Messrs. George and Law—are asked to refrain from being unpleasant on a Holy Day, they give their word to refrain, and keep it.

The "Daily Mail's" friend, the cad-in-the-street, cannot, naturally, understand the calm superiority which is inherent in such action. Still less can he estimate the value of such action among our Roman Catholic Allies in France, Italy, and Portugal, among Roman Catholic neutrals such as Spain and the South American Republics, and among Roman Catholic enemies such as the Austrians, Bavarians, and Irish. Probably our Ministry of Information will quite miss the opportunity the incident affords for useful propagandist work in Roman Catholic countries, especially in Ireland, but, even so, we have the satisfaction of knowing that, bad as is our Government, there are a few gentlemen somewhere in communication with it.

The Responsibility of the Bolo.

However, there you have the proof, from the enemy, of our superiority. The Royal Air Force can attack when and where it wills. The effects of its attacks depend entirely on the people in the Air Ministry.

The Air Minister himself is all out to win the war, and one is under the impression that he believes that it can be won in the air. It can be won in the air provided that he has no mercy on inefficient subordinates. The way to win the war in the air is to deliver in the shortest possible time the greatest possible number of the best possible engines and aeroplanes, to man them with efficient pilots, and to train adequate mechanics to keep them in order.

We have aeroplanes and engines which are better than any in the world. It is for Sir William Weir's subordinates to see that they are produced. If they fail in their task through internal intrigue, through personal disagreements, or through seeking after their own interests, they are traitors to their King, their country, and their comrades in the Royal Air Force, and they deserve to be shot as the traitor Bolo, from whom their office earned its nickname, was shot. If they fail through incapacity, then the kindest thing to do with them is to accord them the honour of going to the front and being shot by the Hun.—C. G. G.

THE NEW DECORATIONS.

The Air Ministry deserves to be congratulated on the creation the two new decorations, the Distinguished Flying Cross d the Air Force Cross. Some such decoration was obviously cessary to correspond with the D.S.C. of the Navy and the .C. of the Army.

Where, however, the Air Ministry has shown particular wisdom in differentiating between gallantry in the face of the enemy, d bravery or good service while flying at home. This fference at once abolishes the anomaly of people wearing a oss inscribed "For Valour" when in fact they have never en over or under fire.

Some difficulty may be found in deciding what precisely is, is not, "in the face of the enemy." A seaflying novice on s first patrol trip may sink a defenceless submarine—defence-ss, of course, only in the sense that he may have the luck to tch it when almost submerged—but it seems certain that he ould be entitled to the D.F.C., although the top of the enemy's ad would be nearer to him than the face of the enemy. On e other hand a veteran sea-patrol pilot might fly for months, ight do most distinguished service, and might display the eatest pertinacity and gallantry in serving his King and in ving his passengers under difficult circumstances. Yet he ight never have the luck to meet an enemy face upwards or any other position. The question therefore arises as to ether distinguished flying of this kind is technically conlered as flying in the face of enemy.

Somewhat similar questions arise as to ferry pilots, who fly lly armed from England to France and all over France, delivering machines from place to place. Their flying is certainly active service flying, as differentiated from the still more arduous and dangerous work of testing new and untried types of machines or making dangerous, and sometimes foolish, experiments under the orders of senior officers—one can mention two very valuable officers who were killed recently in such ways. Such points appear to complicate somewhat the question of who is entitled to the D.F.C. and who to the A.F.C.

Incidentally A.F.C. also stands for Australian Flying Corps, and as the Australian Squadrons are part of the Australian Imperial Force (A.I.F.) it seems doubtful whether they can be absorbed into the R.A.F. except by special Act of Parliament in the Australian Legislature. And as Australia is mighty proud of her Flying Corps—with very good reason—one doubts whether the A.F.C. will be cheerfully surrendered to the R.A.F.

If the A.F.C. is not R.A.F., then the A.F.C. ought to have the M.C., but not the D.F.C. or A.F.C. Strictly speaking, while Capt. William Smith, A.F.C., R.A.F., may quite well exist, Capt. William Smith, A.F.C., A.F.C., should not, which is, perhaps, as well, for it would appear a trifle confusing.

However, the idea of instituting two quite separate decorations for those whom the late Manfred von Richthofen used to differentiate as "trench-hogs" and "base-hogs" is essentially sound, and doubtless each cross will be as gallantly won by the R.A.F. as the D.S.C. and M.C. have been won by the R.N.A.S. and R.F.C. in the past. And, meantime, the D.S.O. still remains as the hall-mark for good service to the King either as a fighting man or as a valuable officer in other war activities.—C.G.G.

NIGHT RECONNAISSANCE.

Lt.-Col. Repington, writing in the "Morning Post" on May 30th of the "surprise" attack on the Soissons-Reims sector, says:—

We seem to have known too little of the German concentrations on the eve of March 21st and May 27th. Admitting that the movements were carried out by night in their last stages, it remains true that some 10 to 20 divisions occupy long road spaces and that better means must be sought to discover these movements and the preliminary concentration of guns. Trench raids are no longer enough, and some process of scouting the main roads by night must be discovered and systematised by the Air Forces of the Allies unless we wish to witness a repetition of these more or less surprise attacks, which cost us heavily in men and war material, lose us valuable ground, and encourage the enemy.

[Coming from a journalist these remarks might be taken as casting a slur on the efficiency of the Royal Air Force, but coming from a soldier of Colonel Repington's standing they merely contain a suggestion as to the direction in which further development is necessary.

Hitherto night reconnaissance has not been considered a necessity. It now appears to be so. And the problem does not seem to present any very great difficulties. Much may be done with scientifically designed searchlights carried on aeroplanes. One has heard of wonderful results with quite small instruments which have been produced both in France and England. Also the common or firework-display parachute flare is no novelty. Night-flying is now almost a national industry, so there is no difficulty on that score.

It is purely a matter of organising special squadrons for night reconnaissance, as squadrons are organised for night-bombing, and keeping them for that work. Obviously no man could fly all night and all day as well, so the night reconnaissance people would have to be specialists in their own line of business. When once the need for such work is recognised, as doubtless it has been by now, the difficulties may be considered as having been overcome. And fortunately we have the shortest nights of the year before us in which to organise for the longer nights when such work will be more necessary.—C.G.G.]

A GOOD CAUSE.

The R.F.C. Aid Committee has now changed its name to the R.A.F. Aid Committee and Prisoners of War Fund. One is happy to be able to record that Lady Henderson has consented to be President and Honorary Treasurer of the R.A.F. Fund as she was of the R.F.C. Fund, the Committee remaining practically the same with the addition of Lady Paine as representing the Naval side of the Royal Air Force. Miss Dudley is Secretary of the Fund and Mrs. W. M. Pryor is Hon. Secretary for the Prisoners of War. The offices of the Fund are at Surrey House, Marble Arch, London, W.1., and contributions should be sent there.

With the inception of the R.A.F., combining as it does both the R.N.A.S. and the R.F.C., and the increasing size of both Services, the drain upon the resources of the Fund is naturally enormously increased. All possible assistance is therefore necessary if the Fund is to continue to help those who are unfortunate enough to be made prisoners of war, and if it is to alleviate somewhat the lot of those on Active Service.

Those who are interested in the Fund's work are invited to call at Surrey House any day between 11 and 1 o'clock and learn for themselves in detail the various branches of the work done by the Fund. In the meantime one appeals for the practical sympathy and co-operation of all interested and asks on behalf of the Fund that donations may be made as soon as possible.

LONDON DEFENCES.

Maj.-Gen. E. B. Ashmore, Commanding the Aerial Defences of London, on June 1st unveiled, at Lord Mayor Treloar's Cripples Hospital and College at Alton, Hants, a tablet recording the establishment of a cot dedicated as a memorial to the children killed in a London borough on the enemy air raid of June 13th, 1917.

In unveiling the tablet, Gen. Ashmore said the children had died innocently, and their deaths had done no particle of good to the German cause. The effect of the raids from the point of view of military gain had always been small, and it tended to become smaller. At first the raids produced a certain feeling of dismay; but after nearly a year's bombing London was far better able to bear up under the inflictions. In the case of the night raids there at first appeared to be no answer. But necessity brought hard thinking, and always more and more was an effective answer found.

"The last raid showed a great advance in our methods," added Gen. Ashmore. "Of some 30 odd machines that attempted the attack we totally destroyed seven. We shall—I am sure of it—do even better than that. We are experimenting and improving every day. Scientific—one might say, ultra-scientific—discoveries are employed. Training and material are being improved, and the night skill of our brave pilots is increasing. I cannot promise that odd machines will not break through, but I confidently expect that we shall make raids on London too expensive for the Huns to continue."

"The people of London," he said, "were stout-hearted. Some aliens, not so stout-hearted, had migrated to other places. He did not think the other places liked them, but London certainly did not object to their absence.

There had been retaliation for the raids both on German towns and on the Germans who took part in the raids. The memorial cot would remind them of the children's sacrifice. It should steel their hearts and stimulate them to the highest effort against the enemy, so that the sacrifices would not have been in vain.

AN IMPORTANT FUNCTION.

The 1918 Wilbur Wright Memorial Lecture will be delivered in the Central Hall, Westminster, on Tuesday, June 25th at 8 p.m. by Dr. W. F. Durand, Chairman of the American Advisory Committee for Aeronautics, and Scientific Attaché to the American Aviation Mission in Europe. His subject will be "Some Outstanding Problems in Aeronautics."

The finances for the Wilbur Wright Lecture are derived from the proceeds of an endowment fund raised in memory of the late Mr. Wilbur Wright, the founder of modern flying, and the premium this year has been awarded by the Aeronautical Society of Great Britain, which administers the fund, to Dr W. F. Durand.

The entry of the United States of America into the War could not be more suitably celebrated than by recognising the great services of the late Mr. Wilbur Wright to aeronautics, and the selection of Dr. Durand, not only on account of his many qualifications, but also on account of the great nation to which he belongs, is a singularly happy one.

Last year's Wilbur Wright Lecture was delivered by Lt.-Col. Mervyn O'Gorman, C.B., shortly after America officially declared war, and by a happy chance Major Dodds, chief aviation staff officer to General Pershing, was able to take the chair, is therefore the more fitting that the lecture itself should this year be delivered by an American citizen, and one who is obviously of French descent.

It is likely that there will be a great many applications for tickets, and those desiring them should apply at the earliest possible opportunity to the Secretary of the Aeronautical Society of Great Britain, 7, Albemarle Street, Piccadilly, W.1.

CONGRATULATIONS.

PAGE—THYNNE.—On May 18th, at St. George's, Hanover Square, W.1., Mr. F. Handley Page was married, very quietly, to Miss Una Helen Thynne.

Mr. Handley Page is, of course, well known to all readers of this paper as one of the pioneers of aviation in this country. He is perhaps better known to the world at large as the designer and producer of the most successful multiple-engine aeroplane yet produced.

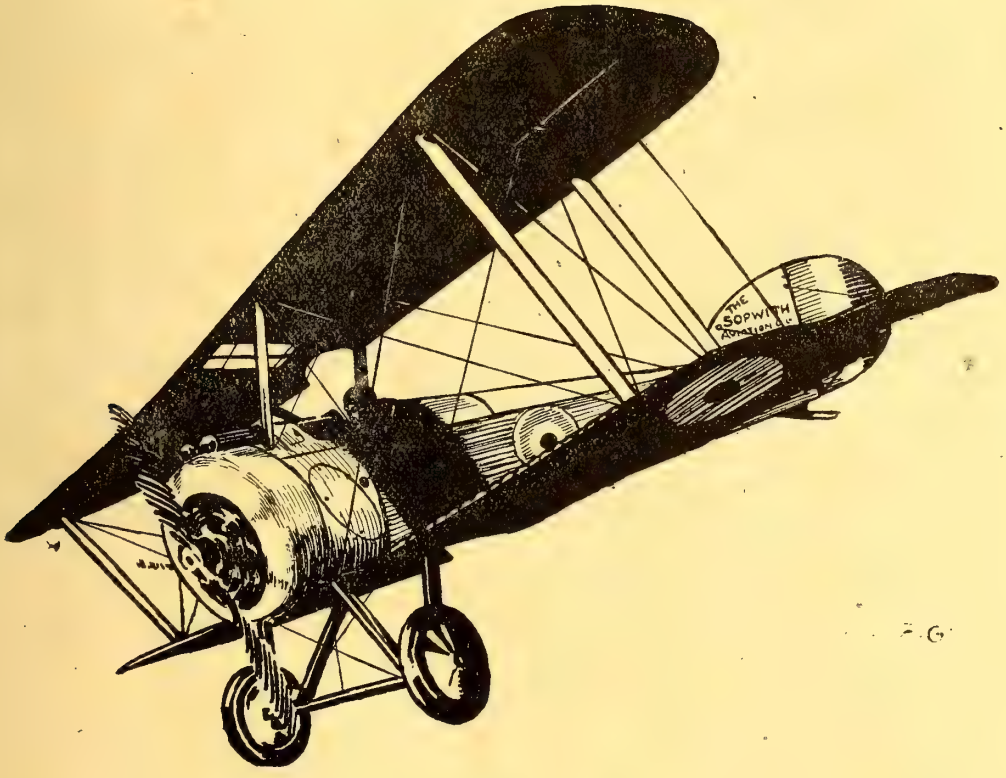
Mr. Page's successes as an engineer, as a designer, and as a business man are truly remarkable, and are the more remarkable when one considers his comparative youth. One has no hesitation in prophesying for him very great further successes to come, and in wishing him such successes one is glad that one can now associate with his name that of his bride.

* * *

ROE.—On June 1st, at High Firs, Bursledon, Hants, to Mr. and Mrs. A. V. Roe, a son.

NEWS OF AN OLD FRIEND.

His many friends in this country will be interested to hear that M. Pierre Verrier, who has now become a prominent manufacturer of aeroplanes in Paris, recently married Mademoiselle de Marcay, sister of the Baron de Marcay, who is M. Verrier's partner in the aeroplane business.



M. Verrier was always one of the most popular pilots at Hendon, and all who knew him will wish him and his bride every good fortune and happiness.

Although the de Marçay-Verrier firm has only been in existence for a comparatively short time, the output is already very considerable, and as it has reached pretty well the limit for the existing factory in Paris, the firm have opened a branch factory in the South of France, where it is hoped that still greater output will be produced.

AIRCRAFT WORKERS' SPORTS.

The third annual aircraft workers sports will be held on Saturday, June 22nd, at Stamford Bridge, under the auspices of the Y.M.C.A. Approximately, 36 firms are taking part in the sports this year, so the events should be more than a little exciting. Last year the Sports Committee was able to hand over a cheque for £200 for the Fund for Disabled Soldiers' and Sailors' Hostels and Trade Colonies, and, as on that occasion there were only about 20 firms taking part in the sports, the takings all round should be bigger this year, and, therefore, the Sports Committee hopes to have very considerable sums to hand over to charities. Admission to the sports may be obtained by payment at the gate at Stamford Bridge.

GEOFFREY WATSON

FROM THE "LONDON GAZETTE."

War Office, May 28th.

REGULAR FORCES—Establishments—R.F.C.—Mil. Wing.—The follg. appts. are made :—

Flight Comdr.—Lt. F. Workman, M.C., R. Ir. Rif., Spec. Res., from a Flying Officer, and to be temp. Capt. while so empld., Nov. 26th, 1917.

Equipt. Officers, 1st Cl.—Lt. R. J. Bennett, Spec. Res., from the 2nd Cl., and to be temp. Capt. while so empld., Feb. 7th.

War Office, May 28th.

The following is from a continuation of Sir D. Haig's dispatch of April 7th, submitting names deserving of special mention :—

Australian Flying Corps.—Bailleau, Maj. C. L. ; Blake, Maj. D. V. J. ; Watt, Maj. W. O.

Air Ministry, May 28th.

R.A.F.—The follg. temp. Appts. are made at the Air Ministry :—

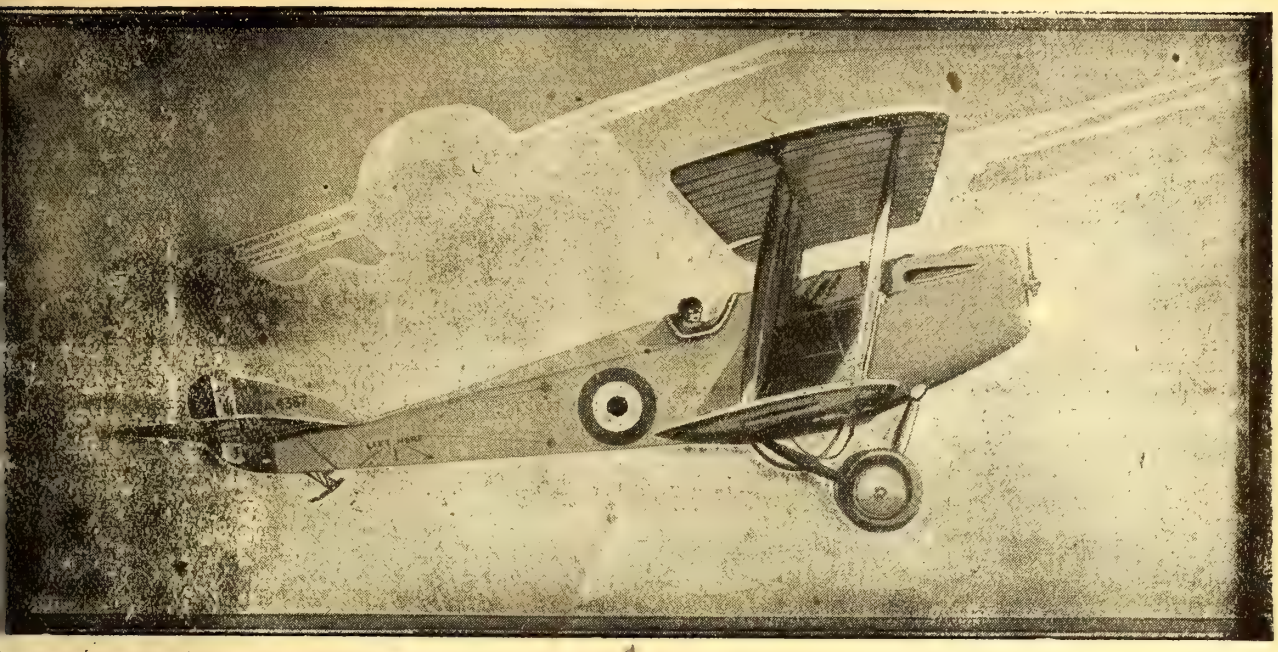
Staff Officers, 2nd Cl.—And to temp. Majs. while so empld. if not already holding that rank :—Capt. (temp. Maj.) C. A. J. Butter, Sec. Lt. A. R. Fulton, April 1st.

Staff Officer 3rd Cl.—Lt. (temp. Capt.) H. O'N. de Segrave, and to retain his temp. rank, vice Lt. (temp. Capt.) S. T. Ravenscroft, May 15th.

The follg. temp. appts. are made :—Staff Officers, 2nd Cl.—Maj. A. R. Martin, April 24th ; Capt. (temp. Maj.) C. R. Andrews, May 13th ; Lt. (temp. Maj.) H. P. Maybury, and to retain his temp. rank while so empld., May 19th.

Staff Officer, 3rd Cl.—Lt. H. J. G. Newman, and to be temp. Capt. while so empld., May 3rd ; R. B. Longridge (Lt., 16th Lrs., Spec. Res.), and is granted a temp. commn. as Lt. and to be temp. Capt. while so empld., May 10th.

Flying Branch.—Lts. to be temp. Majs. while empld. as Majs. (Flying) :—(Temp. Capt.) L. H. Peter, M.C., April 30th ; (Temp. Capt.) I. C. Little, May 17th.



Lts. to be temp. Capts. while empld. as Capts. (Flying) :—F. A. Ayrton, April 1st ; M. L. Doyle, April 24th ; A. B. Fairclough, May 4th ; M. G. Baskerville, May 7th ; H. G. W. Debenham, May 8th ; J. M. Mason, D.S.C., May 9th ; F. H. Davies, May 12th ; (Hon. Capt.) G. K. Cooper, N. L. Gartin, May 14th ; (Hon. Capt.) E. Pierce, May 15th ; T. Durrant, May 16th ; (Hon Capt.) H. V. Drew, May 17th ; H. Dear, to be Sec. Lt. (from Sec. Lt., Tech., April 8th.

Sec. Lts. (on prob.) to be Sec. Lts. (A. and S.) :—A. D. Hegan, H. Russell, C. T. Skipper, J. Stephens, J. C. Deremo, April 1st ; H. Woodcock, T. McScott, A. Kendall, April 2nd ; G. Swannell, C. J. Sanders, D. G. Paterson, F. E. Welford, J. S. Wilson, F. L. Hill, H. L. Tamplin, F. T. Heron, April 3rd ; J. D. Ford, T. H. Robinson, April 4th ; D. P. Pogson, A. W. R. Evans, L. C. Story, April 5th ; G. L. Rutherford, W. E. Angell, April 6th ; R. H. O. Tubbs, W. Oram, J. F. S. Percival, R. A. Arnott, H. C. Turner, A. G. M. Strowger, C. H. Flinn, April 7th ; E. C. Hill-Clarke, L. W. D. Peacock, J. C. Langford, A. W. Clark, H. L. Barradell, T. H. Forrest, W. N. L. Cope, C. Greaves, H. W. Heslop, W. J. Knoll, H. B. Harmsworth, H. K. Goode, T. Conlan, R. C. Creamer, W. Ginger, Geoffrey Hall, R. C. Knowles, A. O. P. Heron, V. G. H. Phillips, H. T. Taylor, A. V. Trimble, C. H. Dickens, L. H. Stiles, W. Stephenson, April 8th ; H. Warburton, F. Ollenbittle, J. R. King, A. E. Moir, A. R. Strachan, J. Webster, C. A. C. Fullerton, J. M. Wilson, F. M. Ruggles, April 9th ; A. M. Stahl, April 10th ; H. S. Sandiford, April 11th ; F. Abrahams, S. C. Gilbert, W. J. Bedworth, J. Howard, W. L. Murray, W. J. Salmons, H. S. Basford, W. H. Jordan, T. H. Rogers, H. H. Ross, J. W. Gibson, C. H. Sawyer, F. Shaw, R. G. Bradbury, F. C. Butler, E. O. Humphries, S. McG. Brown, F. B. Stark, April 12th ; C. H. S. Pain, P. Chauncy, April 13th ; J. R. Watkins, April 14th ; P. A. Cox, A. L. L. Carroll, April 15th ; F. H. A. Weale, April 20th ; D. B. Sinclair, April 21st ; I. L. R. Large, A. W. Buchan, A. W. M. Bryant, April 22nd ; J. P. Cross, R. N. Gosling, H. E. Minton, A. McL. Mooney, A. E. Gardiner, D. H. Prosser, April 23rd ; H. W. Matthews ; F. Clayton, F. J. Whitelaw, R. P. Whyte, H. M. C. Drummond-Wolff, P. R. Moore, B. Green, L. Smith, April 24th ; A. W. Sawyer, J. T. D. Margrave, J. A. Matthews, J. A. C. Randall, G. V. L. Taylor, C. A. McIntosh, E. F. Adams, J. R. A. Farfan, G. Ballance, M. P. Fraser, S. Engel, E. H. Lyon-Hall, C. Waine, I. C. Slater, G. Richardson, G. H. Glasspoole, B. H. Stretton, D. F. Grant, H. [illegible] Thomas, April 25th ; W. Parke, H. C. Dakin, A. E. Brown, S. J. Davies, T. J. Lethbridge, F. P. Whittaker, B. Critchley, G. A. Franklin, J. C. Paterson, T. Robson, H. Hill, J. B. Spence, A. E. Connolly, P. Bertrand, H. Vost, W. J Cairns, J. N. Gatcliff, A. Rogerson, L. P. Vigurs, H. D. Teetzel, R. M. Hillman, B. Fisher, R. C. Hirst, R. A. Pearce, April 26th ; L. Lovatt, A. L. Stanfield, F. Barker, T. H. W. Pearce, V. U. T. Watson, N. Weatherley, J. F. Robb, L. B. Raymond, W. T. Martin, T. Hazen, J. H. Carthew, E. J. Lainchbury, B. C. McDougall, J. K. Graham, W. S. Campbell, April 27th ; A. Shepherd, K. Yeomans, C. N. C. Dickson, R. K. Douglas, A. K. Whitema April 27th ; J. J. Borrowman, S. J. Manser, J. J. B. Rutter, J. Waddington, April 28th ; R. C. Rogers, J. B. Isaacs, J. Spence Hall, C. Houlgrave, J. A. McGill, M. L. Green, April 29th ; L. Court, F. L. Shield, E. L. Milborrow, April 30th.

The follg. are granted temp. commns. as Sec. Lts. (A. and S —W. B. Clarke, M.C. (Sec. Lt., R.G.A.), H. Laycock (ten Sec. Lt., attd. E. Lan. R.), April 1st ; E. M. C. Shipp (Lt. R. Fus., T.F.), and to be Hon. Lt., April 3rd ; H. W. Taylor, M. (Lt., R.F.A., Spec. Res.), and to Hon. Lt., April 4th ; A. Clark, M.C. (Lt., attd. R. Hdr., Spec. Res.), and to Hon L H. B. Wood (Sec. O.; Nicholson, 12492 Corpl. G.; Payne, 2006 Flt.-Serjt. W. H.; Turner, 128 T./S.M. W. G.

War Office, May 31st.

The King has been pleased to approve the following awards for gallant services rendered on the occasion of an hostile air raid :—

The Distinguished Service Order.

Lt. (Temp. Capt.) C. J. Q. Brand, M.C., R.A.F.

For conspicuous gallantry. While on patrol at night he encountered an enemy aeroplane at a height of 8,700ft. He at once attacked the enemy, firing two bursts of 20 rounds each, which put the enemy's right engine out of action. Closing to a range of 25 yards he fired a further three bursts of 25 rounds each, and as a result the enemy machine caught fire and fell in flames to the ground. Captain Brand showed great courage and skill in manœuvring his machine during the encounter, and when the enemy aeroplane burst into flame he was so close that the flames enveloped his machine, scorching his face. This officer has shown great determination and perseverance during the past nine months when on anti-aeroplane patrols at night, and his example of unassuming gallantry and skill has raised his squadron to a very high state of efficiency.

The Military Cross.

Temp. Lt. A. J. Arkell, R.A.F., Gen. List.

For conspicuous gallantry when, during a hostile aeroplane raid, he and his observer, Pte. Stagg, while on patrol, sighted a Gotha machine at a height of 10,000ft. He opened fire at a range of 200 yards, and so manœuvred his machine as to give his observer, despite a vigorous fire being continually poured on to his machine from the enemy aeroplane, a target which offered the best possible advantage for attack. Pte. Stagg then opened a heavy fire upon the enemy aeroplane at close range, as a result of which the enemy machine burst into flames and crashed to the ground. Lt. Arkell showed the utmost coolness and courage during the engagement, the result of which was to cause the enemy machine to be brought down.

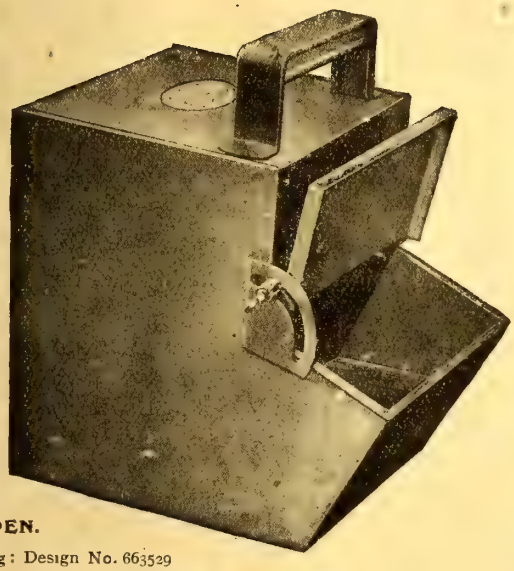
The Military Medal.

No. 10652 1st Cl. Pte. A. T. C. Stagg, R.A.F. (Romsey).

While acting as Gunner-Observer to Lt. Arkell on aeroplane patrol during a night hostile aeroplane raid, Pte. Stagg showed great courage and skill in that during the engagement with an enemy aeroplane at a height of 10,000ft., and although under a heavy machine-gun fire from the enemy, he was able to take advantage of the skilful manœuvring of the machine by Lt. Arkell which enabled him to open a heavy fire on the enemy. As a result of this fire the enemy machine burst into flames and crashed to the ground entirely out of control.

Air Ministry, May 31st.

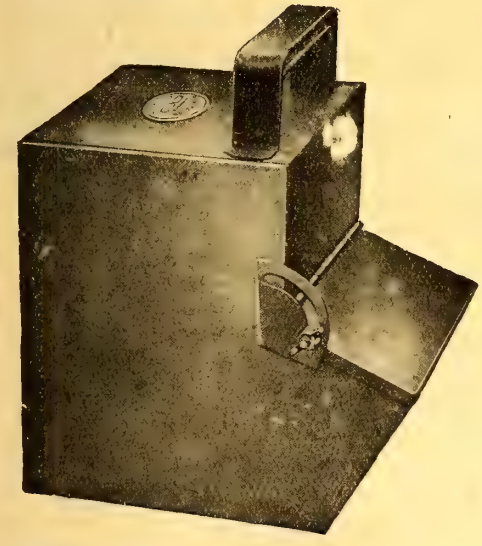
R.A.F.—The following temp. appt. is made at the Air Ministry :—Staff Officer, 2nd Cl.—Capt. (temp. Maj.) H. A. Oxenham, M.C., May 21st.



Flying Branch.—Maj. C. H. Butler, D.S.O., D.S.C., to be temp. Lt.-Col. while empld. as Lt.-Col. (Flying) (A. and S.), May 8th, seny. April 17th. (Substituted for notification in "Gazette" May 21st.)

Maj. C. H. Stringer to be temp. Lt.-Col. while empld. as Lt.-Col. (Flying) (K.B.), May 21st.

Lt. (temp. Capt.) G. M. Thomas to be temp. Maj. while empld. as Maj. (Flying) (Dir.), May 20th.



Lts. to be temp. Capts. while empld. as Capts. (Flying) :—S. Anderson (A. and S.), May 10th; J. R. Milne (A. and S.), May 11th; H. O. N. de H. Segrave (A. and S.), April 18; J. S. Chick (A. and S.), G. Fox-Rule (A. and S.), F. J. Ransley (A. and S.), S. T. Ravenscroft (from S.O.), May 15th; (Hon. Capt.) J. A. Glen, D.S.C., May 16th; W. E. Staton (A. and S.), May 18th; (Hon. Capt.) D. Don (Dir.), (Hon. Capt.) R. Scott Sugden (Dir.), May 20th; J. H. Forman (A. and S.), May 21st.

BLACKBURN BAP AIRCRAFT PRODUCTS

OPEN.

Reg: Design No. 663529

CLOSED.

The "ECONOMY" DOPE CAN

ADOPTED BY THE AIR BOARD.

OWING to the great shortage and waste of Dope, we have created a special Dope Can of the Chicken Feed Type, as illustrated.

The bulk of the Dope is kept airtight in the can, thus avoiding the evaporation of the Solvents and thickening of material. The brush is fed with just the necessary quantity as it is required by the operator.

When the job is finished, there is no need to transfer the Dope back into the drum, and it will be found in perfect condition for use when required.

Specify the BAP and secure the maximum of efficiency with the minimum of Dope consumption.

For Prices and full particulars, communicate direct with the PROPRIETORS:—

Lt.-Col. (temp. Brig.-Gen.) John Harold Whitworth Becke, D.S.O., R.A.F.

War Office, June 3rd.

The King has been pleased, on the occasion of his Majesty's Birthday to approve of the undermentioned rewards for distinguished service in connection with military operations in France and Flanders (dated June 3rd, 1918) :—

To be Brevet Colonel.

Maj. and Bt. Lt.-Col. (temp. Brig.-Gen.) H. R. M. Brooke-Popham, D.S.O. Oxf. and Bucks L.I. and R.A.F.
Maj. and Bt. Lt.-Col. (temp. Brig.-Gen.) F. L. Festing, C.M.G., Northd. Fus. and R.A.F.

To be Brevet Major.

Capt. (temp. Col.) G. B. Hynes, D.S.O., R.A. and R.A.F.

Air Ministry, June 3rd.

The King has been pleased, on the occasion of his Majesty's Birthday, to institute two decorations to be awarded to officers and warrant officers in the Royal Air Force, and two medals to be awarded to non-commissioned officers and men in the Royal Air Force. They are :—

"The Distinguished Flying Cross," to be awarded to officers and warrant officers for acts of gallantry when flying in active operations against the enemy.

"The Air Force Cross," to be awarded to officers and warrant officers for acts of courage or devotion to duty when flying, although not in active operations against the enemy.

"The Distinguished Flying Medal," to be awarded to non-commissioned officers and men for acts of gallantry when flying in active operations against the enemy.

"The Air Force Medal," to be awarded to non-commissioned officers and men for acts of courage or devotion to duty when flying, although not in active operations against the enemy.

* * *

The King has been pleased, on the occasion of his Majesty's Birthday, to confer the following rewards for distinguished service :—

ROYAL AIR FORCE.

Distinguished Service Order.

Maj. (temp. Lt.-Col.) John Eustace Arthur Baldwin.
Maj. (temp. Lt.-Col.) Arthur Courtney Boddam-Whetham.
Capt. (temp. Maj.) Benjamin Henry Noel Hans Hamilton.
Maj. Alwyn Vesey Holt.
Capt. (temp. Maj.) Warwick Wright.

Distinguished Flying Cross.

Lt. (Hon. Capt.) William Hopton Anderson, A.F.C.
Lt. David Claud Bauer.
Lt. (Hon. Capt.) Claver Victor Bessett.
Lt. (temp. Capt.) Robert Alexander Birkbeck
Lt. John Geoffrey Sadler Candy.
Lt. (temp. Capt.) Bernard Purvis Broackes Carter.
Lt. Douglas Colyer.
Capt. Robert John Orton Compston, D.S.C.
Lt. Maurice Lea Cooper.
Maj. Jack Armand Cunningham.
Capt. Roydon Englefield Ashford Dash.
Lt. (temp. Capt.) John Charles Oswald Dickson.
Lt. Thomas Howell French.
Lt. George Cecil Gardner.
Lt. (Hon. Capt.) Harold Harrison Gonyou.
Lt. John Edmund Greene.
Lt. (temp. Capt.) Frederick George Darby Hards, D.S.C.
Lt. Francis Herbert Ronald Henwood.
Lt. Gordon Frank Hyams.
Capt. Allen Murray Jones, M.C., A.F.C.
Lt. (temp. Capt.) Ernest James Jones, A.F.C.
Lt. (temp. Capt.) Harold Aidan Laycock.
Lt. George Chisholme Mackay.
Lt. (temp. Capt.) William Man.
Lt. (temp. Capt.) John Stanley Fleming Morrison.
Lt. Philip John Nolan.
Lt. (Hon. Capt.) Thomas Cooper Pattinson.
Lt. (Hon. Capt.) Arthur Henry Pearce.
Lt. (temp. Capt.) Edward Robert Pennell.
Lt. (Hon. Capt.) Samuel Richard Penrose-Welsted.
Lt. (Hon. Capt.) Cecil Lodge Philcox.
Lt. (Hon. Capt.) John William Pinder.
Capt. John Robinson.
Lt. Charles Basil Slater Spackman.
Capt. (temp. Maj.) David Edmund Stodart.
Lt. Denys Lane Paschel Stuart Stuart-Shepherd.
Lt. Leonard Thomas Eaton Taplin, A.F.C.
Capt. (temp. Maj.) Awdry Morris Vaucour, M.C.
Lt. (Hon. Capt.) Stephen Wynne Vickers, M.C.
Lt. (temp. Capt.) William Young Walls.
Lt. (temp. Capt.) Bert Sterling Wemp.
Lt. Laurence Arthur Wingfield.
Lt. Basil Raymond Worthington.
Lt. (temp. Capt.) George Frederick William Zimmer.

Air Force Cross.

Lt. (temp. Capt.) Valentine Henry Baker, M.C.
Capt. (temp. Lt.-Col.) Robert Benedict Bourdillon, M.C.
Maj.-Gen. William Sefton Brancker.
Maj. (temp. Col.) Charles Dempster Breese.
Lt. (temp. Capt.) Henry Duncan Davis.
Lt. Robert William Dobbie.
Lt. Llewellyan Lewis Meredith Evans.
Maj. (temp. Col.) The Honourable William Francis Forbes-Sempill, Master of Sempill.
Capt. Percy Edward Lovell Gethin.
Lt.-Col. (temp. Brig.-Gen.) Robert Marsland Groves, D.S.O.
Lt. Thomas Hayes.
Lt. (temp. Capt.) Albert Goodeff Henshaw.
Capt. (temp. Maj.) Bennett Melville Jones.
Lt. Walter Hunt Longton.
Lt. Archibald Charles Lutyens, M.C.
Lt. Laurence Newton Mitchell.
Lt. John Oliver.
Capt. (temp. Maj.) Humphrey Rivaz Raikes.
Maj. (temp. Lt.-Col.) Robert Raymond Smith-Barry.
Lt. Charles Gordon Sturt.
Lt. Terence Bernard Tully.

Distinguished Flying Medal.

F/9689 Actg. Air Mech. W/T. Albert Edward Clark (Woodford).
113763 Serjt. John Charles Hagan (Ulverston).

Air Force Medal.

11680 Serjt. Samuel James Mitchell (Handsworth, Birmingham).
106100 Serjt. Frederick Charles Tucker (Birtley, Durham).

Meritorious Service Medal.

2875 Flt. Serjt. J. C. Alexander (Billericay, Essex); 5195 Flt. Serjt. F. T. Angell (Crowthorne, Berks); 15252 Cpl. (actg. Serjt. A. W. Ashbee (Keynsham, Bristol); 5705 Cpl. R. E. Ashbol (Ilford).

246 Temp. Serjt.-Maj. C. W. Baker (Pewsey, Wilts); 3642 Cpl. W. N. Baldwin (Grimsargh, Lancs.); 33948 Flt. Serjt. D Barnett (Birkenhead); 3481 Serjt. (temp. Serjt.-Maj.) J. W. Benson (Leeds); 16008 Temp. Serjt.-Maj. J. F. Bentley (Bow London); 8886 Temp. Serjt.-Maj. J. F. Biggs (Isleworth); 23 Temp. Serjt.-Maj. B. Billing (Bury St. Edmunds); 22996 Flt Serjt. S. F. Bonnett (Bedford); 3908 Serjt. G. H. Bowater (Wes Bromwich); 10730 Cpl. R. W. Broom (Cromer); 15615 Cpl. H T. Brown (Fulham); 10149 Flt. Serjt. R. C. Bruce (Bristol) 43511 1st A.M. G. E. Bryant (West Ealing); 17536 1st A.M. H Burman (Walthamstow); 24086 Temp. Serjt.-Maj. B. C. Burnet (Enfield).

629 Temp. Serjt.-Maj. H. Carrington (Norwich); 90 Temp Serjt.-Maj. C. S. Carden (Enfield); 4741 Flt. Serjt. F. W. C Catchpole (Maidstone); 29063 Temp. Serjt.-Maj. P. J. C. Clark (Wallasey); 11712 Flt. Serjt. J. E. Clifton (Birmingham); 1195 Serjt. H. Collins (Eastbourne); 36034 Temp. Serjt.-Maj. C. H Cooper (Hammersmith); 1953 Temp. Serjt.-Maj. E. H. Cooper (Shoreham); 188 Serjt. (temp. Serjt.-Maj.) E. E. Copper (Beckenham, Kent); 2302 Temp. Serjt.-Maj. A. R. Cox (Gosport); 12651 Cpl. H. W. Crawford (Redcar); 4316 Flt. Serjt. A. Creighton (Lancaster).

30054 Cpl. A. W. T. Davey (Highgate); 11254 Flt. Serjt. R. Dickenson (Salford).

1745 Temp. Serjt.-Maj. W. Eccles (Stockport).

8457 Flt. Serjt. W. H. Finch (Waltham Cross); 4248 Flt. Serjt. C. F. Ford (Chichester); 10232 Flt. Serjt. F. G. Ford (Brixton).

2673 Serjt. (actg. Flt. Serjt.) A. Gibson (Maidstone); 22645 1st A.M. A. R. Gilbert (Kilburn); 8398 Temp. Serjt.-Maj. G. Gillman (Farnham); 49095 Cpl. T. J. G. Grout (East Dulwich).

11442 Cpl. R. A. R. Hill (King's Cross); F/405 P.O. Mech. J. W. Hodgson (York); 45311 Temp. Serjt.-Maj. J. J. Hollyhead, M.M. (Malvern); 6360 Serjt. A. H. M. Hoy (Winsley, Wilts); 23280 Flt. Serjt. S. E. Hughes (Tufnell Park, N.); 19479 Serjt. O. G. Hunter (Hendon).

20236 Temp. Serjt.-Maj. C. W. James (Plumstead); 320 Serjt.-Maj. H. James, M.M. (Eltham, Kent); 321 Temp. Serjt.-Maj.

W. Winter (Croydon); 1452 Serjt. (temp. Serjt.-Maj.) G. H. Withers (Ripon); 3882 Flt. Serjt. J. Wright (Glasgow); 6309 1st A.M. (actg. Cpl.) L. Wright (Woking).

MENTIONS IN DISPATCHES.

The following officers and other ranks of the Royal Air Force have been mentioned in dispatches and reports for distinguished services :—

Capt. (temp. Maj.) W. H. Adkins; Ensign F. G. Allen (U.S. Naval Air Service); Lt.-Col. R. J. Armes; Lt. (temp Capt.) E. A. O. Auldjo-Jamieson.

Maj. (temp. Lt.-Col.) R. K. Bagnall-Wild; Lt. (Hon. Capt.) H. J. Bath; Maj. (temp. Lt.-Col.) A. W. Bigsworth, D.S.O.; Capt. C. G. Beatson; Lt. (temp. Capt.) S. Bell; Maj. (temp. Lt.-Col.) E. G. O. Bcuttler; Lt. (Hon. Capt.) A. G. Bishop; Lt. T. H. Boyd.

Lt. (Hon. Capt.) C. J. Clayton; Lt. (temp. Capt.) F. Cleary; Lt. (temp. Capt.) J. P. Coleman; Lt. J. P. Colin, M.C.; Capt. G. M. Croil.

Lt. (temp. Capt.) C. Death; Lt.-Col. (temp. Brig.-Gen.) B. C. H. Drew; Sec. Lt. W. H. Dunton; Lt. (temp. Capt.) A. Durston.

Lt. (Hon. Capt.) D. S. Earp; Lt. (Hon. Capt.) W. H. Evens.

Lt. (temp. Capt.) H. G. Ford; Lt. (temp. Capt.) J. Fowler.

Lt. (temp. Capt.) J. O. Galpin, D.S.C.; Capt. J. Gardiner; Lt. (Hon. Capt.) E. S. Goodwin; Sec. Lt. R. Gowing; Lt. (temp. Capt.) P. G. Gundry.

Capt. (temp. Maj.) T. D. Hallam, D.S.C.; Lt. (temp. Capt.) A. H. Handman; Sec. Lt. W. J. Harris; Lt. (Hon. Capt.) C. S. Hay; Capt. F. W. Hill; Lt.-Col. (temp. Brig.-Gen.) C. G. Hoare; Lt. (Hon. Capt.) A. Holland; Lt.-Col (temp. Brig.-Gen.) A. Huggins, D.S.O.

Flt. Observer W. B. L. Jones (deceased).

Lt. H. B. Kerruish; Maj. (temp. Lt.-Col.) C. F. Kilner, D.S.O.

Lt. (temp. Capt.) C. F. Latimer; Maj. (temp. Lt.-Col.) C. F. Lee; Lt. (Hon. Capt.) H. A. H. Leetham; Lt. (temp. Capt.) F. J. Linnell.

Lt. (Hon. Capt.) A. J. H. MacColl; Lt. H. L. Macro; Lt. (Hon. Capt.) N. A. Magor, D.S.C.; Maj. (temp. Lt.-Col.) F.K. McClean; Lt. (temp. Capt.) W. G. McMinnies; Lt. (Hon. Capt.) B. A. Malet; Lt. (temp. Capt.), T. Martin; Capt. (temp. Maj.) J. D. Maude; Sec. Lt. J. F. Mehigan; Capt. (temp. Maj.) G. A. N. Mitchell; Capt. (temp. Maj.) R. F. S. Morton; Lt. (temp. Maj.) A. Murray.

Capt. (temp. Maj.) C. H. Nicholas.

Maj. E. Osmond.

Maj. (temp. Lt.-Col.) R. E. C. Peirse, D.S.O.; Lt.-Col. J. C. Porte.

Lt. (Hon. Capt.) C. A. Rea; Lt. (Hon. Capt.) L. Ritson.

Lt. (temp. Capt.) C. W. Scott; Lt. (temp. Capt.) L. G. Scott.

Lt. (temp. Capt.) H. Thrower; Lt. K. C. Tilman; Sec. Lt. J. Tozer-Mitchell.

Col. (temp. Brig. Gen.) A. V. Vyvyan, D.S.O.

Lt.-Col. (temp. Brig.-Gen.) W. W. Warner; Lt. (temp. Capt.) J. S. Wheelwright, D.S.C.; Maj. H. Wyllie.

FROM THE COURT CIRCULAR.

BUCKINGHAM PALACE, June 1st.

His Majesty, who was accompanied by Field-Marshal the Duke of Connaught, held an Investiture in the Quadrangle of the Palace.

The following were severally introduced into the presence of The King, when His Majesty conferred decorations as follows :—

THE DISTINGUISHED SERVICE CROSS.—Capt. Aubrey Ellwood, R.A.F.; Capt. Bertie Millson, R.A.F.

THE MILITARY CROSS.—Capt. Ralph Brown, R.A.F.; Capt. Lionel Payne, R.A.F.; Lt. Frederick Burdick; R.A.F.; Lt. Ernest Gardiner, the King's (Liverpool Regt.), attd. R.A.F.

OFFICIAL COMMUNIQUES.

NAVAL.

ADMIRALTY COMMUNIQUÉS.

JUNE 2nd.—Photographic reconnaissance of Zebrugge shows clearly a submarine or other vessel lying on her bilge close to the Mole. This vessel was probably sunk by torpedo from the "North Star" on the night of April 23rd. The reconnaissance shows, also, a destroyer with her deck nearly awash at low water about 300 yards from the Mole. This is presumably the destroyer sunk by bomb from an aeroplane on May 20th.

JUNE 3rd.—During the period, May 30th to June 2nd inclusive, bombing raids have been carried out night and day on the following military objectives :—Bruges Docks, Zeebrugge, Ostend.

Several tons of heavy bombs were dropped on the objectives, with good results. Photographs confirm great damage at the large engineering works, Bruges.

Three enemy machines were brought down in flames, and a further three driven down out of control.

Three of our machines are missing.

In Home Waters, during the above period, numerous anti-submarine and escort patrols were carried out, and long reconnaissances made across the North Sea. Submarines were sighted and attacked, and enemy mines were located on several occasions.

During a North Sea patrol a Zeppelin was sighted and chased, but our seaplane was unable to get sufficiently near to engage her effectively.

One of our seaplanes is missing.

MILITARY.

G.H.Q. COMMUNIQUÉS.

MAY 28th, 9.7 p.m.—On the 27th inst. the weather was generally fine but cloudy, and visibility was not good. However, a full day's work was done by our aeroplanes both in co-operation with the artillery and in photography and bombing.

Sixteen tons of bombs were dropped by us in the course of the day on various objectives, including billets between Armentières and Lens, and on the docks at Bruges.

Fifteen German machines were destroyed by our aviators, and three were driven down out of control.

Two of our machines are missing.

On the night of the 27th-28th inst. heavy bombs were dropped by us on Zeebrugge lock and Bruges docks. A great number of dumps and billets behind the enemy's lines were also bombed. A total weight of 21 tons of bombs was used in these different attacks.

All the aeroplanes engaged in this work returned safely.

Hostile night-bombing machines were active over our back areas. A Gotha aeroplane was forced to descend behind our lines and its three occupants were captured.

On the same night our long-distance bombing machines were very active, and dropped between four and five tons of bombs on the chemical works at Mannheim, on Landau railway station, the electric power station at Kreuzwald (near Saarbrücken), on Metz-Sablon railway station, and Courcelles railway station. Some very large explosions were caused.

All machines, except one, returned safely.

MAY 29th, 9.25 p.m.—On the 28th inst. fine weather enabled our aeroplanes and balloons to accomplish a full day's work.

Besides co-operation with the artillery and photographic reconnaissance, our aeroplanes dropped 25 tons of bombs during the day on hostile billets, dumps, railways, and aerodromes behind the enemy's lines on all parts of the British front

Thirteen German machines were destroyed in air fighting, and four others were driven down out of control.

Five of our aeroplanes are missing.

Bombing was continued on the night of the 28th-29th inst.

AERONAUTICAL ENGINEERING
SUPPLEMENT TO "THE AEROPLANE"
INCORPORATING AIRCRAFT ENGINEERING, AERODYNAMICS, AND MATTERS PERTAINING TO THE AERONAUTICAL ENGINEER AND THE AIRCRAFT TRADER

REPORT ON A.E.G. BOMBER, G.105.

Issued by the Technical Department of the Department of Aircraft Production, Ministry of Munitions.

This machine was brought down by anti-aircraft fire at Achiet-le-Grand on 23/12/17.

On a label protected by celluloid, mounted on a tube in the nacelle, is the legend—"Abnahme am (Accepted on) 10/11/17."

This machine, whilst carrying a similar power plant, is very different in construction from the Gotha type, which also embraces the Friedrichshafen Bomber reported on in I.C. 619.

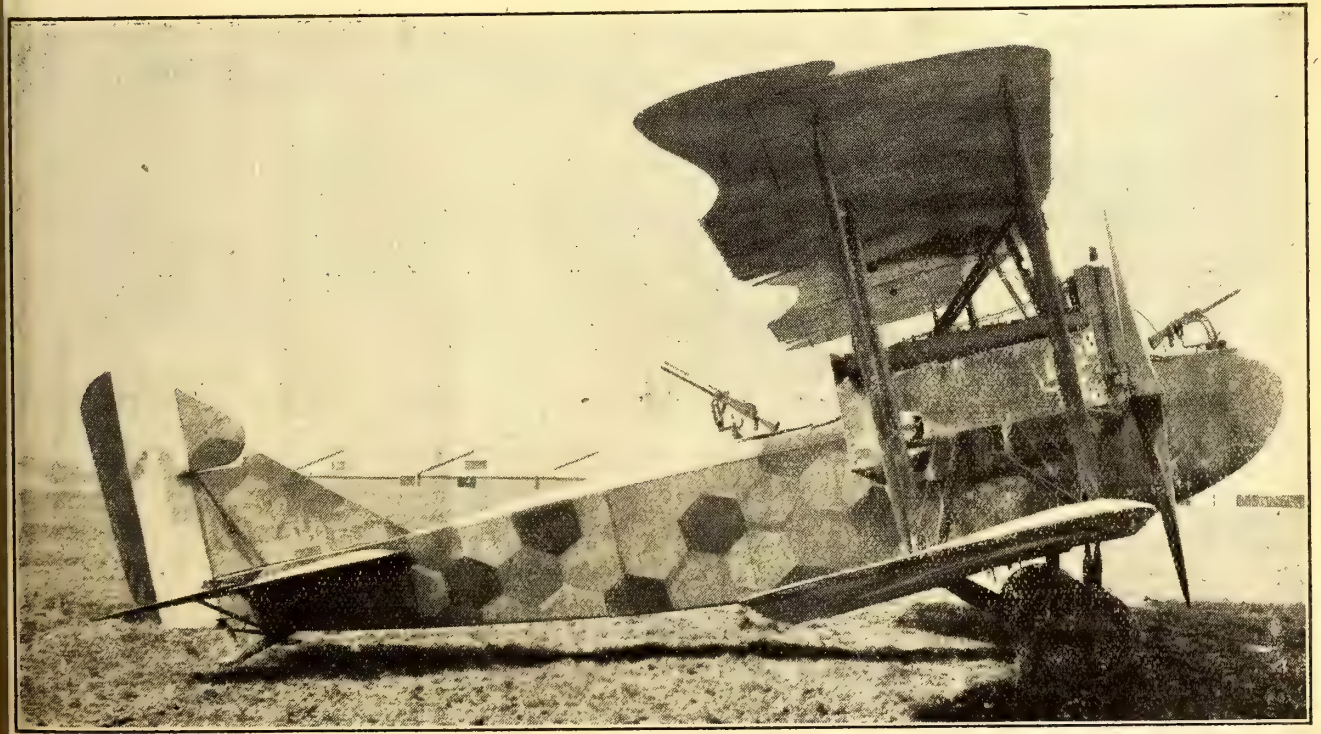
Whereas the latter is generally constructed of wood, ply wood being used to a very large extent throughout, in the A.E.G. steel is almost universally employed, not only in regard to the fuselage, nacelle, subsidiary surfaces and landing gear, but also in the wings themselves.

Needless to say, acetylene welding is freely resorted to throughout the construction, which, however, appears to be far from light.

On the whole, the A.E.G. aeroplane, judged by contemporary British standards of design, is decidedly clumsy, not only in detail work, but also in appearance. The performance is poor.

The leading particulars of the machine are as follows:—

Weight empty	5258 lbs.
Total weight	7130 lbs.
Area of upper wings	395.2 sq. ft.
,, ,, lower ,, ...	335.2 sq. ft.
Total area of ,, ...	730.4 sq. ft
Loading per square foot of wing surface	9.77 lbs. per sq. ft.
Area of ailerons, each	17.9 sq. ft.
,, ,, balance of aileron ...	1.8 sq. ft.
Area of tail plane	34.0 sq. ft.
Area of fin	11.5 sq. ft.
,, ,, rudder	20.8 sq. ft
Balanced area of rudder... ...	2.6 sq. ft
Area of elevators	31.2 sq. ft.
Balanced area of elevators ...	3.6 sq. ft.
Horizontal area of body... ...	206.4 sq. ft.
Vertical area of body	209.2 sq. ft
Total weight per horse power ...	13.7 lbs. approx.
Crew—Pilot and two passengers	540 lbs.
Armament	2 guns.
Engines	2 260-h.p. Mercédès.
Petrol capacity	123 gallons = 861 lbs.
Oil capacity	11 gallons = 110 lbs.
Water capacity	13 gallons = 130 lbs.



Other dimensions are also shown on the drawings at the end of the Report.

Performance.

(*a*) Climb, 5,000 ft. in 10.3 Mins.
Rate of climb at 5,000 ft.—390 ft. per min.
Climb, 9,000 ft. in 23.4 mins.
Rate of climb at 9,000 ft.—235 ft. per min.

(*b*) Speed at Heights.
Level to 5,000 ft.—90 miles per hour approximately.
At 9,000 ft.—86 ,, ,, ,, ,,

(*c*) Landing Speed.
The aeroplane is best landed at a speed between 75 and 80 miles an hour; after flattening out it sinks to the ground quickly and pulls up rapidly.

(1.) Side View of the A.E.G. Bomber. The curious camouflage is to be noted, also the scalloped ailerons, which appear to be a kind of trademark of the A.E.G.

Fig. 1.

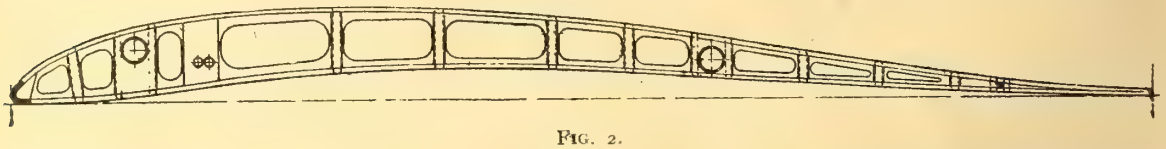


Fig. 2.

(*d*) Control.

1. Lateral—Good.
2. Elevators—Bad, especially when landing.

Note.—It is stated that it is not advisable to fly this machine without a passenger in the front seat.

Construction.

Wings.—As will be seen from the scale drawings, the wings are of characteristic form. The central portion consists of a rectangular centre cell permanently attached to the fuselage.

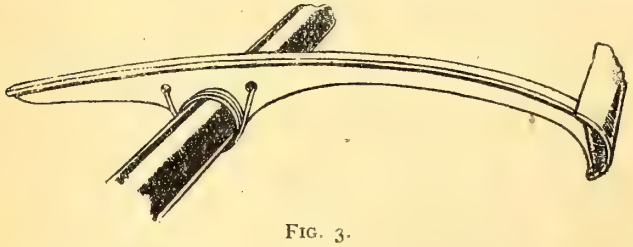

Fig. 3.

The lower wings support the engines. In this centre cell the planes are set horizontally. At each side of it the lower main planes are swept upwards with a vertical dihedral of 2.75°, the top planes being kept flat, and both main planes are swept backwards in the horizontal plane to an angle of 4° for the bottom plane and 3° for the top plane. As the central portion of the upper main plane has 4 inches of negative stagger relative to the bottom plane, this difference in angle brings their tips practically vertically over one another. The angle of incidence

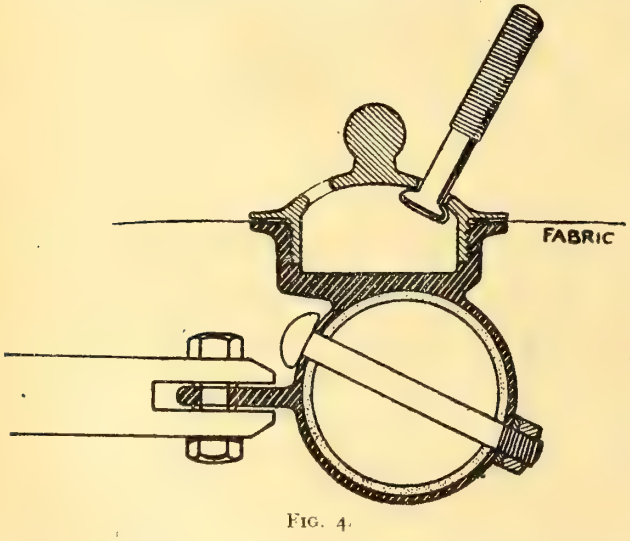

Fig. 4.

attains a maximum of 4° at the base of the engine struts, i.e., 7 ft. 10⅜ inches from the centre. At the second strut the angle is 3½° and at the end strut 2½°. These angles are painted in circles on the surface of the planes, evidently for the convenience of riggers. The camber of both planes is washed out gradually towards the tips, and a representative section of the main planes taken at the junction of the engine bearer struts is given in Fig. 1. For purposes of reference the R.A.F.14 section is superimposed. This figure also shows the position of the main spars which are of steel tube. These are 50 mms. in outside diameter, but their wall thickness is not at present known. In order to allow the thinning down of the wing section, these tubes are flattened out towards the extremity of the wing. They are chamfered down to a narrow end and a flat plate acetylene welded on to each side; thus at the spar tip the section is roughly rectangular. The main spars are kept parallel throughout the whole of their length and are attached to the central cell by means of pin joints, similar to those on the Friedrichshafen. The ribs are of solid wood and are constructed as shown in Fig. 2. It is rather notable in comparison with other German machines of all types that ply wood is almost entirely absent. In the A.E.G. construction the rib webs are perforated and strengthened by wooden uprights at intervals and are glued into a grooved flange. The ribs are placed 300 mms.—325 mms. apart—and are not directly or firmly attached to the spars on which they are a relatively loose fit. Passing through the ribs of the bottom plane and extending from their junction with the centre section to the extreme outside strut are two steel tubes, approximately 17 mms. in diameter, which act as housings for the aileron control wires. These tubes are very strong, and it is thought possible that they are also counted upon to lend rigidity to the wing structure. The leading edge, which is of the usual semi-circular section, acts as a distance piece, as also does the wire trailing edge. Thirteen inches in front of the last named is a stringer formed of a steel rod. Apart from this, the spars are the only longitudinal members of the wings. Between the main ribs are false ribs running from the leading edge to a point a few inches behind the leading spar and applying only to the upper surface. One of these false ribs is sketched in Fig. 3. It is secured as shown in the sketch by means of a semi-circular saddle and a wrapping of tape which passes as shown through holes in the rib. Where it meets the leading edge it is furnished with triangular packing pieces, which locate and hold it in position. The lower plane is covered as to its upper surface with sheet metal immediately under the engines, whilst between them and the fuselage is fixed a strip of corrugated aluminium which acts as a footway. The fabric is attached in the usual manner and is stitched to the ribs both top and bottom. The two surfaces are stitched together behind the metal rod, which acts as a stringer, and by this means the actual trailing edge wire is relieved of a certain amount of tension. The wing structure is internally braced by means of steel tubular cross-pieces and stranded cables. A single fitting is employed for the attachment of the interplane struts and for that of the bracing tubes. This fitting is shown in Fig. 4. It is a tight fit on the spar, to which it is fixed by a bolt, and is formed with an extension lug which acts, as shown, as an anchorage for the bracing tube, whilst a sideways extension of the same lug carries an eye for the bracing wire. It is provided with a cup-shaped upper extension, into which there is screwed a steel dome which carries the ball of the strut socket fitting and also acts as a wiring plate for the interplane bracing wires. As shown in the sketch, the fabric is run into the space between the upper and lower flanges of this fitting, the whole making a very neat job.

Struts.

These are of streamline section steel tube and of uniform dimensions throughout. The section is 92 mms. long by 48 mms. broad. The ends are sharply tapered down, and into them is welded a cupped ferrule which drops on to the ball shown in sketch Fig. 4, and is there held in position by a cotter-pin. The attachment is shown complete in Fig. 5. This joint gives a considerable range of lateral freedom, as is the usual practice on machines of German design.

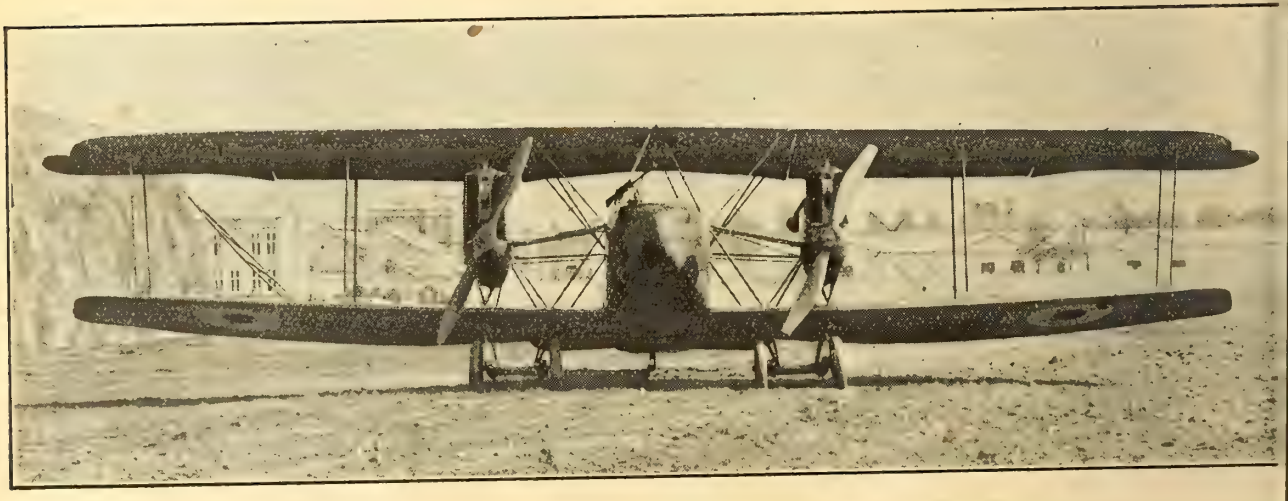
KINDLY MENTION "THE AEROPLANE" WHEN CORRESPONDING WITH ADVERTISERS.



Fuselage.

The whole of the fuselage is built up of steel tubes welded together. It is of plain rectangular section and the cross tubes are attached directly to the main booms without the intervention of any clips. This detail of construction is shown in Fig. 6, which also illustrates the single and double lugs which are used for the purpose of securing the bracing wires. Under the nacelle and in the neighbourhood of the main petrol tanks and the bomb racks the fuselage is reinforced with thin tubular steel tie-rods.

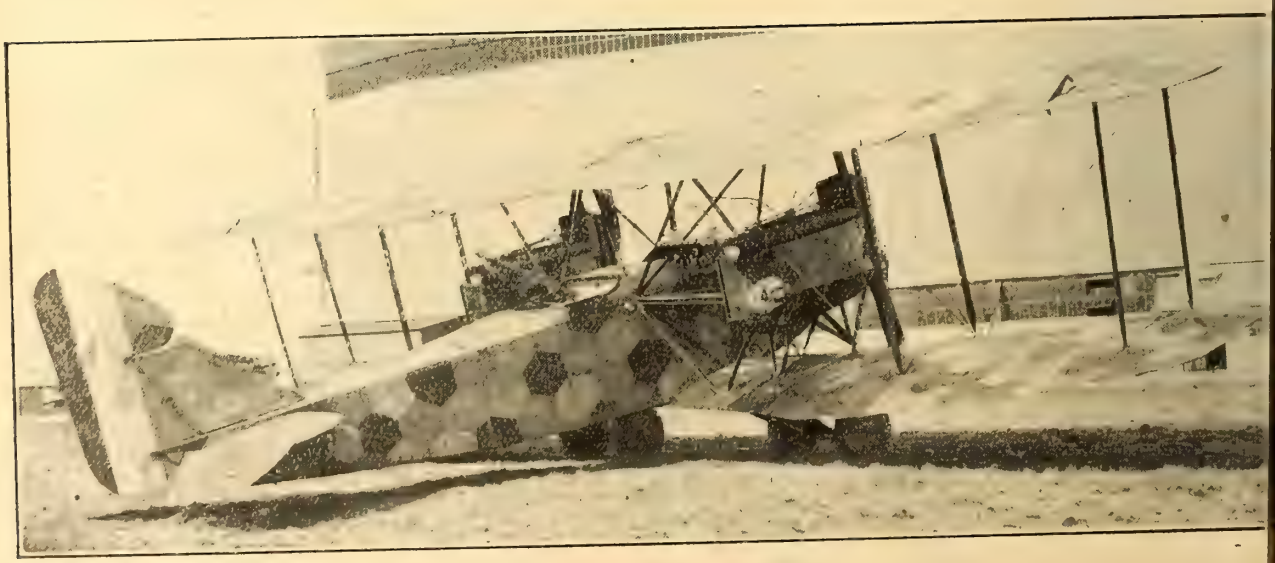


Fig. 7 shows the manner in which the upper booms of the fuse lage are provided with sockets for the inclined struts of the centra cell. The fitting consists of two circular steel plates welded int position to form an integral part of the frame joint, the fron one of these flanges being provided with lugs for the anchorag of bracing cables. The inclined struts are secured by a ring o short set screws wired together as shown. If appearances are t be trusted, this form of attachment, whilst being strong and con venient, is excessively heavy. Unlike the practice which is pur

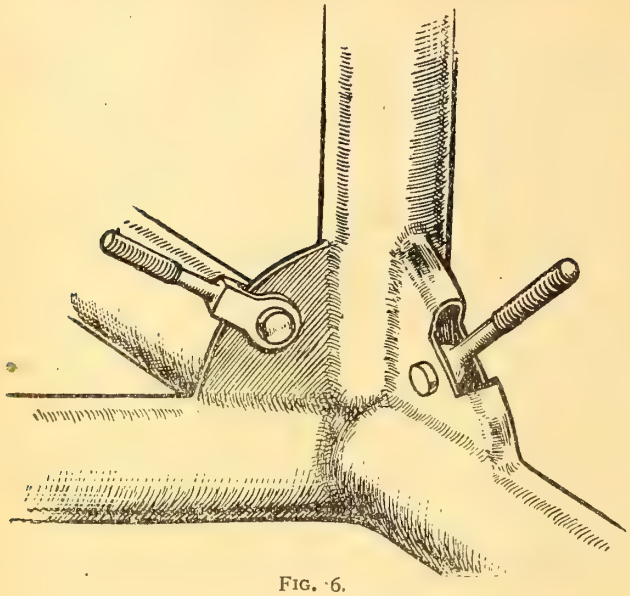

Fig. 6.

sued in the Friedrichshafen Bomber, wherein the main frame consists of three separate sections, that of the A.E.G. is in one piece from stem to stern. The longerons are 30 mms. in diameter and the transverse members 30 mms., these dimensions being retained up to the extreme tail end. The nose part of the frame is covered in with three-ply wood, but behind this a double covering of fabric is used, under which the tubular construction is completely hidden. Behind the after cockpit a single covering only is adopted and laced the whole of its length so that it is removable in its entirety.

Engine Struts.

These are of streamline steel tubing and embrace joints of a somewhat similar type to those used on the interplane struts; that is to say, a certain amount of free movement is provided. The mounting of the engines is clearly shown in the front and side elevations. In front there are four struts which converge to a joint on the leading spar, whilst at the rear there are two struts which meet at a joint on the trailing spar. The attach-

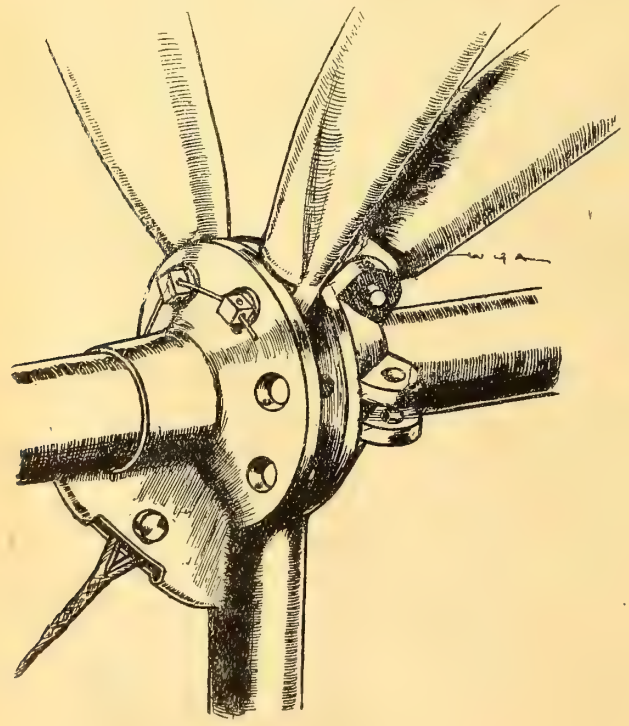

Fig. 7.

ment of the former is shown in Fig. 8. The bell-shaped housing attached to a cup on the spar joint contains a ball-ended set screw which screws into the foot of the four struts which are here united by welding. The inclined transverse struts are taken from the spars to the engine mounting and cross struts from thence again to the upper booms of the fuselage. In order to provide simplicity of erection these subsidiary struts are provided with a means of adjustment as shown in Fig. 9. At

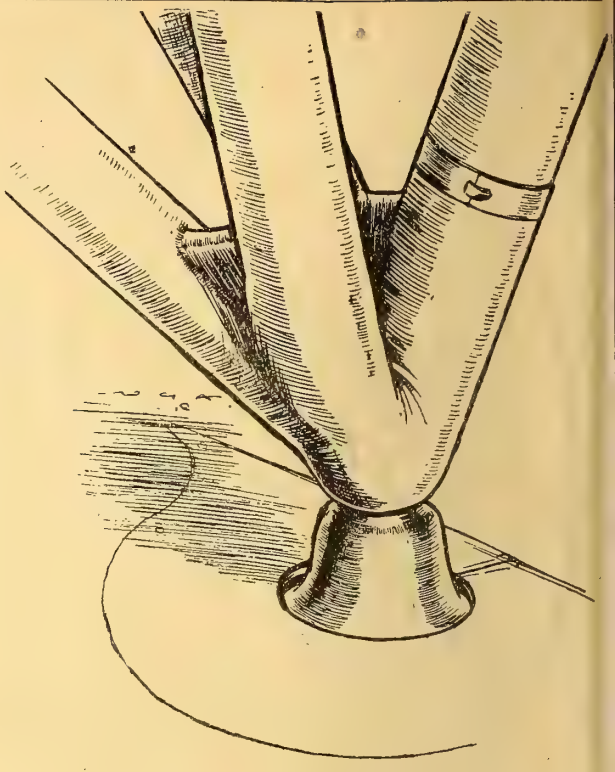

Fig. 8.

one end they terminate in a ball-ended set screw screwed into the tapered end of the strut and secured by a lock nut.

Engine Mounting.

The engine bearers are of steel rectangular section, measuring 40 mms. high by 30 mms. broad, with a wall thickness of approximately 2 mms. These bearers are welded to the struts which support them, as shown in Fig. 10, and for the greater part of their length are reinforced by a system of tubular tie-rods also welded in position. Box attachments welded to the engine bearers, as shown in Fig. 11, are provided for the crank-chamber holding-down bolts. The engine is not directly mounted on the steel bearers, but upon ½-inch wooden washers. Owing to the deformation inseparable from so much welding, the engine mounting is of very clumsy appearance, and, in fact, the quality of welding does not appear to be up to previous German standards, but the construction would appear to be light.

Engine Fairing.

As shown in the photographs, the engines are

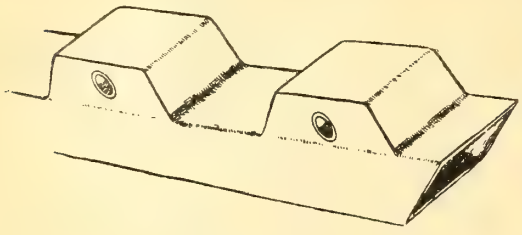

Fig. 11.

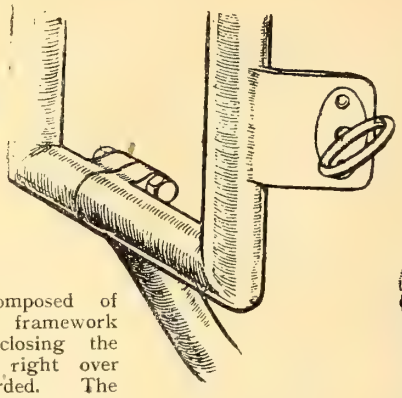

Fig. 12.

almost completely enclosed in a fairing composed of detachable aluminium panels. The necessary framework and clips are provided for panels totally enclosing the engine, but it would seem that this bonnet right over the heads of the cylinders has been discarded. The tubular framework which supports the panels is an elaborate piece of work comprising a multiplicity of welded joints. It consists of 16 mm. tubes, to which are attached lugs for carrying the necessary turn-buttons. The framework is made in two halves so as to be easily detachable, and a joint for that purpose is made, as shown in the sketch Fig. 12. It will be noticed that a narrow slot for the exit of air passing over the engine is provided at the rear end of the engine egg, an opening of somewhat similar dimensions being between the two halves of the radiator.

Engines.

The engines are the standard 6-cylinder 260-h.p. Mercédès. These engines have already been fully described, and no important novel points are adopted. A new shape has been adopted for the exhaust pipe, and this is clearly shown in one of the photographs—an inverted cone is placed in the belled mouth of the pipe. The usual water-pump greaser is fitted and worked by a lever in the pilot's cockpit. It is of rather less clumsy design than that of the Friedrichshafen, but employs the same principle. The throttle is interconnected with the ignition advance as described in the Friedrichshafen report. A small fitting, the purpose of which is not very clear, is attached to the carburetter, and consists, as shown in Fig. 13, of a bell-shaped cover over the top of the float chamber, not directly connected thereto, but supported on a bracket clipped to the main water pipe. The bell is free to slide up and down the stem of the bracket, on which it is a very loose fit, but is prevented from falling over the float chamber by a small washer. It is conjectured that this fitting may have for its purpose the prevention of petrol having access to the hot exhaust pipe in the event of the machine turning over. Between the bell and the float chamber is a clearance of about $\frac{1}{4}$-inch.

Petrol System.

The petrol system employed on the A.E.G. is as set out diagrammatically in Fig. 14. There are two main tanks, each of 270 litres = 95 gallons total capacity, and these are placed under the pilot's seat in the main cockpit. Two subsidiary tanks used solely for starting purposes and giving a gravity supply are mounted in the centre section of the top main plane and are roughly streamline form. Beneath them is a small cowling containing their level gauges, which are visible from the pilot's seat. On the right hand side of the main cockpit is fitted a hand-operated wing pump, the object of which is to draw petrol from either of the main tanks and direct it to the gravity tanks. Pipes from all four tanks are taken to a distributing manifold on the dashboard, and by means of seven taps thereon the supply of petrol can be directed from any one of the tanks to either engine or both. Two additional taps are provided on the wing pump so that the fuel for the gravity supply can be drawn from either main tank as required. The photograph (H) clearly shows the arrangement of the petrol taps, which are of the plain plug type. It would appear that the troubles associated with this form of tap have been overcome, as they

BELLING ELECTRIC GLUE POTS

for Aeroplane and other work

List No. 38.
Price 32/-
(Spare Elements 3/6 each)

Strongly made in cast iron, the Glue container being tinned.
Capacity: 2 pints of glue.
Loading: 900 watts.
3 elements, 3 heats, 3 loose connectors for attaching the cable to.
Weight: 14 lbs.
For use off a power circuit.

List No. 39.
Price 35/-
(Spare Elements 3/6 each)

As above, but with a loading of only 600 watts so that it can be used off an ordinary lamp socket.
Complete with connectors, 2 yards flex, and lamp holder adaptor.

List No. 40.
Price 47/6
(Spare Elements 3/6 each)

Similar to List No. 38, but fitted with a 3 heat switch on a separate panel, which is connected to the Glue Pot by 4 feet of metallic flexible tubing.
For use off a power circuit and recommended for Factory work.

All prices are subject to 25% advance.
Carriage extra on orders under £3 net value.

ALLEN
PISTON RINGS

Best
FOR ALL MAKES AND TYPES
of
Aero Engines

An exclusive and valuable feature of the ALLEN rings is the scientific method of stressing

The whole ring is "stressed" in one simple and complete operation by a specially designed machine tool.

This means a ring of perfect accuracy and absolutely correct fit.

Judge for yourself of its superior qualities by sending for a sample ring.

ALLEN & SIMMONDS, Ltd.,
Piston and Piston Valve Engineers,
READING, Eng.

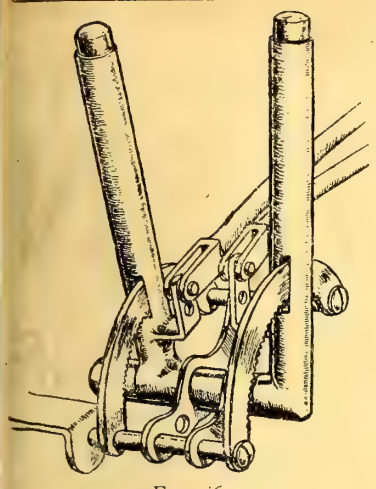

Fig. 16.

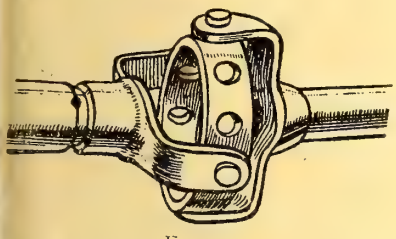

Fig. 19.

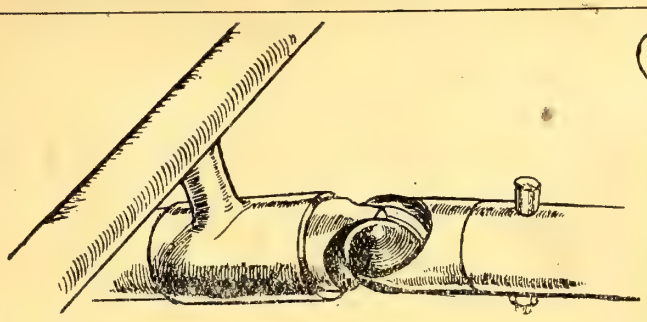

Fig. 17.

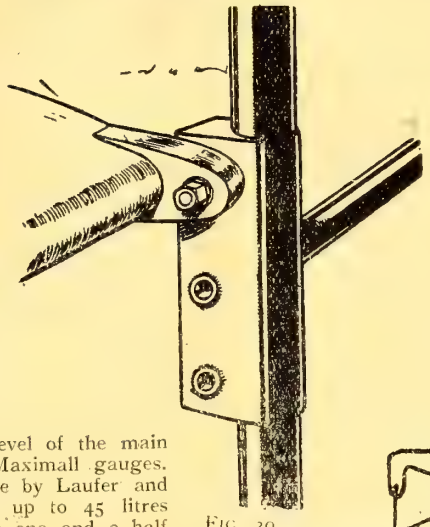

Fig. 20.

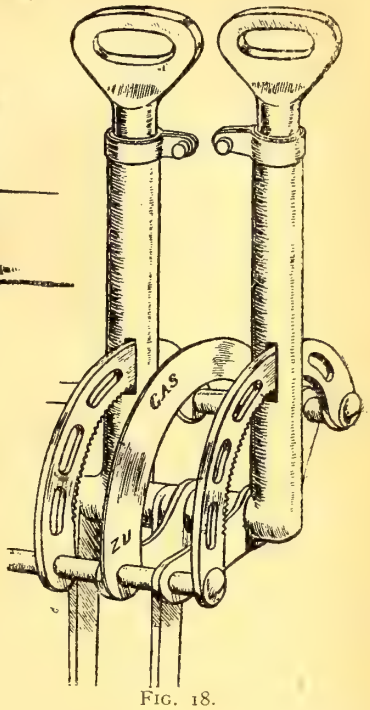

Fig. 18.

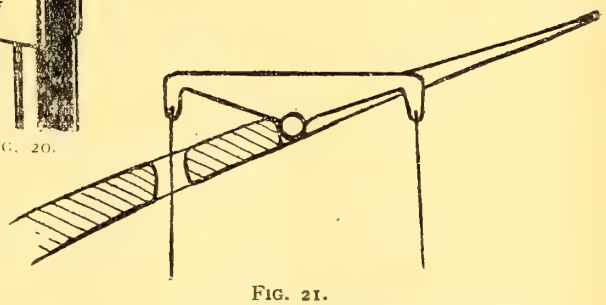

Fig. 21.

show no signs of leaking or sticking. The level of the main tanks is indicated on the dashboard by two Maximall gauges. Those attached to the gravity tanks are made by Laufer and employ the static head principle. They read up to 45 litres each, from zero to this figure being given by one and a half complete revolutions of the indicating hand.

Petrol Pressure System.

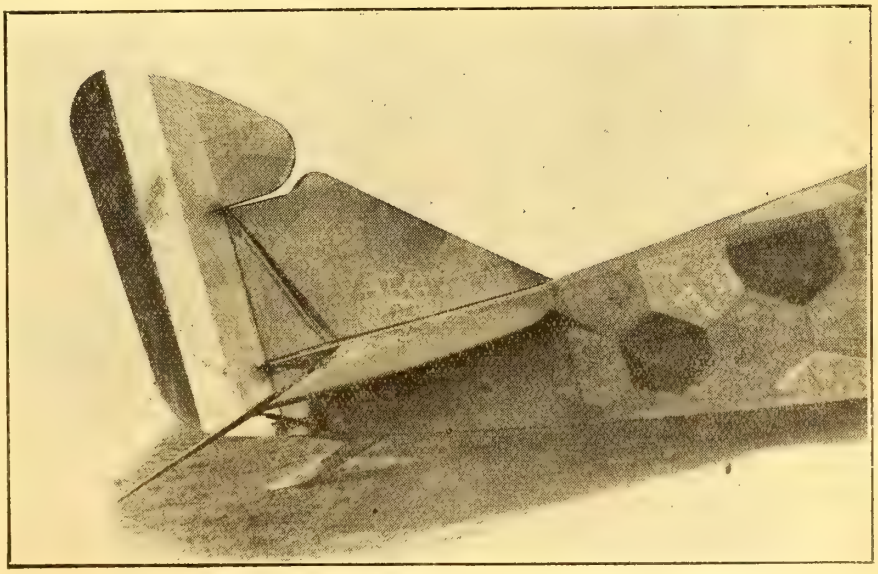
The sketch Fig. 14 also shows in solid lines the arrangement of the petrol pressure system. The usual pressure pump is mounted on each engine and pipes therefrom are led to a manifold mounted on the dashboard. This is also connected to a large hand pump on the right hand side of the pilot's seat. Gauges reading the pressure from each engine pump are provided, and there is also a blow-off tap for relieving the pressure of the whole system.

Oil System.

This is the usual system as fitted to all 260-h.p. Mercédès engines. The main supply of oil is carried in the crank-chamber sump and is continually being refreshed by a small additional supply of fresh oil drawn from an external tank. This tank has a capacity of 5 gallons, is of rectangular shape, and is mounted at the side of the engine nearest to the fuselage. It is provided with a visible glass level over which is a celluloid covered window let into the engine fairing, so that the oil level is visible from the pilot's seat.

Radiator.

Each radiator is composed of two halves bolted together, as shown in the sketch Fig. 15, which is to scale. The space between the two halves is partially covered with a sheet metal panel pierced with a hole 1ft. 6in. high by 4in. wide The radiator is not actually honeycomb, though presenting that appearance. It consists of a series of vertical tubes with transverse gills. Each radiator cell measures 2ft. 3¾in. high by 7⅝in. wide, and has a uniform depth of 4in. Each complete radiator is provided with two shutters of roughly streamline section. These, when fully closed, cover over about one-third of the radiating surface. They are controlled from the pilot's seat by two levers shown in Fig. 16, which work them through universally jointed rods. The articulation in these rods is very neat and of the form shown in sketch Fig. 17. Each radiator is fitted with an electric thermometer, full details of which device have been published. The dial of this instrument is carried on the dashboard and is furnished with a switch enabling the temperature of either radiator to be independently read.



Engine Control.

The throttle levers are of the plain twin variety, and are constructed as indicated in sketch Fig. 18. They are placed close together so as to be easily worked either in unison or separately.

The connections between the levers and the carburetter are made as simple as possible, and the levers operate the throttle through a couple of universally jointed rods which extend from each side of the body to the engine eggs. The universal joints used are of the type shown in Fig. 19, there being apparently no particular desire on the part of the designer to economise weight in these details.

Tail Planes.

The fixed horizontal tail planes are notable for their extremely

(G) Near View of Rudder, Fin, and Tail-skid

bold curvature, both top and bottom. The framework consists entirely of welded steel tubing. The leading edge of the tail plane is mounted so as to be adjustable in case of necessity, a simple bracket being used for this purpose, as illustrated in Fig. 20. This is welded on to the fuselage upright at each side and strengthened with a transverse stay. It allows the tail plane leading edge to be fixed in one of three positions. The trailing edge of the tail plane is supported each side by a streamline section steel tubular strut.

Fin.

The fin, like the fixed tail plane, has also a very strongly marked streamline section at the base tapering off to flat at the top, where it abuts against the balanced portion of the rudder. At this point its framework, which is of light steel tube, is made rigid by a couple of tubular stays bracing the rudder post to the sides of the fuselage.

Rudder and Elevators.

These organs are built up of steel tubular framework and present no points of special interest, except that in the case of the rudder that part which is above the fixed fin is made of grooved section.

Ailerons.

As may be seen from the plan view of the complete machine, the shape of the ailerons is somewhat unusual. These are applied to the top plane only and have a chord which reaches its maximum at their extreme ends and its minimum in the centre of their length. For what purpose this peculiar shape is adopted is not clear. The framework of these ailerons is welded steel tubing, and the control crank is fitted in such a way as to lie partially hidden in a slot in the main plane. This crank is built up of welded sheet steel, and is arranged as shown in the sketch, Fig. 21, an elliptical hole being cut in the trailing edge of the main plane for the passage of the forward wire.

Control.

The main control consists of a wheel mounted on a pivoted lever, the wheel operating the ailerons by means of a drum and cables, which pass direct over pulleys and along tubes running parallel with the wing spars and then over inclined pulleys up to aileron cranks. The wheel column is pivoted to a long crossbar extending the whole length of the fuselage and carrying at each end cranks for the elevator control wires which at intervals are carried through fibre guides socketed to the frame. The cranks of the elevators are concealed inside the rear end of the fuselage whilst those of the rudder (which is fitted with duplicate cranks and wires) are external. A modified dual control is fitted, which allows the assistant pilot to work the elevator and rudder only. For this purpose a socket is mounted on the pivot bar into which can be inserted a plain steel tube which is normally carried in clips behind the pilot's back. A second rudder bar, the design of which is shown in Fig. 22, is carried under the dashboard and can readily be dropped into position into a square socket partially sunk into the floor of the cockpit and connected to the pilot's rudder bar by cranks and a link.

Personnel.

Seats are provided for a crew of four, who are carried as follows :—

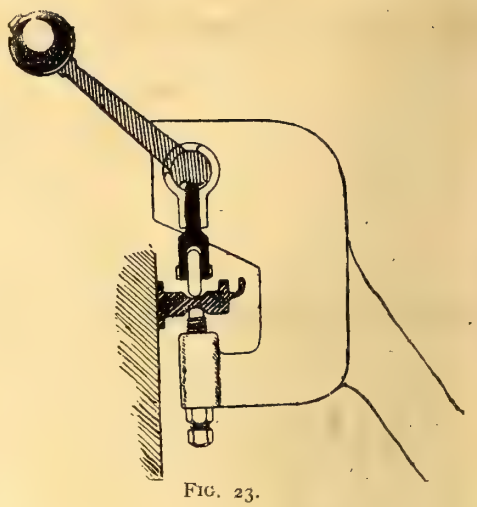
One in the front cockpit.
One in the pilot's seat.
One at the pilot's side.
One in the rear cockpit.

All can, if necessary, change places whilst the machine is in the air. Between the front cockpit and that of the pilot a sliding panel is provided through which the gunner can crawl. The seat at the side of the pilot folds up and slides back into a cavity under the coaming of the nacelle and when in this position allows access down a narrow and inclined passage-way to the rear cockpit. The machine can hardly have been designed to satisfy the requirements of the average pilot in regard to view, as from the pilot's seat it is very difficult to see the ground properly on account of the position of the lower main plane and the width of the fuselage.

Armament.

Two Parabellum guns are mounted, one in the front cockpit and one in the rear, and provision is made for mounting a third or for transferring one of the others on the floor of the rear cockpit, so that it can fire backwards and under the tail of the machine. For this purpose a large trap door, which is visible in the photograph (K), is provided in the floor of the fuselage behind the rear cockpit. This trap door has celluloid windows and is normally kept closed by springs. It is lifted up by a small hand winch fitted with a ratchet. It is of passing interest to note that whereas in the Friedrichshafen a similar trap door was kept open by means of springs, in the A.E.G. springs are used to keep the door closed. In the front cockpit the gun is supported on a carriage which runs round a partially circular rail which is strongly supported from the fuselage by a framework of steel tubes. Forming part of this frame is an inclined steel tubular column, the base of which is fitted in a swivel bearing in the floor of the cockpit, and on this is mounted an adjustable seat for the gunner. A toothed rack runs round the rail and engages with a spur pinion driven by a hand wheel so that the gunner, when occupying his seat, swivels himself round as well as the gun. This gun mounting is shown in photograph (I), and a diagrammatic section of the carriage is given in Fig. 23. The vertical swivel of the fork-ended gun carrier is locked by a ball-ended lever and a similar lever is employed for locking the carriage itself to its rail.

This action is accomplished by a cam device which depresses the roller of the carriage and squeezes the rail section between the roller and an adjustable set screw which normally just clears the groove on the under side of the rail. In order to prevent the forward gunner from shooting the tractor screws, preventative shields of light steel tube are carried between the upper edge of the forward cockpit and the inclined struts of the centre section. These impose a limit to the travel of the gun. In the rear cockpit the gun mounting is U shaped in plan form, and here again the principle of a carriage running on a rail



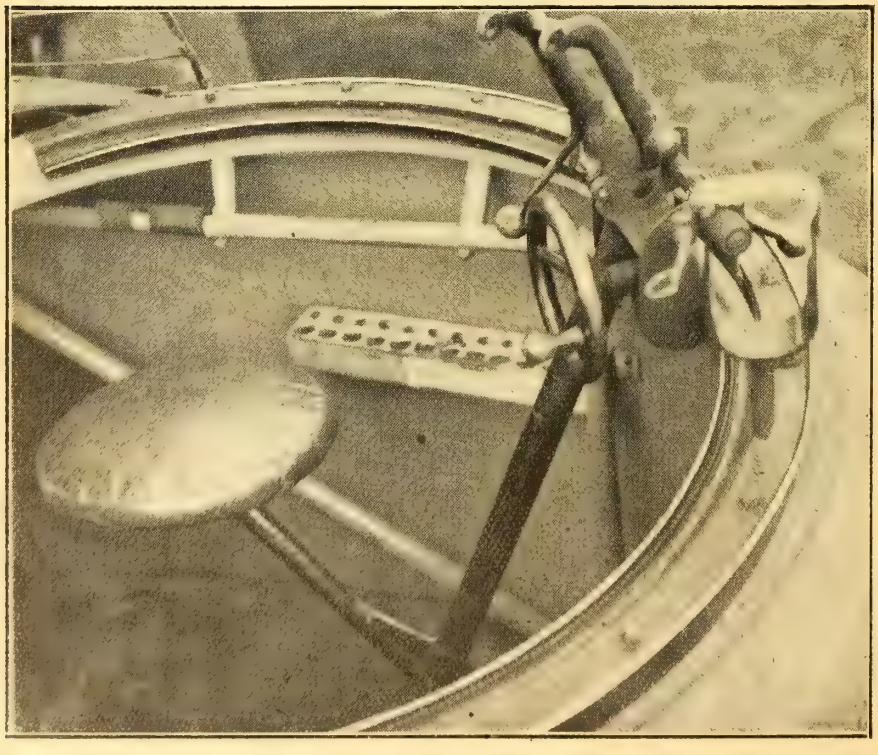


Fig. 23.

and driven by a spur gear meshing with a toothed rack is employed, though in this case the gunner's seat does not revolve with the gun. The carriage is of a somewhat similar type to that used in the front cockpit, but the method of locking it is different. This is shown diagrammatically in Fig. 24. The rail is provided with grooves both above and below, there being two rollers at the top and one underneath. Normally, when the gun carriage is free, the latter is clear of the rail, but when the locking mechanism is brought into action it is forced upwards so that the rail is gripped between the rollers, thus avoiding any possibility of shake at this point, and at the same time a positive lock is obtained on a second rail carried below the first. When the ball-ended hand lever is tightened, its effect is to squeeze the lower rail between two jaws. The movable jaw is, however, connected up by a link to a small cam, the base of which abuts against the foot of a fork-ended rod which carries the lower roller and is free to move up and down in a guide, to the base of which the cam is pivoted. By this means a very secure and rapid locking device is obtained. In the front of the rear cockpit a locker is provided which would be capable of holding ammunition, and beneath this a series of racks of the type shown in Fig 25. These racks are not strong enough to hold anything very heavy, and are placed approximately 5 inches apart.

Bombing Gear.

Three racks for holding twenty-five pounder bombs are installed on the machine; two side by side on the left side of the rear cockpit, and one on the right side of the petrol tanks in the space between the pilot's and rear cockpits. This rack is

DAVIS
High-Speed Steel Furnaces

THE Davis "D.H.S.T." series of Gas-Fired Furnaces have been specially designed for the hardening of Modern High-Speed Steel Tools, and to provide the maximum of convenience and efficiency at the least practical fuel cost.

The firing element consists of Davis PATENT Air-Blast Burners, for Gas at ordinary main pressure and air at 2 lbs per square inch. Two chambers are provided, each fitted with stopper brick; a pre-heating temperature of 1,000° C being obtainable in the upper chamber and 1,350° C in the lower, whilst the flame does not impinge on the work.

Illustration shows the No. 100 size (each chamber $9\frac{3}{4}'' \times 5\frac{1}{2}'' \times 3\frac{3}{8}''$ inside). Price **£30** complete. Made in 4 other sizes—see Lists F18 A, B and C (gratis).

Also OVENS, MUFFLES, CRUCIBLES, LEAD-MELTERS, etc

THE DAVIS FURNACE CO
(Proprietors, THE DAVIS GAS STOVE CO., LTD.)
DEPT. Q, LUTON

a sketch of which is given in Fig. 26. This in turn is carried on a bracket clipped to a steel tube running parallel to the wing spars and braced thereto by tubular steel girders. The crosshead is free to swivel on the bracket against the action of a coiled spring which, when the bomb has been released, twists the crosshead round against a stop, so that the belly-band is forcibly swung round and now faces the direction of flight instead of lying edgewise on to it. The ends of the steel strips are swivelled on the crosshead, and here again coil springs are used, so that the tendency is for the belly-band to be held flat against the lower surface of the bottom main plane, and out of the way of the other clip.

When the bombs are in position, the rings which are fitted on the free end of the belly-band are caught between the jaws of

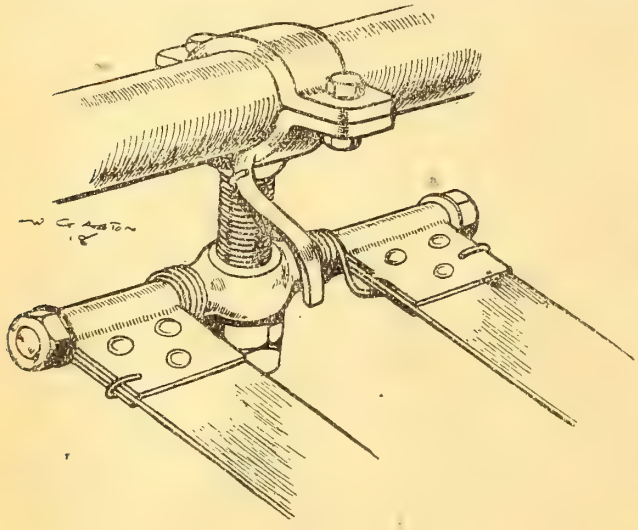

Fig. 26.

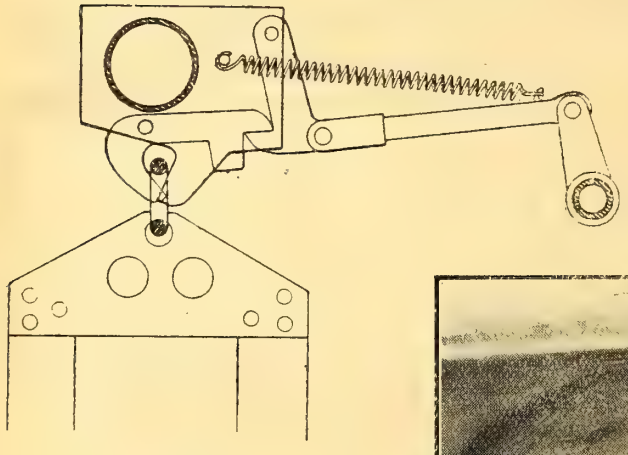

Fig. 27.

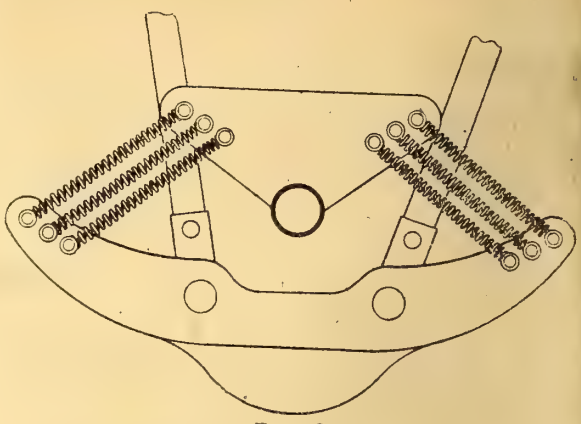
a trigger mechanism, illustrated diagrammatically in Fig. 27. This device is carried on the same tube which supports the crossheads, as already mentioned. Lying parallel to this tube and between it and the leading spar is a control rod fitted with two levers which are connected respectively to the two bomb trip gears, and this rod is operated by a quadrant lever mounted in the front cockpit. In order to allow one trip gear to be worked at a time, the link of the outer trip is provided with a slot where it is pivoted to the trigger release. On working the lever in the cockpit, therefore, its first action up to half way over the quadrant is to release the bomb nearest the nacelle, whilst a further movement releases the outer bomb. An exactly similar method is employed for operating the bombs carried underneath the other wing. The levers in the front cockpit are all mounted on a common bracket built up of steel tubes, and are arranged as follows:—First, there are the two levers which control the



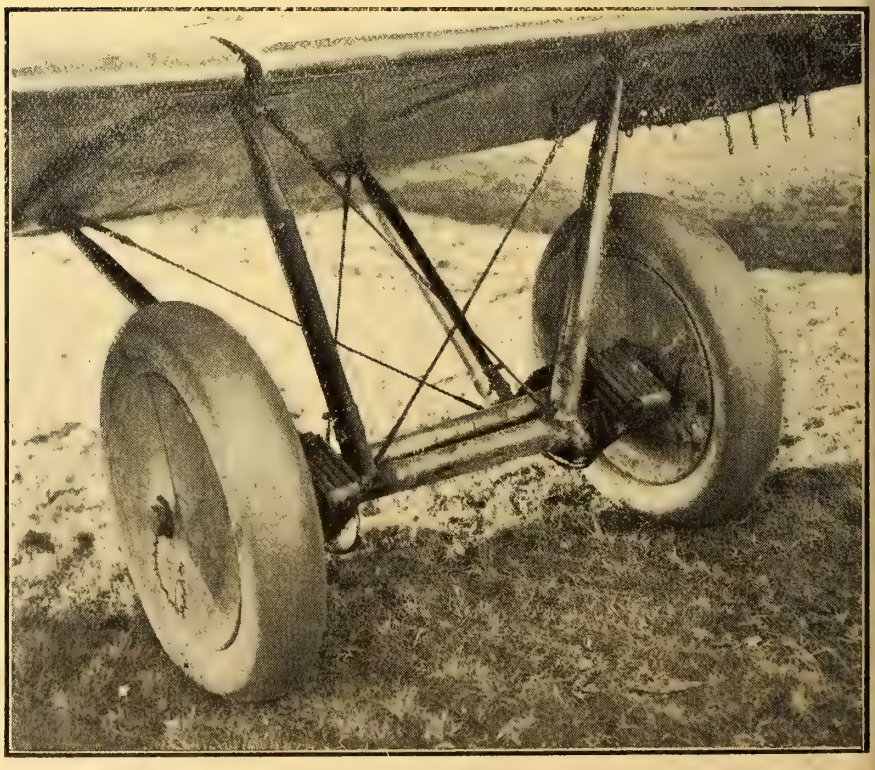


Fig. 28.

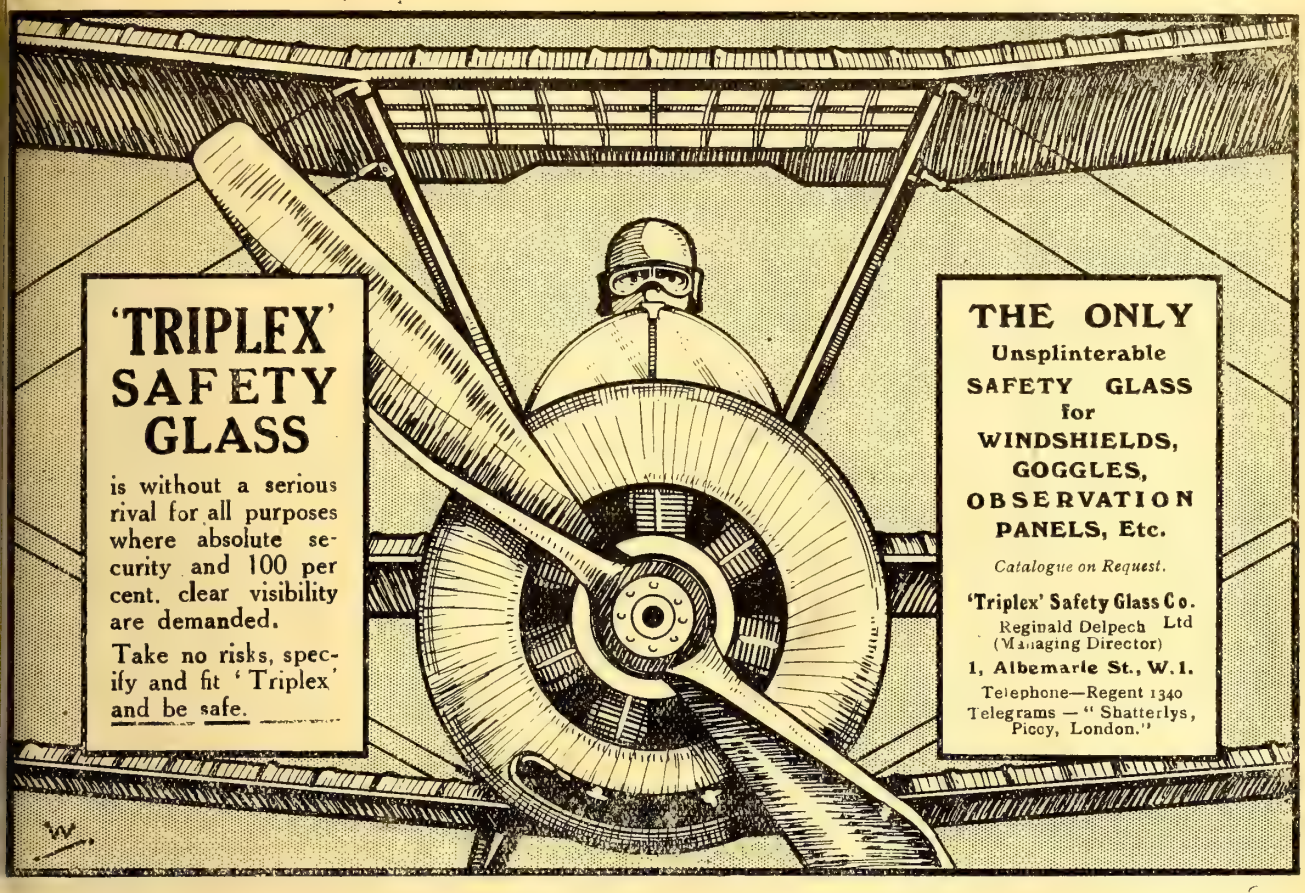

two bomb magazines in the rear cockpit. These are provided with thimbles and chains, so that they cannot be operated accidentally. Next a single lever which controls the large bomb clips on the right wing. These are capable of being secured by split pins inserted in their quadrants. Next, there is a lever which in this particular machine was furnished with no action at all, but is evidently designed for manipulating the large bomb carriers when these are installed. Behind it are, first, a single lever for the left hand outer bomb clips, and, finally, the lever for working the bomb magazine on the right hand side of the nacelle.

Landing Gear.

The landing gear of the A.E.G. bomber is simply an elaboration of that which has become practically a standard fitting on single and two-seaters, except that in this machine the gear is in duplicate. It consists of two axles carrying two wheels a-piece, and suspended from pairs of V struts. One pair is connected to the spars of the centre section immediately underneath the engine strut sockets, and the other to the spars midway between this point and the fuselage and at the same point from which diagonal struts are taken from the spars to the engine mounting and nacelle. This, together with the wire bracing of the landing gear struts, provides a completely triangulated construction. The struts are, however, connected by ball joints similar to those used with the engine struts, so that in case of strain a certain amount of free movement can take place. The pairs of V struts carry at their foot a hollow steel crossbar having the section of a trough, and in this lies the axle which connects the two wheels. As shown in the sketch Fig. 28 and in the photograph (L), the fixed beam has forward and rearward extensions, at each

AERO ENGINES

S.B.A.C. THE SOCIETY OF BRITISH AIRCRAFT CONSTRUCTORS

W. H. ALLEN, SON & CO. LTD.

BEDFORD, ENGLAND.

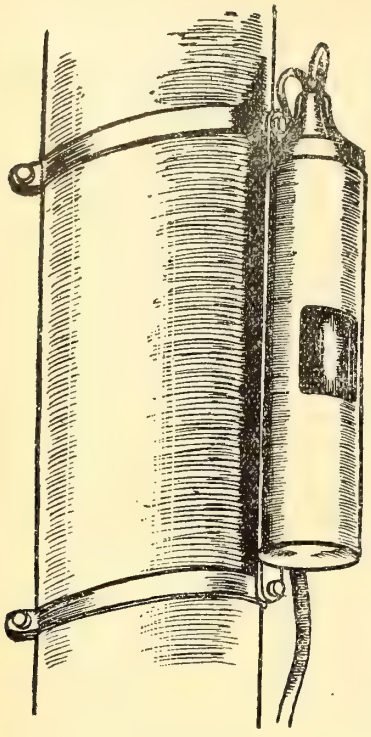

Fig. 29.

end of which are anchored the ends of the batteries of coil springs which act as shock absorbers, and at their other ends are hooked to a horn plate on the wheel axle. Each battery of springs, of which there are four to each axle, consists of 18 springs. A yoke of stranded steel cable restricts the movement of the axle beyond a certain limit. The tyres are 32 ins. × 6 ins. = 810 × 150. A tail skid of massive proportions is used. This is of the shape shown in photograph (G), and is built up entirely of welded steel. The springs against which it works are concealed inside the tail end of the fuselage.

Wireless.

The machine is internally wired for wireless, and a special dynamo for supplying current for this purpose and also for heating is installed on the right hand engine. This dynamo bears the following inscription :—

Telefunken.

J. P. Flieg. C 1916. Type D.

Alternating current 270 watts. 5 amperes. 600 frequency.
Continuous current 50 volts. 4 amperes. r.p.m. 4,500.

The dynamo is mounted on brackets acetylene-welded to the steel engine bearers, and is normally completely enclosed in a detachable fairing. Its position is clearly shown in photograph F. The dynamo drive embraces the pulley which is a standard fitting on the 260-h.p. Mercèdes, but in this particular case the clutch gear whereby the driving pulley can be disconnected from the engine as required appears to have been discarded. Two sets of wires are taken from the dynamo inside flexible metal conduits to a pair of plugs situated at the junction of the fuselage and the right hand lower main plane. Here they terminate in plug sockets, so designed that the plugs cannot be inserted wrongly. One of these wiring circuits applies to the heating system, and wires for this purpose are carried to points in all three cockpits, whilst the other circuit is for wireless and terminates in a plug adaptor in the rear cockpit. No wireless instruments were fitted. Two plug sockets for the heating installations are arranged in the rear cockpit; two in the pilot's cockpit, and one for the forward gunner. A small plate on the pilot's dashboard carries the following inscription, but no definite information is given :—

F. T. Fitting. W/T Set.
Aeroplanes.

Type 94. NY 1125/16.
Fitting, No. 85a.
Driving propeller. Type. Direct coupling.
Length of aerial wires — — — —

F. T. Fitting. W/T Set
Aeroplanes

Telefunken transmitter.— — — metres
Huth transmitter. — — — — metres
D transmitter. — — — metres.
G transmitter. — — — metres.

In addition to these two circuits, there is a lighting installation in conjunction with a battery carried in a box in the rear cockpit. From here, wires are taken to each cockpit and also to the tail and via the leading edge of the upper plane to the extreme outside strut of each wing. On these struts red and green lights are carried, the lamps for this purpose taking the form shown in Fig. 29. Inspection lights are provided at convenient points in each cockpit over the dashboard, instruments, etc.

For the most part the lighting wiring is contained inside a light celluloid conduit.

Instruments.

These comprise twin engine revolution counters, twin air pressure gauges for the petrol supply, electric thermometer, altimeter, petrol level gauges, etc. All of these are of recognised types and call for no detailed description.

Camouflage.

This machine is camouflaged in six different colours on a uniform system covering every portion. The colours are arranged in hexagons measuring roughly 18in. across the flats, and the colours are sage green, reddish mauve, bluish mauve, black, blue and grey. These colours are not flat washes, but are softened by being stippled and splashed with paint of a lighter tone. The effect gained is well shown in photograph G. Considerable care appears to have been taken with this camouflage scheme, which is presumably effective.

Fabric and Dope.

The fabric throughout is of good quality and the dope acetate of cellulose.

Propeller.

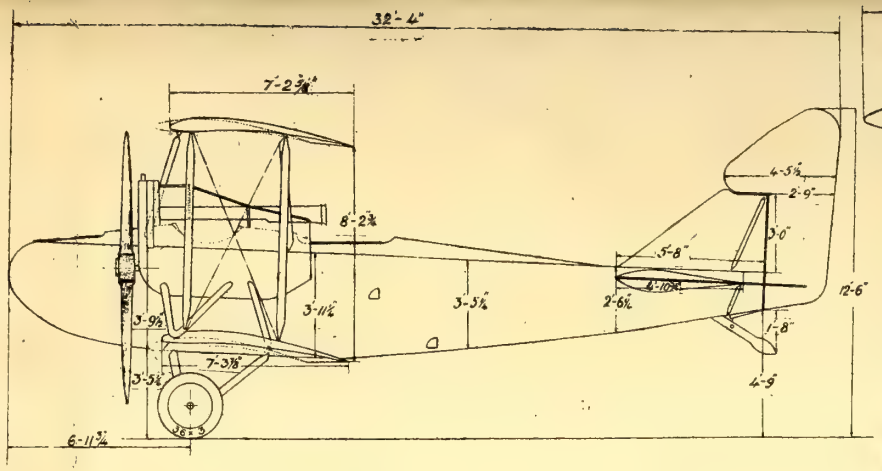
Diameter 10ft. 3.8in.
±.2oin.
Pitch 59.3in.

The following table gives the thicknesses of the various laminæ used in construction of the airscrew. The laminæ are numbered from the trailing to the leading edge.

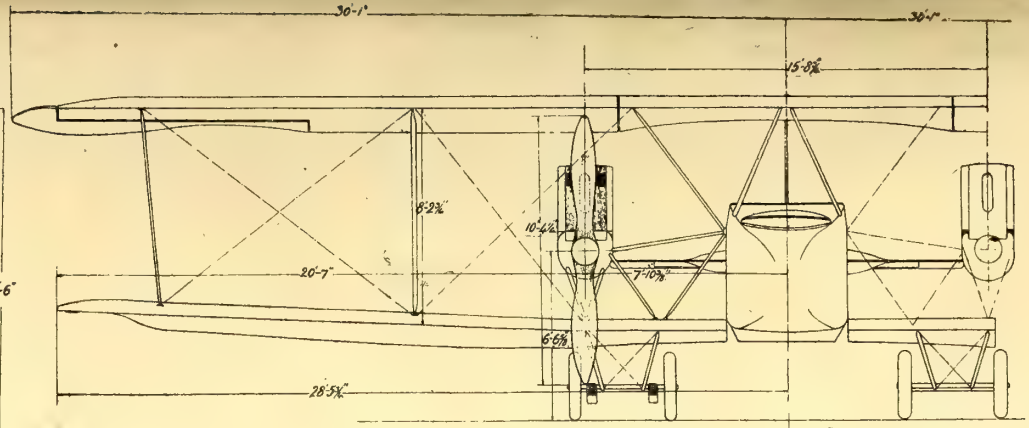
No.	Material.	Thickness in inches.
1	Walnut	.73
2	Mahogany	.80
3	,,	.80
4	,,	.80
5*	,,	.80
6	,,	.80
7*	,,	.40
8*	,,	.40
9	,,	.80
10	Walnut	.83

* These laminations were of a quite different kind of mahogany, probably African.

Only one airscrew has been seen and dimensioned. Thus it is unknown whether all airscrews would have laminæ of similar thicknesses and of similar timbers. There is no apparent reason why these laminæ should be of different thicknesses. It is surmised that either the enemy is short of timber or that he has a highly scientific reason for so doing that we do not know. The port and starboard airscrews rotate in opposite directions.



W. G. A., March, 1918.



A QUICK NAILING MACHINE.

Aircraft manufacturers who are in the habit of using nails to a large extent in aircraft construction, as for example in nailing down webbs and strips on wings, will be interested in a new nailing machine which has been produced by L. F. Grammes and Sons, of Allentown, Pennsylvania, U.S.A. As this machine has been specially designed for aeroplane work no photographs or illustrations are available, but one assumes that it operates on the same principle as nailing machines for other specific work invented and designed by this same well-known firm. It is claimed for these machines that each machine does the work of a number of people, and does it better and more accurately than by hand. It is said that there is no possibility of the wood splitting in driving in nails and that each nail can be driven in at a uniform distance, which is impossible when driven in by hand. Also the nails can be driven below the surface of the wood so as to allow for the sandpapering of the wood without interference with the heads of the nails and designed in such a way that the points of the nails are clinched over. The machines are positively self-feeding. That is to say, the nails are fed in automatically without the aid of the operator. The nails are thrown into the feed-hopper anyhow and the operation of the hopper causes them to slide down to the point where they are picked off and dropped automatically into the chucks ready to be driven. The picker bar which picks off one nail from each track at a time is in the Grammes machine entirely in one piece, whereas one gathers that in other makes the same work is done by anything between 12 or 40 different parts. An ingenious device removes bent nails which get into the hopper by accident. All adjustments and changes and feed or stroke are conveniently made by hand without the aid of tools. The rate of operation of the machine is apparently only limited by the capacity of the operator.

The Company guarantee to accept delivery at their own expense of any machine returned which is found imperfect on receipt and after inspection, and they are prepared to prove the superiority of the Grammes machine by putting it alongside any other in competition.

Aircraft manufacturers are invited to communicate with the firm to obtain further particulars.

ASCOL

THIS BOOK is being ordered by all the largest FIRMS in the AIRCRAFT INDUSTRY. Have you ordered YOUR copy?

THE "Ascol" Book is an encyclopædia of aviation; it contains the following sections:—

1. A.G.S. Parts (showing working drawings).
2. "Ascol" Chart Section.
3. Reprints of the Articles from "Aircraft Supplies."
4. A Beginner's Guide.

It is the vade mecum of Aircraft Parts.

Sold for charity at **3/6** per copy; a specially limited edition of 1,000 copies at 10 6 per copy. (Postage 6d. extra).

Firms engaged in the Aircraft Industry can order Copies of this Book to be invoiced as usual.

KINDLY MENTION "THE AEROPLANE" WHEN CORRESPONDING WITH ADVERTISERS.

THE AIRCRAFT TRADER

MARKET TOPICS.

Prices are for quantities on the usual terms.

COPPER.—The output of Copper is still very satisfactory. The refineries are, however, being very hard pressed and are only with difficulty keeping pace with the demand.

The American authorities have now decided that the official price for Copper should remain at 23.50 cents. per lb., this price to remain in force for a period of 75 days from June 1st, 1918. Judging from recent financial returns of the majority of producers, the price can certainly be considered liberal.

It was pointed out in THE AEROPLANE last week that there was not much hope of the price of Copper being increased, the general opinion being that the agitation for an increase was engineered in order to guard against a reduction.

Current Prices.

Standard Copper	£110 0 0
Electrolytic	£125 0 0 to £121 0 0
Best Selected	£123 0 0 to £119 0 0
Sheets	£149 0 0

TIN.—This market is in a much more healthy condition, and the situation is easier. Very fair quantities have recently been received, and the report that U.S.A. is obtaining supplies from Java has had a favourable influence upon the market. The situation in America is, however, still very unsatisfactory, and it is understood that U.S.A. intend taking steps which should result in considerable improvement, the effort to reduce the quantity of Tin used being of primary importance.

It is gratifying to note that the prices in the East, while still at an abnormal figure, are gradually declining. The same remark applies to prices here. Supplies of Tin here are very satisfactory and buying has recently been fairly brisk.

Comparative Prices.

To-day	£355 0 0 per ton.
May 22nd	£360 0 0 per ton.
May 14th	£370 0 0 per ton.
May 10th	£380 0 0 per ton.
April	£320 0 0 per ton.

LEAD.—There is plenty of Lead available for national requirements, and the position is gradually improving. It is now possible to obtain up to 28 lbs. direct from supplies without special licence. A declaration must be made before the Lead can be supplied. Prices remain unchanged.

STEEL.—There is now no difficulty in obtaining supplies of round Steel for aircraft construction. It is more difficult to obtain hexagons, but the position is rapidly improving. Furthermore, it is again reported that U.S.A. will be sending large supplies of raw material shortly. This information must be treated with reserve, and in any case it is doubtful whether it will have any direct influence upon the production of aero Steels.

High Speed Steel is still difficult to obtain, but supplies of Cast Steel are very favourable.

Prices remain unchanged.

TIMBER.—The Timber position is still as serious as ever. It is stated that certain Deals have been supplied to some firms as a Silver Spruce substitute. In the first place, the chances of these passing VI specification are very remote; and even if they do pass, the percentage of scrap is bound to be appalling, especially if the A.I.D. continues inflexibly to adhere to the strict letter of the standard fixed for wood parts.

It is, of course, generally agreed that the situation bristles with difficulties and the authorities handling this problem have a rough passage before them.

It is reported that the Government are taking over all the Cyprus which has been imported. The Timber is, of course, quite good for other purposes, and if put on the market should yield a fair profit. The most serious side of this business is not the money that the country will lose on unusable Timber. In fact there should and probably will not be any loss, except the loss of output of machines and expense of scrapped, finished, and partly finished components and also the wastage of shipping and labour handling the Timber. Walnut is very scarce. Mahogany is fairly easy to procure. There does not, however, appear to be a superabundance.

It is rumoured that the Air Ministry will take over the control of Plywood shortly. If the information is correct, it is to be hoped that the responsible department will take into their counsel the few firms who have up to the present so satisfactorily kept the aircraft factories supplied.

If the whole question is left to SM7, it is practically certain that the control of production, supply and prices will be carried out in conjunction with suppliers and users, and due consideration given to the requirements of each, and, after all, who are better able to give advice on the Plywood question than the heads of firms who have been manufacturing and importing all their lives.

If, on the other hand, Plywood control is left to the Timber Controller, it is more than likely that there are stormy times ahead. However, the whole question appears to be in the air at present, and further comment is not advisable until an official announcement has been received.

Prices remain unchanged.

FABRIC.—Supplies have so far been very satisfactory. The most anxious time will be between June and the flax crops. There is good reason to believe that the authorities are well prepared and have good stocks in hand.

Official prices are unaltered.

TIMBER WASTAGE.

Professor Groom, reading a paper in the hall of the Society of Arts on May 15th, said the fact that though we had in the United Kingdom timber eminently suited for use in aeroplane building, we were not aware of it at the beginning of the war, while Germany knew of it, and instantly made use of it. Last year tests showed that in the South of England and the Highlands of Scotland the Scotch pine could yield slowly-grown timber equal to the highest demands ever made on wood, namely, use in vital parts of aeroplanes. Germany, having made thousands of tests on the structure of Scotch pine growing in various of her forests, was able instantly to secure rich supplies of wood of exactly the quality required for aeroplanes. But in this country when the war began we did not know the mechanical values of any kind of timber whatsoever grown in the United Kingdom. Dealing with the fireproofing of woods, the speaker said investigations had rendered it possible to such an extent that thin 3-ply wood could be made to resist for minutes, or even hours, a temperature of 3,000 degrees Fahrenheit. The process of fireproofing was not, however, cheap.

Mr. Howard said that the amount wasted on wood by the Government was absolutely criminal. They had issued an advertisement for Oregon pine at 8s. per cubic foot, when its pre-war and proper price was 1s. 6d. per cubic foot. But why did they use this wood when the most suitable was one that they would not allow the public to pay more than 10d. per cubic foot for? In another case, was anything more absurd than that they should insist on first Archangel wood when larch was ideal for the purpose?

Professor Groom said that woods of inferior quality could be improved by changing their colours and thereby improving their decorative value. Except production of fumed oak by ammonia vapour this branch of industry has been neglected. Grey sycamore was obtained from white sycamore, and yet for years white sycamore was exported from England to Paris or Hamburg for treatment and reimported at a price 50 times the cost of the process. He knew of one wood-using establishment in which the normal annual loss or wastage of timber represented £60,000.

ON WIRELESS TELEGRAPHY AND TELEPHONY.

Now that radiography of all kinds is performing such a part in Naval and Military aeronautics, reliable literature on the subject will command a ready demand by those concerned with aeronautics.

The Marconi Company has always been very enterprising in the production of literature concerned with wireless, and the year book on Wireless Telegraphy and Telephony just produced is testimony to the wide field now covered by the science.

To the uninitiated reader the table of definitons of terms used in wireless should be illuminative, no less than 240 definitions being given. In addition to this there is a dictionary of technical terms in English, French, Spanish, Italian, and German, a feature of interest to wireless operators working in foreign parts.

Copies may be obtained from The Aeroplane and General Publishing Co., Ltd., 2, Breams Buildings, London, E.C.4, price 6s. 6d. post free.

AIRCRAFT FINANCE

CURRENT TOPICS.

MORE MONEY WANTED.

Necessity is forcing the Government to devise the means for raising more money in order to carry on the war. Ere long we shall learn what they intend to do. A forced loan would be objectionable in every sense, but nevertheless the fact remains that in spite of the generous terms and convenient forms of present borrowing—i.e., Treasury Bills and National War Bonds—the receipts are quite inadequate. It is an interesting, and, at the same time, an awkward position.

HOPELESS CONFUSION.

The Excess Profit Tax may or may not be a just imposition, but the trouble that it is causing and the quibbling it is provoking in the company world is really beyond a joke. There are hundreds, aye thousands, of joint stock undertakings that are behind with their accounts for a couple of years, simply because of the inability to arrive at an understanding with the authorities as to the actual amount of profit they are legally entitled to.

Admittedly they paid dividends provisionally, but the shareholders, in the absence of any detailed profit and loss account and balance-sheet, are in the dark as to the real position. Admittedly the incidence of the levy on profits has produced hundreds of awkward questions, but surely by this time some equitable basis acceptable to both parties ought to have been arrived at.

EXTRAORDINARY DILATORINESS.

It was at the beginning of April that the public were invited to subscribe for shares in the Whitehead Aircraft Co., and yet there is no market in the London Stock Exchange in the shares. Subscribers are quite reasonable in asking Why? There has been ample time to create a market; indeed, in ordinary circumstances there would be dealings in the shares very soon after the Subscription Lists had been closed.

A MARKET IS NECESSARY.

We do not know of any reason for the laxity of those who sponsored this issue. There is no getting away from the fact that one of the principal virtues of an investment security is its marketability. The sooner that arrangements are completed for dealings to take place in these particular shares the better. Is it not natural that when people invest money in shares they expect to see how the market price of them fluctuates day by day? Nothing is more natural.

AIRCRAFT SHARES ACTIVE.

Aircraft and kindred shares continue to claim a good deal of interest in the Stock Exchange. For example, Aircraft Manufacturing Participating "B" Preference have been quietly bought at 23/- each and the 7% Cumulative Preference have attracted some buyers at 23/3. The latter, by the way, receive their dividend free of income tax up to the limit of 5/- in the £. This is the great attraction, of course, for if the dividend was subject to the deduction of tax the shares would probably be selling under 19/- each.

Rolls-Royce shares have been a good market in the neighbourhood of £2 and there has been persistent buying of Vickers at about 41/6. Quite recently the directors of Vickers carried out certain amendments in the Articles of Association so as to be able to form an auxiliary or subsidiary company. People are very interested to know what object they have in view.

FRENCH COMPANY'S EXTENSIONS.

It is announced that the Automobile de Place Co., a French undertaking intimately concerned with the aeroplane industry, has just opened another factory which is to be devoted solely to aircraft construction. Quite recently the accounts for last year's working were published. The profit shown was 1,438,110 francs in comparison with 1,322,998 francs, an improvement attributed to the higher prices which became operative in the earlier part of the year. At the same time higher costs in every direction had to be contended with. The dividend of 8 francs per share compared with 7½ francs.

LOOKING AFTER PETROL.

One of the most consistently bright sections of the Stock Exchange is that devoted to oil shares. It is therefore appropriate to record the fact that an Inter-Allied Petroleum Organisation, in which Great Britain, France, the United States and Italy are interested, has just been formed to consider and deal with the petroleum—and we suppose petrol—problems of the Allies in connection with the war. At the Paris Conference, the British Government were represented by Professor J. Cadman, (Chairman), Mr. G. H. Ashdown and Mr. J. Graham. Mr. Alexander Fraser is the Secretary, and the headquarters of the conference are in the offices of Mr. Walter Long's Petroleum Executive, at 12, Berkeley Street, W.1.

SOME HIGH PRICES.

The United States Government has just commandeered the stocks of platinum, palladium and iridium in that country and has fixed the respective prices at £21, £27 and £35 per troy ounce.

ELECTRIC CONSTRUCTION PROFITS.

This company, which is paying a bonus of 2½ per cent. in addition to the 7½ per cent. dividend, shows a net profit of £66,826 against £51,504 and £9,326 against £12,389 is added to the reserve.

ENQUIRIES.

Enquiries have been received relating to investments in companies concerned with the aeroplane industry. A particularly interesting one is that of an Aberdonian in the R.A.F. He wants to know whether the shares of Vickers and those of Rolls-Royce are worth considering, and without hestitation we can say that both constitute first-class investments of their individual types.

COMPANIES ANNOUNCEMENTS.

NEW COMPANIES REGISTERED.

The files of the following new companies are available for inspection at Somerset House.

SUNBURY AVIATION CO., LTD.—Private company. Registered May 22nd. Capital, £10,000 in 9,000 preference shares of £1 each and 20,000 deferred shares of 1s. each. To manufacture, buy, sell, let on hire, and deal in aeroplanes, balloons, airships, or any other appliances or machines for aerial navigation, motor-cars, carriages, mechanical engineers, etc. The subscribers (each with one share) are:—H. N. Ballantyne, Curlee, Irnerleithen, woollen manufacturer; G. F. Hird, Linderwood, Beckenham, Kent, woollen merchant. The first directors are:—H. N. Ballantyne and G. F. Hird. Registered office: 32, Charing Cross, S.W.1.

MAGNETO AND SPARE PART CO., LTD.—Private company. Registered May 21st. Capital, £1,000 in £1 shares. Objects as indicated by the title. The subscribers (each with one share) are:—G. Malham, Rothesay House, Beaufort Road, Edgbaston, Birmingham, engineer; S. H. Parrott, 227, Broad Street, Birmingham, magneto expert. The first directors are:—G. Malham and S. H. Parrott. Registered office: 227, Broad Street, Birmingham.

WILLIAM SAINT, LTD.—Private company. Registered May 27th. Capital, £20,000 in £1 shares (3,000 6% cumulative preference). Builders, contractors, dealers in timber, bricks, tiles and building materials, aeroplane builders, sawyers, sawmill proprietors, etc. The subscribers (each with one ordinary share) are:—W. Saint, 8, St. Barnabas Road, Cambridge, builder, contractor and timber merchant; G. F. Saint, 8, St. Barnabas Road, Cambridge, builder, contractor and timber merchant. Table "A" mainly applies. Qualification, £500. Registered office: 8, St. Barnabas Road, Cambridge.

WINDING UP.

NORMAN THOMPSON FLIGHT CO.—In the Companies' Winding-Up Court, on May 28th, the petition of the Palmer Tyre, Ltd., for the compulsory liquidation of the Norman Thompson Flight Co., Ltd., which had stood over for a scheme of arrangement to be formulated, was again mentioned to Mr. Justice Astbury.

Mr. Frank Evans, for the petitioners, stated that a committee of creditors had been appointed and a scheme was in fact in progress. The company wanted the matter to stand over for another month, and he did not object. Mr. Hunt, who appeared for creditors for over £6,000, had intimated that they were unaware of the petition, and therefore had not given notice that they would appear.

His lordship: Treat them as having given notice and let the petition stand over for a month.

(*Continued from page 2062*)

and five tons of bombs were dropped by us on various targets, including billets at Armentières and Valenciennes railway station.

One of our night-bombing machines failed to return.

On the 29th inst. a number of our long-distance day-bombing machines attacked Thionville, and dropped a ton of bombs with good effect on the station and sidings. At the same time other machines bombed the railway and barracks at Metz-Sablon.

In spite of hostile attacks from the air and ground, all our machines returned safely.

MAY 30th, 8.40 p.m.—Low clouds and poor visibility prevented much work being done by our aeroplanes on the 29th inst. until late in the day, when the weather cleared.

Five German machines were brought down in air fighting, and one other was driven down out of control.

We lost no machines.

Five tons of bombs were dropped by us during the day on ammunition dumps and billets in the neighbourhood of Armentières and Bapaume.

Bombing continued during the night of the 29th-30th inst., and 16 tons of bombs were dropped, without the loss of any of our machines, on railway stations, including those at Valenciennes and Busigny, on towns and roads behind the enemy's lines, and on Bruges Docks.

In addition to the raids reported on the 29th inst. our machines heavily bombed the railway triangle at Metz-Sablon on the night of the 28th-29th.

All our machines except one returned safely.

MAY 31st, 10.1 p.m.—On the 30th inst. our aeroplanes and balloons were very active, fine weather enabling much work to be done in co-operation with the artillery, as well as reconnaissance and photography.

Bombing was carried out vigorously all day, 38 tons of bombs being dropped on different targets, including railways, roads, dumps, and billets at Merville, Armentières, Bapaume, Albert, and Valenciennes.

Twenty-eight German machines and two German balloons were destroyed during the day, and six other hostile aeroplanes were driven down out of control.

Five of our machines are missing.

On the night of the 30th-31st inst., 17 tons of bombs were dropped by us.

Bruges docks were again attacked and large fires started.

In addition, 4½ tons of bombs were dropped by our long-distance night squadrons on railway stations and sidings, on Metz-Sablon, Thionville, Courcelles, Karthus (south of Tréves), and Esch.

All our machines returned.

JUNE 1st, 10.4 p.m.—On May 31st our aeroplanes and balloons again carried out much successful work.

During the morning our long-distance bombing machines crossed the Rhine, and, in spite of strong opposition from enemy aircraft, dropped over a ton of bombs on the station and workshops at Karlsruhe.

One of the machines engaged in this raid failed to return.

Another group of our aeroplanes dropped a ton of bombs on the railway triangle at Metz-Sablon with good effect and without loss.

A further 31 tons of bombs were dropped by us in the course of the day on different targets behind the enemy's line.

Twenty German machines were destroyed in air fighting and six were driven down out of control. One other hostile machine was shot down by anti-aircraft fire.

One of our machines is missing.

During the following night 16 tons of bombs were dropped by us, including six tons on Bruges docks and on the Zeebrugge-Bruges Canal.

In addition, four tons of bombs were dropped on the railway junctions and stations at Metz-Sablon, Karthaus, and Thionville.

All our night-bombing machines returned safely.

One German night-bombing aeroplane was brought down in flames behind our lines.

JUNE 2nd, 9.25 p.m.—On June 1st fine weather enabled our aeroplanes and balloons to carry out much useful observation work.

In air fighting 21 German machines were destroyed, and four other hostile machines were driven down out of control. Four of the enemy's observation balloons were also destroyed by our aviators.

Four of our machines are missing.

In the course of the day we dropped 20 tons of bombs, successful attacks being made on Zeebrugge Mole, the railways at Armentières, Rosières, Busigny, and Flers, and on other targets.

In addition, the railway at Karthaus and Metz-Sablon were heavily attacked by our long-distance bombing aeroplanes.

One of these machines failed to return.

The night of June 1st-2nd was misty, but five tons of bombs were dropped by us on targets in the Somme Valley without the loss of any of our machines.

JUNE 3rd, 8.45 p.m.—On the 22nd inst. our aeroplanes carried out a good deal of observation for the artillery, and took many photographs.

Eighteen tons of bombs were dropped by our aeroplanes, and heavy machine-gun fire from the air was directed upon a great variety of targets.

Eight German machines were destroyed in air fighting, and 14 were driven down out of control.

Three of our aeroplanes are missing.

On the night of June 2nd-3rd we bombed Le Cateau, St. Quentin, and Valenciennes railway stations, dropping eight tons of bombs.

All our night-flying machines returned safely.

WAR OFFICE COMMUNIQUÉS.

MAY 31st.—The G.O.C. Macedonia reports :—

On May 24th a hostile aeroplane was forced to land at Karaorman (near Kavalla), where it was bombed and destroyed. On the 28th another enemy machine was shot down in flames near the Vardar.

JUNE 1st—The G.O.C. Mesopotamia reports :—

On May 30th our aeroplanes dropped bombs throughout the night on the enemy's camps at Fathah (on the Tigris above Tekrit) and near the junction of the Lesser Xab with the Tigris.

The Prestwich FLUID Gauge

Accuracy to the ten-thousandth part of an inch with ease

is a

MICROMETER

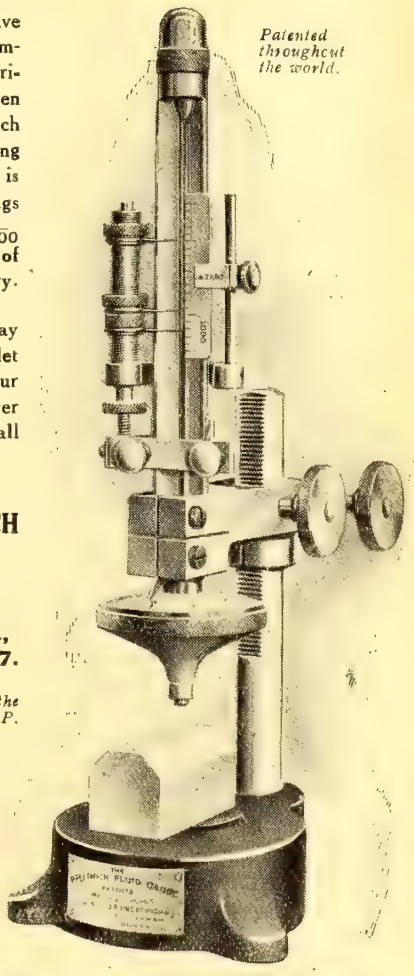
in which the

Sense of Touch

is

ELIMINATED

An ERROR of $\frac{1}{1,000}$ of an inch is



VISIBLE

to the naked eye as 1"

The Prestwich Fluid Gauge is a profitable investment for use in all factories engaged on repetition work to fine limits.

Hundreds of users have been surprised at the simplicity to which their intricate gauging has been reduced. The Prestwich Gauge has no wearing parts, skilled labour is not essential, and readings can be taken to the $\frac{1}{50.000}$ part of an 1" at the rate of 60 per minute if necessary.

Why not write us to-day for our illustrated booklet and let us know your requirements whatever they be? We have all kinds of adaptations.

Patented throughout the world.

Engagements.

BRIGGS—LONG.—An engagement is announced between Col. Edward Featherstone Briggs, D.S.O., R.A.F. (late Wing Comdr., R.N.), second son of the late William Briggs, of Clifton, Bristol, and Violet, only daughter of Mrs. Ernest Long, of York, and grandchild of the late Edwin Long, R.A.

PORTER-COLT—GARDINER.—An engagement is announced between Flt.-Lt. S. Porter-Colt, R.N., eldest son of Mr. Colt, California, and Kathleen, widow of the late Maj. E. Gardiner, R.E., and youngest daughter of Charles Adams, South Africa.

Marriage.

WRIGHT—GIRLING.—On May 25th, at the Pro Cathedral, Bristol, Flt.-Lt. Cyril Victor C. Wright, R.N., eldest son of Dr. Clarence A. Wright and Mrs. Wright, R.N., of Leytonstone, was married to Laura Ellinor, eldest daughter of Mr. and Mrs. Girling, Bromley, Kent, by the Very Rev. Canon Lee.

Birth.

SAMSON.—On May 29th, at 6, Brandon Terrace, Great Yarmouth, the wife of Group Commander Colonel Charles Rumney Samson, D.S.O.—of a daughter.

* * *

On June 1st at Flushing the funeral of Flt. Sub.-Lt. Eric J. E. Buckley took place with military honours. Sub-Lt. Buckley's body was washed up on the coast of Holland last November, and had been temporarily interred where it was found.

MILITARY.

Deaths.

HEARD.—Lt. Edward Terence Heard, R.A.F., whose death was announced last week, was, previously to the war, employed in rubber planting in Bahr-el-Ghazal, Southern Sudan, and also in Government work. On the outbreak of hostilities he joined 2nd King Edward's Horse as a trooper, proceeding to France early in 1915 and receiving his corporal's stripes for gallantry in the field. He joined the R.F.C. in March, 1917, taking his wings in August of that year, since which date he was employed as a ferry pilot.

LAVARACK.—Maj. P. J. Vaughan Lavarack, M.C., R.A.F., who was killed in a flying accident on May 15th, was the fourth son of the late Hamlet Lavarack and Mrs. Lavarack, of 15, Wycombe Gardens, Golders Green, and husband of Lily Lavarack (*née* Gibson).

LODER-SYMONDS.—Capt. William Crawshay Loder-Symonds, Wiltshire Regt., attd. R.A.F., who escaped from Germany about 10 weeks ago, having been a prisoner of war since August, 1914, was killed in a flying accident early on May 30th. He was the fourth and second surviving son of Capt. and Mrs. F. C. Loder-Symonds, of Hinton Manor, Berks, four of whose five sons have now given their lives for their country in this war.

Capt. Loder-Symonds, who was born in August, 1886, received his commission in the Wiltshire Regt. from the Militia in May, 1908, and was promoted captain in Oct., 1914. He was taken prisoner on August 24th, 1914, after being wounded in the thigh at Le Cateau, and was one of the first officers to be eligible for internment in Holland. He declined to give his parole, and was sent to Schweidnitz, in Silesia. On his return to this country he was received by the King at Buckingham Palace. Capt. Loder Symonds married, on April 6th last, Melloney Mary, elder daughter of Capt. and Mrs. W. H. Waring, of Beenham House, Berkshire.

MEDCALF.—Capt. James Harry Medcalf, M.C., D.C.M. Border Regt., attd. R.A.F., who was killed instantaneously as a result of an accident whilst flying on May 25th, was second son of Mr. W. Medcalf, of Denbury, Newton Abbot. He joined the Army in August, 1914, as a despatch rider, and was in France at the end of that month and saw continual service. Getting his commission early in 1915, he was attached to the Border Regt. He won his D.C.M. at Festubert. Transferring to the R.F.C. he obtained his "wings" very quickly, and was flying from 1916 onwards. Seriously wounded on Feb. 5th of this year, he had only just rejoined his squadron as an instructor. Capt. Medcalf was 23 years of age, and had the 1914 Star among his decorations.

MOND.—Lt. Francis L. Mond, R.F.A. and R.A.F., aged 22, killed in an air fight on May 15th, was the eldest son of Mr. and Mrs. Emile Mond, of 22, Hyde Park Square, and Grey Friars, Storrington, and nephew of Sir Alfred Mond, First Commissioner of Works. He was educated at Rugby and Cambridge, and, having received his commission in the Territorial Artillery in June, 1914, volunteered for service oversea on the outbreak of war.

In February, 1915, he joined the Royal Flying Corps, and in the following summer was employed on active service in France. Later he returned to England suffering from shock and concussion, resulting from a fall with his machine. He was in France again in January, 1916, but later on, being classed as temporarily "unfit for flying," he was attached to the R.F.C. staff at home for a period of 18 months, but returned to France in March of this year. On May 15th, while flying over the enemy lines, Mr. Mond was attacked by several enemy scouting machines, and both he and his observer were killed during the action. Their bodies were brought in at great personal risk by an officer in the front line who had witnessed the fight.

MORGAN.—Lt. Edward Percival Morgan, R.A.F., whose death was reported last week, was educated at Bedale School and Wye Agricultural College, on leaving which he emigrated to Canada. He was settled there at the outbreak of the war, and as soon as he was able to release himself from his engagements he enlisted as private in the Canadian Infantry. Subsequently he was transferred to the British Army and got a commission in the R.F.C. He was sent to the front last month.

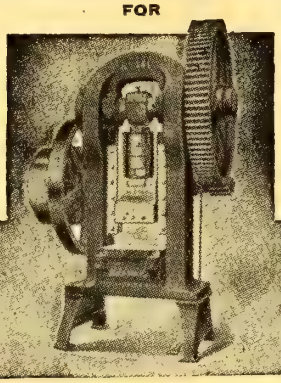
PENDER.—Capt. W. G. Pender, M.C., R.F.C., who was reported missing on August 15th, 1917, has now been officially reported as killed on that date. Born on November 18th, 1886, he was the eldest son of Mr. and Mrs. John Pender, Onich, Great Bookham, Surrey. He was educated at Dollar Academy, Scotland, where he distinguished himself as a fine athlete, being in the first fifteen in 1903-1904 and 1904-1905. His play as a three-quarter back was unexcelled in Scottish school football in these years, and "Gordon Pender's tackling" is still a by-word at his old school. He was also champion long-distance runner in 1904 and 1905. On leaving school he studied engineering in Dundee, and in 1909 received the offer of an appointment in Rhodesia.

On the outbreak of war he returned to England, and obtained his commission in the Royal Flying Corps. He quickly gained his "wings," and saw much active service. He was noted as an extremely skilful pilot—reckoned amongst the first flight in the Service, and his bravery was in keeping with his skill. He was awarded the Military Cross for conspicuous bravery in connection with the Battle of the Somme. He was wounded in July, 1916, but refused to be sent home, insisting on remaining in hospital in France in order to rejoin his squadron at the earliest possible moment.

PHILLIPS.—Sec. Lt. Cecil Ivor Phillips, Gloucestershire Regt., attd. R.F.C., reported missing since October 27th, 1917, is now presumed to have been killed on that date. He was the eldest son of the Rev. E. I. A. Phillips, of 11, Pembroke Vale, Clifton, Bristol, and was 18 years of age. He was educated at Clifton College and Sandhurst, and he went to France in the summer of 1917 as a fighting scout, and was shot down while escorting machines about 10 miles over the German lines.

PRINCE.—On May 30th, in Kent, Lt. William Francis John Prince, London Regt., attd. R.A.F., who was accidentally shot from the air while bathing on May 30th, was 20 years of age.

THORNE.—Lt. Arthur Burrell Thorne, R.F.A., attached R.A.F., was killed on May 8th as the result of a collision in the air while engaged in instructing. Born in 1895, he was educated at Northaw Place, Hurst Court, Ore, and Haileybury College (Melvill). At Haileybury he was in the cricket eleven in 1912 and 1913. In 1914 he came from Canada, obtained a commission in October in the R.F.A., and went to France in February, 1915.



In May, 1916, he was attached R.F.C., and was flying in

HUMBER LIMITED,
COVENTRY.

France as observer and pilot for 11 months before he met with an accident that made him lame for life and kept him in hospital and convalescent home for seven months. Although at the time of his fatal accident he was unable to walk without crutches his capacity as a pilot was unimpaired, and he had a few days previously been passed again for general service. On his body was found an application to be sent to the front again on the first possible opportunity; he had intended to hand it that evening to his commanding officer.

WELLS.—Lt. Charles Douglas Wells, M.C., R.A.F., who was killed in action on May 16th, aged 21, was the only son of Mr. and Mrs. C. H. Wells, of The Manor House, Hempstead, near Stalham. He was educated at Banham Grammar School, and later at Gresham School, Holt, where he obtained his colours for cricket and football, was captain of his house, and a corporal in the school O.T.C. He obtained a commission in the King's Own Royal Lancaster Regiment in October, 1914, and went out to France in July, 1915. He served at Ypres, and took part in all the principal battles on the Somme, and later was present at the taking of Messines Ridge.

He was mentioned in dispatches in 1916, and was awarded the Military Cross at the end of 1917 for conspicuous gallantry in action and devotion to duty. Mr. Wells transferred to the R.F.C. in October, 1917, and went out to the front as an observer last January. His flight commander describes him as a magnificent shot.

WILBERFORCE.—Capt. William Sargent Wilberforce, M.C., 60th Rifles, attd. R.A.F., who was accidentally killed while flying on June 2nd, was the youngest son of the late Bishop of Chichester and Mrs. Ernest Wilberforce, of 17, Eccleston Square, S.W. He was 24 years of age. He received the Military Cross recently for bringing down an enemy aeroplane in Palestine. In March, 1917, he was appointed flight commander, and in January of this year he became an instructor in flying at the Central Flying School.

YEOMAN.—Lt. Bryan Frank Lawson Yeoman, R.A.F., who was accidentally killed while flying on May 11th, in his 22nd year, was the second son of Capt. E. W. Yeoman, of "Lauriston," Lee. He was educated at Highfield College, Leigh-on-Sea. On August 5th, 1914, he joined the 4th London Howitzer Brigade, and received his commission in the London Regiment in the following June. He served in Gallipoli, Egypt, and France, being wounded three times. Last September he transferred to the Royal Flying Corps.

ENGAGEMENT.

PALMER–WILLIAMS.—A marriage will shortly take place between Maj. L. Palmer, York and Lanc. Regt., attd. R.A.F., youngest son of Mrs. Palmer, Instow, Devon, and Miss Lillian Williams, youngest daughter of J. D. Williams, J.P., M.F.H., Clydach Court, Trealaw, S. Wales.

MARRIAGE.

McINTOSH—WEST.—The marriage arranged between Mr. F. Graham McIntosh, 60th Rifles and R.A.F., only son of Mr. J. Grant McIntosh and of Mrs. McIntosh, of Port of Spain, Trinidad, B.W.I., and Miss Margaret Marion Grace West, daughter of Mr. W. W. West, and of Mrs. West, of Needham Hall, Cambs., took place at St. Mark's Church, Friday Bridge, Cambs., on June 1st.

BIRTHS.

ANGAS.—On May 26th, at Kingston House, Farnborough, Hants., the wife of Lt. R. F. Angas, R.F.A., attached R.A.F. —of a son.

KNOWLES.—On May 29th, at Taverham Hall, Norwich, the wife of Capt. R. M. Knowles, M.C., R.A.F., of a son.

The relatives of Captain C. C. Clark, R.F.A., R.A.F., reported missing, have received a telegram stating that he is a wounded prisoner.

* * *

Mr. and Mrs. Sydney Begbie desire to return their sincere thanks for the kind sympathy which they received on the occasion of the death of their only child, Lt. Hamilton Begbie, 3rd E. Surr. Regt. and R.A.F., who was killed in action in France on April 21st.

AIR FORCE.

DEATHS.

BIRLEY.—Sec. Lt. T. E. H. Birley, R.A.F., was reported missing on March 22nd, but news has been received that he is a wounded prisoner of war at Stendal, Germany. It is significant that, although the young officer wrote his postcard on March 30th, it was not posted by the hospital authorities until May 3rd.

FARMER.—Sec. Lt. Archibald Onslow Farmer, R.A.F., who was killed while flying in Norfolk on May 30th, was the eldest son of Mr. and Mrs. Archibald S. Farmer, 7, Palliser Court, Kensington, W. He was 25 years of age.

FULLERTON.—Lt. Charles Fullerton, R.A.F., who was killed whilst flying on May 29th, was the second son of Mr. and Mrs. Fullerton, Noblethorpe, Barnsley. He was 22 years of age.

KNIGHT.—Sec. Lt. W. H. D. Knight, R.A.F., who was killed in action on May 2nd, was the eldest son of W. E. D. Knight, Limura, B.E.A., and grandson of W. Duncan Knight of Rapkyns, Horsham. He was 18 years of age.

SCOTT.—Lt. C. K. Scott, R.A.F., who was killed on June 1st as the result of an accident whilst flying in Kent was the elder son of Mr. and Mrs. H. K. Scott, of 42, Cheyne Court, London, S.W., and formerly of Twickenham, and Seawaren, N.J.

SHIELD and RYNEVELD.—A verdict of "Accidental Death" was returned at an inquest at Dartford on June 3rd on Lt. Frank Leslie Shield, R.A.F., and Lt. John Percival Ryneveld, R.A.F., who were killed in a collision in the air on June 2nd.

It was stated that the two machines were manœuvring independently at a height of 2,000 feet, when the under-carriage of one aeroplane struck the central part of the other and both nose-dived to earth. The pilots were killed instantaneously.

Lt. Hubert Griffith, R.A.F., said: "Both pilots were qualified and both were flying the same type of machine. I think the accident was probably caused by the sun being in the eyes of the pilots. They were practising fighting without any previous arrangement."

TRACEY.—Cadet Ernest Osborn Tracey, R.A.F., who was accidentally killed while flying in Wiltshire on May 31st, was the only son of Col. H. F. Tracey, C.F., N.Z., late Vicar of Dartmouth, and Mrs. Tracey, of North Ford, Dartmouth. He was 18 years of age.

WOOD.—Lt. Patrick Bryan Sandford Wood, R.A.F., who was accidentally killed on active service on May 24th, was the elder son of Dr. and Mrs. Charles Wood, Caius College Cambridge. He was 19 years of age.

ENGAGEMENTS.

BREMNER—HURD.—The marriage arranged between Capt. F. S. H. Bremner, R.A.F., and Vivyen, daughter of Mr. and Mrs. Archibald Hurd, will take place, leave permitting, on June 14th, at 2 o'clock, at All Saints' Church, Margaret Street.

MARIGOLD—MATTHEY.—A marriage has been arranged between James E. Marigold, R.A.F., son of J. A. Marigold, of 7 Augustus Road, Edgbaston, and Constance Joyce, only daughter of Mr. Richard D. Matthey, of The Croft, Hartley Wintney Hants.

MARRIAGES.

HEAD—GRANT.—On May 28th, Capt. J. Laurence Head R.A.F., was married by special licence to Peggy, youngest daughter of the late General Seafield Grant, Craigellachie Burley, New Forest.

PERKINS—FROST.—On May 29th, at All Saints' Church Oakleigh Park, N., Captain J. C. Perkins. R.A.F., only son of Mr. and Mrs. T. A. Perkins, of Heaton, Bradford, was married to Frances Marion, eldest daughter of Mr. and Mrs. A. C. Frost, Wollaston, Oakleigh Park, N., by the Rev. H. S. Miles M.A.

ROGERS—BRADFORD.—On May 25th at St. Barnabas' Church, Bristol, Harry Botwright Rogers, R.A.F., eldest son of Henry Thomas Rogers, of Tufnell Park, was married to Frances May Bradford, eldest daughter of the late Capt. Albert Sidney Bradford, R.N., and of Mrs. Bradford, of Bristol, by the Rev. T. R. F. Jeffreys, vicar.

BIRTHS.

HOLDER.—On May 27th, at Totnes, the wife of Temp. Capt. A. E. Holder, R.A.F.—of a daughter.

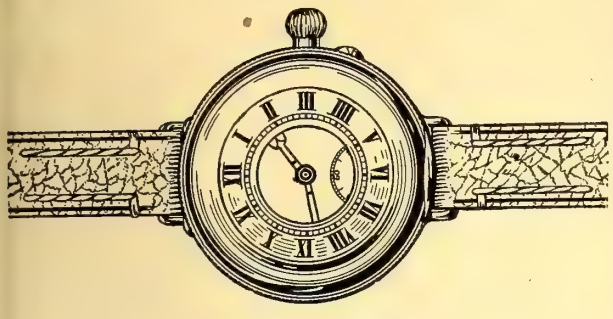
THOMAS.—On May 29th, at 26, St. Peter's Road, Croydon, Nora ((*née* Ebbutt), the wife of Lt. D. O. Thomas, R.A.F., of a son.

WHEATLEY.—On May 26th, 1918, at Calderfall, Kingsdown Road, Epsom, the wife of Captain C. W. C. Wheatley, R.A.F. —a son.

FOREIGN COMMUNIQUES.

FRANCE.

May 28th.—During the night of the 27th enemy aeroplanes were reported by the look-out posts at Rouen proceeding in a westerly direction. The alarm was sounded at 12.20. Violently attacked by anti-aircraft batteries, only one aeroplane succeeded in reaching the Rouen district. It dropped some bombs. One person was killed and four people were wounded. The "All clear" was sounded at 1.45.



May 29th.—Army of the Orient.—An enemy aeroplane was brought down in flames by British aviators in the Vardar Valley.

May 30th.—"Yesterday evening the enemy displayed great aerial activity, and dropped bombs in various places behind the front. Some aeroplanes were reported to be making for Paris. The warning was given at 11.24, and our means of defence were put into action. No enemy machine passed the violent artillery barrage or flew over Paris. Some bombs were dropped in the outskirts.

"An enemy aeroplane was hit by our anti-aircraft batteries and fell in flames. The 'All Clear' was given at 12.34."

May 30th.—Our aviators have participated in the battle with endurance and daring beyond all praise. Our crews have fought

against an enemy force which is very aggressive and very numerous. Flying low they attacked enemy troops with their machine-guns, they have carried out reconnaissances far into the enemy lines, and they have played an important part in maintaining communication.

During May 27th, 28th and 29th 19 German aeroplanes were destroyed in air combats. In addition, two captive balloons were brought down in flames, and 23 enemy machines were compelled to land badly damaged.

Our bombing machines during the night of May 27th-28th dropped 23,000 kilogrammes (23 tons) of explosives on the bridges and crossings of the Ailette and the Aisne and on the cantonments of Guignicourt and Juvincourt. During the following night and day they dropped 37,000 kilogrammes (37 tons) of projectiles on convoys and troops on the march and on the stations of Laon, Fismes, St. Gilles, etc.

Severe explosions and fires were observed in the stations of Fismes, Laon, and Coucy-les-Eppes. A munitions depôt blew up in Fismes.

Between May 27th and 29th six German aeroplanes were brought down by our anti-aircraft defences.

May 31st.—Some hostile aeroplanes crossed the lines yesterday evening and flew towards Paris. Signalled by our observation posts they were at once shelled by our defence batteries. The warning was given at 10.59 and the "All clear" at midnight. Some bombs were dropped in the Paris region, but no victims have been reported.

Army of the Orient.—In spite of bad weather, the Aviation Service took an active part in the battle, firing with machine-guns from a low height on the Bulgarian reserves. The aviators also successfully bombed the stations in the valley of the Vardar and the aerodrome of Hudovo.

June 2nd.—During the daytime on May 31st the aerial struggle continued on the whole battle front. Our crews, with their customary dash, attacked the enemy's aircraft, 23 of which were shot down and 14 seriously damaged.

The enemy's captive balloons, harassed without respite and in many cases forced to land, were considerably hindered in their work of observation. Six of them were destroyed.

Our observers did not cease to mark out the lines and to keep the Command informed in regard to the enemy's movements, carrying out reconnaissances day and night as far as Vervins, Guise, Le Cateau, and Hirson.

In the battle zone our squadrons machine-gunned the German troops on the march and caused them serious losses.

Our bombing aeroplanes gave proof of similar devotion and marvellous endurance. In the daytime on May 31st and during the following night, 66 tons of projectiles were dropped on the troops, transport, railway stations, and aviation grounds of the enemy, and, in particular, in the valley of the Aisne, on Fismes, Fère-en-Tardenois, Oulchy le Château, St. Gobain Forest, etc. Certain crews made as many as three expeditions on the same night. The results observed were very satisfactory.

Two German aeroplanes were shot down by the anti-aircraft defences during the daytime on the 31st.

Army of the Orient.—Allied aviators carried out with success numerous bombardments of stations and camps in the Vardar Valley. An enemy machine was brought down to the west of Ghevgeli.

June 3rd.—Our Air Force continued to display great activity during the days of June 1st and 2nd, carrying out, with its usual dash, its mission of reconnoitring, observation, and pursuit.

Twenty-nine German aeroplanes were shot down and 24 driven down out of control and forced to land. In addition, four captive balloons were set on fire.

Our bombarding squadrons multiplied their expeditions on the whole zone of the battle front. One hundred and thirty tons of explosive were thrown on enemy convoys, troops, assembly centres, and bivouacs, especially in the region of Crouy, Soissons, Vierzy, Villers-Helon, Neuilly-St. Front, La Fère-en-Tardenois, etc.

During the days of June 1st and 2nd four other enemy machines were destroyed by anti-aircraft fire.

Army of the Orient.—Allied aviators dropped over five tons of explosives on the railway stations in the Vardar valley and on the enemy's camps north of Huma and east of Seres.

North-west of Doiran three British machines attacked 12 enemy monoplanes, and shot down four, two of which fell in flames.

GERMANY.

May 28th.—Ten Allied aviators dropped 13 bombs on Landau, in the Palatinate, which caused slight damage to the garrison headquarters and some private houses. Two women and one child were killed.

May 30th.—During the last three days our aviators brought down 38 enemy aeroplanes. First Lt. Berthold achieved his 29th aerial victory.

Lt. Roeth, during a flight from Dixmude to the south of Ypres, brought down in flames five enemy captive balloons.

June 1st.—In the last two days we shot down 36 enemy aero-

planes. Lt. Meckhoff achieved his 28th aerial victory, Lt. Peutter his 25th, and Lt. Kroll his 24th.

June 3rd.—The railways leading towards the battlefield, which were strongly congested by the movements of troops, were successfully attacked by our bombing squadrons.

We shot down 31 enemy aeroplanes. Lieut. Meckhoff achieved his 29th and 30th aerial victories; Lieuts. Loewenhardt and Udet their 25th.

ITALY.

May 28th.—On May 25th our seaplanes effectively bombed the landing stages and hangars at Durazzo. Despite intense anti-aircraft fire and pursuit by enemy aeroplanes, all our machines returned to their base.

On May 27th the enemy made an air raid on Otranto, which was vigorously repulsed by our anti-aircraft guns. The bombs which were dropped caused no damage.

Very different was the result obtained the same day by an aerial attack by British machines on Durazzo. A torpedo-boat which was struck by a bomb capsized and sank, and a fire was observed near the Austrian aeroplane station.

May 30th.—In the morning of May 28th our seaplanes effectively bombed the military works at Durazzo and returned safely to their base.

Yesterday British aeroplanes bombed the enemy naval base of Cattaro, dropping there a ton and a half of explosives. One machine was lost owing to its being damaged, but the aviators were saved.

May 31st.—Aerial activity was intense; enemy trenches, dumps, and hutments were bombed on the Asiago and Lavarone (head of the Astico Valley) Plateaux, and columns of troops and transport were attacked with machine-gun fire on the roads leading to Gallio (north-east of Asiago). In air fights three enemy machines were brought down.

June 2nd.—Our own and Allied flights were very active; enemy aviation camps were bombarded with more than five tons of bombs. Five hostile aeroplanes were brought down in air fighting. A sixth machine hit by artillery fire fell to the left of the Piave.

June 3rd.—There was considerable aerial actvity on both sides One hostile machine was brought down.

U. S. A.

May 28th.—Early in the day our aviators shot down a hostile machine.

AERO-PLANE STEEL PARTS

When requiring Aeroplane Parts write US — we can supply —

Tubes & Tubular Construction, Sheet Metal Pressed Parts, Wheel Rims, Special Sections in Steel, Brazing, Acetylene and Electric Welding, etc.

Any Special Parts made to order. Send your enquiries.

The LOMBARD Rim and Tube Co., Birmingham.

May 29th.—It is established that on May 27th our aviators shot down two hostile machines.

May 31st.—Early in the day our aviators shot down a hostile machine.

June 1st.—Our aviators shot down a hostile machine.

BELGIUM.

May 30th.—Two of our aviators brought down two German balloons in flames.

TURKEY.

May 27th.—Our aviators successfully bombed the enemy encampments at Wadi Hesi (north of Gaza).

In the Dardanelles there has been lively aeroplane activity on both sides.

May 28th.—Our aeroplanes again dropped bombs on the rebel (Arab) encampments on the Wadi Hesi (near the Hedjaz railway, east of the south end of the Dead Sea).

May 30th.—During the night of May 25th our seaplanes successfully and repeatedly attacked the enemy aerodrome on the island of Imbros. Several fires, which blazed for a long while, were observed.

BULGARIA.

May 26th.—East of the Tcherna there was lively aerial activity on the part of the enemy, and their aviators dropped bombs on one of our military hospitals, which was clearly visible, near the village of Molwitza.

May 30th.—West of the Vardar an enemy aeroplane was driven down in an air fight.

THE WAR IN REVIEW.

The Bombing of Karlsruhe.

The "Weser Zeitung" of June 2nd reports that at 9 o'clock on June 1st ten British aeroplanes attacked the "open town" of Karlsruhe and dropped bombs, killing four and severely wounding six persons. A number of persons were slightly wounded. Some houses were struck, apart from other material damage. Two British aviators were shot down.

A Possible Target.

Mr. H. Patrick Devitte the "Daily Express" correspondent at Geneva writes on June 3rd:—

Messages fom Cologne describe the Kaiser's visit to the battle front. The Imperial party travelled in two powerful armoured motor-cars, which were carefully camouflaged, as the German Higher Command holds the Allied aviators in great respect.

When the Kaiser climbed to the summit of the Winterberg he was without an escort, in order to escape the notice of enemy aviators.

Limelight.

Reuter's special correspondent with the American Army writes on May 30th:—

Lt. Campbell to-day protected a British aviator who was wounded while returning from a mission over the German lines.

When two enemy battleplanes attacked the wounded British aviator, Lt. Campbell dived between the German machines and their intended victim, and succeeded in escorting him back safely.

[It seems clear that the American Army in the field has yet to be schooled regarding the undesirability of allowing unofficial accounts of the performance of individual soldiers. Also that the American aviator needs schooling, for a machine-gun behind the German machines would have been a better protection for their intended victim than an aeroplane between.—Ed.]

Good Work in Italy.

An Italian semi-official communiqué of June 2nd, dealing with air warfare for May, says:—

Italian pilots and anti-aircraft batteries brought down 54 enemy aeroplanes and two captive balloons, whilst British aviators accounted for 82 machines and two captive balloons. The Italian and Allied losses due to hostile offensive action were only four chasing machines (two Italian and two British) which did not return.

Ten raiding operations were carried out, in which about 27 tons of bombs were dropped without the loss of even one machine brought about by the enemy. The British aviators almost daily carried out bombardment actions on the enemy lines, dropping altogether more than four tons of bombs.

The communiqué invites attention to the "imaginary victories" which the enemy reported on May 3rd and May 21st. In the first case three machines were said to have been brought down by an Austrian pilot. On that day the Italians lost one machine only, and this was forced to land in the enemy's lines owing to engine trouble. On the other hand, three enemy machines were brought down. In the second case, the Austrians reported that on the 19th four Italian aeroplanes had been brought down. No Allied machine, Italian, British, or French, was lost, but seven enemy aeroplanes were forced to land on the 19th.

L'Hermetic

Sample Tin Gratis to Aero Engine Builders.

L'Hermetic filled joint is as impervious to any outside agency as is the surface of the metal itself.

L'Hermetic, which is a heavy liquid compound, dries immediately on application and impregnates the joint, making it air-tight, water-tight, grease-tight, dirt and dust proof. L'Hermetic is also heatproof and i soluble in all spirit, oil and fatty essences.

Extensively used by the French military authorities and by all the leading French aero engine manufacturers.

"CONCERNING COSTS" FREE.

"PRACTICAL COSTING," By A. H. Gledhill, A.M.I.M.E. 3/- Post Free.

COMBINED TIME AND JOB CARD

for recording complete labour cost.

The **"IN"** and **"OUT"** time is recorded on the card, also the time when jobs are changed.

The TIME on the Job is cast out at the side of card and the total hours entered in the Job No. column under the Job number.

Unfinished Jobs are entered at the foot with Job number and the total hours worked up to the week-end under column headed "Carried Forward," and transferred to the next week's time card in the column "Brought Forward," any time worked on this job during the second week is entered in the column, "Time for this Week." If the job is completed during the second week, the total is added and entered in the "Jobs Finished" column. If the job is not completed, the total is entered in the column "Carried Forward," which will in turn be entered on the third week's time card.

STANDING ORDER NUMBERS for constantly recurring Non-Productive Jobs are represented on the card, e.g. K.31 Grinding Tools; E.53 Making a New Lathe Tool.

ON ALLOTMENTS ON PARNASSUS.

This is the age of amateurs. The country is run by politicians who are mere amateurs at the game, despite the fact that some of them make a handsome living out of it over and above their statutory £400 per annum or their Government salaries. The War on land is run by amateur strategists, though one hopes the professional soldier will come into his own ere long. The War at sea has, until recently, been conducted in a still more amateurish way, though, in justice be it said, most of the hard and perilous work of strafing submarines has been done by merchant sailors and fishermen, who are professionals of the highest class as seamen, as well as being amateurs of war in the true sense of the word. The War in the air, except as concerns the soldiers at the front, has been hampered from the start and is still hampered by amateurs of the very worst kind, for one of the outstanding facts of the supply of aircraft is that, except for a few, very few, patriotic men who are serving their country in the best possible way, there is hardly an official on the technical side of the Air Ministry who could get a job in civilian life with a business firm if taken on his merits and not on account of his "Service pull."

The Finances of the country are run by amateurs whose efforts to raise money are as funny as the famous 'Pantomime Rehearsal," for any professional money sharp, from a snide company promoter to the ordinary proprietor of a gambling hell who lives by rooking young officers of their pay, would have raised twice the money with half the fuss. And, finally, the country is being fed very largely by amateur gardeners, whose earnest, if frequently misguided, efforts in their funny little allotments are compensating for lack of official foresight and failure to foster agriculture before the War.

The Amateur in Art.

It is not surprising, therefore, to find that this national epidemic of amateurism has spread to the Arts, and that the Heights, or at any rate the foot-hills, of Parnassus are being sedulously cultivated, very much on the allotment principle, by innumerable amateur poets. Naturally the Flying Services and their appurtainers have begged out their claims on the slopes, and, like other products of allotment gardens, the results vary immensely in quality. It is always well to remember that the word amateur has two very distinct meanings, the true original meaning and the commonly accepted meaning which is used as an opprobrious epithet.

Naturally, also, some of the choicest products of these allotments on Parnassus have from time to time found their way to this office, so it seems worth while, just for a change, to pretend that for the time being the War is going well on the Bolo Sector of the Strand Front, and to present to the long-suffering readers of this paper a selection of verses concerned more or less with flying affairs, in the hope that they will provide a little light relief from the more serious affairs of war. Also, they illustrate something of the inner feelings of the writers, which, however shocking their verse may be, could not come out in mere prose.

The Beginners' Feelings.

Let us begin at the beginning and see how the pupil, or cadet as he is officially known, or "Hun" as he is still called by the old R.F.C. crowd, or "Quirk" as the R.N.A.S. people call him, expresses himself. It will be noticed that the Instructor is not, as a rule, a popular person. He is very much the schoolmaster, but is generally so young that he has not had time to acquire the all-comprehending all-forgiving mind of the true instructor of the young. Also, his pupils are pretty well of his own age, and some are older, which makes his task the more difficult. Frequently he is a war-worn pilot, and, anyhow, constant flying as an instructor is very wearing to the nerves, so it generally happens that the instructor is short and blunt in the temper and long and sharp in the tongue. Hence the following effort:—

PER—VERY—HAPS.

The Pilot who's instructing me
Has many a charming quality,
And chief is, undeniably,
His uniform politeness.
His tact and gentleness inspire
The most unprepossessing Flyer,
No Pupil's faults can dim or tire
His amiable brightness.

If, when he deems the time is high
To take me with him in the sky,
He happens to observe that I
Am busy with a letter:
He'll say, "Oh pray continue, do!
You've got no stamps? Well, here's a few,
I'll take it to the post for you,
That you may fly the better."

When he has mollified me thus
And we have clambered in the 'bus
And taken off—he doesn't cuss
At every little blunder;
But delicately intimates
That so-and-so precipitates
A sideslip on the Squire's estates
And breaks the 'bus asunder.

"Now will you kindly take control?
I'd like it best, upon the whole,
If you will fly her to the goal
Of Salisbury Cathedral;
Yet should she happen to prefer
The Isle of Wight or Winchester,
Don't try to interfere with her:—
It may be her Dihedral."

Then, when I've zig-zagged to and fro
'Twixt Porton Rings and Winterslow
And "Gasoline" is running low
He'll say, "That's splendid! You 'ull
Pan out a pukka pilot, lad.
Your exhibition's not half bad
Considering you've only had
Two dozen hours of 'Dual.'"

"Now try a turn to our left flank."
(Then, when I steer her like a tank)—
"May I suggest a little 'bank'?
I won't insist about it:
Pray don't begin imagining
You *must* depress your inner wing—
Still, it is hardly thought 'the thing'
To make a turn without it."

Then if I start to stall the 'bus
And Pitot's' scarcely more than 'Plus'
He'll say, "I hate to make a fuss
Or seem the least bit 'shirty':
But in the circles where they *dress*
It's thought a sign of '*politesse*'
To keep the speed at never less
Than twenty-five or thirty."

When in this mild paternal way
He's pointed out my faults, he'll say—
"You've done so well, I think you may
Proceed on leave to-morrow:
Your home's in Kent?—I'll fly you there,
It won't be half an hour by air:
Or if you want a railway fare,
Just come to me and borrow."

And when he's dropped me at the gate
He says, "Don't worry if you're late,
For if the O.C. starts a 'Hate'
Your rich deserts I'll tell him."
Then I awoke. . . . . If I possessed
Instructor with such virtues blessed,
Not all the wealth of East and West
Would ever make me sell him. H. T. B.

As an example of sarcasm in its gentlest form those verses should be quite useful to many instructors. If they cause a few of these hard-worked and sorely tried gentlemen to abate their acerbity a trifle, they will have served their purpose.

Now we may turn to another aspect of the pupil. One apologises for his language, but in the interests of realism it would be a mistake to edit him. Many a hardened air-fighter, with orders and decorations to his credit, will recall that horrid feeling of going aloft for the first time in the old Maurice Farman "short-horn" biplane, commonly called a "Rumpty," which, though an excellent machine in the air, was alarmingly jellified on the ground. However, let the Hun tell his own tale of woe:—

THE RUMPTY FEAR.

I was a Hun but yesterday, you were a Hun last year
So you'll understand, I know, when I talk of the terrible "Rumpty Fear."
They put me into a sort of cage a maze of sticks and wire
With a petrol engine hung behind, that turned my thoughts to fire.
They sat me down in a little chair in a box of dented tin,
And all there was 'twixt me and space—how thin, ye Gods! How thin.
Another man got up in front, who said he'd fly me round.
Extr'ordinary the faith I had he'd get me back to ground.
They put my hands upon a stick with handles at the side
And into pedals on the floor my feet by straps were tied.
Around my waist a belt was fixed and fastened up with locks,
And there I was trussed like a fowl inside that damned tin box.

The brute in front looks round and grins. "All right," he cries, "Contact."
I try to mutter "Let me out," my voice just will not act.
A bang, a roar, the whole machine starts shaking like a jelly,
The ground recedes and in my mouth I find my wretched belly.
The stick to which my hands are glued starts wobbling about,
The beast who's sitting in the front begins to point and shout.
The earth and sky go whirling by all jumbled in my eyes.
I draw my breath and clench my teeth and think "Oh! fool unwise!
Why eat your stomach in the air before this roaring fan
When you might eat your food on earth like any decent man?"

A pop, a bang and silence! We are diving for the ground,
My inside's in my mouth again, my terror's most profound.
We land upon the aerodrome and taxi in again,
The saviour of my life gets out, *he* doesn't show the strain.
He turns a tired eye on me and says in bored contempt
"To-morrow if the weather's fine we will again attempt,
Your turns and things are pretty dud, your landing's rotten too,
"We'll send you solo all the same after another few."
Ugh! Er! to be alone in that damned awful box of tin.
I hie me off immediately to drown my thoughts in gin.

With ginger-beer one hopes, for neat gin is not good for youngsters, especially in hot weather. The general impression certainly bears out General Brancker's famous dictum that no pupil ever really sees anything during the first hour which he spends in the air. The curious thing is that people who start by being in a blue funk often become, after a little experience, the coolest and most self-possessed of pilots.

Now we can progress a step further to the advanced pupil who is flying across-country and doing fighting practice preparatory to going over-seas. Here is what he thinks about it:—

WERE YOU EVER ALOFT . . . . ?

Were you ever aloft in an aeroplane,
When the clouds were thick and low,
And you couldn't find the aerodrome,
Or a single place you know;
When you didn't know where you were at all,
With earth you'd lost connection,
And it seemed each way you headed the 'bus,
Turned out the wrong direction?

Were you ever aloft with an engine,
When its revs. keep slowing and slowing,
And you hold her nose down to keep up speed,
And into a gully you're going;
When every moment you think she'll konk,
And you swear as a pilot would,
And after a final effort you find
It's only the pressure that's dud?

Were you ever aloft on an altitude test,
Ten thousand feet in the air,
With the old 'bus climbing so awful slow
You thought you'd never get there;
At last you reach the height you want,
And swiftly down you come,
Knowing you've one less test to do,
And your hands and feet are numb?

Were you ever aloft to do some stunts,
A loop is the first you try,
You hang on your belt when at the top
Then "wind-up," and C.I.
When you taxi in on the aerodrome,
To your instructor you explain
And promise you'll roll and spin next day,
But he sends you up again?

Were you ever aloft with a feeling of pride,
In your progress in learning to fly.
Your air-work is good and you stunt a bit,
And your confidence is high;
But how cheap you feel when one fine day
Your hopes receive a check,
You land cross-wind, and, dreadfully peeved,
You clamber out of the wreck?

Were you ever aloft in a practise scrap
With a pilot who is more clever,
He does a half-roll and gets on your tail,
And you cannot shake him,—never:
Your camera gun is useless to you,
For turn or stunt as you will,
He is taking his pictures right along,
You're lucky snaps don't kill?

Somehow these verses give one quite a good notion of the various little annoyances and disappointments of the pilot who is coming on well, and has not yet acquired the gift of flying by instinct, or rather doing his flying sub-consciously. The versifier's rhymes and metre are not above reproach, but he gets his ideas home all the same.

As a transition from the beginners to the active-service people, here is a little thing by a flight-commander who has been in the flying game pretty well from the beginning. Whether his nightmare was caused by too much good living, or by strain of service over-seas, or by the "worrits" of innumerable unsatisfactory Quirks or Huns one would not hazard even a guess. However as the nightmare of a specialist it is quite a good effort:—

THE AIRMAN'S NIGHTMARE.

I can see a white hot engine
Three inches from my nose,
The petrol tank a blazing hell
Just underneath my toes.

SIR WILLIAM WEIR.

Secretary of State for the Royal Air Force.

The wires are snapping round my head.
The rudder-bar has jammed.
Both wings are cracking horribly.
My eyes with oil are crammed.

My poor observer's fainted
And fallen through the plane,
I'm sorry, because I liked him.
Life's full of joy and pain.

Great Scott! one wing has fallen off,
The other's badly gashed.
The earth's ten thousand feet below.
The elevator's smashed.

Revolution indicators
Are tearing out my hair.
My goggles are waltzing round me
Humming the "Druid's Prayer."

The lubrication oil tank
Is forced between my teeth.
O why do the pistons chortle
Like asthmatical breath?

Four propeller blades are fighting
The bent induction pipe.
The inlet valves they swear aloud.
The fabric tastes unripe.

The stays are crooning plaintively
To soothe the petrol tap.
The engine jumps its bearers, bursts,
And settles in my lap.

I'm falling faster and faster,
I do so want to yell,
But when I reach the earth again
Won't I have lots to tell?

A fearful crash! I hit the ground.
. . . I've fallen out of bed!
Think goodness I'm awake once more
Holding my throbbing head.

Again the metre and rhyme are not perfection, but the material is there, and, to use the vulgar but expressive theatrical *cliché*, he "gets it across."

Another cause of nerve trouble at the aerodrome, the non-stop talker, is handled graphically in a few brief but pithy lines. One hopes that they will touch the spot in several instances:—

THE SAD STORY OF JOB McCREE.

("Some" distance after Keats.)

A chap there was, named Job McCree,
Who did adorn the R.F.C.
He talked so much and gave no peace,
His friends said: "Tell that thing to cease!
Stop babbling, pray!" But did he? Nay,
Short of a charge of T.N.T.,
Nothing *could* silence Job McCree.
His comrades, through the day, in tears,
Toiled with his sweet voice in their ears,
At night, with blankets round each head
They camouflaged themselves in bed.
At last: "Haul out the 'bus!" cried one;
"I've had enough of this, my son!
Come forth with me and you shall see
Stars of exceeding brilliancy."

* * * * * *

And from an height they dropped the wight,
Deep down into a marsh he fell.
They searched full diligent and well,
Yet found him not, but in one spot
Ever since that eventful day,
Bubbles rise upwards, so they say,
As though, communing with himself,
He talketh still, unhappy elf!

E. S. F.

ON ACTIVE SERVICE.

Now let us turn to the active-service people. Here one finds, quite naturally, a more joyous spirit than exists amid the wearisome round of aerodrome drudgery. Let the first place be taken by the representative of the Senior Service, now, at any rate for the time being, merged in the R.A.F.:—

R.N.A.S. "TAILS WELL UP."

We're flying by day, and we're flying by night;
We've harried the Hun, and have put him to flight.
Oh, I tell you Life's great to R.N.A.S. fellers,
Who, I hear it is said, are the Air Cinderellas!

In the grey of the dawn, in the black of the night,
'Planes heavy with bombs, till at length they are light;
For the trails left behind us, are always the tellers
When the stunting is done by the Air Cinderellas.

A. M. O.

TEACHING THE YOUNG IDEA: A Lecture to the Observers on aerial fighting.

here one has not only the *joie de vivre* but the more inspiring *joie de tuer*. Brief as are the verses, they breathe the good old English spirit of destruction as exemplified in the classic sentence attributed by a satirical Frenchman to the English sportsman :—"What a lovely day! Let us go out and kill something!"

Another excellent example of the same breed is a set of verses by a young fighting pilot, now permanently disabled, but as full of fight as ever :—

"THE HYMN OF HATE."—OFFENSIVE PATROL.

Onward, Baby Nieuports,
Flying out to war,
Lewis guns all loaded
Engines all a'roar.
See, the Flight Commander
Leads against the foe,
Five machines with engines revving
Cylinders a'glow.
Onward, Baby Nieuports,
Flying out to war,
Lewis guns all loaded
Engines all a'roar.

At the sign of triumph
The wily Hun doth flee.
"Dive then, Baby Nieuports,
Dive to victory."
Albatroses quiver,
Engines glowing red,
Crack! crack! crack! behind them.
Pumping them with lead.

See the Albatros's
Tanks begin to leak,
As the guns of Nieuports
One and all do speak.
Diving ever downwards,
Every wily Hun,
Into flames they're bursting.
"Nieuports—you have won"

Pull your joy-sticks backwards
Zoom towards the skies.
Up to fifteen thousand
Fast the Nieuports rise,
Guns once more are silent,
All their rounds are loosed,
Now they're flying Westwards—
Flying home to roost.

Welcome, Bristol Fighters,
Who towards us soar,
Blend with ours your engines
As we homewards roar
"We have done much battle
With the Albatros,
Never will they fly again
Now they bite the moss."
Onward, Nieuports, Bristols,
Flying out to war,
Lewis guns all loaded
Vickers guns galore.

As the note on bought music remarks, "This song may be sung without licence," and probably without restraint. One fears that the perpetrator is a graceless young scamp, and that the ultra-pious will not approve of his stealing the metre of a popular hymn and fitting his verses to the tune thereof, but the spirit of the verses is so near the spirit of the hymn that logically there seems no ethical difference between the two. It is true that the first line would have to be sung, "Onward, Baby New-hoo-pores," to make it fit the tune, but probably that would only add to the sonority of the chorus.

Anyhow, it is the hymn of a fighting man, and its sentiment is preferable to that of hymns like that containing the lines, "Whatever, Lord, we lend to Thee, repaid a thousandfold shall be." Somehow the desire for 100,000 per cent. interest on gilt-edged security of such a nature has always struck one as conveying a pretty poor idea of the good pious person who wrote it.

(To be continued).

THE DEATH OF BERTRAM COOPER.

All those who have been long concerned with aeronautics will learn with deep regret of the death of Mr. Bertram G. Cooper, formerly secretary of the Aeronautical Society. Mr. Cooper was killed in an aeroplane accident on June 8th, when flying as a passenger on what was his first flight, despite his long connection with aeronautical affairs.

Bertram Cooper was in the Civil Service when he took over the secretaryship of the Aeronautical Society from Mr. T. O'B. Hubbard (now Lieut-Col. R.A.F.) on that gentleman joining the R.F.C. in 1913. He continued to fulfil the arduous duties of his office with tact and ability till some time after the outbreak of war, when his natural leanings towards scientific matters led him to join Mr. Griffith Brewer in the Aeronautical Instrument Co. Thence he transferred after a while to the Air Board, where he held a responsible position in the Technical Department.

Mr. Cooper became a widower two years ago, and leaves a son six years of age.

THE IMPORTANCE OF ARMY RECONNAISSANCE.

Lt.-Col. Repington, writing in the "Morning Post" on June 9th, says :—

It is the veiled approach march, the concealed concentration for the offensive, that German Main Headquarters justly vaunts as its masterpiece, as we previously vaunted ours before Cambrai. This German secret we have to penetrate in future, and the work must be done.

It is a matter of comparative unimportance how many air victories our pilots obtain if they do not pay more attention to reconnaissance than to duelling. If our Air Force, and that of our Allies, does not succeed in future in identifying the German approach march, then we must revise our opinions of the advantage of superiority in the air, for this superiority, if it means anything, means superiority and priority of infomation.

It is the same with Intelligence work, and a Commander in the field is very gravely handicapped if either Service fails him in critical days.

THE MASTERY OF THE AIR.

Reuter's special service sends the following message from the French Army on June 5th in connection with the recent German attack.

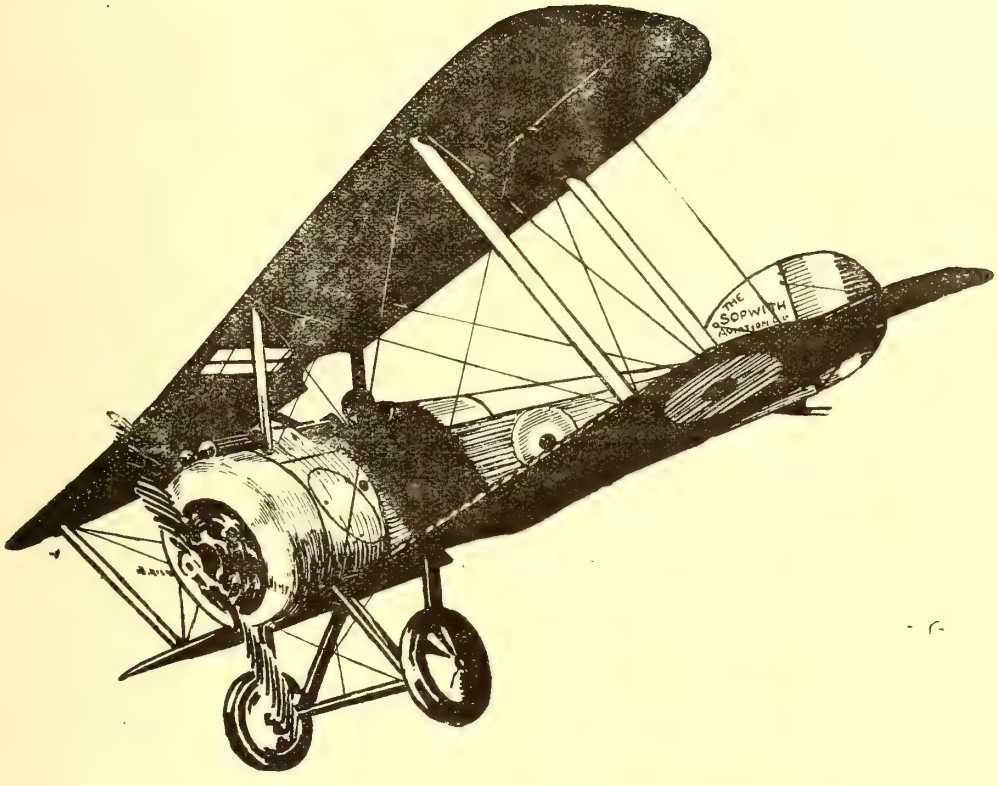
During the first 24 hours of the battle the German air service had the mastery of the air between the Aisne and the Marne. Its triumph was short-lived. As soon as the attack opened on Monday orders were sent to a powerful aviation group, comprising both fighting and bombardment squadrons, to move to the new battlefield. The entire group, which includes among its aviators some of the best-known aces of the French Air Service, started at once for the Aisne, flying along the German front on the Oise, and causing as much damage to the enemy in its passage as it conveniently could.

The group took the air on Tuesday morning, both fighting and bombardment squadrons, the fighting planes engaging the Boche aviators and descending to within a few score feet of the ground, in order to attack the German troops and convoys on the roads. By the end of the day the balance in the air had been redressed. In the course of Wednesday our supremacy in the air was definitely re-established, and since then it has hardly been challenged. A remarkable number of German observation balloons have been destroyed during the last few days.

THE WILBUR WRIGHT LECTURE.

Considerable additional interest is given to the sixth "Wilbur Wright" Lecture, to be held by the Aeronautical Society of Great Britain on June 25th at the Central Hall, Westminster, by the fact that the chair will be taken by Sir William Weir, Secretary of State for the Air Ministry.

Dr. W. F. Durand, who is to give the lecture, is one of the principal authorities on aviation in the United States. He is chairman of their National Advisory Committee for Aeronautics, and Scientific Attaché to the American Embassy in Paris. Dr. Durand's subject will be "Some Outstanding Problems in Aeronautics."



Applications for tickets, which are already in great demand, should be made to Mr. W. Barnard Faraday, the Secretary of the Society, 7, Albemarle Street, W.1.

AIRSHIP AND K.B. PATROLS.

The following presumably official account appeared in the "Times" of June 8th :—

The longer hours of daylight have enabled our seaplanes, airships, and kite balloons materially to assist our surface craft in

KINDLY MENTION "THE AEROPLANE" WHEN CORRESPONDING WITH ADVERTISERS.

defending merchant vessels and in hunting out the U-boat. The summer conditions favour the submarine hunters, whose incessant searching of the seas forces the German craft to seek deeper waters in the hope of escaping their vigilance.

Particularly good work was performed recently by an observation balloon which was being towed by one of his Majesty's ships through a sector of home waters. The patrol was started at daybreak, and the balloon had not gone far before the observer sighted something which indicated the presence of a submarine. Depth charges were dropped, which caused the submarine to change its position. An hour later a submarine was seen by the balloon to break surface a considerable distance away and to begin shelling a small sailing vessel. The balloon was towed rapidly to the spot. In the meantime the submarine was forced by the towing vessel to cease firing and to submerge. Aided by the balloon the towing ship was able to get over the track of the U-boat, and to drop nine depth charges, as the result of which large quantities of oil rose to the surface and gradually spread to an area of roughly a mile.

One of our airships, also on an early morning reconnaissance, sighted a U-boat engaged in attacking a merchantman. Putting on full speed the airship arrived on the spot just after the submarine had submerged, but the German had not got deep enough to be out of the vision of the airship's crew. A bomb dropped about three feet astern of the U-boat's port evidently gave her a bad shaking, for streaks of oil rose to the surface and the submarine was seen to alter her course to starboard. The airship manœuvred for position and with a second bomb scored a direct hit on the stern of the submarine, causing it to lift towards the surface and roll as though about to turn turtle. More oil rose and the submarine disappeared from the airship's view.

THE FIRST RIESENFLUGZEUG.

The following particulars of a "giant" German aeroplane brought down in France recently were issued by the Press Bureau on June 7th:—

Four engines; span, 136 ft.; length over all, 66 ft. 6 in.; crew, number not definitely known.

The correspondent of the Havas Agency on the French front telegraphed on June 6th that the giant German aeroplane which was brought down on June 1st in the neighbourhood of Retz (south-west of Soissons) carried nine passengers, including the pilot officer commanding, two observer officers and machine-gunners, two specialist engineers, a second pilot in charge of the engines, and two other specialist engineers.

The machine is of the most recent type of giant aeroplanes. Its principal characteristics are as follows:—Four engines, each of 300-horse-power; spread of wings, 43 metres (about 141 feet); total length, 28 metres (about 92 feet); crew, nine men; weight, when empty, 9,200 kilogrammes (over nine tons); weight in flight, when fully loaded, 14,600 kilogrammes (14½ tons); weight of bombs that can be carried, about 2,000 kilogrammes (about two tons); maximum speed, 120 to 130 kilometres (75 to 80 miles) per hour; armament, four machine-guns.

SOUVENIR COLLECTING.

At the Clerkenwell Police Court, Albert Chapman, 36, of Rendlesham Road, Upper Clapton, and Albert Tutt, 41, of Holland Park Avenue, Kensington, aeroplane examiners, were charged, on remand, with being concerned together in stealing an aeroplane float chamber cover and needle valve, value £2, the property of H.M. Secretary of State for War.

Detective Bowton, N division, went to an Enemy Aircraft Viewroom, where he saw the prisoners, and told them he would arrest them for being concerned in stealing a float and a chamber cover and needle from a German aeroplane. The prisoners said they had not got them. On the way to the station Tutt said, "I unscrewed the valve from the machine, but did not intend to take it away."

Mr. Lewis prosecuted for the Treasury, and said the place of the alleged theft would not be mentioned—for obvious reasons. The men were watched and were seen, it was alleged, to be working together, the one covering the other. The matter had been referred to the Public Prosecutor by the Air Ministry, and a serious view was taken in that things might be taken which would be irreplacable. The prisoners were on the premises legitimately, in connection with their occupation

The prisoners pleaded guilty.

Mr. Lewis said there was no unpatriotic purpose suggested but prisoners had given no explanation of their conduct.

Chapman, it was said, came from Australia to work for the Government. He was a skilled man Tutt had been discharged from the Army with wounds, and was employed as a skilled man. Chapman said it was done on the impulse of the moment without any felonious intent beyond securing a souvenir. It had been a lesson to him. Tutt said he took the thing out of the machine out of interest, and as a souvenir.

Mr. Symmons said he believed the defence, but it was a serious matter. Having regard to their good character, and this being the first case o fthe kind he had had, he woud not send them to prison. They would not send them to prison. They them to prison. They would have to pay a fine of £15 each. Any other case of the sort would be dealt with by imprisonment.

POETRY.

In these days of modern sides to ancient schools literature of any kind is hard enough to come by, and poetry, except of the kind so-called which is usually worthily set to tunes for the delectation of suburban drawing rooms, is rarer still. Therefore one owes a debt of gratitude to Maj. the Hon. Maurice Baring for a very small, and therefore precious, book of poems published by Martin Secker, of 5, John Street, Adelphi, W.C.

There are many of the Royal Air Force who from time to time have made efforts to produce poetry. Some few have succeeded, others have produced praiseworthy failures, many have produced excellent humorous verse which is not poetry, but has been highly entertaining. Therefore one recommends to all who appreciate poetry at its best, or who hope some day themselves to be among the poets, that they should acquire Major Baring's book, both for their edification and their education.

Very fittingly the first poem in the book, which is also the longest, is one in memory of Captain Lord Lucas, than whom no man has ever been more fitted to inspire poetry. One can recollect nothing finer of its kind in the English language than this piece of work. Shorter but equally perfect in their workmanship are two other poems, one in memory of Julian Grenfell and the other of one Pierre.

By way of an antidote to the serious poetry, which is all the more serious because of its delicate hints of humour here and there, there is at the end of the book an "Elegy on the Death of Juliet's Owl," a perfectly priceless thing which deserves to go down in the history of literature alongside the "Ode to Corinna's Parrot" by a certain Publius Ovidius Naso—a friend of one's youth.

For all that he has to handle the coarse Anglo-Saxon tongue Major Baring belongs in spirit to the great days of Rome, and though his writings of pre-war days show it more plainly than does this little book, the perfect finish of his work and the perfect use of every word recall the Latin poets alone. One's only regret is that his military duties have prevented Major Baring from producing between 1914-1917 a greater amount of such work.—C.G.G.

THE W.R.A.Fs. AND FLYING.

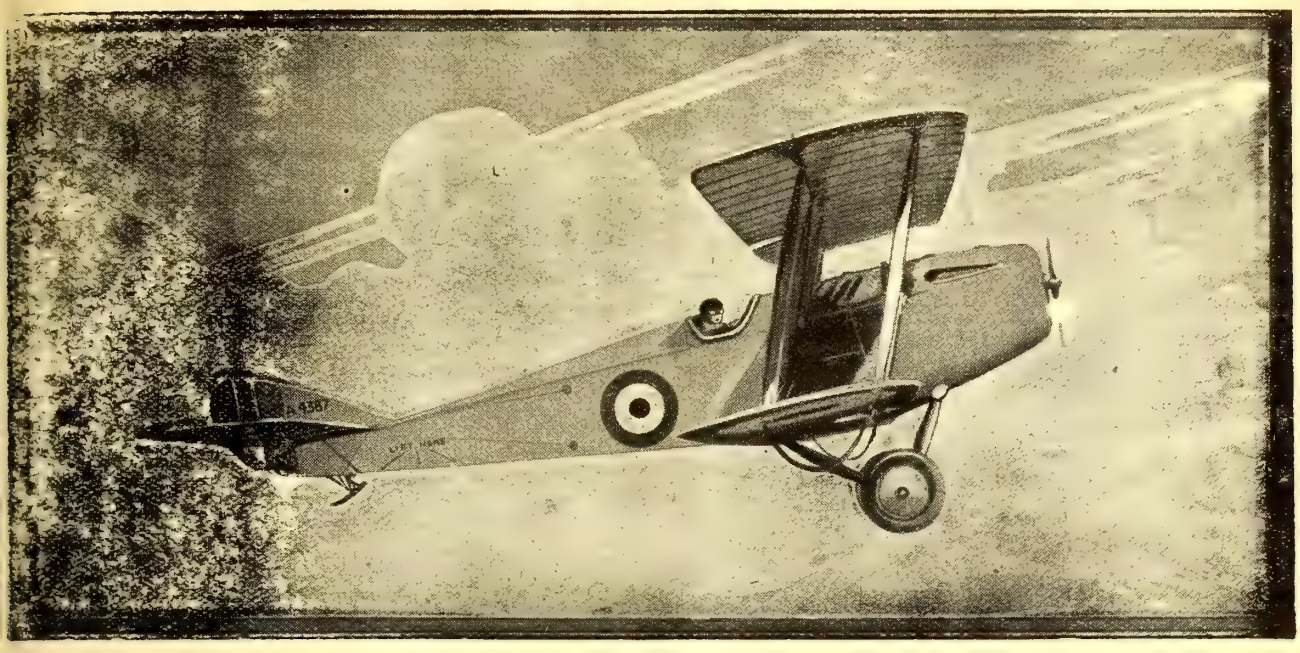
Apropos the statement made by the Minister of Labour at Sheffield on June 3rd, in regard to a Woman's Air Force, Maj. Baird, Parliamentary Secretary to the Air Ministry, stated in the lobby on June 4th that such a force was really in existence already, holding a position corresponding with that of the W.A.A.C.s. in relation to the Army. There was no reason whatever, he added, why women should not fly quite as well as men. Indeed, they performed the work assigned to them admirably, but there was, of course, no idea of sending them to fight at the front The intention rather was to release men for duties of a more arduous nature. The thing was not being done under any definite scheme, for which at present there was no necessity.

[There is perhaps no reason why any W.R.A.F. should not do anything as well as Maj. Baird does it, but that is no reason for risking valuable aeroplanes in the care of women pilots when there are plenty of men to fly them.—Ed.]

THE BILLETING OF W.R.A.Fs.

An Order in Council has been made to amend the Air Force Act so that the provisions of the Army Act as to billeting shall apply to women who are enrolled for employment by the Air Council as they apply to aviators. Officers of any body of the Air Force with whom the women to be billeted are employed, and the officer commanding that body, are to "be deemed in relation to such women to be their officers and commanding officer; and if any such woman is guilty of an offence in relation to billeting" mentioned in Sect. 30 of the Army Act, she shall be punishable on summary conviction. [Sect. 30 of the Army Act makes it an offence for any person subject to military law to be guilty of any ill-treatment, by violence, extortion, or making disturbances in billets, of the occupier of a house in which any person or horse is billeted.]

THE O.B.E. AN "INSULT."



The bestowal of the O.B.E. for war services is regarded more as an insult than a reward by at least one member of the Worcestershire County Council, so says the "Star."

At a meeting of that body on June 10th, the Chairman, Mr. W. Bund, congratulated the Vice-Chairman, Colonel Vincent Wheeler, on being made an officer of the Order of the British Empire, but expressed the opinion that it was a poor reward after the colonel's work in the Army and as Chairman of the War Agricultural Executive. (Cries of "Hear, hear.")

Mr. J. Leadbetter said the honours bestowed on the Chairman and Vice-Chairman were an insult to the county. The list of honours contained names of men who had done nothing but make money, and some of them were of military age.

The Chairman expressed disapproval of the remarks, and added, "We are all grateful, but the measure of our gratitude is another matter."

["And so say all of us." One of the few honest members of Parliament remarked at a lunch the other day that every one of the last four "Honours" lists contained the names of men who were known to be "wrong 'uns."—Ed.]

GEOFFREY WATSON

FROM THE "LONDON GAZETTE."

WAR OFFICE, June 3rd.

The King has been pleased, on the occasion of His Majesty's Birthday, to give orders for the following appointment to the Most Honourable Order of the Bath for services in connection with the war. Dated June 3rd, 1918 :—

C.B. (MILITARY DIVISION).

Lt.-Col. and Bt. Col. (Temp. Maj.-Gen.) Edward Bailey Ashmore, C.M.G., M.V.O., R.A

* * *

The King has been pleased, on the occasion of his Majesty's Birthday, to approve of the following reward for distinguished service in connection with military operations in Egypt. Dated June 3rd :—

TO BE BREVET LIEUTENANT-COLONEL ON PROMOTION TO MAJOR.

Capt. (temp. Col.) A. E. Borton, D.S.O., R. Highrs. and R.F.C

* * *

The King has been pleased, on the occasion of his Majesty's Birthday, to approve of the following reward for distinguished service in connection with Military Operations in Salonika, dated June 3rd, 1918 :—

TO BE BREVET MAJOR.—Capt. (temp. Maj.) A. Cleghorn, R.E. and R.A.F.

* * *

The King has been pleased, on the occasion of his Majesty's Birthday, to approve of the following rewards for distinguished service in connection with Military Operations in Italy, dated June 3rd, 1918 :—

TO BE BREVET COLONEL.

Maj. and Bt. Lt.-Col. (temp. Brig.-Gen.) T. I. Webb-Bowen, Bedf. R. and R.A.F.

TO BE BREVET LIEUTENANT-COLONEL.

Maj. (temp. Col.) P. B. Joubert de la Ferté, D.S.O., R.A. and R.A.F.

* * *

The King has been pleased, on the occasion of His Majesty's Birthday, to approve of the following rewards for valuable services rendered in connection with the war. Dated June 3rd :—

TO BE BREVET COLONEL.

Capt. and Bt. Lt.-Col. (Temp. Brig.-Gen.) F. H. Sykes, C.M.G., Hrs., and R.A.F.

TO BE BREVET LIEUTENANT-COLONEL ON PROMOTION TO MAJOR.

Capt. (Temp. Lt.-Col.) L. W. B. Rees, V.C., M.C., R.A. and R.A.F.

* * *

The King has awarded the Albert Medal to Serjt. (Flt. Serjt.) Thomas Nicholl, R.F.C., in recognition of an act of gallantry which he performed in France on February 26th, 1918.

Two bombs exploded under an aeroplane, burning the machine entirely and causing considerable loss of life. Owing to the explosion a phosphorus bomb attached to another machine standing near to it was ignited. Flt. Serjt. Nicholl, with great presence of mind, and regardless of the danger to himself, unhooked the burning bomb and carried it to a place of safety. By his prompt action Flt. Serjt. Nicholl, whose hands were badly burned, saved the second machine and prevented further serious damage and loss of life which would probably have been caused.

* * *

The King has been pleased, on the occasion of his Majesty's Birthday, to give orders for the following appointments to the Most Excellent Order of the British Empire, dated June 3rd, for services in connection with the war.

COMMANDERS (C.B.E.).

War Office, June 5th.

REGULAR FORCES.—Establishments. — R.F.C. — Mil. Wing.—Schools of Instrn.—Schools of Mil. Aeronautics.—Examining Officer (Graded as a Flt. Comdr.)—Rank and corps of Sec. Lt. W. H. Dolphin, Ind. Army Res. Officer, is as now described, and not as in "Gazette" of Jan. 14th.

Admiralty, June 7th.

The King has been pleased to approve of the award of the following decorations and medal to officers and men of the Royal Naval Air Service:—

The Distinguished Service Cross.

Flt. Lt. John Gamon, R.N.A.S.

For conspicuous gallantry and devotion to duty. On March 30th, 1918, whilst returning from a bombing raid, he was attacked by three enemy triplanes, one of which he brought down and drove off the other two. He has carried out very many bombing raids on enemy lines of communication, aerodromes, and dumps. His work has always been of the greatest merit, and he has set a splendid example to those around him.

Flt. Sub-Lt. G. B. McBain, R.N.A.S.

For conspicuous bravery and devotion to duty in carrying out bombing raids on enemy troops, aerodromes, and lines of communication. On March 18th, 1918, while returning from bombing an enemy aerodrome, he was attacked by five enemy scouts. After a short combat one of the scouts was seen to nose-dive, and its tail plane fell off. The four other enemy aircraft retired. He has carried out many bombing raids, at all times showing great determination and setting a splendid example.

A Bar to the Distinguished Service Cross.

Flt. Lt. (actg. Flt. Comdr.) L. H. Rochford, D.S.C., R.N.A.S.

For consistent determination, bravery, and skill. As a Flt. Comdr. he has shown considerable ability, and has always set a fine example when dealing with enemy aircraft. On March 21st, 1918, when on offensive patrol, he attacked one of nine Albatros scouts. Enemy aircraft was seen to go down in the mist out of control. He has destroyed or driven down out of control many other enemy machines.

Flt. Lt. (actg. Flt. Comdr.) C. R. Lupton, D.S.C., R.N.A.S.

For conspicuous bravery and skill in leading bombing formations, especially on March 26th, 1918, when he carried out at low altitudes four bombing raids on enemy communications. In the course of these raids he caused great damage to enemy transport, and inflicted serious casualties on large numbers of their reinforcements. He has carried out very many bombing raids, and by his courage and resource has instilled a spirit of confidence and daring in all those who have flown with him.

Flt. Lt. J. A. Glen, D.S.C., R.N.A.S.

For exceptional gallantry and skill as a flight leader when engaging enemy aircraft. He has destroyed or driven down out of control many enemy machines.

A Bar to the Distinguished Service Medal.

Air Mech., 1st Gr., W. Naylor, D.S.M., O.N., F1406.

* * *

The following officer has been mentioned in despatches:—
Flt. Lt. H. C. Lemon, R.N.A.S. (killed).

* * *

The following decoration has been conferred by an Allied Power on the following officer of the British Naval Forces for distinguished services rendered during the War. The King has given unrestricted permission to wear the decoration in question:—

Conferred by the King of the Hellenes.

May 25th.

Temp. Lt. (Hon. Capt.) F. T. R. Kempster (K.B.) to be temp Lt., Obsr. Officer, and to retain hon. rank as Capt., May 1st.

Temp. Sec. Lts. (late Gen. List, R.F.C., on prob.) to be con firmed in their rank as temp. Sec. Lts., Obsr. Officers :— T. J. Wilson, J. A. Cogan, April 29th; J. A. Tomlinson, May 3rd W. D. Davidson, May 4th; J. Lumsden, A. T. Sprangle, J. C Fitton, May 6th; G. A. Drewitt, May 9th; G. E. Davies, J. W Whitmarsh, May 11th; H. L. Page, May 13th; F. A. Gledhill May 14th; W. R. Gray, T. W. Brockley, F. H. Perry, Ma 15th; D. R. Goodie, A. Taylor, May 17th; A. T. Streeter, L. C J. Barlow, J. H. Umney, May 18th; H. Pullan, May 20th; A H. Harrison, G. W. Elias, F. N. Brace, D. P. Conyngham, Ma 21st; W. A. Tagg, May 22nd, R. W. Brigstock, May 23rd.

Temp. Sec. Lt. H. G. Herbert (late Gen. List, R.F.C.) to b Sec. Lt., Obsr. Officer, April 28th.

The follg. Cadts are granted temp. commns. as Sec. Lts (Obsr. Officers) :—F. H. Foster, April 27th; F. Allen, S. J West, L. F. Rowsell, W. Knowles, S. Chandler, L. Eastwood May 23rd.

The follg. Cadets are granted temp. commns. as Sec. Lts. K.B. :—A. C. Blackburn, F. D. Wilkinson, May 13th; F. M Grey, May 20th.

Lt. R. J. W. Sawbridge relinquishes his commn. on accoun of ill-health contracted on active service, and is granted the hon rank of Lt., June 8th.

War Office, June 8th.

REGULAR FORCES.—Establishments. — R.F.C. — Mil. Wing.—Flt. Comdr.—The rank of temp. Capt. G. E. F. Sutton M.C., Canadian Local Forces, is now as described, and not as in the "Gazette" of Aug. 22nd, 1917.

Instr. in Gunnery.—(Graded as an Equipt. Officer, 1st Cl.).—The date of appt. of Sec. Lt. P. H. R. Whittet, M.C., Spec. Res. notified in the "Gazette" of May 11th is March 24th, 1917.

Gen. List.—Sec. Lt. G. Oliver to be temp. Capt. while empld as a Section Comdr., Res. Depot, Jan. 15th.

War Office, June 10th.

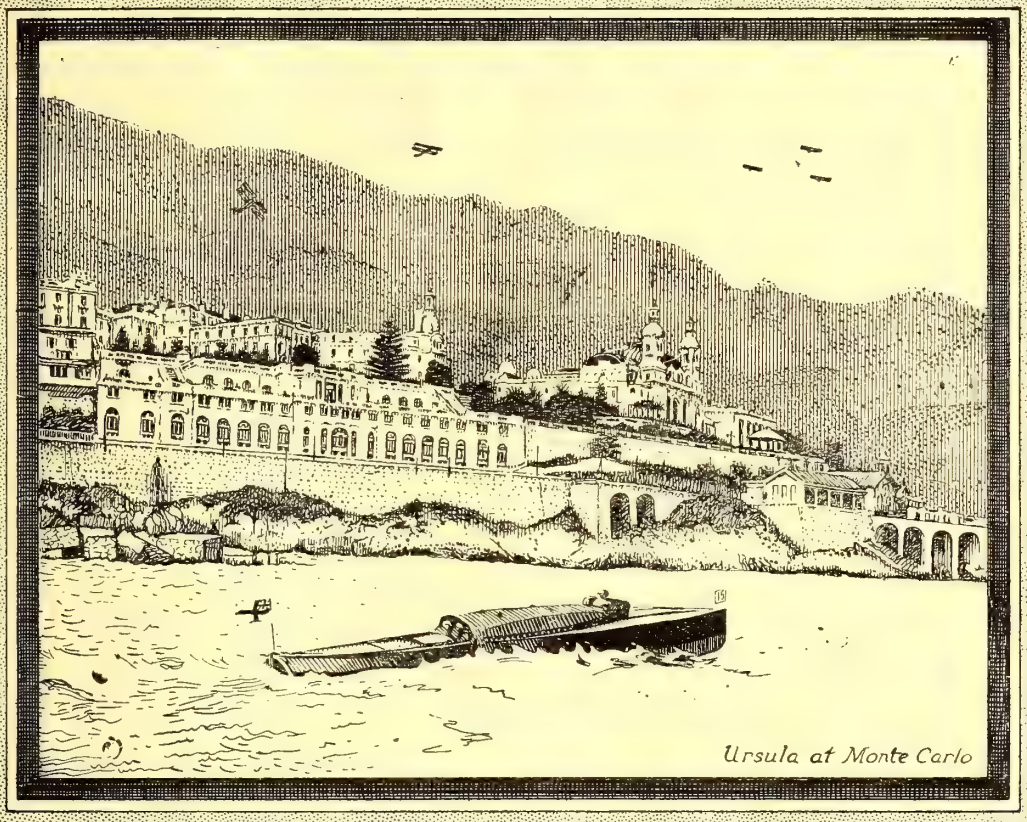
REGULAR FORCES—Establishments—R.F.C.—Mil. Wing —Staff Officer, 3rd Cl.—Graded as a Staff Capt.—Temp. Lt. J. S. Webb, Gen. List, from a Flying Officer (Obsr.), and to be temp. Capt. while so empld., March 1st.

Gen. List.—To be temp. Sec. Lts. :—3rd Cl. Air Mech. C. Wilson, from R.F.C., Feb. 12th; Pte. H. Reeves, from A.S.C., Feb. 18th.

Temp. Lt. C. W. T. Riley, Gen. List, to be temp. Capt. (without the pay or allowances of that rank) while actg. as Adjt., vice Temp. Lt. J. S. Curtis, Gen. List, who relinquishes the temp. rank of Capt., March 20th.

FROM THE COURT CIRCULAR.

Royal Pavilion,
Aldershot Camp, June 7th.



The King and Queen and Field-Marshal the Duke of Connaught, attended by the Ladies and Gentlemen in Waiting, inspected Establishments of the Royal Air Force this afternoon.

Royal Pavilion,
Aldershot Camp, June 8th.

The King, accompanied by the Queen, the Princess Mary, and Field-Marshal the Duke of Connaught, and attended by the Ladies and Gentlemen of the Households in Waiting, proceeded to the Queen's Parade, Aldershot Camp, this morning, for the purpose of holding an Investiture. His Majesty conferred decorations as follows :—

The Military Cross.—Lt.-Col. J. Mead, R.A.F.; Lt. T. Macaulay, R.F.A., attd. R.A.F.; Lt. R. Andrews, Can. M.R., attd.

THE L.V.G. BIPLANE: TYPE C.V.

Front View of the L.V.G. biplane: type C.V

"L'Aérophile" for April, 1918 contains an interesting description of the L.V.G. biplane, type C.V., a translation of the substance of which is reproduced, with certain illustrations, under a sense of obligation to the editor of that excellent French technical paper.

Comparative specifications of the L.V.G. biplanes C.II., C.IV., C.V., and Rumpler C.IV.:—

	L.V.G.			Rumpler
	C.II.	C.IV.	C.V.	C.IV.
an (upper wing)..	12.85m.	13.60m.	13.62m.	12.60m.
, (lower ,,)..	11.35m.	12m.	12.85m.	12.10m.
tal length	8.10m.	8.60m.	8.10m.	8.4m.
ight	3m.	3.10m.	3.20m.	3.25m.
ting surface ..	37.60sqm.	40sqm.	42.70sqm.	33.50sqm.
eight	845kg.	900kg.	920kg.	1010kg.
wer of motor ..	175h.p.	235h.p.	225h.p.	260h.p. 250h.p.
ake ,, ,, ..	Mercédès	Mercédès	Benz	Mercédès or Maybach

Note.—1 metre=32.37 inches
1 sq. metre=10.75 sq. feet.
1 kilogramme=2.2 lbs.

The L.V.G. type C.V., which is constructed by the Luft Verkehrs Gesellschaft (Aeronautical Transport Company), is a 2 seater. It belongs to the "general purpose" class, sometimes known as the Army Corps type.

Less speedy on the flat than the Rumpler C.IV., described in The Aeroplane of February 27th, 1918, its rate of climb is inferior (4,000 metres in 35 minutes), and equally its ceiling is less elevated (a little more than 5,000 metres).

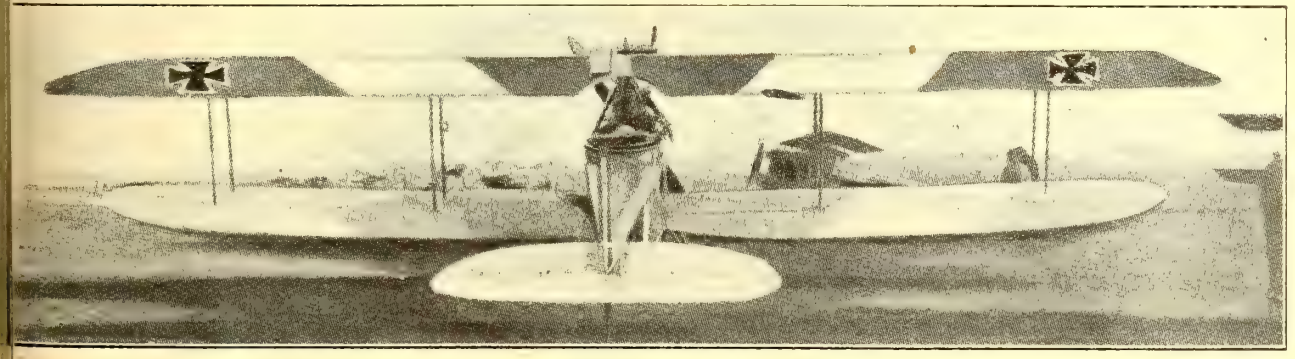
Its speeds are as follows:—

At 2,000 metres ... ... 164 km. per hr.
At 3,000 metres ... ... 160 km. per hr.
At 4,000 metres ... ... 150 km. per hr.

The Wings.

The upper and lower wings are set at a dihedral angle, more so the lower ones.

This dihedral is of 1° to the upper wings and of 2° to the lower. They are neither staggered nor swept back.



The trailing edges of the wings are flexible. The ribs are spaced about .4m. apart, with false intermediary ribs. The incidence of the wings is as follows:—

At 1st and 2nd ribs ... ... 4.5°
At 3rd to 9th ribs ... ... 5°
At 10th rib ... ... 4.75°
At 11th rib ... ... 4.5°
At 12th rib ... ... 4°
At 13th rib ... ... 3°

The upper wings, viewed in plan, are slightly trapezoidal, with rounded edges.

Their chord is 1.74m., and in the centre a semi-circular piece is cut out of the trailing edge above the pilot's head.

The ailerons project past the ends of the wings by .34m. Their form is rounded, and resembles that of the ailerons of the Gotha.

Rear View of the L.V.G. biplane: type C.V.

Their total length is 2.61m. Their chord varies from .53m. inside to .75m. at the projecting portion.

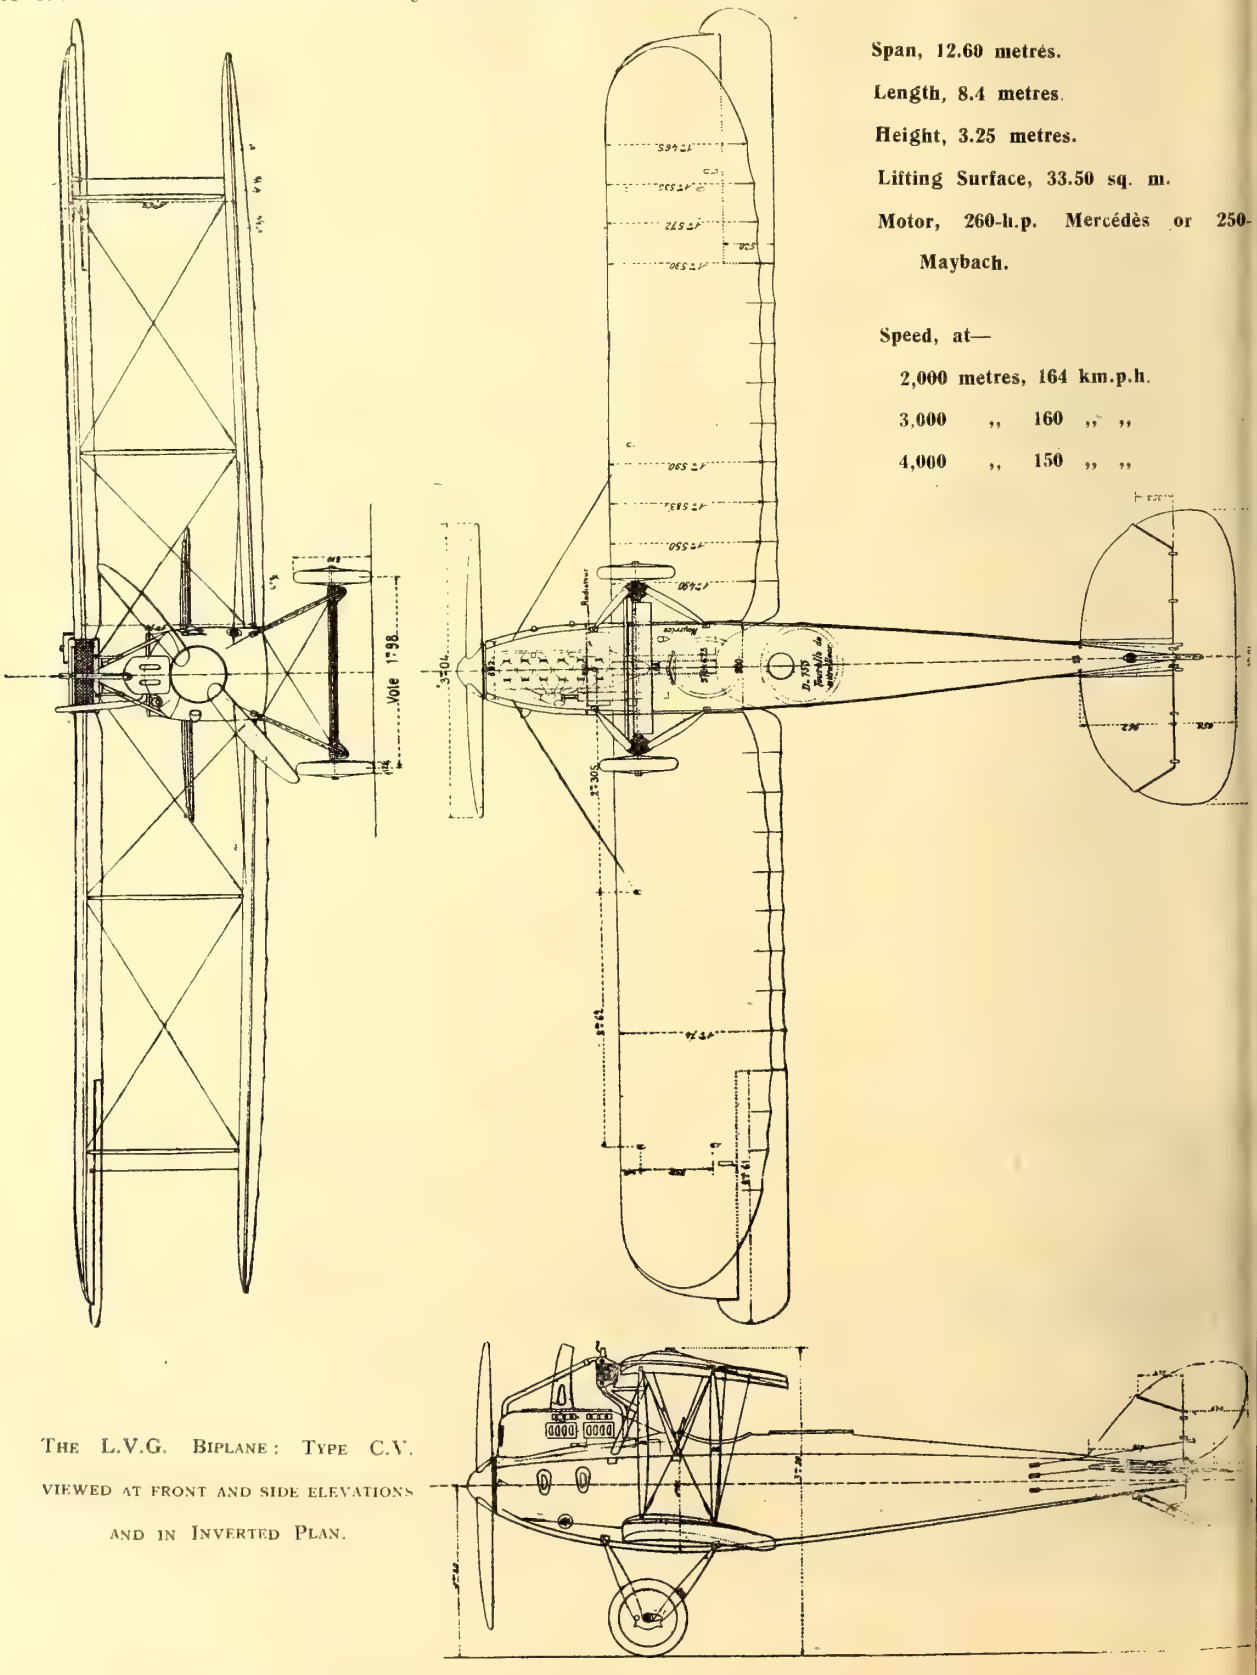
The hinges of the ailerons are parallel with the leading edge of the wing. They are attached by means of pins or bolts threaded through hinge loops, held in place by keys, on the system employed to attach the ailerons on the Roland fighter D.II. The arrangement has the advantage of permitting the quick attachment of the members.

The lower wings, following the present tendency of German aeroplanes, are rounded at the ends, and taper at the rear, as in the D.F.W., Rumpler C. IV., and Albatros C. IV. Their maximum chord is 1.59m.

The aileron cables pass through the interior of the lower wings.

The interplane struts (two pairs on either side of the fuselage) are constructed of streamline timber .105m. in diameter, and tapered towards both ends. By reason of the differing dihe angles the inside and outside struts are not the same length.

The outer struts are 1.635m. long and the inner ones 1.59



The gap between the wings is 1.74m. at the fuselage and 1.6 in line with the external struts.

The total lifting surface is 42.9 sq. m., that of the upper pl being 23.73 sq. m., and the lower 19.17 sq. m.

The cabane struts are in the form of an "N," inclined wards the rear, and converging to the fixed centre sectio the upper plane, the width of which is .12m

The Tail.

The shape of the stabilising plane, or fixed tail plane, resem that of the Albatros fighter. At the same time, it should noted that its leading edge is flatter, and it is therefore no deep.

Span, 12.60 metres.

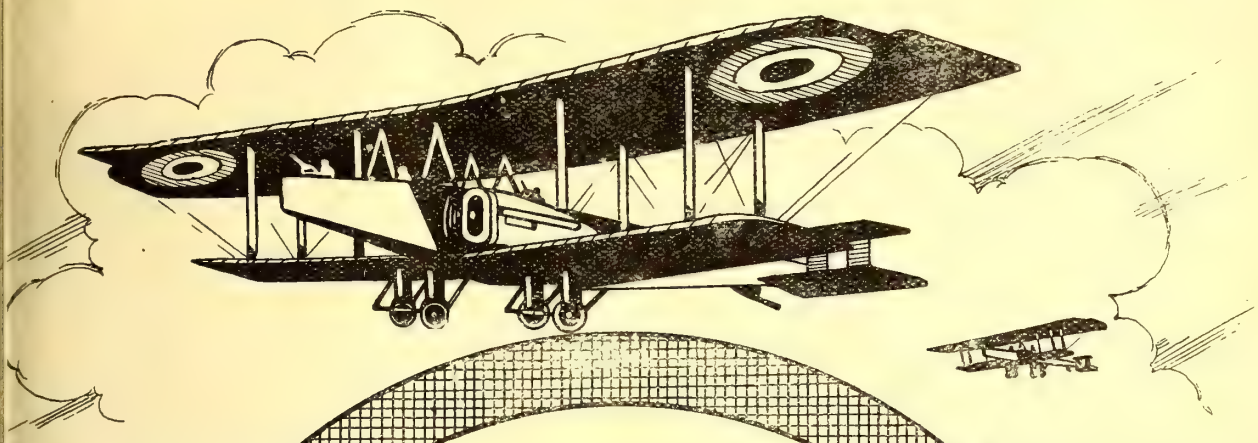
Length, 8.4 metres.

Height, 3.25 metres.

Lifting Surface, 33.50 sq. m.

Motor, 260-h.p. Mercédès or 250-

Maybach.



Speed, at—

2,000 metres, 164 km.p.h.

3,000 ,, 160 ,, ,,

4,000 ,, 150 ,, ,,

The L.V.G. Biplane: Type C.V. viewed at front and side elevations and in Inverted Plan.

"I am returning herewith a pair of 'Triplex' Goggles, and shall be glad if you will kindly replace same for me .. I had a bad smash in a Nieuport Scout and **only for your goggles, should most certainly have lost an eye.**"

"You will be pleased to hear that **'Triplex' saved my eyes** from being badly cut, and will also be interested to learn that the **'Triplex' windscreen was unbroken,** though the immediate surroundings were battered."

100% Safety & Visibility

are the outstanding features of 'Triplex' Unsplinterable Safety Glass.

It has the unqualified approval of leading Aeronautical Engineers for Windshields, Observation Panels, Instrument and Map Covers, Goggles, etc.

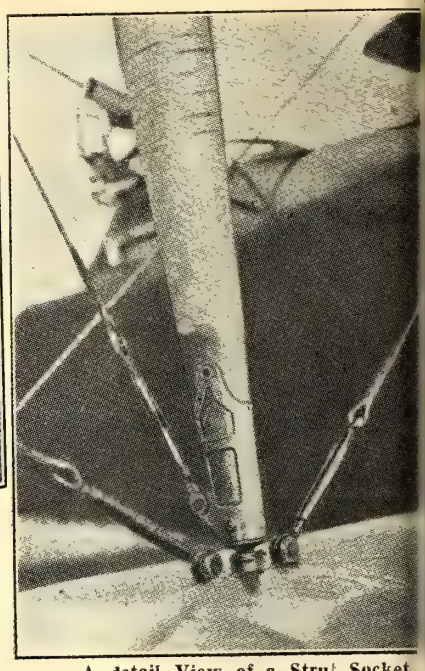
CONTRACTORS TO H.M. GOVERNMENT

"I am sending you to-day, under separate cover, a pair of **'Triplex' Goggles** which came to grief the day before yesterday. A small piece of shrapnel hit them. It is a good thing the Goggles happened to be **'Triplex'** or else it would have been a case of Nelson and one eye."



"There is no doubt **'Triplex' saved both my eyes,** as they would have been done for with any ordinary glass"

W.

'Triplex' Safety Glass

A Side View of the L.V.G.: type C.V.

A detail View of a Strut Socket.

The tail plane consists of two separate parts attached one on each side to a fixed section embodied in the fuselage, which like it is constructed of three-ply.

The elevator is a single flap, with rounded corners and balanced by a triangular extension at each end. The greatest width is 3.04m. and the depth .65m. The small triangles have a base of .39m. and are .39m. high.

At the outer angle of each of the tail planes one finds a projection of about .020m., intended to eliminate vibration from the tips of the balanced ends of the elevators by screening them from the air blast.

The balanced rudder is placed above the elevator, and forms with the fixed fin an oval inclined backwards.

The fixed fin is constructed of three-ply, and is trapezoidal in shape. The total height of the vertical empennage is 1.068m.; its depth is .675m. (1.15m. including the compensated portion). One finds on the fixed fin a projection in front of the compensating point of the rudder similar to those found on the fixed tail planes.

The internal structure of these members consists of steel tubework.

The control cables pass through the fuselage, coming outside 1.50m. from its extremity; one pair of the elevator cables pass through a channel in the thickness of the stabilising plane.

The fuselage is entirely built of varnished three-ply, and is rectangular in form, with a well-rounded top, the underside being slightly less rounded. The sides have a slight outward bulge, accentuated at the level of the pilot's seat.

The general lines are not so slender as those of the Rumpler C.IV.

The Power Plant.

The L.V.G., C.V., is driven by a Garuda airscrew, type V., with a diameter of 3.04m. The boss of the airscrew is enclosed in a "Casserole," or pot, .58m. diameter.

The motor is a 225 h.p. Benz, also used in the D.F.W. and F.D.H.G. II.

It is fed by two tanks, with a capacity of 249 litres. On the upper left wing is fitted a feed tank. The contents of these tanks permit of a flight of about 3¼ hours.

The upper portion of the motor is entirely covered in with a panelled and removable sheet steel bonnet.

The exhaust is led overhead as in the Rumpler C. IV. Contrary to that machine it is not much curved, but rises nearly vertically. [The drawings and photographs show a slight curve.—Ed. The Aeroplane.]

The honeycomb radiator, the capacity of which is 35 litres, is placed in front the wings. It is rectangular in shape, and is attached to cabane struts by two brackets. Its upper part is attached to fixed centre section of the upper plane by a small steel tube fo

The temperature regulating blind placed in front of the rad tor is one of the best in use. It is simpler and more ratio than the system of shutters. It consists of a movable blind strong fabric, which is rolled and unrolled at the will of pilot, which permits the stoppage of the passage of air and regulation of the cooling. [One commends the idea to the sup elaborators of the R.A.F. Technical Department.—Ed.]

Accommodation.

The accommodation for the pilot is of oval form, the big dimension being in the direction of travel.

Very close to this is arranged the passenger's seat inside turntable .86m. in diameter, which carries a "Parabellum machine gun.

In front and on the right side is a Spandau machine gun fir through the airscrew, and controlled by a Bowden wire.

Wireless apparatus is installed.

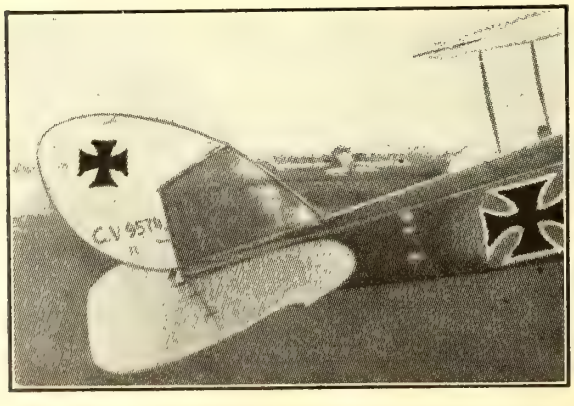
The landing carriage consists of two pairs of streamline " struts built of timber, and a pair of wheels 810mm. x 125 mm

The tyres are marked "Harburg," Vienna. The wheel tr is 1.98m. The axle is placed in a streamline wooden fairing

The suspension consists of "Sandow" elastic cord.

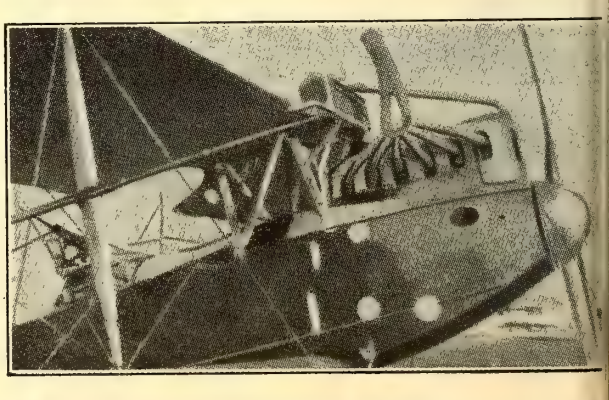
As in the Rumpler C. IV., a drag cable runs from the fr of the fuselage to the base of the inner interplane strut.

The tail skid, which is attached to a small fin underneath fuselage, is constructed of wood, and is terminated by four s laminations .002m. thick.



The skid is sprung with elastic cord.

The machine is camouflaged in bright green and mauve the upper sides of the wings and on the horizontal empennag



The under sides of these surfaces are bright blue.

In the passenger's cockpit a hole in the floor permits passage of a camera.

The machine described above was apparently intended photographic reconnaissance. It carried no bomb-dropping g

The Design and Construction of Internal Combustion Engines, with special reference to Aero Engines.—VIII.

BY C. SYLVESTER.
Author of "The Conversion of Electrical Machinery," "Testing Motors and Motor Starters," etc., etc.

FLUIDS AND GASES OF INTERNAL COMBUSTION ENGINES.

Petrol.

Petrol is produced by distilling crude petroleum, and its component parts are carbon and hydrogen. Petrol, unlike the fluids used in oil engines, does not require heat to vaporise it.

The specific gravity of good quality petrol should never exceed 0.725.

Petrol does not corrode nor have any deteriorating effect upon metals. It will, however, melt paraffin wax, bitumen and such-like substances.

The calorific value of petrol is about 20,000 British Thermal Units. To make this quite clear it may be said that the calorific value of any fuel is the amount of heat, expressed in British Thermal Units, which will be given out by one pound of fuel.

The calorific value of any fuel may be determined by means of a calorimeter.

Paraffin.

Paraffin is chiefly used as the working fluid for oil engines. It is obtained from the distillation of crude petroleum, or at least, during the process of distillation. Its component parts are carbon and hydrogen in almost the same proportions as petrol.

The flash point of paraffin is much higher than that of petrol, and, if used alone, it is necessary that it should be vaporised by some means before it may be converted into gas.

The specific gravity of paraffin is 0.80 and the calorific value is about 18,000 B.Th.U. per lb.

Paraffin is much cheaper than petrol, and it is fairly successful when used in engines of quite a large size. Its chief drawback is, however, its tendency to deposit carbon. After an engine has been running for a short time, the spray box and the inlet and exhaust valves are choked up with carbon.

The fuel used in Diesel engines is very crude oil, and it must have a high hydrogen content, a high calorific value, and a low viscosity—the latter to guarantee a good flow through the fuel pipes in cold weather.

Fuel oils which may be recommended for use in Diesels are mineral oils which have been freed from benzine. Oils of this description would contain at least twelve per cent. of carbon, and the calorific value would be about 18,000 B.Th.U. per lb.

Benzol.

Benzol is obtained by a distillation of coal tar. It contains more carbon and less hydrogen than petrol.

The flash point of benzol is much less than that of petrol, it should therefore be handled with greater care.

For use with internal combustion engines it has its advantages and disadvantages. It is easily compressed to 100 lbs. per square inch without preigniting, but it is much more likely to deposit carbon than petrol. It often contains foreign impurities which attack some metals.

In price, it is a trifle dearer than petrol at the present time. It may be more easily procurable, but it is not particularly suitable for use in aero engines.

One reason for this is that it attacks rubber—a very serious drawback.

The specific gravity of benzol is 0.87, and its calorific value is somewhere in the region of 19,000 B.Th.U. per lb.

HEAT, WORK, AND H.P. UNITS.

In the second article of this series the definition of a British Thermal Unit was given. It is now necessary to show how the British Thermal Unit is related to other units which are used to calculate the amount of work done in an engine.

To explain this clearly it is not necessary to go into the intricate details of the many units which are related to each other. Just sufficient to show how they are related will meet the case.

1. One horse-power is equal to 33,000 foot-lbs. per minute.
2. One Joule is equal to .7373 foot-lbs. per sec.
3. One British Thermal Unit is equal to 1058 Joules.
4. The number of "gram calories" is equal to the number of B.Th.U. × 251.
5. Kilogram calories per kilogram × 1.8, is equal to British Thermal Units per lb.
6. The direct relation between the British Thermal Unit and the foot-lb. is obtained from the formula:—

British Thermal Units × 778 is equal to the number of foot-lbs.

Referring to the last numbered item we will suppose that the number of B.Th.U. is equal to B, and the number of foot-lbs. C, then if 778 is represented by A:—

$$B \times A = C, \text{ and}$$

$$\frac{C}{A} = B, \text{ therefore}$$

$$\frac{C}{B} = A.$$

The approximate H P of an engine may be roughly calculated by the following:—

$$H\,P = \frac{D^2 \times N}{2.5} \times 3.$$

that is, where D is the bore of the engine and N is the number of cylinders.

For instance, a six-cylinder engine has a bore of six inches then

$$\frac{6 \times 6 \times 6}{2.5} = \frac{216}{2.5} = 86.4 \therefore 86.4 \times 3 = 259.2 \text{ H.P.}$$

This rule stands good for engines where the speed does not exceed 1,400 r.p.m. and the explosion pressure is not more than 390 lbs. per square inch.

IGNITION.

Ignition in an aero engine is carried out by means of a spark across the points of a plug. This spark is produced by a magneto or induction coil.

Sparking Plugs.

The sparking plug is one of the most vital parts of an aero engine.

So much so that if there is the slightest loss of compression through the plug blowing, the power of the engine is considerably affected.

Loss of compression does not only mean loss of power, but the leakage of gas through the plug, however slight, makes the plug overheat, and so cause self-ignition.

Further, if the plug is not absolutely gas-tight, any unburnt gas is deposited upon the insulation of the plug in the form of carbon or soot. This soot is a conductor of electricity, and allows part of the current to leak away, instead of the whole spark being concentrated across the points of the plug.

From this it will be seen that the insulator must be designed and constructed so that the joint between it and the metal body of the plug is perfectly gas-tight, and yet the insulator must not crack when heated up owing to the different expansion of the insulating material and the metal.

The usual plan in ordinary plugs is to form a shoulder on the insulator. A copper and asbestos washer is put on either side of this shoulder, which is then held down to the metal body by means of a screw gland. This joint allows for the difference in expansion, but it cannot really be considered absolutely gas-tight. After the plug has been heated and cooled several times, the copper-asbestos washers lose their springiness and there is always more or less a leakage of gas past the joint.

Aero Plugs

A plug of this description would be practically useless for aero engine work. There are, however, several methods adopted by plug manufacturers to overcome this trouble which are more or less satisfactory.

One method, which appears to meet the case, is to machine a small shoulder on the centre pin at the point where it enters the open portion of the plug. This shoulder is insulated with mica so that when the mica washers are placed on the pin terminal screw and tightened up, the insulated shoulder presses against the plug material and makes a good joint.

Plug Pins.

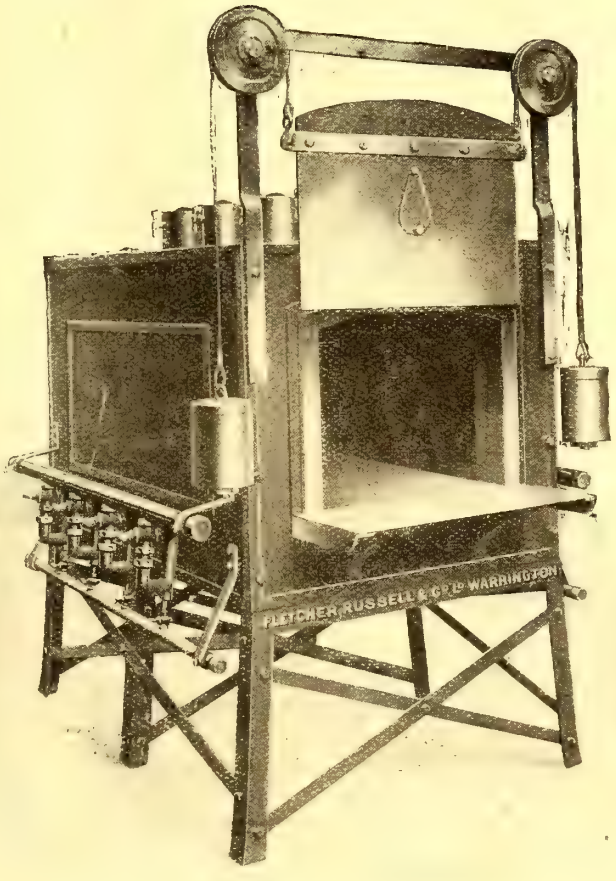
It is not essential that sparking plug pins should be made as thin as possible. When small pins are used, the heat absorbed by the pin can only be conducted away very slowly owing to the small area of the point. Plug pins should be made as large as possible in order that the heat may be more rapidly carried away.

Shape and Material of Sparking Points.

The sparking points of plugs should be made of pure nickel. This material is proved to be the best for this purpose.

As far as the shape of the sparking points is concerned, it may be said that this is a continual problem for designers.

Mica Aero Engine Plugs.



Generally speaking, the advantage of a plug with mica insulation is that it is unaffected by heat, and so will stand up to very severe conditions. The disadvantage of mica is that if it is exposed to soot or excessive lubricating oil it will require more cleaning than a plug with Steatite insulation.

Gas Heated Oven Furnace

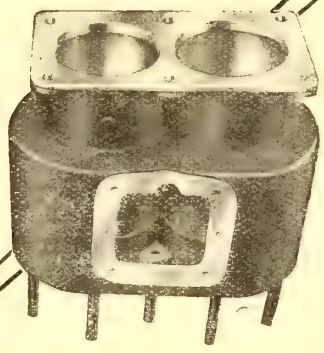
McGRUER SPARS are THE ACME of STRENGTH and LIGHTNESS

Particulars from:—

McGRUER BENTWOOD HOLLOW SPAR Co.,
Commercial Wharf, Lambeth, LONDON, S.E.1.



"The best job I have ever had done."

This is what the man to whom these agricultural tractor engine cylinders belonged said, when he came to collect his repair. This is what everyone either thinks or says about the job he sends to :—

THE NEW WELDING Co.

Ask any Engineer

in your neighbourhood where he sends his welding repairs, and send yours to where ninety-nine out of every hundred send theirs—THE NEW WELDING CO. The Engineer has proved for himself that there is no repair service in the country where he can obtain a better job, at a more reasonable price, or in quicker time.

Special Heat Treated Alloy and other Steels for Aircraft and Automobile Purposes

IMPORTANT SPECIALITIES:

S.S.G. **A SPECIAL NICKEL CHROME GEAR STEEL.**
FOR AIR OR OIL HARDENING. When treated this steel has exceedingly tough properties and is specially suitable for Gear Wheels, Connecting Rods, etc.

S.G.W. **A NICKEL CHROME STEEL IN FOUR GRADES.**
Eminently suitable and strongly recommended for Gears, Crankshafts, and other highly stressed parts, and having exceptional machining qualities. Combines unusually heavy shock-resisting and wearing properties with silent running.

G.P.S. **A HIGH GRADE ALLOY CASE HARDENING STEEL**
for severely strained parts, such as Gear Wheels, Gudgeon Pins etc.

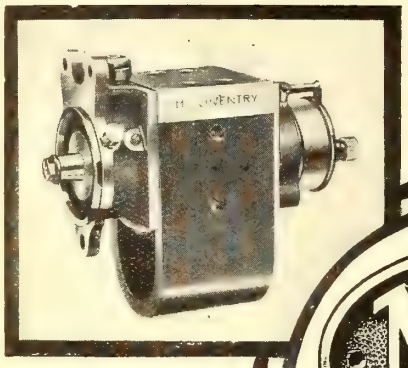
SHEFFIELD.

INCREASED OUTPUT

DEMANDS

GREATER ACCOMMODATION

To meet calls for accelerated production The WILFLEY COMPANY offers its services for the provision of Factory Buildings of all types in **STEEL, FERRO-CONCRETE, BREEZE SLABS, ASBESTOS SHEETS, BRICK** and other Construction.



DESIGNS FOR COMPLETE FACTORIES IMMEDIATELY AVAILABLE.

TEMPORARY STRUCTURES A SPECIALITY.

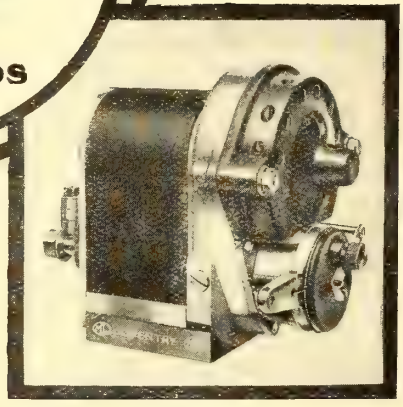
Type A.D.S



Type P.L. 7.

M-L

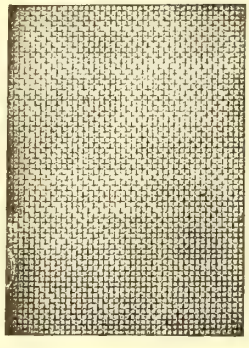
All-British
Magnetos

Type P.L.R.

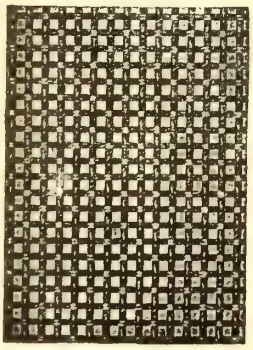
Type P.M. 6.

All = British
Magnetos
for
Aircraft.

THE strong features of M-L All-British Magnetos which have made the aero types so successful are lightness, efficiency and effective sparking at very low speeds.



M-L Magnetos are smaller, lighter and stronger, and are more efficient than any pre-war magnetos of equal electrical output. All parts are interchangeable, "spares" can be quickly supplied.



The M-L Magneto Synd., Ltd., have been making magnetos for Aero Engines since 1914.

The illustrations show some of the M-L All-British Magnetos for Aircraft. Types A D S and P L R are designed for Rotary Engines. Types P L 6 and P L 7 are for 6 and 7 cylinder Radial Engines. Types P L 6 and P M 6 are for Vertical and V Type Engines.

WARRINGTON.

BELLING ELECTRIC GLUE POTS

for Aeroplane and other work

List No. 38.
Price 32/-
(Spare Elements 3/6 each)

Strongly made in cast iron, the Glue container being tinned.
CAPACITY: 2 pints of glue.
LOADING: 900 watts.
3 elements, 3 heats, 3 loose connectors for attaching the cable to.
WEIGHT: 14 lbs.
For use off a power circuit.

List No. 39.
Price 35/-
(Spare Elements 3/6 each)

As above, but with a loading of only 600 watts so that it can be used off an ordinary lamp socket.
Complete with connectors, 2 yards flex, and lamp holder adaptor.

List No. 40.
Price 47/6
(Spare Elements 3/6 each)

Similar to List No. 38, but fitted with a 3 heat switch on a separate panel, which is connected to the Glue Pot by 4 feet of metallic flexible tubing.
For use off a power circuit and recommended for Factory work.

All prices are subject to 25% advance.
Carriage extra on orders under £3 net value.

To overcome this difficulty some manufacturers make their plugs with a removable centre-pin. Here the pins may be removed and washed in petrol to remove the carbon.

PIN POINTS.

There is considerable difference of opinion in designing circles concerning the most efficient sparking points of a plug. So much so, that it would not be exaggerating in the slightest degree if it were said that there are scores of sparking plugs on the market with differently designed points. Some of these are illustrated in Fig. 27.

In this diagram A shows the sparking points of the well-known Lodge aero plug. This plug is one of the most satisfactory used in modern aero engines. It will be noticed that a

FIG. 27.

diamond point is protruding towards the centre pin. If a short circuit should develop in this plug immersion in a bath of petrol for a few hours will remove the soot or carbon. Under no consideration must the mica insulation be scratched.

B illustrates the points of a plug that was claimed to be the very essence of plug design. The chief point claimed for this was that it could not miss-fire, owing to the very short distance from the centre-pin to any part of the interior of the plug. This might have been so had it not been overlooked that it was possible for "the very short distance" to be choked with soot. This is actually what happened when the plug was tested, but not before large quantities had been placed on the market.

C is a fairly satisfactory plug. It is a little weak where the outside point is pinned to the material.

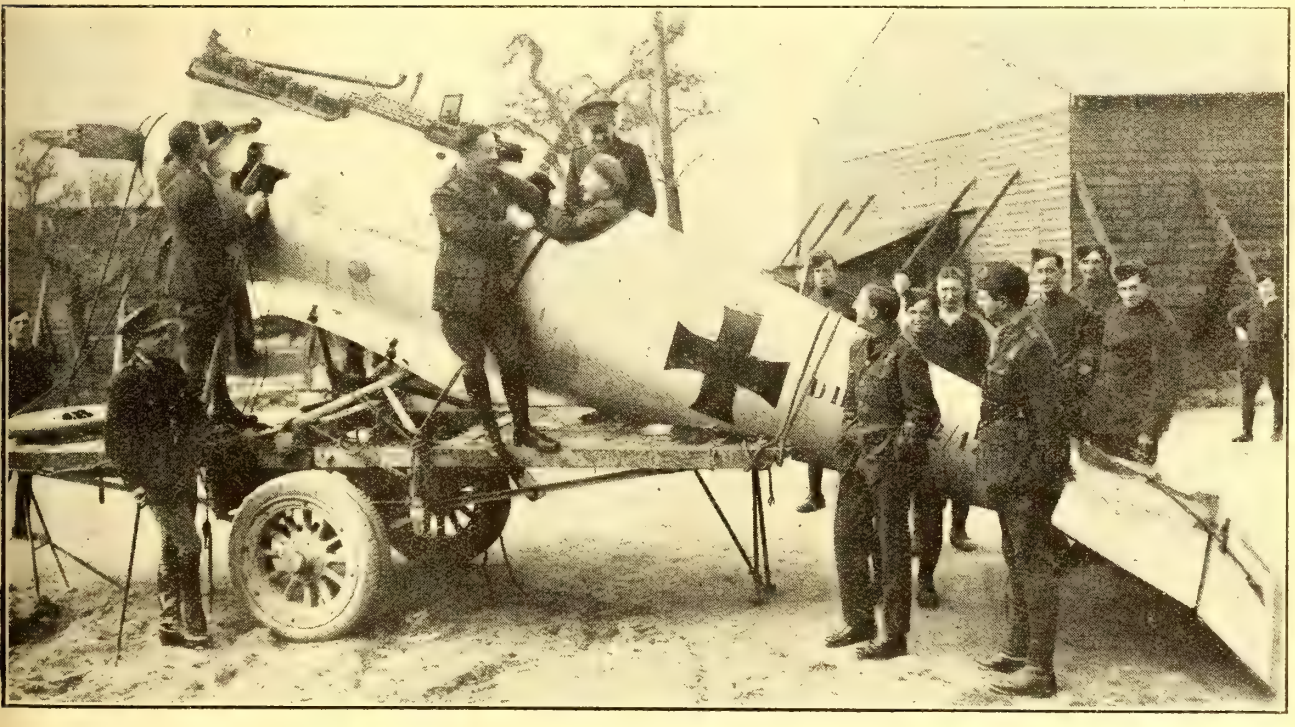
D is a simple plug, but it is not so satisfactory as some that have been mentioned.

The outstanding peculiarity in the design of the points is shown at *a*. Here, a small bar of nickel is inserted through holes drilled in the sides of the plug, the ends being riveted over. The centre pin point is about .012 in. from this bar. On paper this looks like a satisfactory job, but it was found that, after a short run, the space between the inside of the bar and the inside of the plug made a good receptacle for oil. Thus it is very seldom used for aero engines.

E illustrates a very satisfactory plug. It has three sparking points, which at high speeds almost guarantee a continuous spark. At low speeds, the spark being divided, there is a tendency to miss-fire.

F is a plug much inferior to that illustrated at E.

G is a well-known type of plug and it is very much favoured. It will be observed that it is similar in construction to that illustrated at C. The same fault is prominent in this plug as was described at C. That is, it is a little weak where the outside pin is connected to the outside of the plug.



H is a plug not often used. Here the centre pin is eccentric, and the spark gap is between it and the inside of the plug. After a very short run, the centre point becomes coated with a deposit of carbon which short-circuits the sparking points before the extreme edge of the plug is reached. This is a serious disadvantage.

PLUG TERMINALS.

It is very surprising that, since sparking plugs were invented, there appear to be little or no improvements in the design of the terminals. This is not a large item yet it is most important, as one often hears complaints of terminals working loose during a run. This complaint became such an inconvenience that orders were issued to air mechanics to see that all sparking-plug terminals were taped up with Blackley tape before an engine was taken on a run.

It is essential that plug terminals should be a good sound job, because, if one works loose it is hardly possible to tighten it up during a run.

(To be continued.)

The Fuselage of a captured Pfalz Biplane. An interesting feature is the origin of the bottom planes which consists of the shaping of the underside of the fuselage to a cambered section.

THE PATENTS INDEX.

The subjoined list of recent inventions has been specially compiled by The Aeroplane from the current Official Patents Records :—

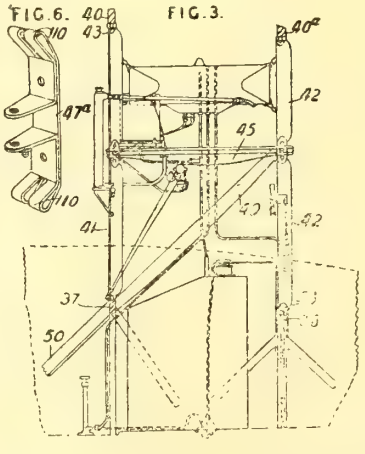
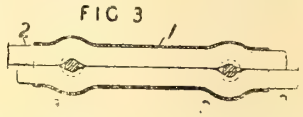
serration, or groove, compressed, rolled, cut, or turned, so as to give it a firmer grip when glued into its hole in the laminæ.



113,965. Hydro-aeroplanes. Curtiss Motor Co., Hammondsport, New York, U.S.A.—(Assignees of Curtiss, G. H.; Hammondsport, New York, U.S.A.) Dec. 6th. 1916, No. 3426/18. Convention date, Dec. 6th, 1915. Not yet accepted. Abridged as open to inspection under Sect. 91 of the Act.

A flying-boat or hydro-aeroplane, particularly of the kind described in Specification 15786/15, has the hull framework extended into the fin excrescences which flare continuously outwardly from a point near the bow to a point of maximum beam in the vicinity of the hydroplane step. The bottom planking 12 is supported by floors 11 and framing 33, and is continuous from a false keel 13 to the edge of the fins which is streamline in plan. The hull is built on frames 31 connected to the cabin floor 30 by keel braces 32 and at top is fitted with an entrance scuttle 34 provided with a flexible cover, and with a detachable transparent cabin top. The cabin top which is semi-circular in horizontal section has a celluloid cover supported by ribs 23, 25 connected to a curved cornice 22 and a lower band 24. The band 24 is secured to a combing surrounding the cock-pit by an external strip 28 and internal plates 29. Sliding panels are fitted at 26*a*. An inverted-V-shaped strut 44 connected by an horizontal board 44*a* is arranged between the lower wing beam and the fin excrescences and a strut 45 between the rear part of the wing and the side of the body. Specification 102,620 also is referred to.

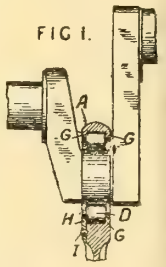
113,964. Aeronautics. Curtiss Motor Co., Hammondsport, New York, U.S.A.—(Assignees of Curtiss, G. H.; Hammondsport, New York, U.S.A.) Dec. 6th, 1916, No. 3425/18. Convention date, Dec. 6th, 1915. Not yet accepted. Abridged as open to inspection under Sect. 91 of the Act.



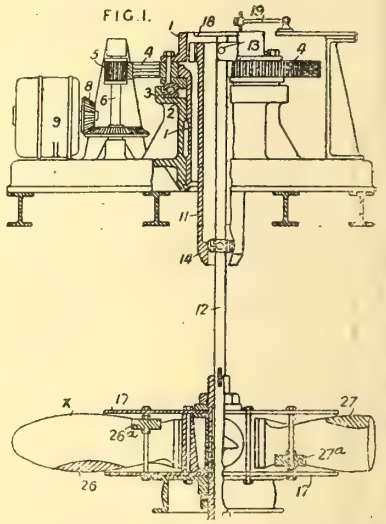
Planes, arrangement of; propelling.—The upper planes of flying-boats, such as are described in Specification 102,620, are supported from the lower planes by V-shaped braces, which may serve also to support the engines. Figs. 2 and 3 show the spars 40, 40*a* of the central section of the upper plane supported above the spars 37, 38 of the lower plane by V-shaped braces 41, 42 arranged in diamond form. Engine-supporting beams 45 may be arranged between the front and rear braces 41, 42 at the junction of the V-portions, and the beams 45 may be connected by braces 47 to a central strut 48. Diagonal braces 49, 50 further support the engine beams. The sockets 43 for receiving the V-braces are mounted on base-plates 103, Fig. 4, formed with anchoring-ears 104, and with hinge ears 105 adapted to co-operate with a corresponding hinge ear 106 on a fitting 107 carried by the detachable wing section. This wing fitting is formed with diverging ears, as shown, for attachment of the cross-bracing of the wings. The braces 47 are received in sockets 47*a*, Fig. 6, formed by folding a strip of material as shown, eyes 110 serving for attachment of the cross-bracing 44 of the central section.

114,405. Wire-couplings. Bousson, R.A., 1, Rue Jean Francois Lepine, Paris.

Wires 2 are coupled together by threading them into a flattened tube 1 of uniform cross-section so that they lie side and side, and



driving pointed rivets 3 through holes in the sides of the tube so that the rivets pass between the wires distorting them and consequently distorting the tube as shown.



114,052. Connecting-rods. Douglas, W. (trading as Douglas Bros.), Hanham Road, Kingswood, Bristol.

The connecting-rod of a petrol engine is formed with a solid end A which is grooved to form a race for rollers D and is rounded to facilitate threading over the crankshaft. To permit of the insertion of the rollers, the crank web is cut away and the flange G is slotted, the slot being closed by a plate H sliding in a dovetail groove and secured by a screw I.

114,195. Testing Balance of Rotary Apparatus. Gott, A. E., 7, Villiers Road, Southall, Middlesex.

A method of testing the dynamic balance of rotatable bodies consists in supporting the rotor so that it is free to spin about its natural axis and in utilising the deflection of the mechanical axis of the rotor to obtain balance. For this purpose, the motor and the rotor axes are connected by a shaft having cardan or gimbal joints at the points of connection. In the form shown in Fig. 1, the motor shaft 1, of sleeve form, is supported in bearings 3 and is driven through gearing 4, 5, 8 by an electric motor 9. The hollow connector shaft 11 is fitted in the sleeve 1

by a gimbal joint 13, and at its lower end supports the rotor shaft 12 by a gimbal joint 14. On rotation, the rotor, shown as a propeller X, spins on its natural axis, and if out of balance causes its mechanical axis 12 to describe a cone, the position and size of which are recorded by a pencil 19 marking on the disc head 18 of the shaft 12. The rotor is mounted in a frame 17 to which are fitted means for adjusting the compensating weights 26*a*, 27*a* for correcting any excess masses as at 26, 27. In modifications, (1) the gimbal joint 13 is arranged below the motor shaft, and the joint 14 is close to the rotor, (2) the rotor is mounted above the joint 13 and a counter-balancing mass is mounted gimbal-wise on the lower end of the connector shaft 11, and (3) the rotor is mounted on an horizontal axis supported on pendulous and spring-controlled bearings.

ROLLS-ROYCE

A National Industry and the War

From the outset the works and organisation of Rolls-Royce Ltd. have been placed at the disposal of the Government.

* * * *

The annual accounts published show that in the aggregate the war profits of Rolls-Royce Ltd. have been less than the Company's best peace profits by 25%.

* * * *

The notable success of Rolls-Royce cars, armoured cars, and aero engines in the war will, when publication is permitted, make Britishers prouder than ever of Rolls-Royce engineering.

* * * *

Rolls-Royce expert knowledge has been placed unreservedly at the disposal of Allies who have gratefully acknowledged the assistance they have derived from it in their war endeavours.

ASCOL.

THE AIRCRAFT TRADER

MARKET TOPICS.

June 6th, 1918.

COPPER.—Now the official price in U.S.A. has been fixed, business is moving more freely and orders are being placed for forward delivery. Supplies both here and in U.S.A. are very favourable, and the output is being well maintained. Furthermore, complaints do not appear to be prevalent of delay in getting supplies to the refineries. Official prices here remain unchanged.

TIN.—The position of this market is much easier and a fair amount of Tin is being offered. Buyers do not, however, appear to be keen to buy for forward delivery. The Eastern market shows a marked falling off, prices having continued to decline, reaching as low as £363. The shipping problem is difficult.

The situation in U.S.A. is still very serious, and although it is rumoured that the Government will commandeer all Tin and control the prices and distribution to consumers, it is difficult to see how this can be done, seeing that U.S. stocks are very low and buyers have been prepared to pay any price in order to obtain supplies.

Comparative Prices.

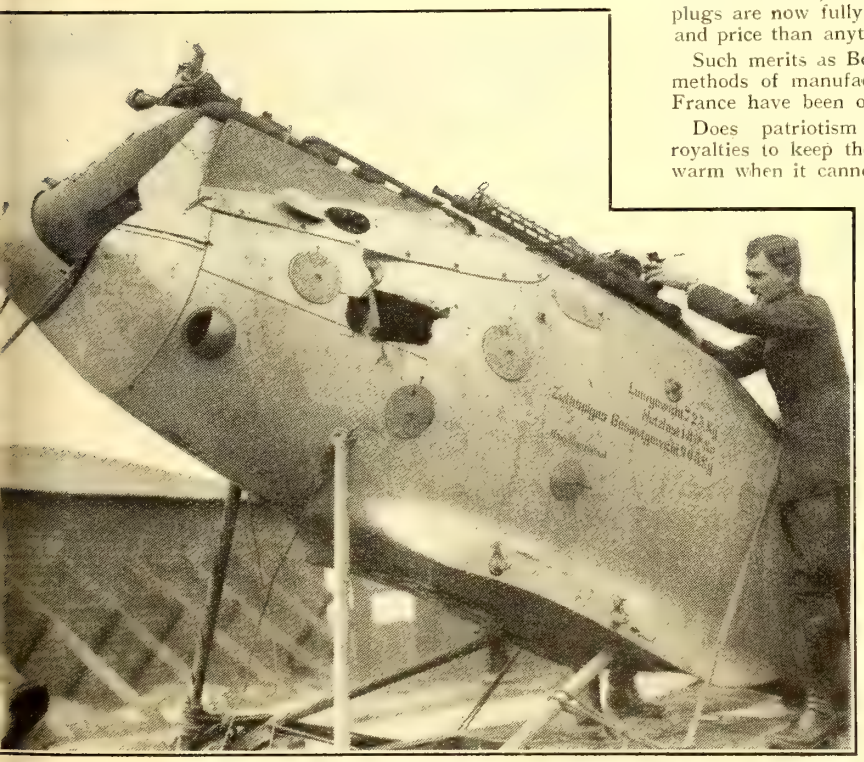
June 3rd	£349	0	0 per ton.
May 30th	£353	0	0 per ton.
May 22nd	£360	0	0 per ton.
May 9th	£380	0	0 per ton.

LEAD.—The position of this market is now fairly satisfactory, supplies being well maintained.

STEEL.—Sellers are now seeking buyers, as in pre-war days. It appears that the two main factors responsible for this change are the cessation of supplies to Russia and the new extensions at the mills and corresponding increase in output.

It is very difficult to say whether this easiness will continue or whether it is merely a temporary inflation of stocks. In any case it is very welcome, and if advantage is taken should enable the Air Ministry to obtain large supplies of aircraft steels in anticipation of future requirements. Official prices remain unchanged. The average basis price of Cast Steel is now 98s. per cwt.

TIMBER.—The question of supplies is still the one absorbing theme, and a solution to this problem does not appear to have been discovered by the authorities. Probably they are pinning their faith on Spruce substitutes.



Although it was rumoured about a fortnight ago that the Air Ministry contemplated taking over the control of Plywood no official notification of this appears to have been received.

Mahogany supplies are fairly well maintained.

Prices remain unchanged.

FABRIC.—There is nothing of importance to report. Supplies are fairly easy to obtain through official channels.

It is rumoured that the use of frayed fabric will be discontinued shortly in favour of strips cut from fabric clippings.

The Nose of the Fuselage of a Pfalz biplane.

A TRADE MATTER.

The following letter has been received:—

Sir,—We observe in the newspapers an account of the acquisition by Messrs. Bluemel Bros., Ltd., of a licence to manufacture sparking plugs under the Bosch Patent.

We notice with particular interest that during the progress of the case the statement was made that English manufacturers of motors needed, called for, and were unable to obtain Bosch sparking plugs. The inference was that there was some peculiar merit possessed by the German patent which sets this make of plug above and apart from other makes. This is entirely inaccurate and misleading.

There is not a single manufacturer in this country at the moment fitting Bosch plugs, and although we are intimately associated with the whole trade we have yet to hear of a manufacturer who wishes to do so on the grounds that they would fulfil any purpose which English-made plugs are unable to do with equal satisfaction to the user. Bosch plugs represent Germany's best effort in plug-making; so does the Bosch magneto among magnetos. Whatever may have been the case before the war, British magnetos and the best British sparking plugs are now fully equal to and probably better both in quality and price than anything Germany has ever produced.

Such merits as Bosch plugs possess are the outcome of careful methods of manufacture; plugs of similar construction made in France have been on the market for years.

Does patriotism prompt that Englishmen should pay royalties to keep the name and fame of a German-owned patent warm when it cannot be demonstrated that it has a single merit unpossessed by British-made plugs?

(Signed)

The Sphinx Manufacturing Co.

AVRO LORE.

The June number of the "Joystick" is to hand and a very ambitious production it is. One notes it is No. 4 of the third volume and it gets right away from the conventional line of house-organs by devoting four pages to an exposition of the Education Bill, in the course of which four statistical items show why a Bill is wanted and four items explain what the Bill proposes. The question is most admirably worked out by Mr. J. S. Morgan, one of the Welfare Supervisors. Messrs. A. V. Roe and Co. are really a most considerate and democratic firm; their latest scheme is that of a Boy Welfare Department supervised by Mr. Morgan and Mr. W. T. Wilson, and in the course of another article, showing considerable literary skill, they explain how the directorate has empowered them to provide all that is necessary for the moral, mental, physical and social training of their youths.

KINDLY MENTION "THE AEROPLANE" WHEN CORRESPONDING WITH ADVERTISERS.

AIRCRAFT FINANCE

CURRENT TOPICS.

THE CONFIDENCE OF THE MARKET.

One would scarcely imagine from the calm and decorous behaviour of the financial world that the great German offensive is now in full swing. True, the multitude of rules and regulations under which business is now conducted are all calculated to check what in normal times was called the functional manifestation of the financial structure. But the bald fact remains that in the Stock Exchange there is a greater disposition to buy securities than to sell, which clearly evidences a feeling of confidence in the ultimate issue of the struggle.

WAR MONEY COMING IN BETTER

Indeed, one of the results of the German onslaught has been to spur people on to purchase more War Bonds. This is a happy development. Only a week or two ago the question of obtaining more money for financing the war became very serious, if not really critical. Now, if the quantity of money rolling in is not so ample as the authorities need, it is increasing satisfactorily, and with the banks up and down the country exerting a little more moral pressure on their clients, the remedial measures contemplated may be temporarily postponed.

VICKERS AND AEROPLANES.

Enquiries continue to be received as to the desirability of investing money in aircraft firms with a view to the future.

Take the case of Vickers; it is a gigantic undertaking which has taken up the manufacture of aeroplanes as a side line just as it has from time to time turned its activity and genius to the construction of many other things which are absolutely foreign to the ordinary business of armament specialists. Every schoolboy has discovered by now that aerial navigation and germane industries have boundless possibilities, commercially, industrially and militarily. Vickers are sure to make the most of these possibilities because they possess the capital as well as the facilities, and also the political power.

WHAT THE SHARES OFFER.

Their £1 shares are priced in the market at about 43s.., so that on the dividend of 12½ per cent. they offer the purchaser about 6 per cent. on his money. At first blush this seems a poor return, but it is very important to note that the company pays the income tax on the dividend, therefore the yield is equal to a return of 7½ per cent. subject to tax. It should be mentioned, however, that the Board intends to modify this practice of paying income tax for the shareholders. As compensation it will increase the dividend and distribute it subject to the shareholders paying the tax. Conceivably the net return to the shareholders may be a trifle more than at present.

SPECULATIVE POSSIBILITIES.

To some people the great attraction of Vickers' shares rests, not in the present dividend, but in their speculative possibilities. Since 1913 the dividend has been a uniform 12½ per cent. annually, yet it must be patent to everyone that since the outbreak of the war the company has made millions more profit each half year. How much the profits have really grown no one knows; the accounts have not been published because of the inability to fix up terms, etc., with the Government. But some day and somehow these accumulated profits must be dealt with. Probably excuses will be found for keeping a good portion of them in the business for future development, but surely there must be a substantial balance available for the ordinary shares, to be divisible either as larger dividend or as bonuses.

ROLLS-ROYCE.

The Rolls-Royce Company comes into a different category from Vickers; it is younger, and is, or was, essentially a motor-car constructional concern which has gained fame therefor. Now it seems to be concentrating its energies mostly on aeroplanes and also engines with great success. Only a month or two ago it provided a very pleasant surprise for its shareholders by capitalising its reserve fund and thus giving them as a bonus one new share in respect of each one held in addition to the 10 per cent. dividend. Here again the company is behind-hand in presenting its accounts owing to the inability to settle outstanding differences with the Government.

BIGGER PROFITS ESTIMATED.

However, the profits are said to be swelling visibly; it is estimated that they are over £100,000 per annum, which on the increased capital of £400,000 is equal to at least 25 per cent. For 1916 they were £82,640 against £44,171 in 1915. What they were in the past financial year is not known, but they were certainly greater than in 1916, which makes the estimate of more than £100,000 seem very modest.

PREMISES AND EQUIPMENT.

As the Chairman remarked at the meeting, as a result of the additions carried out for the benefit of the Government when the war is over the company will find itself in the possession of premises and equipment greatly in excess of what it had in 1914, and it will be a question whether or not it can be used to advantage. Naturally the company with the brilliant reputation for its cars and its financial success will surely make the most of this fortunate position.

PRICE OF THE SHARES.

At 37s. 6d. each the £1 shares only offer a little over 5 per cent. on the money invested, but the Stock Exchange is confident not only in bigger dividends in the immediate future, but of possibilities for the company when the war is over. Even if the dividend is increased to 15 per cent. the shares would offer just over 7 per cent. No doubt they possess a greater tincture of speculation than Vickers' shares, but then the two companies differ so much.

There have been few features of interest among aeroplane and kindred shares. Aircraft Manufacturing "B" Preference have been consistently firm and gained the whole of the dividend deducted. Armstrongs have been strong and Beardmore Preference have been bought. There are still many enquiries as to when there is to be a market in Whitehead Aircraft shares.

COMPANIES ANNOUNCEMENTS.

NEW COMPANIES REGISTERED.

The files of the following new companies are available for inspection at Somerset House.

LEWIS SPEED-UP TOOL AND ENGINEERING WORKS, LTD.—Private company. Registered, May 23rd. Capital, £1,000 in £1 shares. Mechanical, aviation, electrical, marine, hydraulic and motor engineers, metal founders, fitters, smiths, millwrights, tool makers, etc. The first directors are:—J. Lazarus (British), H. Tardy (Swiss) and C. V. Thurdin (Swedish). Qualification: 10 shares. Registered office: 2a, Kelvin Road, Highbury, N.5.

MARSTON LINE, LTD.—Private company. Registered, May 22nd. Capital, £40,000 in £1 shares. To enter into two agreements with E. C. Marston & Co., Ltd., relating to (a) the purchase of the steamship "Wirral," and (b) management, and to carry on the business of shipowners, shipbuilders, etc. Power is especifically taken to include in the business the acquisition, building, maintenance and repair and disposal of aircraft.

HONOURABLE GABRIELLE BORTHWICK'S WORKSHOPS, LTD.—Private Company. Registered June 6th. Capital, £3,000 in £1 shares. To take over the business of an automobile and engineering training school and garage proprietors carried on by the Hon. Gabrielle M. A. Borthwick at 8, Brick Street, London; also to carry on the business of flying school proprietors, repairers of automobiles and aircraft, etc. The subscribers (each with one share) are:—

The Hon. Gabrielle Borthwick, 87, Kinnerton Street, Knightsbridge, S.W., motor dealer.
Edith Ogle, 5, Kent Terrace, Regent's Park, N.W., motor dealer.

Permanent governing director: The Hon. Gabrielle M. A. Borthwick. Instructress: Edith Ogle. Solicitors: Kenneth Brown and Co., Lennox House, Norfolk Street, W.C.

CHELSEA AVIATION CO., LTD.—Private Company. Registered June 3rd. Capital £250,000 in £1 shares. To take over the business of the Wells Aviation Co., Ltd., and to enter into an agreement with S. J. Waring. The subscribers (each with one share) are:—

J. Ritson, 83, Lonsdale Road, Barnes, S.W.13, chartered secretary.
G. Barclay, 3, Chandos Avenue, Oakleigh Park, N.20, C.A.

The first directors are to be appointed by the subscribers. Solicitors: Paines and Co., 14, St. Helens Place, E.C.

WALKER, MATHESON AND CO., LTD.—Private Company. Registered June 3rd. Capital £1,000 in £1 shares. To take over the business of engineers carried on in London as "Walker, Matheson and Co.," also to carry on the business of aircraft and aeronautical instrument makers, tool makers, lift and hoist makers, ironmongers, electrical, motor power and locomotive engineers, dealers in motor and electrical equipment, etc.

The first directors are:—J. Walker, B. F. Matheson, L. E. Durrant, C. B. Boitel-Gill, each of whom may retain office while holding £100 shares. Qualification: £100. Solicitor A. S. Cooper, 27, Chancery Lane, W.C.

OFFICIAL COMMUNIQUES.

NAVAL.

ADMIRALTY COMMUNIQUÉ.

JUNE 6th.—During the period June 3rd to June 5th inclusive eight bombing raids have been made on the following military objectives:—Zeebrugge, Ostend, Bruges, and Thourout railway junction. Large quantities of heavy bombs were dropped. In the course of aerial fighting two enemy machines were destroyed and three driven down out of control.

One of our machines is missing.

In home waters during the same period, escort duties and anti-submarine patrols have been carried out. Submarines were sighted, attacked, and enemy mines located on several occasions.

A squadron of large seaplanes carried out a long reconnaissance over the North Sea. A large formation of hostile machines was met and engaged, resulting in two enemy machines being shot down.

On the return journey two of our machines were forced to alight close to the Dutch coast, owing to engine trouble, and have been interned. The next-of-kin have been informed.

MILITARY.

G.H.Q. COMMUNIQUÉS.

JUNE 4th, 8.17 p.m.—There was less activity in the air on June 3rd.

Some reconnaissance and photographic work was carried out, and in the course of the following night a total of 18 tons of bombs was dropped by our aeroplanes. The targets chiefly attacked by us were the railway stations of St. Quentin, Douai, and Luxemburg.

Three hostile machines were brought down in air fighting, and one was driven down out of control.

None of our aeroplanes is missing.

JUNE 5th, 8.34 p.m.—The weather was overcast on the British front on June 4th, and aircraft were not active.

One hostile machine was brought down by our aeroplanes, and another driven down out of control. One German balloon was destroyed.

Beside reconnaissance work and artillery co-operation, we dropped during the day and the following night 14 tons of bombs. We lost no machines.

JUNE 6th, 9.35 p.m.—Fine weather on June 5th enabled our airmen to carry out much photographic reconnaissance and artillery work.

Twenty tons of bombs were dropped on different targets, including hostile dumps, railways, billets, Armentières and Roye stations, and the Zeebrugge seaplane base.

In addition, our long-distance day bombing machines heavily attacked the railway station and barracks at Trèves and the Metz-Sablon railway station, and the railways at Karthaus (just south of Trèves), returning without loss

Seven hostile machines and three German observation balloons were shot down during the day by our airmen, and three hostile aeroplanes were driven down out of control.

Four of our machines are missing.

On the night of the 5th-6th inst. 13 tons of bombs were dropped by us on St. Quentin, Busigny, Cambrai, and Armentières stations.

All our machines returned.

On the same night our long-distance bombing machines again attacked the Metz-Sablon station and triangle, and also the railway sidings at Thionville, dropping five tons of bombs with good results, although visibility was indifferent.

On the morning of the 6th inst. the railway station at Coblenz was heavily attacked by us, and good bursts were observed on the railway line.

All machines engaged in these raids returned safely.

JUNE 7th, 9.15 p.m.—Our aviators took advantage of the fine weather on the British front on June 6th to accomplish much useful work in reconnaissance and photography, and, together with our balloons, ranged our guns on many hostile batteries.

In air fighting 14 German machines were destroyed and eight others were driven down out of control. Three German observation balloons were also destroyed by our aviators, and another hostile aeroplane was forced to descend by anti-aircraft fire

During the day we dropped 28 tons of bombs and a further 11 tons in the course of the following night. Amongst the targets attacked were Valenciennes, Le Cateau, Busigny, and St. Quentin railway stations.

We lost one machine during the day and none at night.

JUNE 8th, 8.55 p.m.—In the air a good deal of observation and photographic work was carried out by us on June 7th.

Bombing was active on both sides. We dropped 23 tons of bombs on railway junctions, aerodromes, and dumps beyond the German lines.

Twelve enemy machines were brought down by our aviators, and seven driven down out of control.

We lost three machines.

On the night of June 7th-8th no flying was possible.

JUNE 9th, 9.35 p.m.—Low clouds on the British front interfered with work in the air on June 8th. Little photography or observation was possible, but our aeroplanes constantly attacked the enemy behind his lines with machine-gun fire

Our squadrons, co-operating with the French, heavily bombed Nesle and Fresnoy-les-Roye. In all nine tons of bombs were dropped during the day.

During the following night two tons of bombs were dropped on Don railway statiton and Salome dump (east of La Bassée).

In the course of the 24 hours four hostile machines were brought down by us and two others driven down out of control.

None of our machines is missing.

JUNE 10th, 7.47 p.m.—On the 9th inst. our flying squadrons, co-operating with the French on the Noyon-Montdidier battle front, were at work continually from dawn to dusk.

Bombing aeroplanes impeded the enemy's advance, and harassed his troops and transport with constant machine-gun fire. Strong patrols of scout machines swept the battle area throughout the day, while high-flying aeroplanes protected those below from attack from above.

Amongst targets hit by our aviators were an aerodrome near Roye, where hostile machines on the ground were set on fire; an ammunition dump at Montdidier, which went up in a sheet of flame; gun teams and wagons at Conchy; lorries at Lagny (just south of the Noyon-Roye road) and Hainvillers, and infantry in trenches and on the roads along and behind the whole fighting line.

On the British front there was little enemy activity in the air, but our machines carried out a good deal of artillery observation work, reconnaissances, bombing, and photography, until stopped by rain.

One of our artillery machines forced a German two-seater to land and surrender on the aerodrome to which our machine belonged. In addition to this machine, 14 other German aeroplanes were brought down by us and four others were driven down out of control. A hostile balloon was shot down in flames.

Four of our machines are missing.

WAR OFFICE COMMUNIQUÉS.

JUNE 3rd.—The G.O.C. Italy reports:—

Since my last report the Italians have carried out two highly successful operations at the two extremities of the line, the first in the Tonale Pass, the second at Capo Sile. The situation remains otherwise quiet.

Since May 25th the Royal Air Force has destroyed 14 enemy aeroplane and driven one other down out of control.

One of our machines has failed to return.

JUNE 7th.—The G.O.C. Palestine reports:—

Activity during the past week has in general been confined to the operations of the Air Service. On May 31st, June 3rd, and June 4th, the enemy camps, bivouacs, and aerodrome in the vicinity of Amman (on the Hedjaz railway, 25 miles east of the Jordan at the Ghoraniyeh bridgehead) were heavily bombed by Imperial and Australian squadrons.

THE CASUALTY LIST.

PERSONAL NOTICES.

NAVAL.

Deaths.

ARTHUR.—Maj. James Arthur, R.A.F., who was killed in action on June 7th, formerly held the rank of Lt.-Comdr. in the R.N.V.R., with seniority of Dec. 31st, 1917, and had previously served in the Ayrshire Yeomanry. He was only son of the late Thomas Glen Arthur and of Mrs. Arthur, of Carrick House, Ayr, and Djenan-el-Mufti, Algiers. He was born in Oct., 1889, and married in 1912, Eleanor Theresa, second daughter of Mr. Samuel Hynman Montgomerie, of Garnsgate Hall, Lincoln, and Lady Sophia Montgomerie, eldest daughter of the fourteenth Earl of Eglinton and Winton.

LE MESURIER.—Capt. Thomas Frederick Le Mesurier, D.S.C., R.A.F. (late Flt. Comdr., R.N.), who was killed on the Western Front on May 26th, was the eldest son of Mr. and Mrs. Le Mesurier, of 10, Church Lane, Merton Park, and was 21 years of age. He was educated at Rutlish School, Merton, and Hurstpierpont College, and, on leaving the latter in 1914, joined the Royal Naval Division. For the past two years he was flying in France, being chiefly engaged in bombing operations. He was a daring and successful flier, and shortly before he was killed was recommended for the command of a squadron. He received the D.S.C. in May, 1917, for "conspicuously good work as a pilot of bombing machines," and in August of the same year he was awarded a bar for good work in leading his flight in bombing raids. On May 26th, after bombing the German trenches, he was crossing the Belgian lines when his machine was seen to crash to the ground. Capt. Le Mesurier and his observer were both killed. Capt. Le Mesurier took part in close upon 150 bombing raids, and was responsible for bringing down a number of German aviators.

Marriages.

CAVE-BROWNE-CAVE—WRIGHT.—On June 8th, 1918, at St. Peter's, Clapham, Lt.-Col. Thomas Reginald Cave-Browne-Cave, R.A.F. (late Wing Comdr., R.N.), elder son of Sir Thomas Cave-Browne-Cave, C.B., of Burnage, Streatham Common, was married to Marjorie Gwynne, only daughter of Mrs. Wright, of Cautley Avenue, Clapham Common, by the Rev. N. P. Tower.

FOX—CASE.—The marriage arranged between Flt. Comdr. Frederick Middleton Fox, R.N., eldest son of Mr. and Mrs. Samuel Middleton Fox, Fawe Park, Keswick, Cumberland, and Helen, eldest daughter of the late Howard Case and Mrs. Case, Rochester, New York, U.S.A., took place on June 8th at St. Stephen's Church, Edinburgh.

* * *

A Good-Service Pension of £150 a year has been awarded to Capt. Sir Godfrey M. Paine, K.C.B., M.V.O. (Temp. Major-General, R.A.F.), to date April 27th.

* * *

His many friends will be glad to hear that Lieut.-Col. Alec Ogilvie, R.A.F. (late Wing-Commander, R.N.), is making satisfactory progress towards recovery from the injuries which he received in an accident to an aeroplane in which he was a passenger last week. His escape from death was wonderful, and the Air Force is to be congratulated on being spared the services of so valuable an officer.

MILITARY.

Deaths.

BENBOW.—Capt. E. L. Benbow, M.C., attd. R.A.F. (Lt., R.F.A.), who was killed in action on May 30th, was the son of Mr. J. Benbow, of La Mortola, Ventimiglia, Italy. He went to France on Feb. 2nd, 1915, and served with his battery for about 12 months. He afterwards served as observer with the Royal Flying Corps for eight months, then, qualifying as a pilot, did work for which he was decorated with the M.C. by the King at the Investiture in Hyde Park on June 2nd, 1917.

BUTLER.—Sec. Lt. Howard Richmond Henry Butler, Aust. Flying Corps, killed in an accident whilst flying in Ayrshire, on June 2nd, was the only son of Mr. W. R. Butler, architect, of Melbourne, Victoria. He was educated at the Melbourne Grammar School, and, after serving some months in Australia with the Royal Australian Engineers, at Swan Island, he enlisted in the Australian Artillery. He was in camp some time at Maribynong, Victoria, and left Melbourne in May, 1917, with artillery reinforcements. He served in the Australian Artillery until October 4th, 1917, and then joined the Australian Flying Corps, being gazetted second lieutenant on April 8th last. He was completing his training before going out to the front. He was 21 years of age.

CAPPER.—Lt. Harry Kent Capper, London Regiment and R.A.F., who was killed on June 4th as the result of an accident while flying in Lincolnshire, was the eldest son of the late W. Kent Capper, of Putney, and of Mrs. Capper, 1, Emperor's Gate, S.W.7.

DAVEY.—Sec. Lt. Albert Victor Patrick Davey, R.F.A., attd. R.A.F., who was accidentally killed whilst flying abroad on June 2nd, was 22 years of age and son of Mr and Mrs. Davey, of Wyoming, Bexley Heath. Educated at Colfe's Grammar School, Lewisham, he obtained an appointment with the R.M.S. Packet Company. In May, 1915, he enlisted as trooper in the County of London Yeomanry. After service on an Eastern front he returned to England, and secured a commission in the R.F.A. in June, 1917. Transferring to the R.A.F. in Sept. he went out to the front last March.

KEMP.—Sec. Lt. George Hubert Kemp, R.A.F., killed in aerial fighting on June 1st, aged 20, was the second son of Mr. and Mrs. G. Kemp, of Westcombe Park, and was educated at the Roan School, Greenwich. Before joining the forces he was engaged in the Port of London Authority. He received a commission in the Durham L.I. in 1917, and was wounded at Chérisy. He transferred to the R.A.F. in 1918, and had gained his wings. He was shot through the heart in a fight with a number of German aircraft, but his pilot descended within the Allied lines.

MANUEL.—Lt. E. G. Manuel, R.A.F., died on June 8th as the result of a flying accident at Hendon. He was 29 years of age.

George Manuel, writes one of his friends, was a thorough little sportsman. He was one of the old Army, and wore the 1914 Star. His humorously pessimistic outlook on life in general and on the war in particular was a healthy antidote to the unthinking casualness of younger officers, yet he was in reality far from being a pessimist. He believed in the soundness of the nation at heart and, both before and after joining the R.F.C., he did his duty as an officer and a gentleman should. Without being a specialist on any subject there were few subjects on which he was not unusually well informed, and his quick wit and keen sense of humour made him a companion who will be sorely missed by all who knew him.

He was a thoroughly sound pilot and his death occurred in one of those practically unavoidable accidents which will happen to the most skilful. He was taking a machine out of the aerodrome when the engine stopped. As he was turning to land, another machine crossed his path, and in avoiding it he allowed his machine to stall, with the result that it dived from so low a level that he had no room to flatten out before it crashed. He was killed instantly.

MEADWAY.—Lt. Brian Wilton Meadway, Northants Regt. and R.A.F., who was killed while flying in Hertfordshire on June 4th, was the only child of Minnie and the late G. H. Meadway, grandson of John Wilton, of Heathlands, Chadwell Heath, and great-grandson of George Wilton, of H.M.S. "Agamemnon," Trafalgar, 1805. He was 22 years of age.

MILDMAY.—Second Lt. Bouverie Walter St. John Mildmay, R.A.F., whose death in action on April 16th has been officially announced, was only son of the Rev. Arundell St. John Mildmay, of Old Wolverton Vicarage, Bucks, and was the only male representative of his generation of the Mildmays of Hazlegrove. Educated at Stonehouse, Broadstairs, and Winchester, he entered the R.F.C. under a Headmaster's nomination. He had his commission in August, 1917, and from his squadron abroad comes the following: "He was a remarkably daring pilot, and he was trying a very steep dive over the aerodrome when something seemed to break in his machine. He pulled out of the dive with difficulty, but almost immediately afterwards, while turning to land, his machine went out of control and dived again to the ground." Mr. Mildmay was by heredity a Count of the Holy Roman Empire.

MITCHELL.—Lt. Norman Ramsey Mitchell, Royal Scots, attd. R.A.F., who was killed in a flying accident in Kent on June 6th, was the eldest son of the late Norman R. Mitchell and of Mrs. Mitchell, 8, Blackford Avenue, Edinburgh. He was 24 years of age.

MUSGRAVE.—Maj. Herbert Musgrave, D.S.O., R.E., was killed in action on June 3rd. He was the youngest son of the late Sir Anthony Musgrave, G.C.M G., and of Lady Musgrave, of East Grinstead. He was born in May, 1876, and passed through Harrow and Woolwich into the Royal Engineers in March, 1896; he had promotion in March, 1899, was Capt. in March, 1905, and Maj. in Oct., 1914.

Maj. Musgrave, who was a graduate of the Staff College, was employed with the South African Constabulary from June, 1901, to Sept., 1904, and was D.A.A. and Q.M.G., at Malta from Aug., 1908, to Aug., 1912. In the following year he entered the Royal Flying Corps, and in 1914 for a period he was Deputy Assistant Director of Military Aeronautics at the War Office, and also controlled the supply of matériel.

In Feb. this year he was appointed a General Staff Officer (second grade). He had received the D.S.O. during the war. For service in South Africa (1899-1902) he had two mentions in despatches and was awarded the Queen's and the King's medals with seven bars. Maj. Musgrave, who had been wounded early in the war, married in 1915 Georgeanna, only daughter of Mr. Mark Hopkins.

PAICE.—Stanley Cooll Paice, Canadian Contingent, attd. R.A.F., was killed in a flying accident at Upavon, Wilts, on June 4th. He was 30 years of age.

Kaiser (*loq.*): "How is it at such a height on so cold a morning the lubricants do not freeze?"
Gen. Hoppner: "The British have discovered the secret which we have been seeking for months."
Vide "Daily Mail," see above.

A BRITISH FIRM BEATS THE GERMANS

THE SECRET

THE HANDLEY-PAGE.

After the two royalties had descended from the machine it was loaded with dummy bombs in preparation for a flight. The now famous German flying officer Richthofen took the seat which the Kaiser had vacated, and two other officers also boarded the plane. With a terrific roar the two engines were started, and like a bird the aeroplane rose in the air. It climbed rapidly to about 10,000ft., and the Kaiser turned to General Höppner, saying:

"How is it that, at such a height and on so cold a morning, the lubricants do not freeze?"

"The British have discovered the secret which we have been seeking for months," replied the general. "Our great difficulty is now surmounted. It [illegible]

PLUMPTRE.—Lt. Leslie Grantham Heigham Plumptre, Beds. Regt., attd. R.A.F., who was the adopted son of Mrs. Henry Heigham, 43, Redcliffe Square, was injured in accident, and died two days later, on June 4th, at casualty clearing station. He was 20 years of age.

RADER.—Philip D. Rader, an American aviator, who served with the R.F.C. early in the war, was killed in a practice flight at Buffalo on June 10th. A student flying with him was also killed.

SALMON-BACKHOUSE.—Lt. St. John Salmon-Backhouse, R.A.F., who was killed in aerial combat on April 3rd, aged 28, was the second son of the late R. Salmon-Backhouse, of Leeds, and Mrs. Salmon Backhouse. He was educated at Lynams and King's College School, Wimbledon, and then entered an engineering workshop, where he trained for four years. He went out to Argentina in 1909, and was employed on the Central Argentine Railway at Rosario. After three years he obtained an appointment as draughtsman in Liebig Meat Extract Company Fabrica, Colon, Entre Rios, where he remained until the war broke out. He returned to England, and enlisted in the 1st Sportsman's Battalion, obtained his commission, and transferred to the East Lancashire Regt., and was sent to the front in July, 1916. In the following year he joined the R.F.C., went to Cairo, and obtained his "wings," and returned to Salonika as pilot.

SMITH GRANT.—Capt. John Gordon Smith Cheetham Hill Smith Grant, Royal Scots, attd. R.A.F., who is reported to have died of bomb wounds on May 30th in a stationary hospital in France, was the eldest son of the late Colonel George Smith Grant, Minmore, Glenlivet. He was 25 years of age.

VAN RYNEVELD.—Lt. John P. van Ryneveld, R.F.C., whose death was announced last week, was the younger son of Mr. and Mrs. D. J. van Ryneveld, of Theunissen, Orange Free State, and brother of Lt.-Col. H. A. van Ryneveld, R.A.F. He was 23 years of age.

WILBERFORCE.—Capt. William Robert Sargent Wilberforce, M.C., K.R.R.C. and R.A.F., whose death was announced last week, was educated at Winchester, where he gained many athletic distinctions, winning the school steeplechase, and being a member of Commoner VI. and the Association football team. On the outbreak of war he was given a commission in the 7th K.R.R.C., and served with the battalion in Flanders in 1915. On the recommendation of the Commander-in-Chief, B.E.F., he was granted a Regular commission in the K.R.R.C. in 1916, and later joined the R.F.C. Shortly after obtaining his pilot's certificate he proceeded to Egypt, and served continuously in Egypt and Palestine for 12 months, being present at the first battle of Gaza. In 1917 he returned to England, after suffering from fever in Palestine, and was employed as instructor and flight commander up to the time of his death.

ENGAGEMENTS.

DEAN—McNEILL.—A marriage has been arranged, and will shortly take place, between Maj. H. Gordon Dean, York and Lancs. Regt. attd. R.A.F., and Helen McNeill, daughter of the Rev. John McNeill, of England and America.

HILL-REID—CARTER.—The engagement is announced of Lt. William Scott Hill-Reid, Devon Regt., attd. R.A.F., elder son of Mr. and Mrs. William Hill-Reid, of Bexhill-on-Sea, and grandson of the late Rev. William Reid, D.D., of Edinburgh, to Edith Angela, second daughter of Mr. and Mrs. Eric M. Carter, of Edgbaston, Birmingham, and granddaughter of the late Furneaux Jordan, F.R.C.S., of Birmingham.

JACKSON-TAYLOR—WEBSTER.—The marriage of Capt. P. S. Jackson-Taylor, Hereford Regt. and R.A.F., and Joyce, daughter of Mrs. Webster, of 20, Rugby Mansions, W., will take place at 2.30. There will be no reception, but friends will be welcome at the church.

ROE—STOPES.—A marriage has been arranged and will take place on June 19th at 2.30 p.m. at St. Margaret's Church, Westminster, between Humphrey Verdon Roe, Lieut. R.A.F. (late Lt., Manchester Regt.), and Marie Carmichael Stopes, D.Sc. The Right Rev. the Lord Bishop of Birmingham will officiate.

SUTTON—O'CONNOR.—An engagement is announced between Capt. G. E. F. Sutton, M.C., R.A.F. and Enid Mary Kathleen, elder daughter of Mr. and Mrs. M. B. O'Connor, of Ballygunge, Calcutta, and of Ballygunge, St. George's Hill, Weybridge.

* * *

The Gillingham Town Council have decided to confer the freedom of the borough upon Capt. James Byford McCudden, V.C., D.S.O., M.C., M.M., R.A.F., who is a native of the town.

* * *

A Memorial Service for Lt. Kenneth Chester Herron, Yeomanry, attd. R.A.F., was held at the Church of St. Martin-in-the-Fields, on June 5th.

AIR FORCE.

DEATHS.

ALLOWAY.—Lt. Cecil William Alloway, R.A.F., who was killed while flying at Newmarket on May 27th, was the eldest son of the late William Alloway, and Mary Alloway, of Molesworth, Huntingdonshire. He was 28 years of age.

ASPINALL.—Capt. John Vincent Aspinall, R.A.F., who was killed in action on May 15th, was the son of Mr. H. Aspinall, of London.

BANKS.—A verdict of accidental death was returned at an inquest in London on June 7th on Sec. Lt. Fredk. Banks, R.A.F., aged 21, of Milton Road, Cambridge. It was stated that when flying in Middlesex Mr. Banks proceeded to descend with his engine off. Suddenly he switched it on again, and attempted to turn, when the machine nose-dived to the earth, Mr. Banks receiving injuries that resulted in his death. This was his first flight alone. Officers of the R.A.F. gave evidence as to the capability he had shown in training.

CAPPER, LEWIS and STEINBERG.—A report was received on June 5th by the South-Lincolnshire Coroner that three aviators, Lt. Henry Kent Capper, R.A.F., aged 19, Sec. Lt. John Aikin Carleton Lewis, R.A.F., aged 20, and Actg. Serjt. John Steinberg, R.A.F., aged 20, were killed while flying during the previous night. Two aeroplanes came into collision and crashed to the ground from a height of about 400 ft.

FINLAY.—Sec. Lt. Kenneth Neil Finlay, R.A.F., who was accidentally killed whilst flying at Narborough on June 3rd, was the elder son of the late George Neil and Mrs. Finlay, of Ye Olde House, Long Melford, Suffolk. He was 18 years of age.

HEADLAM.—Lt. John Headlam, R.A.F., who was killed in action on May 30th, was the eldest son of Mr. and Mrs. W. A. Headlam, Stakesby Road, Whitby, Yorks. He was 19 years of age, and was serving as a scout pilot.

MACARTNEY-FILGATE.—Sec. Lt. Desmond Maurice Macartney-Filgate, R.A.F., who died on May 30th from injuries received in a flying accident, was the third son of the late Charles Macartney-Filgate, and grandson of the late Townley Macartney-Filgate, of Lowtherstone, Balbriggan. He was 18 years of age.

MACMASTER.—Capt. Frank H. Macmaster, R.A.F., who was accidentally killed on May 31st whilst flying in Kent, was the second son of Mr. F. H. D. Macmaster, of Buenos Ayres, and Mrs. Macmaster, of 58, Worple Road, Wimbledon.

STEVENS.—Lt. R. H. B. Stevens, R.A.F., who was killed in action on May 30th, was the elder son of Mr. H. M. Stevens, the Borough Accountant, Brighton, and Annie E. Stevens, of Droveway Corner, Dyke Road, Preston Rural, Sussex. He was 19 years of age, and was educated at the Brighton Grammar School.

STUART.—Capt. Peter Dudley Stuart, R.A.F., Croix de Guerre, who was killed on June 1st whilst flying in Lincolnshire, was the younger son of Mrs. E. K. Stuart and the late Dr. Peter Stuart, of Drummoyne, Blundellsands, grandson of the late Peter Stuart, of Elm House, Seaforth, and of the late Henry Simpson, of Nottingham. He was 24 years of age.

ENGAGEMENT.

WHITEHEAD—BINDA.—The engagement is announced between Maj. Ralph Whitehead, R.A.F., eldest son of the late Arthur Whitehead, of Brindle Lodge, Hoghton, Lancashire, and Fanny, only daughter of Cav. Carlos Binda and Signora Binda, of Milan, Italy.

MARRIAGES.

CARPENTER—DYSON.—On Thursday, June 6th, at St. Matthew's Church, Bootle, Lt. Sydney David, R.A.F., only son of Mr. and Mrs. D. J. Carpenter, of Waverley Park, London, was married by special licence to Nellie, younger daughter of Mr. and Mrs. W. Dyson, of Bootle, Liverpool.

COOK—DISNEY.—On June 6th, at St. Mary's Church, Weymouth, Capt. Charles Cook, R.A.F., was married to Eveline, only daughter of Norton Disney.

BIRTHS.

MOLLOY.—On May 28th, at 9, Beaconsfield Terrace, Hythe, Kent, the wife (*née* Noos) of W. Ford Molloy, M.A., LL.B., Serjt.-Maj., R.A.F.—a daughter (Sheila).

DREYDEL.—On May 28th, at Glendale, Hale, Cheshire, Joyce (*née* Wauchope), the wife of Capt. A. J. Dreydel, R.A.F.—a daughter.

FOREIGN COMMUNIQUES.

FRANCE.

June 4th.—During the day of the 3rd our bombarding squadrons, while forcing their way into the enemy's lines, shot down two enemy aeroplanes. Three other aeroplanes and two captive balloons were shot down by our chasing squadrons.

During the same day 21 tons of projectiles were dropped on troops on the march, artillery columns, and supply transports. During the night of June 3rd-4th 28 tons were dropped on the same objectives.

Our observation posts having signalled the approach of enemy aviators on Paris a warning was given at 10.54 p.m., and the

ROCHDALE

"All clear" was sounded at 11.25 p.m. There is nothing to report.

JUNE 5th.—Our Flying Service continued to show great activity in the whole fighting zone. On June 4th during a double expedition by day in the valley of the Saviere our bombing squadrons dropped over 17 tons of projectiles on concentrations of enemy troops, which were completely dispersed.

During the night of June 4th-5th nearly 14 tons of explosives were further dropped on the stations of Fismes, Fere-en-Tardenois, Roye, and Bohain. Four enemy aeroplanes were brought down, and two captive balloons set on fire.

An enemy machine of giant type with four motors was also brought down during the night of June 1st and 2nd in the region of Nanteuil le Haudoin. Its crew of eight men were made prisoners.

ARMY OF THE ORIENT.—Allied aviators have bombarded encampments east of Seres and north of Huma. An enemy machine was forced to descend, damaged, north-west of Gnevgeli.

JUNE 6th.—Yesterday 19 enemy aeroplanes were brought down or forced to land disabled. A captive German balloon was set on fire.

The same day and during the following night 25 tons of explosives were dropped by our bombing squadrons on cantonments, depots, stations, and convoys in the enemy zone. A great conflagration, followed by explosions, was observed in the station of Fère-en-Tardenois.

JUNE 7th.—During the day of June 6th our pilots shot down, or put out of action, 13 German aeroplanes, and set fire to four captive balloons.

Our bombing machines carried out a number of expeditions against the region of Roye, St. Quentin, Soissons, etc. Twenty-seven tons of explosives were dropped, and a number of fires could be observed in the places bombed.

JUNE 10th.—During the day of June 9th our chasing squadrons destroyed, or put out of action, 11 enemy aeroplanes.

Our bombing aeroplanes, which were able to intervene at once in the battle, attacked unceasingly the enemy's troops massed behind the front of attack.

During the day of the 9th and the night following, in spite of the bad weather, 18 tons of projectiles were dropped on points of assembly, convoys, and railway stations, especially Roye railway station, where a great fire, followed by an explosion, was observed.

During the month of May, 28 German aeroplanes were shot down by anti-aircraft fire, three of them by night. In addition, 20 other machines, driven out of control by our fire, were compelled to break off their mission.

ARMY OF THE ORIENT.—In the course of Sunday's air fighting one enemy aeroplane was brought down in its own lines.

GERMANY.

JUNE 5th.—Lt. Loewenhardt achieved his 26th aerial victory.

JUNE 6th.—During the last two days 46 enemy aeroplanes and four captive balloons have been brought down. The Richthofen chasing squadrons shot down 15 enemy aeroplanes yesterday.

Capt. Berthold and Lt. Meckhoff obtained their 31st, Lt. Loewenhardt his 27th, Lt. Udet his 26th, and Lt. Kirstein his 21st and 22nd victory in the air.

JUNE 9th.—Lt. Kroll gained his 24th and 25th, and Serjt.-Maj. Rumey his 23rd aerial victories.

JUNE 10th.—Thirty-seven aeroplanes and six captive balloons were shot down yesterday.

Lt. Kroll obtained his 27th and 28th victories, Lt. Udet his 27th, and Lt. Kirstein his 23rd victory, in the air.

AUSTRIA.

JUNE 10th.—One of our bombing squadrons obtained numerous hits in an attack on the Italian aerodromes of Treviso and Montebelluna (both in the Venetian plain).

ITALY.

JUNE 3rd.—In the morning of June 2nd our seaplanes, despite the enemy's intense anti-aircraft fire, dropped bombs with visibly good results on the military works at Lagosta (an island on the coast of Dalmatia). All our machines except one returned to their base.

JUNE 5th.—Accurate shooting by our batteries brought down a captive balloon in flames on the left bank of the Piave.

On the evening of the 3rd inst. four enemy aeroplanes were brought down.

JUNE 7th.—Aeroplanes and airships bombarded with more than five tons of bombs enemy aviation camps in the Venetian Plain, the railway station of Mezocorona (north of Trent), and columns on the march on the Quero-Fenere road (Upper Piave).

JUNE 8th.—The enemy's aviation camp between the Piave and the Livenza and the railway station of Caldonazzo (Brenta Valley, 12 miles south-east of Trent), surprised while in full activity, were effectively bombarded by our aeroplanes and airships. In fighting 10 enemy machines were brought down.

JUNE 9th.—Our airships and aeroplanes bombarded railway stations, aviation camps, and enemy hutments, and attacked troops in movement with machine-gun fire. At Mattarello station (about five miles south of Trent) the explosion of a large ammunition dump was observed. During the air fighting in t day five enemy machines were brought down.

JUNE 10th.—Our aeroplanes dropped four tons of bombs enemy depôts and communication junctions. Five enemy aer planes were brought down during air fighting.

BELGIUM.

JUNE 5th.—Sous-Lieut.-Av. Coppens shot down a German ballo south of Zarren. This is the fifth balloon set on fire by th aviator in the last three weeks.

JUNE 7th.—To-night German aeroplanes dropped bombs some of our cantonments. One of the enemy machines was sh down in the region of Adinkerke by our anti-aircraft guns a its occupants made prisoners.

JUNE 9th.—Sous-Lieut.-Av. Coppens brought down his six balloon, thus bringing the number of his aerial victories up seven in a month.

THE WAR IN REVIEW.

A French Affair.

M. Painlevé has been appointed President of the Fren Parliamentary Aviation Group, in succession to the l M. Millevoye.

M. Painlevé Opinions.

The correspondent of the "Daily Chronicle" writes fr Paris on May 21st as follows:—

M. Painlevé, formerly Premier and War Minister, who h just accepted presidency of the aviation group in the Chamber Deputies, contributes to the "Petit Parisien" an interest programme of the aerial war force. He points out that it essential to blind the enemy's artillery, that is, to destroy German aeroplanes employed on observation work.

He recommends that the Entente aviators should, by th number and boldness, make the air a prohibited area for Germ aviators, and that by incessant bombardments our aerial fl should day and night harry the enemy's convoys, his commu cation and revictualling lines, his cantonments, as well as firing line. This has already been done on a limited scale. must now be done on a vast scale.

He appeals to America to send us thousands and thousands bombarding aviators. A thorough understanding between Allied aeroplane makers is essential. They must communicate one another their experiments and their factory secrets, and th ensure the creation of the aerial army of civilisation.

THE ROYAL ALBERT HALL,

Saturday, June 15th.

— at 3 30 p.m. —

A Mass Meeting

WILL BE HELD TO PASS A RESOLUTION demanding

That All Germans be Denaturalised and Interned.

That All Aliens be Registered.

And that the British Empire be Preserved for the British People

N. Pemberton Billing, M.P.

Will take the Chair.

An Unfounded Rumour.

A statement that Mr. Clifford B. Prodger has been killed, or seriously injured, is in circulation. One takes pleasure in contradicting this rumour, which is entirely without foundation, and in assuring those concerned that Mr. Prodger was in the best of health at the time of writing on June 11th.

German Anti-Aircraft Defence.

A Berlin telegram, dated May 23rd, says that the Imperial Chancellor has given the following answer to a question concerning protection against air attacks:—

Perfectly sure methods of preventing air raids do not exist. In the first place comes a good anti-aircraft defence, then the menace of reprisal raids against the enemy capitals. The Army Administration is active in both directions. According to newspaper reports, serious and urgent voices were raised in the French Chamber, and especially in the Municipal Council of Paris, in favour of an agreement among the belligerents, as to the cessation of air attacks against towns outside the zone of operations. This, so far, has not led to definite proposals from the enemy side. Should this happen, military quarters would first be charged with the examination of the proposal.

A German Denial.

A Berlin telegram of May 24th says:—The British Admiralty's report that a German torpedo boat destroyer was sunk by a British aeroplane near Zeebrugge is denied.

The Realities of War.

The correspondent of the "Frankfurter Zeitung," on the Western front, writes as follows in an account of the march of General von Hutier's Army into the Somme area in March:—

That was the advance. But this advance we knew already from 1914. We knew it in the East. But what we do not know in the East is the enemy aviators. With every kilometre farther forward they become more importunate. They are not reconnoitring, they are attacking. They come in whole squadrons; the bombs whine through the air and burst; the machine-guns spray up and down the crowded roads; and the columns are without any cover beyond only the roadside ditch. The plaguey fellows are driven off, but they are soon back again, with new bombs and fresh ammunition. Our chasing squadrons cannot be everywhere at once. And so it goes on day and night. No quiet hour, no sheltering billet, and with the cold March rain on top of it all no dry stitch on one's whole body.

The Point of View.

From the "Daily Express" of May 31st:—

The Cologne "Volkszeitung" condemns with fierce wrath the British Whitsuntide raid on Cologne, but carefully conceals the fact of the German Whitsuntide raid on London!

"It can hardly have been a coincidence that the enemy should just choose the day before the Feast of Pentecost for his attack on a town far removed from the front, the military effects of which, as might have been clearly foreseen, could only be nil.

"The circumstance that Englishmen and Frenchmen contrive to present Whitsun gifts of this nature to citizens engaged in the celebration of one of the greatest and holiest Christian festivals thus bringing death and mourning in their train, proves how little prospect there is of any humanising of the war in the air.

"The child-murderers of Karlsruhe proved true to themselves in hurling their bombs at Whitsuntide among the peaceable population of Cologne."

[The similarity of the journalism of Cologne and of Fleet Street is quaint.—Ed.]

Mutual Recriminations.

The "Daily Telegraph" correspondent at Rotterdam writes on June 1st:—

There are increasing symptoms that the air raids on German towns are having the desired effect on the public, who are displaying growing anger against their own military authorities

LONDON OFFICE: 60, WATLING STREET, E.C.

At Cologne feeling is very bitter, and the Town Council have called upon the military to answer for the failure of the defences. The army in turn tried to throw the blame on the local authorities, Col. Thomson, representing the general commanding the Air Forces, declaring: "You did not give warning in time to allow civilians to shelter themselves."

Were They Zeppelins?

A message from Copenhagen, dated May 23rd, states that fishermen who have arrived at Esbjerg state that they witnessed a German Zeppelin brought down in the North Sea. They stated that the crew were saved by the men on a British destroyer.

A telegram to the "Copenhagen" states that a Zeppelin was shot down on June 1st, probably by a hostile warship, off Nymind gab, north of Esbjerg. The whole crew are believed to have been drowned.

[It is curious that there is no British Naval communiqué on the subject.—Ed.]

The Fate of Lt. Bongartz.

Lt. Bongartz, one of the German "Aces," has been brought down by a British aviator. He received a bullet which has caused the loss of an eye.

The Death of Major Lufbery.

Reuter's correspondent with the American Army writes on May 19th:—

Major Raoul Lufbery, who formerly belonged to the Lafayette Squadron, but has been a member of the American Air Service for some months, was this morning shot down in flames during an engagement which took place at a height of about 5,000 feet with a German triplane carrying two guns. Major Lufbery remained in his aeroplane until he was some 2,500 feet from the ground and his machine was a roaring furnace, and then he jumped out. His body fell near a farmhouse. The burning machine was found 400 yards away.

About the same time Lt. Douglas Campbell gained his second air victory by shooting down an enemy biplane in flames. It fell inside our lines.

Major Lufbery, who is credited with having brought down 18 German aeroplanes, had been a fighting aviator on the French front for about two years. As far back as December 29th, 1916, he had been the victor in six aerial combats. He came from Chicago, and was one of some 12 citizens of the United States who offered their services as flying men to France and who formed the Lafayette Squadron. Major Lufbery had been decorated with the Military Medal and the Cross of the Legion of Honour for his services.

Where Flying Men are fitted out.

ONE SERVICE

Uniformity of custom and kit; on land, on sea and in the air one organisation only—unity of control centring on one ideal—efficiency. That is the ideal aimed at by the R.A.F. It also summarises the policy of Dunhills; as the R.A.F. have co-ordinated all the efforts and abilities of its two parent services for the better 'strafing' of the Hun so is every idea, every thought and every effort concentrated by the House of Dunhill on the problem of eliminating weather.

The land crab knows nothing of weather inconvenience—it is left to men of the R.A.F., who fight it in its own headquarters, to feel the full fury of its All Highest displeasure.

But Dunhills know and have provided for the worst to the last little detail; and it is just this expert "understanding" knowledge that made them so indispensable to men of the old Air Forces.

The new Force still has the old traditions, the old enemies and now they are one service they still have Dunhills for equipment—the one service that will never fail them.

Call in, if you can, at our well-known "base" in Conduit Street—a few paces from Regent Street—and inspect the full kit. Or, if London is "out of bounds," drop a line for patterns and full details which will be sent gladly on request.

The Death of Captain Resnati.

It is reported that Captain Resnati, the Italian military aviator who demonstrated the Capronis in the United States, has been killed in an aeroplane fall.

Camouflage.

Reuter's correspondent with the American Army writes on May 21st:—

According to information obtained from a captured German officer the published monthly figures of German air losses are not accepted by the flying personnel, and are intended for the German public and neutrals. A machine which is shot down within the German lines is not counted as a casualty if even parts of it are salved. [Which appears to be the custom of all belligerents.—Ed.]

A Fine Performance.

A message from New York on May 24th stated that Katherine Stinson, postal flyer, broke the American non-stop record in an attempt to fly from Chicago to New York. Owing to shortage of gasolene she was forced to descend at Binghampton. She flew 783 miles in ten hours.

A Quick Journey.

It is reported that two aviators flew from New York City to Washington D.C., had luncheon in the American capital, and arrived back in New York in time for dinner, the entire journey occupying nine hours.

Flying in South Africa.

The "Daily Express" of June 3rd publishes the following from its Johannesburg correspondent:—

Maj. Miller has returned to Johannesburg after a journey of 800 miles in the air.

It is calculated that 100,000 Swaziland natives saw Maj. Miller in the air, and his flying created a sensation. The natives hid in the bush or scuttled to their kraals.

At Mbabane they waited round the aeroplane all night to see him start in the morning.

"White man," they were heard to say, "can have Swaziland now. Only thing he cannot do is to raise the dead, and that will come in time."

THE PARIS POST AND OTHERS.

The "Petit Parisien" writes on June 8th :—

"The French aviators, Heraldy and Lorgnat, yesterday made a new attempt to establish a postal service between Paris and London, which was completely successful. They left Bezons, near Paris, at 1.5 p.m., carrying 300 kilogrammes (about 6 cwt.) of mails, and arrived in London at 3.50 p.m. They left at 4.5 p.m., reaching Bezons at 6.40 p.m. The rapidity of this flight allows one to hope for a regular service, which will assure the receipt of a reply to a letter sent on the same day. The achievement of Heraldy and Lorgnat constitutes a record for the distance covered."

The General Secretary of the Postal Administration made the following statement to a representative of the "Petit Journal" on the subject of aerial posts :—

"We are still quite at the beginning of things. No aerial post service has yet been started. We are studying several services, specially between Paris and Rome and Paris and London, but we have not yet obtained any definite results. It will be necessary to employ a model embodying the characteristics of aeroplane and seaplane, and such a model is not yet altogether ready."

In connection with the above the following statement was also published on June 9th :—

Trials continue daily of aeral flights between town and town, in anticipation of the future aerial postal service.

Since the Paris-London flight and back effected in five hours and a quarter, the aviators, Lemercier and Ducroq, have made a trial flight from Paris to Lyons and back. Leaving Vincennes at 6.40 a.m., they reached Lyons at 11.15 a.m. They left Lyons at 1.20 p.m., and returned to Vincennes at 6.5 p.m.

It was reported on June 9th that an American wireless message states that the air mail service between New York and Boston has been established, the first mail being carried in three hours twenty-two minutes.

THE 39th RAID ON PARIS.

The "Times" correspondent writes from Paris on June 7th :—

The 39th Gotha raid last night resulted in the dropping of one or two bombs, with casualties of one person killed and a few injured. The material damage was slight.

Metal Components

ABSOLUTE accuracy to design, careful finish and entire reliability are the points on which we concentrate in our production of sheet metal components for aircraft.

Aeroplane Construction

In aeroplane construction the vital factor is "how many machines can be turned out in a given time." This depends entirely upon the efficiency of the machinery employed. And no machine reaches its highest point of production until its clutches, brakes, etc, are fitted with Ferodo Fabric.

Ferodo Fabrics are the most efficient transmitters of energy. Leather, wood, textile beltings, etc., are out of date for Friction drives and Braking purposes. The moment they become soaked with oil they are useless; Ferodo Fabrics never slip, never seize; are not affected by water, oil or acid, and are absolutely reliable under all conditions.

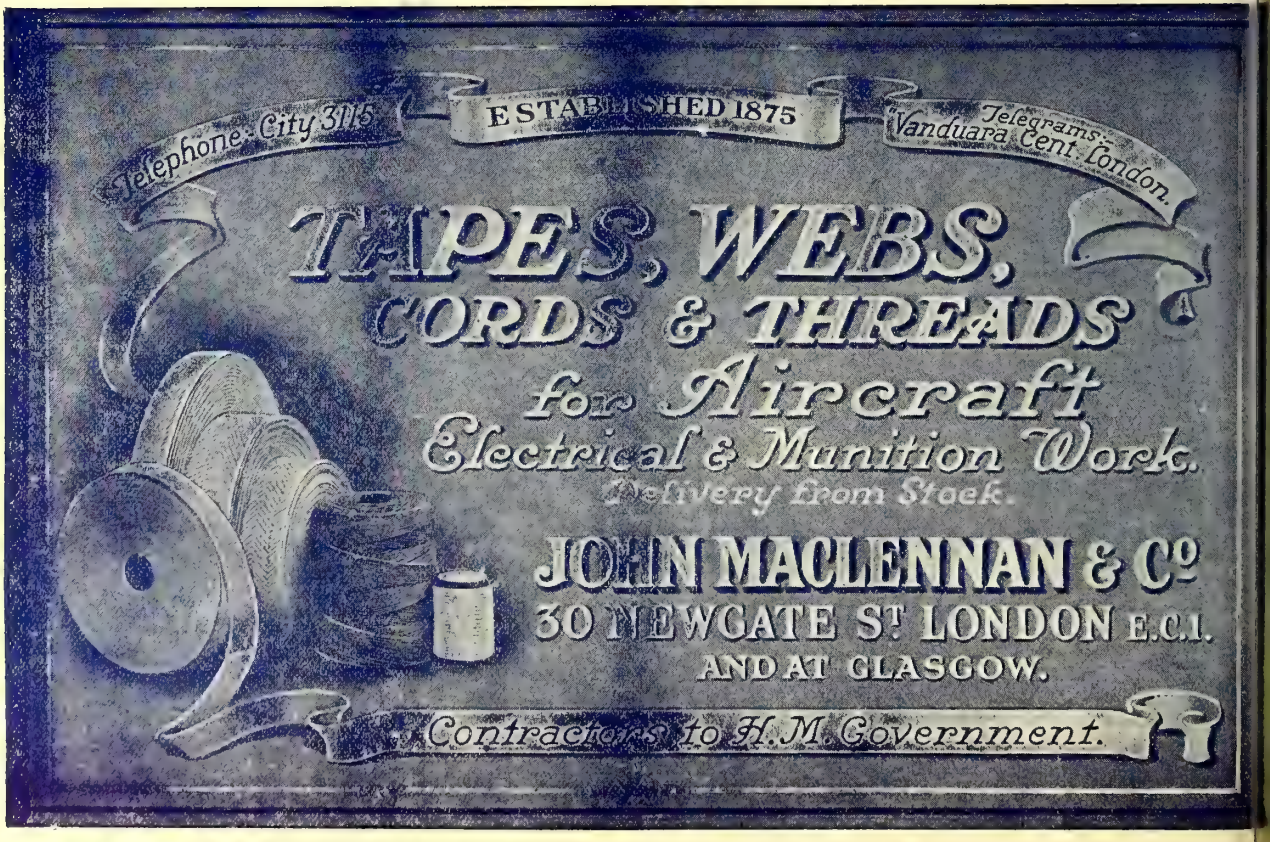
ALUMINIUM CASTINGS

OF EVERY DESCRIPTION.

We make a Speciality of Aeronautical and Automobile Work.

We are making many thousands of **Aluminium Die Castings** weekly under the celebrated **Gothias** process—in many cases **entirely eliminating** machining operations, and we hold the sole manufacturing rights in the British Empire for this process.



Chemical and Physical tests are made on our own premises, and our **Castings**, both **Sand** and **Die**, are produced under the most up-to-date and scientific methods.

Sole makers of the **Birmal Aluminium Pistons**, thousands of which are running to-day in a highly satisfactory manner under the most severe conditions.

Highest Class Castings to Government Specifications. Prompt Delivery.

SURRE

BELLING ELECTRIC GLUE POTS

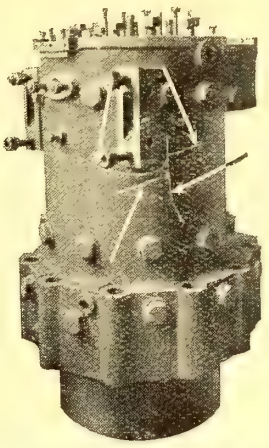
for Aeroplane and other work

List No. 38.
Price 32/-
(Spare Elements 3/6 each)

Strongly made in cast iron, the Glue container being tinned.
CAPACITY: 2 pints of glue.
LOADING: 900 watts. 3 elements, 3 heats, 3 loose connectors for attaching the cable to.
WEIGHT: 14 lbs.
For use off a power circuit.

List No. 39.
Price 35/-
(Spare Elements 3/6 each)

As above, but with a loading of only 600 watts so that it can be used off an ordinary lamp socket.
Complete with connectors, 2 yards flex, and lamp holder adaptor.



List No. 40.
Price 47/6
(Spare Elements 3/6 each)

Similar to List No. 38, but fitted with a 3 heat switch on a separate panel, which is connected to the Glue Pot by 4 feet of metallic flexible tubing.
For use off a power circuit and recommended for Factory work.

All prices are subject to 50% advance.
Carriage extra on orders under £3 net value.

BELLING & CO.

MANUFACTURING ELECTRICAL ENGINEERS
EDMONTON, LONDON, N.18

THE picture abov is that of the cylinder of a Diesel engine belong ing to a motor ship. This cylinder was badly cracked in several places, making it a delicate operati n to weld without distorting the metal. Ba imar made a successful job in a very shor t time. The cylinder is about five feet in height and weighs about one ton. This repair was made to the order of one of England's largest shipbuilders

Ship Repairs

MANY illustrated descriptions of wonderful repairs to ships are printed in the technical press of America. These repairs are made by welding. The saving of time, materials, and money is so obvious that shipowners and shipbuilders cannot ignore it.

Ships are wanted at sea—not in dock—so any method that will speed up repairs will be appreciated.

Barimar's Travelling Plants

and men go to any port to make repairs. Many breakages, even in large and heavy pieces, can be repaired quickly by welding; saving an expensive and possibly delayed replacement, and sometimes avoiding the necessity of dry-docking the ship.

Barimar Scientific Welding Service handles broken and defective castings in any metal. Cast-iron and bronze propellers, stern frames, rudder frames, tail shafts, engines, boilers, crank shafts, cross-heads, connecting rods, and other heavy parts.

Write for Our Booklet

"The Welding Test" will give you a lot of information about our work. If you have a repair to make now, a copy of the book will be sent free. If you wish a copy for filing, please send three penny stamps for postage. Please ask for Manual "B.C." and mention "THE AEROPLANE."

Send Light Repairs to London

Remove all fittings, attach label bearing your name and address, and send broken part carriage paid. Send complete instructions by post.

ON ALLOTMENTS ON PARNASSUS.—(*Concluded*)

ast week there was published the first of a series of
es by people in the Flying Services, illustrative of
ous phases of flying. One could hardly claim that
writers had cultivated the highest poetic heights of
assus, so one made bold to class them among the
ment-holders who are doing such valuable amateur
in other fields of war activity.—C. G. G.]

THE DISTANT WAR AREAS.

quite another kind, more akin to the product of
home aerodrome, are two sets of verses from Meso-
mia. Both sets go to an old familiar tune, and the
at any rate, may be used with desirable effect on
sirable observers and pilots :—

SONG OF THE R.E.8.

(*Tune*, "*Wrap me up in my Tarpaulin Jacket.*")

"A stalwart young Pilot sat sighing,
And as in his biplane he sat, he sat,
Quoth he, 'Oh I fain would be flying,
But my futile Observer's so fat.'"

Chorus—

"Wrap me up in my old leather jacket,
Pull my flying cap over my brow, my brow,
I'm wanting to fly home to 'Blighty,'
I wonder who's kissing her now (bow-wow)."

"Oh had I the wings of a Quadruplane,
A Pup, Camel, Dolphin or Spad, or Spad,
High into the skies would I leap again,
Away from this corpulent lad."

"Oh get me two hefty Ak Emmas,
And give my propeller a swing, a swing,
To rid me of all these dilemmas,
Shove sandbags inside the dam thing."

"Then homewards I'll fly in a hurry,
And hustle o'er mountain and plain, and plain,
To free all the girls from their worry,
And talk of my prowess again."

"A lonely Observer stayed crying,
On a can of Shell spirit he sat, he sat,
Said he, 'Well I've no wish for dying,
Oh where did I hang up my hat?'"

"A hero is that noble fellow,
His last 'Write-off' makes up a score (and more),
My gills feel a little bit yellow,
The bones of my back are still sore."

"I don't blame the lad for our last crash,
A mule cart stood there in his way, his way.
The mule ate our 'bus as a bran mash,
There were no 'spares' worth bringing away."

"Pull out of the hangars six 'buses,
And set them all out in a row, a row,
With a Pilot who ne'er drinks nor cusses,
I'll fly along mournful and slow."

ssibly Mesopotamia does breed boredom, but, to George Robey's old joke, which may still be new Messopot," it is nothing to the Mess-up-at-'ome-'ere. e second set of verses is purely narrative. Some- it reminds one of the Border Poetry collated by one op Percy—one seems to remember that he was a op. The verses are beautifully disjointed and dis- ected, but they manage to convey a graphic im- sion of the surroundings among which they were

SOME EXTRA VERSES.

"Now we're stranded in Mesopotamia,
It's a beautiful country I swear (yes swear),
The sandstorms, so cool and refreshing,
Recall fogs in Lei—ces—ter Square."

Chorus—

"Wrap me up in my old leather jacket,
Pull my flying cap over my brow, my brow,
I'm wanting to fly home to 'Blighty,'
I wonder who's kissing her now (bow-wow)."

"The Arab's a greedy old heathen,
His wives he can count by the score, the score,
He covers their heads up with blankets:
You can't get a glad eye, O Lor."

"A wily old cuss is the Turco,
Samarrah he felt he could spare, could spare,
He ratted, when we got to work O,
And left us *this Paradise fair*!"

"A job I'd despise is the Sweeper's,
He makes dust wherever he goes, he goes,
It gets in your mouth and your peepers,
Its not a nice job for the nose."

"The Bhistie's a better class nigger,
He bring's us the water we drink—yes drink!
Don't offer us fizz, beer or whisky,
Tigris water is nicer we think."

"The Rigger's a kind patient fellow,
He fits on new axles galore, galore.
His language sounds *homelike* and *in flow*,
When fetching new 'V' struts from Store."

"The Fitter has painstaking manners,
Your engine won't rev., then he weeps, he weeps,
He'll coax her all night with his spanners,
Next day she's O.K. (Revs in heaps)."

"The old R.E.8 is a wonder,
In aeroplanes she's the last word, last word,
You open her out—gee by thunder,
She hops off the ground like a bird."

"Umpty-Third" Squadron, Mesopotamia, December, 1917.

THE MORE SERIOUS SIDE.

So much for the lighter side. Now we come to another phase altogether, that is the feeling of the chap who is going on leave, and really needs a rest. Despite the levity of the words, one gets the idea of the tired feeling beneath the levity :—

LEAVE.

When you're going on leave
In a couple of days,
Your heart pit-a-patters so lightly;
Then you grab your reprieve
And you think of the plays,
That others have spoken of nightly.
But you dread that you'll go
On some beastly old show,
The world then looks drab and unsightly;
So you pray all you know,
That the clouds will be low:
The sun you hope won't shine so brightly
And you sulfer such pain,
When there's no sign of rain;
Your voucher you clutch, Oh! so tightly.
That is how you go on,
'Till the time comes along,
When on leave you trot off so sprightly.

B. N. K. S.

Finally, here is a little verse, which one submits to serious critics as genuine poetry :—

WHY?

Softly some thousand feet below,
The flares dart up, blaze out and fall,
The hideous ground, transformed by snow,
Looks pure for once beneath its pall.
The sea of sky, fretted with stars,
Lies limp'd 'neath the pallid moon,
The heavens bend and breezes croon
O'er this sick world, its unhealed scars.
From wood and swamp the whole land round,
Where hate and lust and death abound,
Drifts back the cry :—" How long, and Why ?."

B. N. K. S.

The writer is an active-service pilot who has done much good work. Like all thinking people, he regards war as waste, but that does not prevent him from seeing the good done by war. The question, "How long, and Why?" is one which millions are asking. For most of us the answer to the first question is simply, "Till we win," and to the second, "Because all our friends are in it." But below that one feels that the world in general, and England in particular, was slipping away into sloth, and self-indulgence, and ease which was disease, so that it needed war to clean its system and to show the value of manhood over money.

THE RANK AND FILE.

The Rank and File also cultivate their allotments on Parnassus. Here, for example, is one effort by a former air mechanic, R.F.C., who has already published sundry booklets of verse :—

THE ADVENTURES OF ALGY.

When Algy, young and strong and fit,
And madly keen to do his bit,
Stepped out at Farnborough Station
To join the Royal Flying Corps,
He clenched his hands and stoutly swore
He'd win a reputation.

The brilliant pattern of his hose
Quite startled all the N.C Os.,
And threw them in a panic;
They biffed him, stood him on his head:
"Oh, what a funny freak!" they said—
"A Super Air-Mechanic!"

Next day, dear Algy was equipped;
He grasped his cane, and gaily tripped
Along the public byways;
And all the folk of Aldershot
Stared hard, and said, "We like him not,
Although he has some spry ways!"

They placed him in the S.R.O.
But Algy said he'd rather go
And to the stars pay homage;
He much preferred an aeroplane,
And so they posted him again
Forthwith, to Castle Bromwich.

There, Algy smashed a Sopwith Scout,
And knocked the Aerodrome about;
The Colonel's words were bitter;
"Get out," he growled, "you comic thing!"
And Algy, to another Wing
Went off as Wireless Fitter.

He did not take to "Volts" and "Amps,"
And, after strafing sundry lamps
With most refreshing vigour,
He found himself en route for Wye,
Where, Algy said, he'd have a try
To be a first-rate Rigger!

But Algy, down at his R.S.,
Got things in such a ghastly mess
He wasn't worth a stiver;
So they re-mustered him again,
"Aha!" said he, "my course is plain—
I'll be an M.T. driver!"

The casualties began to swell
Among the Squadron's personnel,
For Algy was a terror;
And those who travelled in his Ford
And came through safely, thanked the Lord,
And marvel'ed at the error!

And now, in Orders, one may read
The rank, the number, and the breed
Of Air-Mechanic Huggins;
His trade is stated, too, I trow,
Perchance he still pursues it now—
A "Miscellaneous Muggins"!

G. R. S.

One seems to have met the A.M. of that type, ev in civilian employ. The "Miscellaneous Muggin who is put onto jobs of all sorts because he is no gc at anything is a constant trouble to Squadron and Pa commanders. Incidentally the type persists even in t commissioned ranks. One finds him plentifully in t Hotel Bolo, for example, sometimes with brass rou the peak of his cap, sometimes with only "two fing up"—as rude people call the wound stripes on the c band which in the R.A.F. signify a captain. Th seems a chance for some inspired allotment cultiva to do something equally adequate about the type officer who always manages to avoid going on act service, although he is no use at home.

As a companion to "Algy" one ventures to crib t following touching lines from "The Highflyer," wh is the House Journal of a well-known seaplane firm

THE ROYAL NAVAL ALL SORTS.

THE TRIALS OF A RATING ON LEAVE.

I tell yer what it is you chaps this is a rummy game,
It doesn't matter where we go it's all along the same.
We're always took for something else, though I'm no bloc
ing Saint,
It isn't always funny to be took for what you ain't.

We's the Royal Naval All Sorts, that's just the name for us
It's a dollar to a hayseed if I jump aboard a 'bus
Some old lady grabs a hold of me and hollers in my face,
" 'Ere! stop this 'bus at once young man, you've took me p
my place."

I might be going home some night along a quiet street,
Some youngster's sure to take me for a special on his beat
" Farver's come 'ome drunk and knockin' muvver on the 'e
Please come and lock up farver while I put the kids to bed.'

" Go home and tell your mother that I'm not a special cop
I'm a Naval Air Mechanic, and I've no desire to swop.
If your father's took to combing out your mother of a night,
Tell her to fetch the sergeant, he'll comb father out all right.'

One day I took a notion for to go and see the Zoo.
I went into the monkey-house beside the cockatoo.
An old gentleman was passing by, he went too near the cage,
When a monkey seized him by the coat and tore it in a rage

He turned round to me and said: " Here keeper this won't d
" I'm not the bloomin' keeper," I replied, " but who are you
He said he was a member, so I went off there and then
To try and find the keeper who released him from his den.

It isn't always quite so bad as that I'm glad to say.
I was going down from Paddington by train the other day,
When just about to take a seat and settle down to smoke,
I saw a smart young lady with a much excited bloke.

A newly married couple, and they took me for the guard,
This time I meant to play the part, it wasn't very hard.
I found an empty carriage and I told them to get in.
They tipped me half a dollar and I gave a knowing grin.

I said I'd warn the passengers it was a mental case.
" If anyone comes near the door just make a slight grimac
I hopped it then for sure my camouflage was not the best.
But they were so pre-occupied they never would have guesse

I hear they're going to dress us in sky blue and stream-l
caps.
That ought to suit us very well we're such good looking chaps
'Twill almost end our camouflage, the public to deceive.
There's only one thing left and that's a French poilu on lea
" THE PHILISTINE."

So many of the former R.N.A.S. mechanics are st in pseudo-naval costume, and still "go ashore in Nu ber Ones" from a "ship" which is fifty miles from t sea, in a "leave boat" on four wheels, that one c still sympathise with their little troubles arising fr being mistaken for everything except what they are

"THE AWAKENING."—(Without apologies to the late Lord Leighton.)

FEMININE HELP.

Even those charming ladies who inhabit Government offices in their thousands, and appear to have little to do except look charming and make tea, have their own allotments. A highly esteemed feminine correspondent, who has had a brief, very brief, experience of a Government office, writes :—

"I am not, and hope I never may be, absolutely *idle*, but I felt I was not educated up to Government methods. Of course, it has its humorous side, but when one thinks of all those thousands of people paid to do practically nothing—and do it overtime as well—while men are having their homes and businesses broken up to go and have their poor, comic heads blown off for 1s. a day, it is enough to turn one into a Hyde Park ranter, or a poetess." Hence the following" :—

WAR WORK.

One day—one blissful day it was in flaming June—
Vain, idle dreams I wove : fanned by an infant breeze,
Sweetly I snoozed and drowsed—from sordid cares immune—
Lulled by the lapping tide, the softly rustling trees.

"What!" you exclaim : "'tis thus you fritter golden hours
While England cries for all our best in thew and brain?
The Sprite of Bloody War upon our country glowers?" . . .
Oh, stem your wrath, I beg : oh, let me, *please*, explain!

A verdant couch I sought not on the river's marge
In slothful mood, shunning the strife of vulgar mob.
Ah, no! I prayed for *work*, and, to a building large
On the Embankment I was lured—a Gov'ment job!

Brightly at 10 a.m. I took my seat obsessed
With thoughts of occupation new, but, as each hour
Dragged slowly on t'wards Angelus I grew depressed,
And lack of entertainment bred a temper sour.

I sat—a plaintive sight—among a concourse mixed
Who bandied jests and quips—(old men and maidens, too),
I, with my dwindling hopes on work no longer fixed,
Happy as Daniel closely caged in local Zoo!

One day—*one* blissful (?) day it was in flaming June
I watched the misty shadows by sweet sunbeams cleft.
But Conscience with this soporific life was not attune :
Two hours for lunch : a long-protracted tea—*I left!*

There you have an energetic and brainy woman's view of how things are done in some Government offices. Judging by examples which one knows, she is not far wide of the mark, and as her verses were written actually from personal experience they may be taken as photographically accurate.

As an antidote one gives the following as illustrating the effect on the non-mechanical female mind of too much purely technical work. Considered as a nightmare, it is even worse than that of the Flight-Commander already quoted. The metre goes out and loses itself at times, the rhymes on occasion simply don't, and the sense is about what one would expect from a nightmare, but in some quaint way it retains a connected narrative :—

THE RESULTS OF OVERWORK.

A DISTURBED NIGHT.

(February 15th, 1918.)

My Pillows (Pilot's Cushions)
And Minimum Stock Sheet,
Control lost and turnbuckled,
Top Cover Skid complete.

Palm-cradled in a nightmare,
My Eyebolts strange sights view,
By sleep's Propellers wafted,
My nightmare airship flew.

The Radiator Shutters
(With Brackets all complete),
I thought were kicked asunder
By mighty Engine Feet.

I thought a Bristol Fighter,
All armed with Bombs and Guns,
Came flying through the window,
Mistaking me for Huns.

A Royal King-Post followed,
With Struts across the floor;
The Fighter flew to smash him,
Top Ribs flew out with gore.

I screamed for help; A Stern Post
Leaped in with Compound Spring,
And, followed by his Gun Mounts,
Who also Streamlined in.

The Gun Mounts shot the Fighter,
And then in accents rough,
They called for Washers, Special,
And swore at the Blast Trough.

They bathed the King-Post's bruises,
And soon a Fabric band,
Stays Vertical his Top Ribs,
And slings his Starboard hand.

To Port they fly to cheer him,
His Pipes Exhaust to Pump,
His Air Relief relieves them.
He eats the Plug and Sump.

A Bell Crank next came tripping,
Her hair was like a Bush,
Her eyes like Springs and Flash Tubes :
She gave her Nut the Push.

The Nut with Jaw-Ends grinding,
And grasping sharp Rock-shaft,
Her Throttle clave asunder,
And stabbed her fore and aft.

Then flew in Judge and Jury,
Cross Members, Cross Heads all;
The Jury said, "Not guilty,"
The Judge put Cap on Ball.

The Jury yelled, "Not guilty!"
"The Nut was Screwed," they bawled,
They swore the Bell was cranky,
And rightly overhauled.

The Jury flew for Petrol,
And fetched an Aldis Sight,
And piling heaps of Wood Parts,
They set the Judge alight.

The Judge then called his Doggie,
A splendid Sopwith Pup,
He saw his Master singe-ing—
Forked Ends of flame flew up.

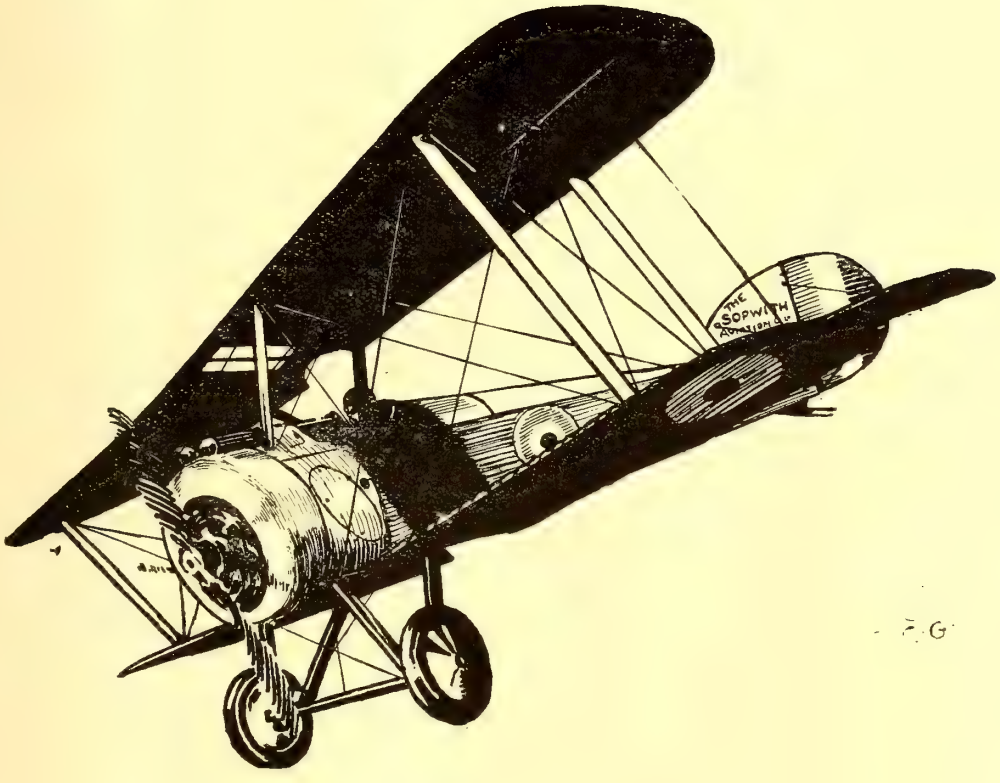
The Pup flew at the Jury,
And with a burning Log,
And C.C. Gear, he fired them,
Then ate them (dirty dog).

My Sockets (Hinge), unbolted,
Loud crowed a Petrol Cock,
Flops down my nightmare Airship,
I waken with Spring Shock.

E. M. M. Y.

Last but by no means least of the feminine helps the R.A.F. (pending the coming into being of t W.R.A.Fs.) are the female fitters in various workshop both "trade" factories and the Royal Aircraft Establis ment, as it is now called to distinguish it from t R.A.F. of the Royal Air Force. Here, then, is the so of the workshop :—

THE LAY OF THE FEMALE FITTERS.



From A to Z, from Z to A,
This is the Female Fitters' lay.

A is for Aeroplanes, little and big.
B stands for Bending, with hammer and jig.
C is the Caps that we all hate to wear—
D is for Drills—I have broken my share.
E's Electricity, making things hum—
F is for Female—called "lady" by some—
G is the Grumblers, of whom we've no lack—
H is the Huns we are helping to whack.
I is the Industry shown by us all.
J's for the Jobs—there's not one but will pall.
K stands for Kasein, with horrible smell,
L is for Labourer—Lunch-time as well.
M is the Metal we cut up and file.
N is the Noise we make—frankly, it's vile!
O is for Overtime—most of us stop.
P is to Punch, or, colloquially, "pop."
Q is the Queer things that some of us do.
R's for the Rumours that seldom are true.
S is the Scamper at scund of the bell.
T's for the Tools that we handle so well.
U is our Usefulness—truly, it's great!
V's for the Visitors coming in state.
W's Windows we quarrel about—
X is the Xcellent work we turn out.
Y—(Yes, You're right—this is positive rot!)
Z is the Zeal that we have—or have not.

From Z to A, from A to Z,
The F. F.'s lay is finished.

KINDLY MENTION "THE AEROPLANE" WHEN CORRESPONDING WITH ADVERTISERS.

A workmanlike little job, is it not? Certainly not poetry, but at any rate it scans and rhymes, which is something in these days of *vers libre* and futurist poets, and vorticists and so forth. A good mechanic is better than a medium artist any day of the week, and the mechanism of the lines is so good that one feels sure that the writer is quite a useful workshop hand.

THE REAL THING.

Some day possibly a major poet will arise who will sing of the aeroplane and its doings as my friend "Klaxon" sings of the King's Ships and the men of the King's Navy. One pictures "Klaxon," as one reads him, standing on the bridge of a destroyer doing a steady 35 knots in the teeth of a 50-knot North-Easter, his Hyacinthine locks streaming in the gale, while all around him resounds like a cosmic Aeolian harp. Not otherwise, surely, can "Klaxon" get his inspiration. Yet one believes that his most uplifting lines are written when sitting on the mud, fathoms deep at the bottom of the North Sea, in the chlorinic atmosphere of an overdue submarine, scratching his head partly for ideas and partly to drown the noise of sweepers' chains draggin along the skin of his ship, and that the rythmic thro of his majestic metre is really produced by the bum of *Vernon* "duds" as they bounce along her sides.

So perhaps the true prophet of the air in poetry ma be merely a bald-headed Equipment Officer, inspired b the song of his engines on test, or the chatter of lathe in his squadron workshops. Perhaps he may be worried Staff Officer who will write the real thing as a antidote to filling up innumerable forms which mea nothing but help to keep unnecessary brass-hats in thei jobs. It is extremely unlikely that the real thing, th ultimate orchid of poetry of the air, or even the rose i full bloom, will come from a pilot or an observer o the active list, though it may come from either afte he has been laid out permanently. Still there is n harm in their trying to produce it. Meantime, rathe than most of the sloppy stuff which has been publishe by way of being poetry, one prefers the plunder of th comic allotment-holders on Parnassus which has appeare hereinbefore.—C. G. G.

THE DEATH OF CAPT. PIERRON.

Much regret will be felt at the death of Capt.-Aviateur Pierron, of the Service d'Aviation Militaire, of France, who was killed on June 12th, along with his passenger, Lt. Rousseau, by the fall of their machine on the aerodrome at Hounslow, when they were within a quarter of a mile of their destination, after flying from France.

Eye-witnesses of the accident state that the machine was approaching Hounslow at about 8.30, flying steadily, and giving no indication of trouble. It had glided to within about 250 feet from the ground when it suddenly dipped, turned on its side, and dropped like a stone to earth. When the onlookers reached the spot both men were dead.

It is stated that on a previous journey an engine defect forced a landing, in the course of which the tail of the machine, Capt. Pierron's old familiar "Horace" Farman, was damaged. Capt. Pierron is said to have bent the damaged part straight with a mallet, and to have continued his journey. It is therefore assumed that the bent portion broke at the moment when the pilot opened up his engine to land, and at the same time operated his elevator, after a long glide. The eye-witnesses' account of what happened agree with this hypothesis.

Capt. Pierron was immensely popular with all the Flying Service people with whom he came in contact. For something like three years he has been a technical liaison officer between the French and British Services, and in that work he flew regularly between Paris and London. He always used the same old Farman, with a de Dietrich-built engine, and his average during the summer months must have been one return trip per week.

He was before the war a well-known motor manufacturer, and a famous balloonist. His wit—which was equally keen in French or English—and his goodness of heart won for him host of friends in this country, and his death removes one who has done great work in building up and maintaining that excellent working alliance which exists between the technical branches of the Allied Flying Services.

BAIRD AS A BUFFER.

From the "Star" of June 5th:—

Major Baird, M.P., has informed a questioner that in the matter of the aviation park at Loch Doon no disciplinary action on the part of the Air Council is considered to be required. This will be interesting news to the taxpayer, who wants to know why £500,000 was spent on a site which had to be abandoned before it was ever used.

The taxpayer, to whose patriotism the Government is just now appealing in regard to investments, wants to know why a site was selected for a flying school at which no flying would be possible on half the days of the year. He wants to know who chose a site where the only place on which an aeroplane could land was a peat-bog. The man who set 3,000 men to lay 56 miles of pipes to drain that peat-bog ought to have some form of public recognition conferred on him. The man who first thought of laying a second railway and constructing a tunnel through 1,150ft. of hard rock at an extra cost of £150,000 for a traffic of four trucks a day has missed his vocation. It seems hard that the Air Board has not "decorated" these zealous public servants.

[It still remains to be proved whether the people who chose Loch Doon were more to blame than the people who condemned it. Anyhow, Major Baird had a hand in condemning it, so perhaps that explains his hitherto inexplicable decoration.—Ed.]

THE WILBUR WRIGHT LECTURE.

Considerable additional interest is given to the sixth "Wilbu Wright" Lecture, to be held by the Aeronautical Society c Great Britain on June 25th at the Central Hall, Westminste by the fact that the chair will be taken by Sir William Weir Secretary of State for the Air Ministry.

Dr. W. F. Durand, who is to give the lecture, is one of th principal authorities on aviation in the United States. He i chairman of their National Advisory Committee for Aeronautics and Scientific Attaché to the American Embassy in Paris Dr. Durand's subject will be "Some Outstanding Problems i Aeronautics," which will be discussed quite non-technically.

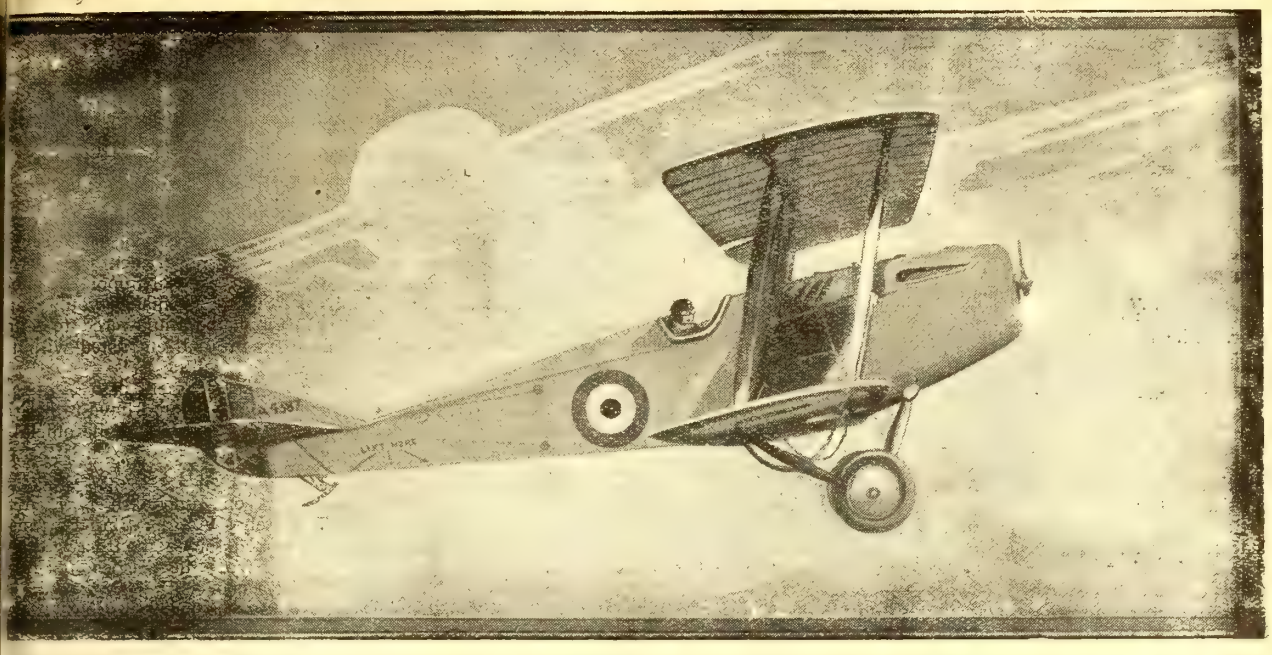
Applications for tickets, which are already in great demand should be made to Mr. W. Barnard Faraday, the Secretary c the Society, 7, Albemarle Street, W.1.

A FINE ITALIAN PERFORMANCE.

The "Times" correspondent writes on June 13th that tw Italian pilots have flown 500 miles to Friedrichshafen and back and have taken excellent photographs of this German aeria stronghold, returning unharmed.

This flight to Friedrichshafen and back is among the longes non-stop flights made during the war. The record is still held b Sous Lt. Marchal, the French pilot, who, in June, 1916, left Franc for Russia and was actually within 60 miles of the Russian line when he was obliged, owing to engine trouble, to land. Durin the flight he passed over Berlin and dropped leaflets. He travelle about 811 miles, mostly at night.

Capt. de Beauchamp and Serjt. Gallois have to their credit th flights which rank next to Lt. Marchal's in distance. Capt Beauchamp in September, 1916, and Serit. Gallois on July 6th-7th 1917, dropped bombs on Essen, the distance covered on the doubl journey being given officially as 500 miles. The first-name officer also flew to Munich on Nov. 16th, 1916, and afterward landed at Santa Dona di Piave, near Vicenza, Italy, after cross ing the Alps. The distance covered in this flight was 437½ miles



The record journey made for a hostile purpose is the fligh of 2,000 miles from London to Constantinople, which was mad by Sqdn. Comdr. Savory, R.N.A.S., on a Handley Page biplan with Rolls-Royce engines, in May, 1917, but this included severa stops.

Of the flights without warlike objective, the most remarkabl are those accomplished by Capt. Doctor Giulio Laureati, of th Italian Flying Service, who, in August, 1917, flew from Turin t Naples and back, about 920 miles, without a stop, and in Sep tember, 1917, for the first time in history flew from Italy t England (Turin to Hounslow), a distance of 656¼ miles, in abou 7½ hours.

It is well to recall that the first visit to Friedrichshafen wa paid by Flt. Comdr. E. Featherstone Briggs and Flt. Lts. Sipp and Babington, R.N., on Avros, with 80 h.p. Gnômes, in Novem ber, 1914, when the Zeppelin Factory was bombed and consider able damage was done to airships in process of manufacture.

CAPT. VON RICHTHOFEN.

"The Red Air Fighter," by the late Capt. Baron vo Richthofen, promises to be one of the best selling books of th year. The insight which it affords into German psychology an German methods appears to be highly appreciated by officers o the Flying Services, and at many aerodromes the book seems t have become practically a text-book. One hopes that the long introduction and the multitudinous foot-notes by the Editor o this paper assist in that direction.

The latest Martinsyde Fighter, fitted with a Rolls-Royce Engine, holds the World's Records for

CLIMB
and
SPEED at HEIGHT

MARTINSYDE

Head Office

WOKING, Surrey.

A PROPOSED ENGINEERS' CLUB FOR THE MIDLANDS.

A representative meeting was held recently at the Chamber of Commerce, Birmingham, in connection with the project for forming an Engineers' Club in the Midlands.

In opening the proceedings the chairman, Dr. C. C. Garrard, M.I.E.E., remarked that in the future a great responsibility would rest upon engineers and upon all occupying leading positions in the engineering industry in connection with the work of reconstruction rendered necessary by the war. It was felt, however, that as a body engineers did not have the power corresponding to their abilities. This was no doubt due to their being so scattered and split up into a large number of organisations which had very little contact with each other. It was felt that the first thing to do to get over this state of affairs was for engineers and those associated with them technically to get together and to know each other. The result would inevitably be co-operative action, which would undoubtedly result not only in advantages to engineers themselves, but in great benefit to the country.

The idea underlying the organisation of the club was that it should offer all the advantages of a first-class social club, combined with facilities for meetings, lectures, etc. It was thus hoped that it would become the meeting place of the various technical societies in the district. Such a common meeting place for these societies had long been desired in Birmingham.

It might be added that the present scheme was part of a larger idea whereby such engineers' clubs would be founded in all the large engineering centres in the country. These, it was hoped, would eventually become federated together, so that members would not only have the practical advantages of the use of the club house in their travels, but the clubs would form centres of engineering activities in each locality.

A number of men connected with the industry have been elected to form a finance and general arrangements committee, and also a rules and propaganda committee.

Dr. C. C. Garrard, of the General Electric Co., and Mr. J. Fearn, of the Birmingham Small Arms Co., Ltd., were elected provisional chairman and honorary secretary respectively.

Mr. Fearn would be glad to get into touch with anyone interested in this project, and invites any such to communicate with him. Letters should be addressed to him care of the Birmingham Chamber of Commerce.

UNIFIED COMMAND.

The " Homme Libre " (M. Clemenceau's old paper), on June 16th, commenting on the collaboration of the British Air Force in the great battle, says :—

The units of the British Air Force employed on the battle front between Montdidier and Noyon are placed under the French command, from which they receive general fighting orders, the details of execution being left in the hands of the unit commanders. There is freedom of action on the one side and a spirit of initiative in the other.

The " Homme Libre " goes on to describe numerous exploits of British bombers and pilots, declaring that both did admirable work, in clearing not only the air of enemy machines but also the battlefields of the crews of the enemy batteries.

HOW THE MONEY GOES.

From the " Morning Post " of June 12th :—

The Comptroller and Auditor-General has been investigating the accounts of the Ministry of Munitions, and his report thereon has recently been published as a Parliamentary White Paper. The particular accounts in question relate to the transactions of the Ministry of Munitions with the National Factories and Roval Aircraft Factory, to which the Ministry supplies material.

The Auditor-General discovered that out of a total amount of over thirty-eight millions, representing the value of material supplied, over fifteen millions had not been invoiced, and of the rest the invoices were frequently incorrect. On the other side, the factory accountants had in many cases failed to keep accurate records, and in some instances the accounts were in such a state that it was impossible to check them. A trifling sum of three million pounds had gone astray altogether, but the Auditor-General states that it has since been identified.

His report, following upon the reports of the Parliamentary Committee dealing with the financial administration of the Munistry of Munitions, indicates a condition of affairs which has no parallel in English history. The Committee made certain recommendations to the Ministry, but according to their latest report these had been largely ignored.

While the Ministry of Munitions is expending many millions for which it produces either no vouchers at all or incorrect vouchers, other Departments stolidly and persistently block the supply of military requirements.

In war a thing is either required or it is not; and if it is required it is wanted at once. A long war, in fact, has a tendency to induce the lethargic habit of a long peace. Men subjected to a prolonged and a continuous strain cannot face the call to renewed initiative. Nevertheless, they must. Must is the word. And it is the business of the War Cabinet to replace tired men [illegible] men of fresh energies.

[There seems to be a hint hereabouts for those who are responsible for appointments in the Technical Department of the Ministry.—Ed.]

But there is another cause for that departmental procrasti[illegible] tion and departmental obstruction which breaks the heart of n[illegible] whose sole desire is to get things done for the country.

The new bureaucracy has inherited the fine old tradition of [illegible] Civil Service, which is the tradition of the Circumlocution Off[illegible] and whose essence is the quite definite avoidance of responsibil[illegible] Decisive action, initiative, a new departure, these things invo[illegible] responsibility. Someone perhaps must assume it, but it must [illegible] someone else.

We would therefore urge again, as we have urged before, [illegible] appointment of a Minister whose sole duty it should be to serve [illegible] a court of appeal and arbiter for all departments concern[illegible] matters which, important in themselves, are not important enou[illegible] to submit to the War Cabinet. Such a Minister would be [illegible] deputy of the War Cabinet, and would be empowered to enfo[illegible] the working together of all departments and entrusted with th[illegible] supervision.

[There is much to be said for the appointment of a Minister [illegible] Acceleration, but to make him effective he would have to be gi[illegible] plenary powers over the life and death, at any rate the official [illegible] and death, of Government servants.—Ed.]

A CONVICTION.

At a court-martial at Devonport on June 14th Maj. Art[illegible] Fincham Oxborrow, R.A.F., lately Actg. Staff-Paymas[illegible] R.N.R., was ordered to be imprisoned for 12 months, with h[illegible] labour, and dismissed with disgrace from the Service, for fals[illegible] ing accounts to the extent of over £900.

AN EXAMPLE FOR OTHERS.

At a Metropolitan police court on June 14th Charlotte W[illegible] a married woman, was fined £1 for failing to notify the find[illegible] of a height gauge belonging to an enemy aircraft which [illegible] been brought down by gunfire.

MORE BAIRD BLUNDERING.

On June 13th Maj. Baird said that experiments with parach[illegible] had been and were being made for use in flying, but the g[illegible] majority of accidents occurred in circumstances in which [illegible] kind of parachute would not be available.

This statement was made in reply to a question by [illegible] Morrell, who said he put it in view of the fact that in [illegible] nearly 800 pilots had been killed while training in this coun[illegible]

Maj. Baird on that point said that the number of fatal fl[illegible] accidents was much smaller than the figures quoted.

[It is, of course, true, that in the *majority* of accidents a pa[illegible] chute would not save life, but there are many, very many, ca[illegible] occurring constantly, both at home and at the front, in wh[illegible] parachutes would save life. Such cases are those in wh[illegible] tails or wings or controls break in the air, and especially cases[illegible] fire. Quite apart from the actual saving of life, the knowle[illegible] that such a form of lifebuoy existed on an aeroplane would s[illegible] many a man's nerve for long periods. Parachutes and meth[illegible] of fitting them exist. The only thing which hinders their us[illegible] the obstinacy of people in the Technical Department, who do[illegible] little flying that they cannot understand the feelings of regu[illegible] fliers in this or in any other of their needs, and men like t[illegible] Major Baird, who knows next to nothing himself, and is cont[illegible] simply to defend his department and keep his job without consi[illegible] ing the men on whose behalf he is supposed to be speaking[illegible] C. G. G.]

HONOURS.

(From the " Sunday Times," June 9th, 1918.)

When I perceived this morning
The host of names adorning
The Honours List (Department O.B.E.).
I was seized with apprehension
They'd discover some pretension
To rope me in, and do this thing to me.

The Honours List is swelling
So greatly, there's no telling
But they'll introduce conscription for recruits;
Comb out the population,
And force the decoration
On ev'ry man they think the honour suits.

H. R. M.

THE W.R.A.F.

On June 15th the " Penguins " moved their general inqu[illegible] office from Wellington Street, Strand, to their new headquarters [illegible] Mason's Yard, Duke Street, St. James's, W. The enrolment [illegible] " mobile " women commences next week, and the immediate [illegible] mands are for cooks, waitresses, and domestic workers. Appli[illegible] tion forms may be obtained from any employment exchange [illegible] from the above address, but written applications and correspon[illegible] ence should be addressed to the employment exchange nearest t[illegible] applicant's home.

CONGRATULATIONS.

FLETCHER.—On Wednesday, the 12th inst., at 42, Cavendi[illegible] Road, N.W.6, to Ida Mary (née Harper), wife of Anthony [illegible] Fletcher—a son (Anthony Douglas Martin).

RECONNAISSANCE AND AERIAL SUPREMACY.

BY HENRY FORESTER.

" . . . Surprise lies at the foundation of all undertakings without exception, only in very different degrees, according to the nature of the undertaking and other circumstances . . . secrecy and rapidity are the two factors in this product."—Von Clausewitz, " On War," Vol. I, Bk. III, Chap. IX.

Lt.-Col. Repington, writing in the "Morning Post," on June 9th last, said that the German Higher Command were rightly pleased with their success in the concealment of concentrations in the days and weeks before the launching of an offensive. He said also that the increased fever for duelling in the air among present-day pilots should not blind them to the true reasons for such fighting—the prevention of adequate aerial reconnaissance by the enemy and increased security for reconnaissance aeroplanes of the Allied Forces.

The essence of successful war throughout the ages has been the infliction of the unexpected attack on forces or defences not properly prepared for resistance. Chivalry ordains that individuals must awaken their opponents before killing them, but nations and armies are less sensitive in action. All advantages must be taken in war provided that dishonourable stratagem is left aside.

Preparedness.

There is scarcely a victory in history, either on land or sea, which was not the result of greater prevision and preparedness on the side of the victor. In 1870 the Franco-German War had ceased in so far as effective fighting was concerned before France had overcome the initial unreadiness of her Army and Navy. Paris was beleaguered before the Imperial Government had succeeded, despite frenzied haste, in supplying their troops with sufficient boots for current use.

As in stratagem so in the tactical field success lies with the determined forces acting with swift precision and certainty, even against greater numbers and greater metal. It is not only consistent preparation before a war and in the wider spaces of hostility that leads to victory, but in the sphere of tactical operations also. Not even the slightest operation in the field can be carried out without preliminary work. Ill thought-out plans and insufficient care in the pre-arrangement of movements are the most constant sources of "unfortunate incidents" in war.

The Advantage of Attack.

In the attack the preparation of operation orders depends entirely on the knowledge of the enemy dispositions at the disposal of the General Officer Commanding the attacking troops. He must know the composition of the troops opposite to him, i.e., from what part of the civilised globe they are drawn. He must know a little of the psychology of the enemy general and his staff. The main outlines of the defences must be familiar to him, and he must, above all, know the disposition of enemy reserves. Yet, with all that, he is not so much at the mercy of intelligence as is the defending force.

The attacker has many advantages. He chooses the field of battle, and opens operations at a time suitable to himself. In face of unexpectedly strong resistance at one point he can divert the weight of his attack to other less well-defended points. As he is able to begin hostilities he is also able to end them. His artillery, moreover, are firing on targets of which the registration is perfect, and which do not change. The defender, on the other hand, has to fire on moving targets, the importance of which vary widely from moment to moment.

The attacking force, in addition, can concentrate the mass of its means of reconnaissance on the sector at which he proposes to open battle. He is not greatly concerned with happenings on other parts of the front as if his offensive attains a proper degree of success all intended moves of the enemy elsewhere become relatively unimportant.

The Disadvantage of Defence.

The defence is always at a disadvantage. It is an unhappy fate to be passive in war. Success in war, it cannot be too often repeated, can only be attained by vigorous action.

No war has yet been won by a consistently defensive attitude any more than war can be waged profitably by the speeches of politicians, however loaded they may be with masses of ill-informed vituperation. None has yet stopped the pastime of murder or the business of burglary by telling the murderer and the burglar that they are very bad men.

The Need for Knowledge.

The defence, amongst other disadvantages, must maintain a careful reconnaissance at all points of the defended front, from the strongest to the weakest sectors. It is not enough to watch carefully those places at which the enemy may be expected to attack. The skilled enemy rarely does the obvious.

Sir George Colley, a soldier of distinction, turned Majuba into a defeat because he failed to defend the steepest slope of the hill. He under-estimated his enemy's intelligence, and paid for this breach of elemental principle, the greatest and last mistake of his career, with his life. The strongest points need the most careful watching and defending, as on them depends the integrity of the line.

No attack can be made without elaborate preparations, especially under the somewhat peculiar conditions prevailing in the present war. The attacking troops must be brought to the point at which it is prepared to open the offensive. The number of guns in this area must be increased greatly.

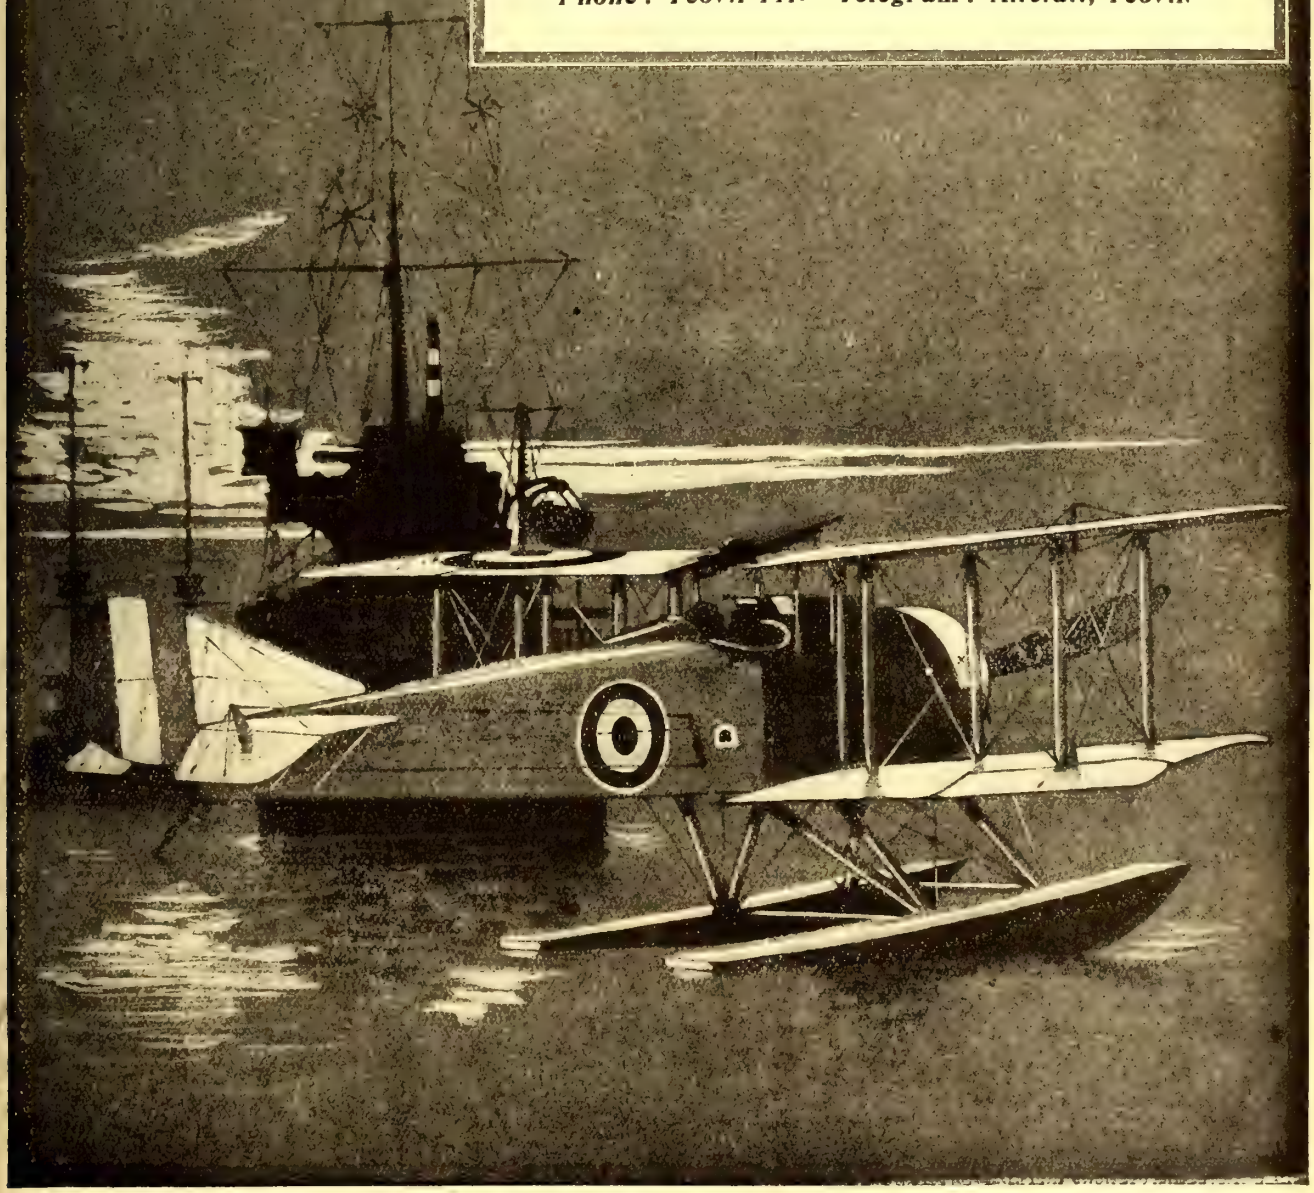
Additional roads are necessary in order that troops and supplies may readily be brought up in support as the offensive proceeds. Ammunition must be dumped in large quantities in readiness for the battle. And, with all this, it is necessary that the enemy shall be kept in ignorance of all that is happening in the chosen sector.

Preparation for Advance.

Movements in the trench systems at present popular in war tend if successful, to increase the length of the front in a manner unknown in any other of the many forms of war. Therefore, victory makes necessary the employment of greatly increased numbers. Not only must the gains made be consolidated, but every preparation must be made to defeat the counter-attack which has become a common feature of operations.

Advances, and all attacks in strength which are intended to end in advances, involve the employment of numerous detachments of technical troops in the repair and construction of roads, railways, bridges, trench systems, and so on, all of which must be carried out with great speed.

Modern Reconnaissance.



In former days, before the operations of war descended from the high estate of spacious disposition to the

WESTLAND Aircraft.

BRANCH OF PETTERS LIMITED.

YEOVIL.

Phone: Yeovil 141. Telegram: Aircraft, Yeovil.

KINDLY MENTION "THE AEROPLANE" WHEN CORRESPONDING WITH ADVERTISERS.

pettiness of an illimitable siege, information was gained in countless ways, principal among these being the cavalry screen. In the earlier stage of the present hostilities the main source of information was drawn jointly from aviation units and from the cavalry. Practically speaking, all ground work has now ceased, owing to the prevailing conditions, and the only reconnaissances of value are made by units of the Royal Air Force.

The recent offensives carried out by the enemy would appear, from such information as has been issued to the public, to have contained elements of "surprise" in the military sense of the word. There is little doubt that on two occasions the attacks made were unexpected, otherwise the disposition of reserves would have been different. If it can be admitted that "surprise" attacks on a large scale similar in initial form to that made at Cambrai by General Byng, late last year—that is to say, without a long period of the intensive artillery preparation which naturally lessens the surprise—one must be permitted to wonder how far our claim to the "supremacy of the air" is justified by events.

The Limits of Camouflage.

Such attacks cannot be made without preliminary preparation, a large proportion of which must in the nature of things be visible from the air. The art of "camouflage," greatly though it has progressed since the beginning of the war, is yet unable to disguise a landscape, recently entirely altered, in such a manner as to make it represent itself when young. The decrease in guns and works can be disguised, but a vast increase cannot be hidden from the trained eye of the experienced aerial observer.

The actual bringing up of troops and material must be carried out under cover of night, that as little suspicion as may be shall come to the enemy. Yet even so the concentrations should leave traces visible to the aerial patrol. It would therefore seem that Col. Repington is right in saying that the increase in air fighting is affecting the execution of really serious work.

The Reason for Air Fighting.

The reason of aerial fighting is not that joy may come to the aerial duellist, nor that he shall find an easy road to the acquisition of merit. It is not a self-contained art existing for itself alone.

Aerial fighting should be directed against machines carrying out routine duties for the army. Supremacy in the air implies that the Power possessing it is able to prevent enemy scouts or spotting machines from passing over ground held by their opponents.

Unfortunately it has become the habit for fighting machines to seek out other fighting aeroplanes rather than to chase the working machines. No mistaken feeling of sportsmanship should prevent pilots from attacking and destroying reconnaissance aircraft.

The fighting pilot should not forget that the only reason for his existence is to protect his own scouting machines and to destroy those of the enemy.

There is little doubt that the true duties of the fighting aeroplane have of late been forgotten to some degree, and it is possible that inadequate protection has been given to Allied reconnoitring aircraft.

One does not imply necessarily that the British aerial forces are at fault, for it must not be forgotten that we are but one of twenty-four Allies, and our resources are apparently not capable of managing or assisting to manage the warlike efforts of more than about twenty of that faithful band. But, be the reason what it may, there is little question that the Allied strategical intelligence has failed to some degree of recent months.

Night Reconnaissance.

There is another element in this question of preventing military "surprise." It is clear that if reconnaissance by day, of whatever intensity it may have been, has failed to reveal the general drift of enemy intention it will be necessary (it may be done at present, and may always have been done) to carry out nightly tactical and strategical reconnaissances by aeroplane.

The concealment given to an army by the darkness of the night is not entire. It is true that little can be seen of movements by night from aeroplanes flying at a height of five thousand feet or more, yet if pilots go out with the special intention of observing enemy movements by night, and fly sufficiently low, they will see any large moves that may be in course of execution.

Troops cannot move in large bodies at night without some manner of lighting. Trains cannot assume, either by day or by night, the mantle of invisibility. The long columns of motor transports, now an essential of war, is outlined to the watcher above by even that little amount of light that is permitted to each wagon.

If the enemy hear the approach of aircraft, then all movement must at once cease. The cessation of movement is one of the desired objects of the visiting pilot. Even if they are unable to detect movement of an unusual size, they will have achieved a purpose of value if, even unknown to themselves, they have prevented the progress of the enemy's plans for an hour or two.

There is little doubt that on the average night a pilot flying at a height of one thousand feet can see much of what is happening below. If the roads are crowded with troops, he cannot fail to see them, and the secrets of the railway are of no less a degree visible to him.

The Beauty of the Obvious.

In order to get definite results, however, pilots must go out over the chosen sector at intervals throughout the period of darkness. Otherwise troops will scatter and lights will be extinguished during the brief period of the reconnaissance and all may be missed. If observation is made continuous, the enemy will cease to try and avoid it. He realises with singular rapidity the useless in war, and is not above learning from experience.

It is possible that such deliberate night reconnaissance may be a habit with the Allied Forces abroad at present but, if so, it is a little hard to understand the lack of knowledge of what the enemy proposed to do in each of the last three offensives. Certain of his moves followed so clearly the great accepted principles of strategy that intention should have supplied that knowledge which reconnaissance apparently failed to believe.

There can be no harm in indicating the obvious, even in the twentieth century, and the necessity of night reconnaissance and of the intelligent use of fighting aircraft are both obvious.

RIBBONS FOR AIR FORCE DECORATIONS.

It is officially stated that the colours of the ribbons of the new Air Force decorations and medals are as follows:—

Distinguished Flying Cross.—Purple and white.

Air Force Cross.—Red and white.

Distinguished Flying Medal.—Purple and white.

Air Force Medal.—Red and white.

The ribbon will in all cases be worn so as to show a coloured band at the top.

EFFICIENCY IN THE AIR MINISTRY.

The "Morning Post" of June 12th states that Sir Arthur Roberts, K.B.E., F.C.A., who recently resigned his position in the Air Ministry, has rejoined the Department in an honorary capacity as Chief Auditor of Works Accounts. At the time of his resignation Sir Arthur refused to make any statement.

Mr. Bertram H. Jones, who was reported to have resigned at the same time and for the same reason as Sir Arthur Roberts, is also back at the Ministry.

GEOFFREY WATSON

FROM THE "LONDON GAZETTE."

The King has been pleased to confer the Medal of the Most Excellent Order of the British Empire on the following persons for services in connection with the war, in which great courage or self-sacrifice has been displayed. The awards are dated June 3rd :—

Gardner, James, Ex-Air Mech. L., R.N.A.S., for courage and presence of mind in extinguishing, at great personal risk and with difficulty, a fire on a loaded ammunition lorry.

Tilley, Harry, Ldg. Mech., R.N.A.S., for courage and presence of mind in preventing an explosion at great personal risk.

* * *

The King has been graciously pleased, on the occasion of His Majesty's Birthday, to give orders for the following appointments to the Most Excellent Order of the British Empire, for services in connection with the war.

MEMBERS (M.B.E.)

Hawker, Harry George, Esq., Trade Pilot, Sopwith Aviation Co., Ltd.

Hills, Maj. John Harris, Staff Officer, 2nd Cl., R.A.F.

Hinchliffe, Robert, Esq., Chief Draughtsman, Messrs. Armstrong, Whitworth, and Co.

Holloway, Maj. Reginald, Staff Officer, 2nd Cl., R.A.F.

* * *

The King has been pleased to approve of the awards of the Military Medal for bravery in the Field to the following non-commissioned officer and men :—

26216 1st Cl. A.M. R. N. Booth, R.A.F. (Dewsbury).
25272 1st Cl. A.M. B. O. Boundy, R.A.F. (Taunton).
4248 Flt. Serjt. C. F. Colin, R.F.C. (Chichester).
7966 1st Cl. A.M. W. J. Farr, R.A.F. (London, N.).
98930 2nd Cl. A.M. J. G. Glass, R.A.F. (India).

AIR MINISTRY, June 12th.

The King has been pleased to confer the Distinguished Flying Cross on the following officers of the R.A.F. :—

Lt. Edward Eric TURNER.

Whilst piloting his machine during a hostile air raid he displayed great determination and skill in manœuvring at a height of 11,000ft. under heavy enemy fire, which enabled his observer to bring effective fire on an enemy aeroplane, resulting in its being driven to the ground.

Lt. Henry Balfour BARWISE.

Whilst acting as observer to Lt. E. E. Turner on patrol duty, during a hostile air raid, he showed great courage and ability. Although exposed to severe fire from the enemy he took prompt advantage of the skilful piloting of his machine, which enabled him to bring effective fire on his antagonist, as a result of which the enemy aeroplane was badly damaged and forced to land.

WAR OFFICE, June 13th.

REGULAR FORCES. — ESTABLISHMENTS.—R.F.C. — MIL. WING.—Sqdn. Comdr.—Temp. Maj. S. E. Parker, Gen. List, from a special appt. (graded as a Sqdn. Comdr.), Feb. 12th.

Gen. List.—Serjt. E. A. Gay, from R.F.C., to be temp, Sec. Lt. March 23rd. (Substituted for notification in "Gazette," April 25th).

* * *

AIR MINISTRY, June 14th.

R.A.F.—The follg. temp. appts. are made at the Air Ministry:

Director.—Maj. (temp. Lt.-Col.) P. R. C. Groves, D.S.O., and to be temp. Brig.-Gen. whilst so empld, May 27th.

Chief Inspr. of Gymnasia (Staff Officer, 1st Cl.)—Capt. (temp. Lt.-Col.) E. G. H. Clarke, M.C., April 1st (substituted for the notification in the "Gazette" of April 2nd).

Asst. Inspr. of Gymnasia (Staff Officer, 2nd Cl.).—J. E. Speranza (temp. Maj.) and R.W. Surr. R., and is granted a temp. commn. as Maj., May 14th.

Staff Officers 2nd Cl.—Capt. (temp. Maj.) G. S. Peacock, April 1st; Capt. (temp. Maj.) N. Sladden, June 3rd.

Staff Officers, 4th Cl.—J. W. Hustwaite (temp. Sec. Lt., Labour Corps), and is granted a temp. commn. as Sec. Lt., and to be temp. Lt. whilst so empld., April 1st; Sec. Lt. E. G. Clement, and to be temp. Lt. whilst so empld., May 31st.

The follg. temp. appts. are made:—Staff Officers, 1st Cl., and to be temp. Lt.-Cols., whilst so empld.:—Capt. J. A. M. Lang, Lt. D. N. Thomson, M.C., April 1st.

Staff Officer, 2nd Cl.—Lt. (temp. Capt.) R. G. Mitchell, and to be temp. Maj. whilst so empld., April 1st.

Staff Officer, 4th Cl. (P.)—Lt. A. H. Goldie, April 6th.

FLYING BRANCH.—Maj. G. F. H. Faithfull to be temp. Lt.-Col. whilst empld. as Lt.-Col. (K.B.), June 3rd.

Capt. (temp. Maj.) L. F. Richard to retain his temp. rank whilst empld. as Maj. (A. and S.), April 9th.

Lts. to be temp. Capts. whilst empld. as Capts. (A. and S.):—(Hon. Capt.) C. E. S. Lusk, May 8th; W. J. A. Duncan, May 18th; G. E. Wait, May 23rd; (Hon. Capt.) A. W. Farquhar, May 27th; R. J. Dawes, (Hon. Capt.) C. B. Glynn, C. E. Howell, T. F. Williams, M.C., June 1st; H. J. Hunterf, June 2nd; R. O. Purry, June 5th; C. W. Busk, M.C., L. G. Wood, June 6th; H. S. P. Walmsley, June 7th.

Lt. (Hon. Capt.) B. E. Harrison to be temp. Capt. whilst empld. as Capt. (O.), June 8th.

The follg. temp. Sec. Lts. (late Gen. List, R.F.C., on prob.) are confirmed in their rank as temp. Sec. Lts. (A. and S.):—H. M. Pasmore, M. de W. Bamberger, April 2nd; T. F. Kesterton, W. Endersby, April 4th; G. F. Birchard, C. H. Kayler, April 5th; A. C. Gray, T. E. Birbeck, April 6th; J. R. Fournier, April 7th; W. A. Macfarlane, W. J. Prangley, T. S. Gordon, N. Kirkpatrick, G. C. Macklem, April 8th; W. B. Tait April 18th; N. F. Hoxie, April 23rd; G. S. Reid, April 30th; J. Fulton, J. A. Gilchrist, May 2nd; J. Stewart, May 4th; R. C. Davies, E. H. Mulley, M.C. Brown, May 6th; P. B. Myers E. Barrett, May 7th; K. A. Nelson, H. Dabney, T. G. Hobbs G. W. D. Foggin, May 8th; V. S. Stevens, J. W. Cox, J. T. Potts, T. Buchanan, R. E. M. Milne, R. P. AERONAUTICAL ENGINEERING
SUPPLEMENT TO "THE AEROPLANE"
INCORPORATING AIRCRAFT ENGINEERING, AERODYNAMICS, AND MATTERS PERTAINING TO THE AERONAUTICAL ENGINEER AND THE AIRCRAFT TRADER

The Design and Construction of Internal Combustion Engines, with special reference to Aero Engines.—IX.

BY C. SYLVESTER.
Author of "The Conversion of Electrical Machinery," "Testing Motors and Motor Starters," etc., etc.

Testing.

The testing of an engine, whether oil or petrol, may be considered the most important operation since the commencement its erection, and tests should only be carried out under the pervision of an expert. An expert, in this sense, does not ean an expert in design and construction, but a person who, addition to understanding thoroughly the constructional tails, can tell by the behaviour of the engine whether it is nning correctly or not.

Tests of very large Diesel engines sometimes run over a period several weeks, that is, including the "running" prior to e official tests. Here it is essential that one person should pervise the whole of the running. Thus, he becomes quainted with the whole of the minor breakdowns that have curred, and he knows, to a certain extent, where the weakest rts of his engine are. Moreover, each engine has a peculiar te of its own, and the slightest change in this note will be tected by the supervisor, who as a rule will know what steps take to rectify any fault that may have developed.

Engine Test Beds.

It is important that engine test beds should be as strong as ssible. Here not only should the mechanical strength of the d be taken into consideration but the foundation should be ite as strong in proportion.

It is a common practice, when arranging the beds for large gines, to level the bed with iron wedges. These wedges are aced between the base of the bed and the concrete foundation, us allowing a very fine vertical adjustment. This method is od practice, providing that the bed is constructed with flanges the base to allow the grout, after levelling is completed, to tain a firm grip on the bed.

If the bed is not fitted with substantial flanges, then the levelling ocess should be carried out with long liners placed under the ges of the bed, the final adjustment being carried out by eans of long wedges which will have a maximum bearing rface.

Aero engine test beds are very small, and they usually vary in ape according to the type of engine to be tested. They are, a rule, made of stout cast iron.

However, concerning all types of test beds, it is most imrtant that they should be absolutely rigid, and as far as possible parate from each other. [One takes leave to differ from Mr. lvester on this point. An aeroplane engine never runs on a lid bed after it is taken off test, for an aeroplane is far from gid. Many an engine has done excellently on a test bed, and adly in an aeroplane because the test bed has given it the gidity which it lacked itself in its crank-case and bearers. herefore one is of the opinion that to obtain truly informative sts, the test bed for an aero engine should be made deliberately ringy.—Ed.]

A Curious Fact.

It may be rather curious to state that "All test beds should , as far as possible, separate from each other." From this is necessary to explain an incident that has occurred within ie writer's experience.

Two large oil engines were erected side by side on two separate ngine beds. After erection, the running in was commenced on ne engine for one day and was continued on the other engine ie following day. And, during the whole of the running in, ie two engines were never run together.

These engines were being built for a Government Department, nd the officials insisted upon the official tests of both engines eing carried out on the same day. The tests were of eight hours' duration, thus it became necessary to run both engines together. One engine was accordingly started up at 8 a.m., and it ran very nicely until noon, when the other engine was started.

The method of starting these engines was with an electric motor, and it was found that when two cylinders were firing, the engine was taking its own load, and the motor could be shut down.

In the case under consideration, when the second cylinder commenced firing, the engine that was already on test commenced to vibrate. So much so that the foreman in charge of the test began to run round the engine to try and ascertain what had happened. When the third cylinder on the incoming engine commenced firing, the vibration on the first engine was so excessive that it became necessary to shut both engines down. The first engine was again started and run up to full speed. The maximum load was placed on it and there was no sign of vibration. When the second engine was started up, the same thing happened as before—the vibration was excessive.

From this it was quite apparent that the running of one engine was affecting that of the other. It was therefore necessary to complete the test of each engine separately, which was done. [It would be interesting to know what would have happened if those two engines were installed in the same boat or submarine.—Ed.]

The Cause of the Trouble.

After both engines had been tested and were dismantled, it was decided to overhaul the engine-bed foundations to see if the cause of the trouble could be discovered. The cause was not far distant, for, after a few inches of concrete had been removed round the beds, it was found that both engine-beds had been laid across two stiff girders.

These girders ran the whole length of the two engines, that is, they were laid at right angles to the engine beds as illustrated in Fig. 34. Thus, the second engine running at a different speed from the first, vibration was set up which made it impossible for either to run without very grave risks.

After these girders were cut and separated by a space of only a few inches, all subsequent tests were satisfactory.

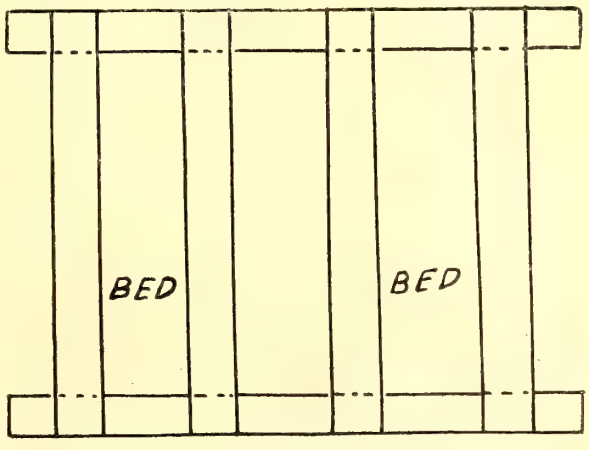

FIG. 34.

Test Brakes.

To test an engine it is essential that some means should be adopted to provide a constant, reliable, and easily calculated load. To be constant, it should be able to provide the load for the maximum period of the test without any fluctuation. As far as reliability is concerned, it is necessary that the indicated load should indicate the correct load—no more and no less.

That it is essential that the load should be easily calculated, is apparent from the fact that there is no time, on official tests, to waste upon intricate calculations.

The method adopted for testing engines of all sizes is by means of a brake. The design of brakes varies, some placing the load on the engine driving shaft by mechanical, others by electrical means

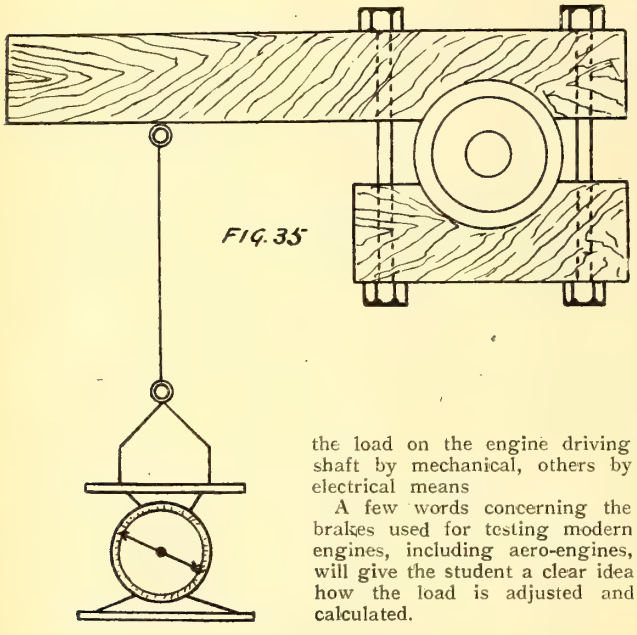

FIG. 35

A few words concerning the brakes used for testing modern engines, including aero-engines, will give the student a clear idea how the load is adjusted and calculated.

The Prony Brake.

This brake is probably the oldest type of brake in existence, and it is fairly satisfactory for testing small engines. The brake is illustrated in Fig. 35.

Here, it will be seen that in principle it consists of two wooden clamps held together round the outside of a special drum fitted on the engine shaft. The clamps are held in position by means of two long bolts and nuts. The latter are also used to place the required tension on the drum. Holes are bored in the upper piece of wood, through which soap and water are run to act as a lubricant.

The method of indicating the power developed by the engine is by means of a weight and spring balance. These are fitted as shown in the sketch.

The weight on the spring balance, after taking into consideration the distance it is from the centre of the pulley, is much more than the engine will lift under full load. It therefore follows that as there is a tendency of the beam to lift in the upward direction, and the weight is inclined to pull the beam down, the difference in these powers will be indicated on the scale.

For instance, we will presume that the weight is 100 lbs. Then, if the engine will lift, say, 20 lbs., the reading on the scale will be 60 lbs., thus indicating that the engine is exerting a power of 20 lbs.

This method of testing will give approximate readings for small power engines, but it is practically useless for the testing of large engines.

Eddy Current Brakes.

A few years ago it was thought that the electrical eddy current brake was to be the brake of the future. The results obtained by the first makes were certainly encouraging, but it was found that it was only with difficulty that brakes could be manufactured that would efficiently test engines up to 80 h.p.

Over and above this disadvantage, the intricate calculations that are necessary in order that the torque may be accurately determined is very much against its adoption. Windage, friction, and heat play an important part in this brake, and one is very apt to err when making these calculations, which are really out of the sphere of the mechanical engineer.

The Froude Water Dynamometer.

Here we have a brake that is extensively used for testing Diesel, gas, oil, and petrol engines. The writer has used it for testing Diesel engines up to 2,000 h.p.

Fig. 36 illustrates the end and side view of this brake. A brief description of the brake and its action is as follows:—

The main shaft supports a rotor revolving inside a casing through which water is circulated to provide the hydraulic resistance, and simultaneously to carry away the heat developed by the destruction of power.

In each face of the rotor, pockets are formed of semi-elliptical cross section divided from one another by means of oblique vanes. The internal faces of the casing are also pocketed in the same way.

When in action, the rotor discharges water at high speed from its periphery into the spaces formed in the casing, by which it is then returned at diminished speed into the rotor pocket at a point near the shaft. Thus, the pockets in the rotor and casing together form elliptical receptacles round which the water courses at high speed.

The resistance offered by the water to the motion of the rotor reacts on the casing, which tends to turn on its antifriction roller supports. This tendency is counteracted by means of a lever arm, at the end of which are suspended balance weights measuring the reaction.

From this it will be seen that the forces resisting the rotation may be divided into three classes:—

1. The hydraulic resistance created by the rotor.
2. The friction of the shaft bearings. This is almost negligible because they are of the roller type.
3. The friction of the glands.

It will be noticed that all these items react upon the casing, which being free to swivel on antifriction rollers, transmits the whole of the forces to the weighing apparatus.

Advantages of a Water Brake.

A great deal may be said in favour of the water brake in addition to its accuracy. The resistance, being hydraulic, is practically negligible at starting, but it increases rapidly with the speed. Moreover, it has a great range of output, the maximum power capacity being in some cases 100 times greater than the minimum at the same speed. Another considerable advantage is that the rotor inertia is very slight.

Calculation of Power.

As previously stated, one of the essential points of a good brake is that the power should be easily calculated. With the brake illustrated, the power may be calculated by the simple formula:—

$$\text{B.H.P.} = \frac{\text{W.} \times \text{N.}}{\text{K.}}$$

Where W is the load at the end of the dynamometer arm. N is the revolutions per minute, and K is the constant.

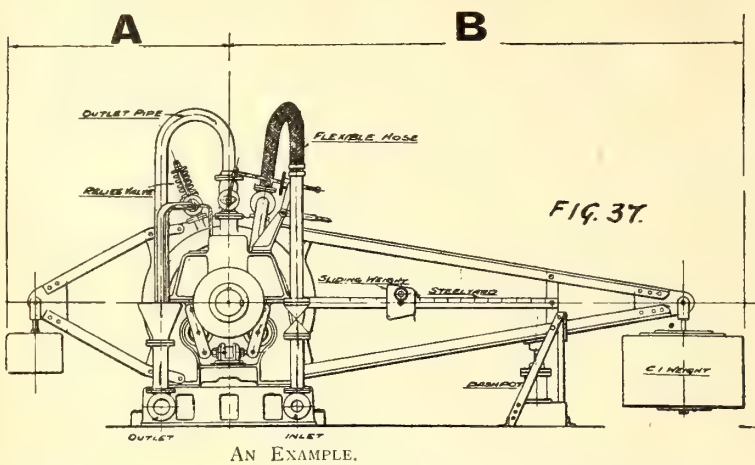

FIG. 37.

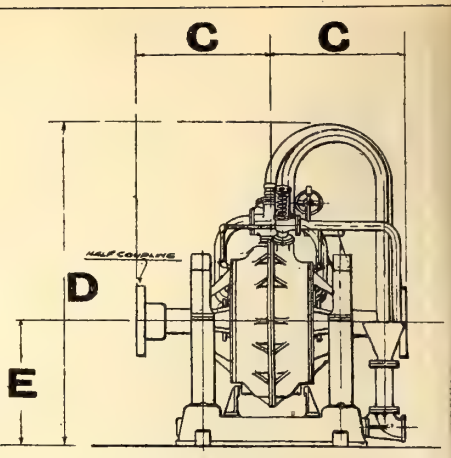
An Example.

We will presume that the speed of an engine is 1,500 r.p.m., and that the maximum weight it lifts is 200 lbs. Then, if the constant is 1200, the h.p. will be :—

$$\frac{200 \times 1500}{1200} = 250 \text{ H.P.}$$

In the sketch the letters merely refer to the dimensions of the dynamometer, which vary according to power. One example is, calculating the dimensions in inches :—

A	B	C	D	E
49	271	45	132	63 inches.



F and G are standard for several sizes.

Non-Reversible Dynamometers.

Fig. 37 illustrates this type of dynamometer. In this sketch it will be noticed that a very accurate adjustment may be obtained by means of a sliding weight fitted on a steel-yard. Here, the dimensions of one size are :—

A	B	C	D	E
90	180	54	126	49 inches.

From these figures it will be seen that the total overall length of the machine is more than 22 feet. This is not surprising since it is capable of testing an engine of 5,000 h.p.

The Generator Brake.

One of the most recent brakes used for the testing of engines is one designed and constructed by Electromotors, Ltd., Openshaw, Manchester.

This brake is similar in construction to a direct current generator, that is to say, it consists of an armature and pole pieces from which a certain voltage is generated.

The armature is wound with coils of sufficient cross sectional area to produce the maximum current without undue overheating. The load is placed on the engine by passing the desired amount of current through resistances.

Double pole switches, voltmeters, rheostats, ammeters, and wattmeters are arranged to allow for the easy regulation of the load and to enable it to be accurately determined.

There is one outstanding feature in favour of the adoption of this type of brake for engine testing. The generator, taking current from the supply mains for the shop, may be run as a motor for starting the engine. This does away with the installation of air-compressing plants for air starting. Again when the engine is running, the power generated will, at least, supply energy to the water circulating or air cooling motor for engine cooling.

These brakes are made to test engines up to 150 h.p. For testing engines of a larger power than this, two or more brakes may be connected together. The maximum speed of this type of brake is 1,600 r.p.m.

Co-operation in the Aircraft Industry.

BY DIOGENES.

I.—SOME GENERAL NOTIONS AND SUGGESTIONS.

When people talk of co-operation, they have in mind more often than not the idea that finds its concrete expression in the German syndicate or the American trust.

As a matter of fact, there are a thousand and one ways in which manufacturers in any industry can co-operate with one another. If we were to take only the common reading of the term, we should probably say off-hand that the Aircraft Industry is by no means ripe for co-operation; that co-operation involves a considerable degree of standardisation of product and that this is highly undesirable until the product has reached a stage at which changes in principle and in design are seldom necessary and seldom considerable.

Now if we choose to be broad-minded enough to realise that co-operation can conceivably exist without being complete, we shall, on examination, find not only that the Aircraft Industry is already ripe for quite a considerable measure of co-operation, but that it has in point of fact already achieved it in no inconsiderable degree.

In certain directions, of course, co-operation in an obvious form has been forced upon many of the firms that are temporarily, if not permanently, engaged in this industry. Those who have entered the Industry under stress of circumstances and not of their own free will are particularly likely to be now in the position of manufacturing on a co-operative basis, with the assistance of a number of other firms, an article which is identical with that similarly manufactured in a number of other works.

This is a form of co-operation which is likely only to be a temporary phase in the Aircraft Industry. It will die out when the necessity for its continuance ceases, but it will come again gradually at some later date, and then it will no longer be temporary, but will be a permanent part of the Industry's method.

The Growth of the S.B.A.C.

Meanwhile, aircraft manufacturers and particularly those who, either exclusively or as part of their production, do not regard their connection with the Industry as a transitory incident, are co-operating in ways that are perhaps less obvious, but that possess far more real significance. This co-operation began when the Society of British Aircraft Constructors was formed, and was brought about partly by an apparent desire in other quarters to do for the Aircraft Industry any co-operating that wanted doing.

As soon as the Industry began to find its feet, it began also to resent being treated as an infant in long clothes. It may be that in this respect it was precocious, but all things considered, its precocity cannot be regarded as surprising. Never has an industry grown so rapidly from a joke into a primary national necessity.

A Centre of Effort.

On questions of broad organisation and policy, co-operation between firms in an industry involves first the formation of some Association as a centre of co-operative effort. Next, it requires the machinery which will link up that Association or Society with the somewhat similar organisations already existing or being formed in other industries.

The Aircraft Industry has secured the machinery required for both of these purposes. In a very brief space it has created within itself a Society which is, undoubtedly, very efficient, and which has achieved more in its short life than almost any other organisation of the kind.

Its achievement has doubtless been assisted by extraneous circumstances, and by a strong and friendly public opinion. This latter is an immense asset of the Aircraft Industry, as a whole, and should be utilised to the full without being unfairly exploited.

Such exploitation is not in the least probable on the part of the industry, but is far more probable on the part of small groups of speculative capitalists. Very many industries pass through an uncomfortable period during which their reputations are besmirched, and their best interests damaged by the unscrupulous or wild behaviour of a few individuals.

The Evils of Booms.

A boom is brought about more or less artificially. The gullibility of the public is traded upon by company promoters, and, in a very short time, the inevitable trouble follows. The boom is then succeeded by a slump, and for the time being the industry is in a bad way.

If it has a sound foundation in the quality and the essential utility of its products, the swing of the pendulum does not absolutely ruin it, but, at the best, it only recovers gradually, and settles down at a point far less advanced than that which marked the heights of its early prosperity.

Now, I suggest that one of the ways in which a young industry can indulge in co-operation to its own best advantage is b using its influence to prevent itself being made the subject c wild financial flutters. As to how this might be done, it occur to me that an example might be taken from an effort made i the field of petroleum developments.

A Case in Point.

There was a time a few years ago when the public was almo always found ready to subscribe on the most flimsy evidence c the existence of oil. Some ignorant or unprincipled person woul discover that a particular piece of ground showed rather th same formation as that known to exist in a famous oilfield, an would immediately jump to the conclusion that immense deposi must lie below.

Somebody else would mistake a smell of paraffin, resultin from some local leakage from a pipe or barrel, for good evidenc of the existence of petroleum in the most accessible form imagin able. There was no recognised qualification by which the publi could judge whether a so-called expert was an expert in fact, c only in his own imagination.

This state of affairs brought about many disastrous incident and discredited not only those who deserved it, but those wh did not. The effort to check it took the form of the constitutio of a body of Petroleum Technologists. The qualifications fo membership of this body were regularised and one of its mai ideas, though hitherto limited in execution on account of th war, was that the Institution, as such, should definitely dis countenance all schemes which were not certified by responsibl men properly qualified to judge of them.

An Anti-Gambling Institution.

Now, is it altogether unreasonable to suggest that the Aircra Industry might work on rather similar lines and might creat a body which, in the interests of the Industry as a whole, woul examine into every project put before the public and becom so recognised that, if facilities for examination by that bod had not been granted, the project in question would autc matically come under suspicion?

This kind of thing, if it is to be done at all, ought to b organised before the trouble arises and not merely when th trouble has reached its height and the just have already bee blamed for the vagaries of the unjust.

Bogus Flotations.

One can imagine some very quaint propositions that might b put before the public in respect both of the manufacture an of the use of aeroplanes. Schemes for manufacture which hav really sound financial or engineering basis may be floated in th hope that the public, in its enthusiasm over the magnificen work of the Air Force, may be disposed to invest its mone without much inquiry. A few such flotations might discredi the whole Industry up to such a point that when really genuin firms and propositions required capital they would fail to get it.

Similarly, we shall, no doubt, meet with all kinds of projec for the running of aeroplane services. These will be based o more or less empirical figures as to the probable operating cos and the probable receipts from the carriage of passengers, mail or goods.

To Protect the Industry.

It will be a long time before the public will be qualified t analyse accounts of this kind and form any sound opinion as t whether they are honest. Consequently, my little suggestion fo co-operation in this sphere would amount to the constitution o some sort of Central Council or Committee which would b prepared to consider all schemes laid before it, and would eithe endorse such schemes as being in its opinion reasonable, or els would refuse to endorse them.

It could not be expected to report at length on every scheme but would merely refrain from endorsing any that were obvious or inherently unsound in the light of expert knowledge. Th investing public would then have something to go upon, and wild boom followed by a bad slump might be avoided.

Possibly there are legal reasons why any such scheme i altogether impossible. Perhaps the advisory body would ha itself open to all kinds of actions for libel or slander by thos to whom it would not give its name, but I think it would b worth while, at least, to take an opinion as to whether this woul be the case. If the thing could be done, then publicists an others anxious to help the Industry forward would be given a valuable lead which would assist them to separate the sheep from the goats with the greater certainty.

I have, however, rather digressed from the main issue into a mere side-line, and must return in my next article to more im portant business.

DAVIS
High-Speed Steel Furnaces

THE Davis "D.H.S.T." series of Gas-Fired Furnaces have been specially designed for the hardening of Modern High-Speed Steel Tools, and to provide the maximum of convenience and efficiency at the least practical fuel cost.

The firing element consists of Davis PATENT Air-Blast Burners, for Gas at ordinary main pressure and air at 2 lbs per square inch. Two chambers are provided, each fitted with stopper brick; a pre-heating temperature of 1,000° C being obtainable in the upper chamber and 1,350° C in the lower, whilst the flame does not impinge on the work.

Illustration shows the No. 100 size (each chamber $9\frac{3}{4}'' \times 5\frac{1}{2}'' \times 3\frac{3}{8}''$ inside). Price **£30** complete. Made in 4 other sizes—see Lists F18 A, B and C (gratis).

Also OVENS, MUFFLES, CRUCIBLES, LEAD-MELTERS, etc

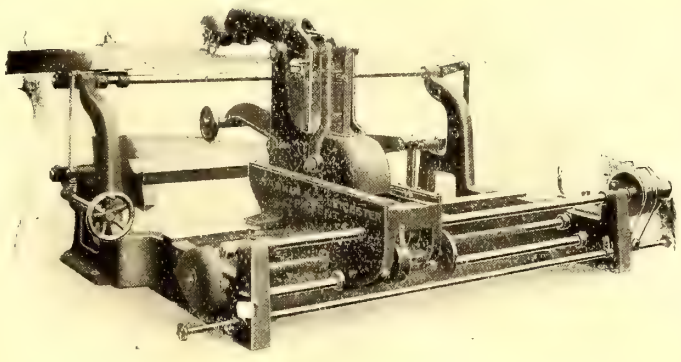
KINDLY MENTION "THE AEROPLANE" WHEN CORRESPONDING WITH ADVERTISERS.



AUTOMATIC PROPELLER SHAPERS.

For Propellers having any number of blades.

Our latest machines have 2 speeds of traverse along the blade, viz.: 3¾in. and 5¾ in. per minute.

An average size propeller can be shaped therefore in 80 mins.

Over 100 of these machines now in commission.

Made in 2 sizes to take propellers up to 12ft. and 14ft. dia.

Either machine deals with propellers 16in. wide and 9½in. deep through hub.

PRICES.

12ft. type.. **£282 10s.**
14ft. ,, **£309 10s.**

An important feature is that WOODEN FORMERS ONLY are required. These can be easily made in your own shop and make the manufacture of small quantities of propellers a paying proposition on our machine.

WE cannot illustrate all of the hundreds of small parts we make.

Above we print a small sketch which shows the type of work we do, without indicating exactly the details of the work. It suggests, we think, what we can do for you.

The Pulvo Engineering Co. Ltd
HARRY WHITFIELD, Sole Directo
10, DANE ST., HOLBORN, W.C. 1
'Phone: Holborn 410. Wires: Pulviput, Westcen

PULVO

THE PULVO COMPANY.

. visit to the Pulvo Engineering Company, Ltd., is a very cative experience. Here is a firm doing engineering and al work of the highest description and intricacy and yet the ur ratio is five women to one man. This is a masterpiece in way of women's war work. There are women drillers, rs, riveters, welders and benders, women charge hands, nen super-charge hands, even a works manageress in the on of Mrs. Ernest.

o far as aeronautical work is concerned this firm is a war tion, but one is assured that the policy of the directorate is it shall be a post-war bread and butter industry.

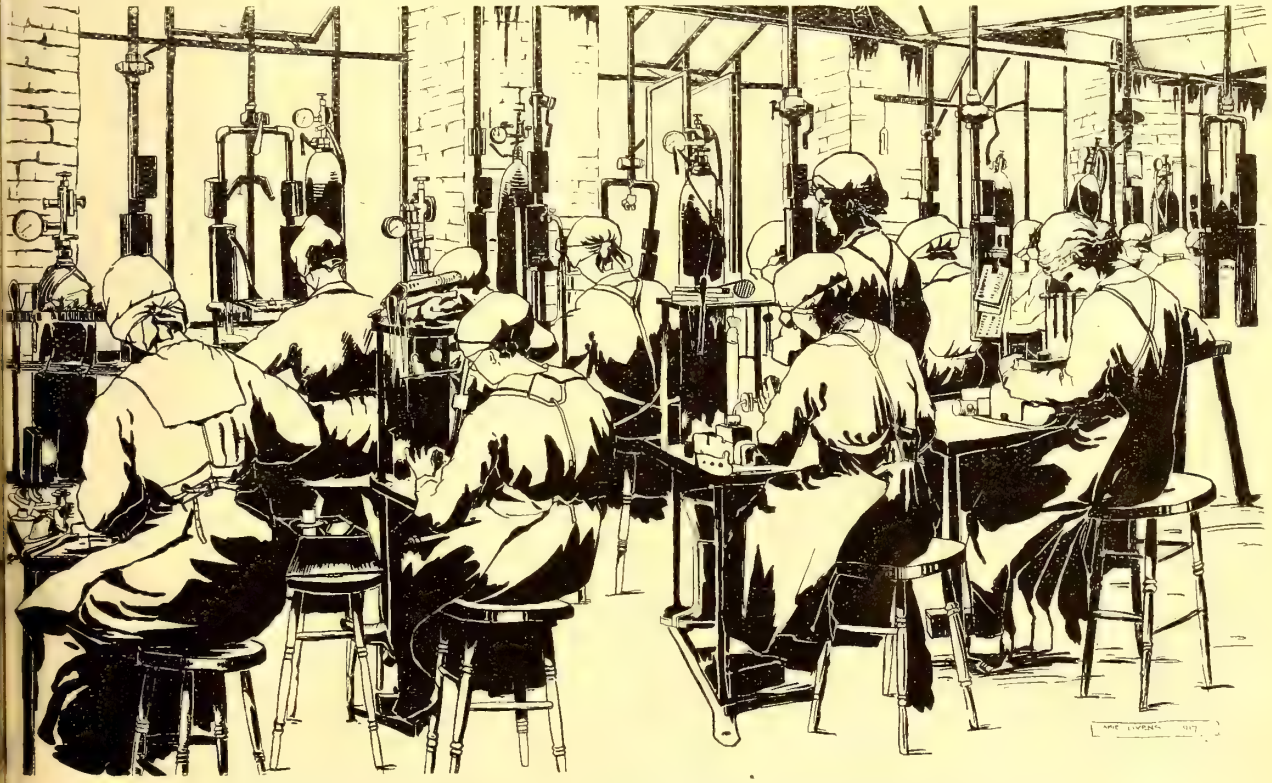
he aviation part of the concern was established soon after outbreak of war by the Managing Director, Mr. Harry itfield, with three girls and one machine. There are now dreds of women employed and every inch of space is fully upied. As a matter of fact, the quarter in which the works situated does not give much encouragement to expansion, this firm has made the most of the available space. The ks have expanded upstairs, downstairs, over the landing, in basement, round the corner, and lately into the main oughfare.

he quality of the work turned out is so high that there no A.I.D. inspection during manufacture. The firm's own ers reject only one per cent. of the finished product, whilst final A.I.D. reception test rejects only a quarter of one cent.—a fact of which the firm may well be proud. All the men employed are far above the average factory worker class, st the majority are good, sound, middle-class women, who happily, conscientiously and efficiently because of the per- l interest which they have in winning the war, and they are tly encouraged by the care evinced by the management for welfare.

r. Laing Whitfield and Mr. Tweddle are joint works mana- , and Mr. Ernest is Production and Progress manager.

he sight that impresses one most is the acetylene welders in room, a sketch of which is reproduced; this is a depart- t which a firm of much larger proportions might envy. re is even a woman "muffler," a job no doubt excellent in winter but seemingly hardly suitable to a woman in the mer months.

his fortunate concern has no shop stewards or strikes, and erate hours pay from a production view point.



An Impression of a Pulvo operative at a Capstan Lathe.

"AIRCRAFT SUPPLIES."

he fortnightly circulation of "Aircraft Supplies," the House nal of Aircraft Supplies, Ltd., has grown to exceed 1,500 es, although the Publicity Department has "combed out" mailing list no less than three times, and on each occasion reduced the circulation to 1,200. In view of the coming ning of paper, to commence on the 24th of this month, it is necessary for the proprietors to conserve their resources in paper in order to provide for the continued publication of "Aircraft Supplies."

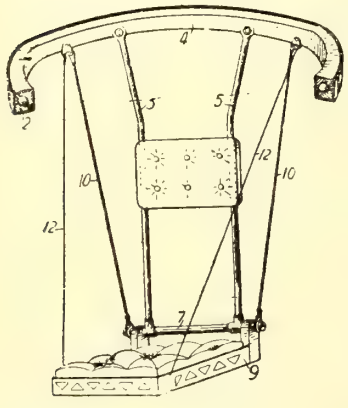
It has been decided to levy a subscription, which can be paid either yearly or half-yearly, and to circulate "Aircraft Supplies" among subscribers only, excepting in occasional instances, where it will be necessary to send out single copies.

The directors of the Aircraft Supplies Company state that the levying of this subscription is made entirely to meet the paper shortage, and that there is no intention whatever to allow any profit to accrue to the company from this publication; it has therefore been decided to make a payment at the end of each six months to the Secretary of the R.A.F. Aid Committee.

An Impression of the Welders at the works of the Pulvo Engineering Co., Ltd.

THE PATENTS INDEX.

The subjoined list of recent inventions has been specially compiled by The Aeroplane from the current Official Patents Records :—

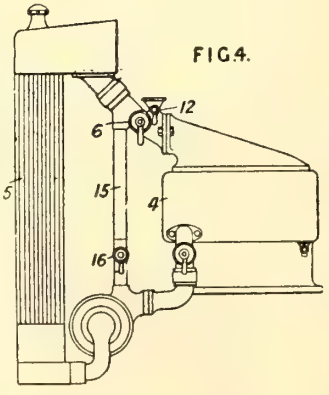


Patent Applications.

Bloomer, F. Box spars for aircraft, etc. No. 9361. June 7th.
Buckham, Sir G. T. Anti-aircraft ordinance. No. 9437. June 7th.
Campbell, F. Aviator's rigging tool. No. 9172. June 4th.
Clerget, Blin et Cie Radial engines. No. 9431. June 7th.
Cullen, W. H. Control levers of aeroplanes. No. 9219. June 4th.
Dunkerley, L. Cutters for machines for forming aircraft propeller blades, struts, etc. No. 9455. June 8th.
Grand, S. E. Parachute device for aeroplanes. No. 9326, June 6th.
Higginbottom, J. Aeroplanes. No. 9089. June 3rd.
Innes, J. Hangars, etc. No. 9117. June 3rd.
Knight, J. Jig for assembling aeroplane wings. No. 9366. June 7th.
Mascord, G. W. Hangars, etc., for aircraft. No. 9337. June 6th.
Mooney, D. J. Fuselages, etc., for aviation. No. 9109. June 3rd.
Napier and Son, D. Doping, etc., fabrics for aircraft, etc. No. 9276. June 5th.
Tellier et Cie, A. Hydro-aeroplanes. No. 9302. June 5th.

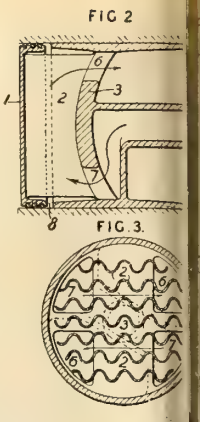
Complete Specifications, Accepted, Prints of which can be Obtained on and after June 27th, 1918.

116,108. May 22nd, 1917. Sage and Co., F., and Feary, N.A.T.N. instruments for indicating inclination.
116,149. May 31st, 1917. Baily, A. H. Engine power-transmission for aircraft.
116,166. June 12th, 1917. Taylor, W. Levels for aircraft.
109,436. Aug. 16th, 1916. Soc. Lorraine des Anciens Etblsmt. de Dietrich et Cie de Luneville. Ignition apparatus for aviation engines.



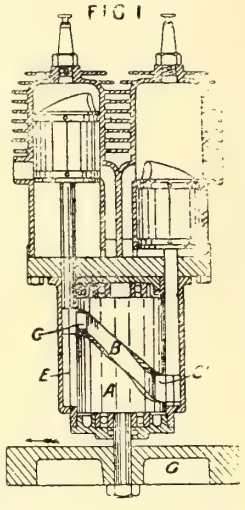
Abridgments of recently published Specifications.

114498. Aeronautics. Bruce, R. A., Verona, West Park, Yeovil, Somersetshire. April 19th, 1917. No. 5512.



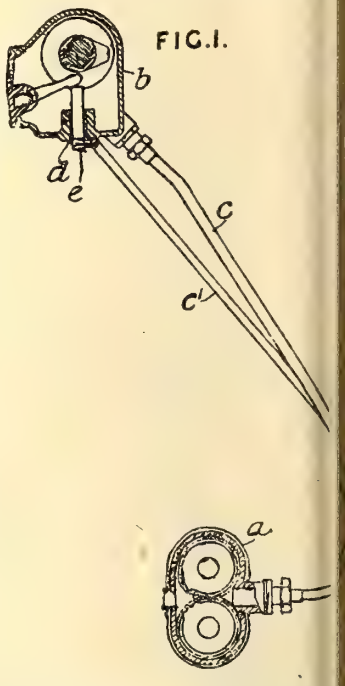
Cars and Cabins.—The seat 9 for the gunner or passenger of a gun-carrying aeroplane is suspended from the rotatable ring 4 carrying the gun mounting by tubes 5 and ties 10, 12. The ring 4 rotates on a fixed ball race 2. The seat is hinged to a cross-tube 7 so that it may be folded up.

114,519. Internal-combustion Engines. Lund, E. K., 8, Swinley Street, Wigan, and Bennett, E., 14, Water Street, Liverpool.



Cylinders, Heating and Cooling.—Cocks 6 are placed in the pipes connecting the radiator 5 with the cylinder jacket 4 so that the latter may be emptied without emptying the radiator and boiling water poured into it through a cock 12 at starting. The cocks 6 may be connected together and to the cock 12, or a three-way cock may take the place of the cock 12 and the upper cock 6. When a pump is employed in the system, its driving gear may be controlled simultaneously with the cocks 6, and a by-pass 15 with a cock 16 may be inserted in the cooling system.

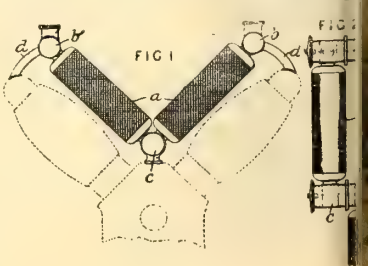
114,528. Pistons. Riedler, A., 7, Rauchstrasse, Berlin, June 11th, 1917. No. 8341.

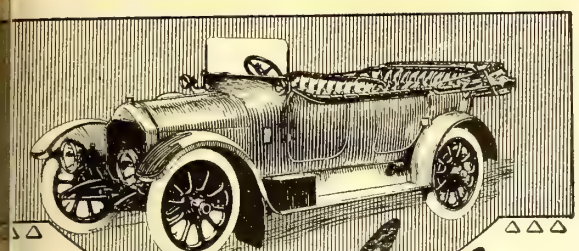


The head 1 of an internal-combustion engine piston is separated by a space from the body 3 and is connected to it by parallel ribs 2 forming channels through which air or explosive mixture is circulated in order to cool the piston. The ribs 2 are preferably corrugated or otherwise formed to increase the cooling surface. The openings 7, 6 for the entrance and escape of fluid are preferably in duplicate, the fluid being arranged, as shown, to flow in two opposite streams. The gap 8 also serves to pick up oil.

114,317. Converting Reciproca into Rotary Motion. Sarro M., 55, Via Palestro, and N longhi, G., 1°, Corso Umb both in Rome. March 22nd, No. 5114. Convention date, 17th, 1917. Not yet acce Abridged as open to inspe under Sect. 91 of the Act.

In an internal-combustion or engine having two or more cylin the piston-rods carry rollers C. engaging an endless helical groo formed on a drum A mounted shaft which runs in ball bearings is fitted with a fly-wheel G. ends of the piston-rods engage g E.





113,742. Lubricating Coatalen, L., and Sunbeam Motor Car Co., Moorfield Works, Wolverhampton.

To prevent the escape of oil from the cam-shaft casing of an internal-combustion engine for aircraft, etc., which is likely to occur through the openings provided for the valve tappets, etc., a pump *a* draws oil or air from the casing through a pipe *c*, and delivers it to the crank chamber. There may be an additional suction pipe c^1 communicating with the glands *d* of the valve tappets *e*. The reduction of pressure in the casing prevents the oil from escaping.

114,869. Radiators for internal-combustion engines. Del L. T., 59, The Avenue, Brondesbury Park, London.

For use with engines having their cylinders arranged V- the radiator is formed in sections arranged as a V so that shall lie between the cylinders. The elements *a*, which ma those described in Specification 112,043, are connected to headers *b* and to a common lower header *c*, the upper headers being connected to the cylinders by junctions *d*. To allow of variation of the inclination of the two sections, the lower header *c* may be formed in sections, the whole

Humber

The Car for which thousands are waiting.

MOTORISTS in all parts of the British Empire are ready to endorse the claims of Humber Cars for reliability, durability and refinement of detail. The reason why many others are compelled to wait for new cars is because our whole resources are requisitioned for War work.

Orders will be executed in rotation.

AIRCRAFT SUPPLIES

AN IMPORTANT ANNOUNCEMENT.

BY SALES MANAGER.

The fortnightly circulation of *"Aircraft Suppplies"* has grown to exceed 1,500 copies at the prese time, and although I understand the Publicity Department has "combed out" the Mailing List no le than three times during the last six months, and on each occasion has reduced the circulation to 1,2(the popularity of *"Aircraft Supplies"* makes it almost impossible to meet the demands without allowi the circulation to increase with each issue. While the Directors of *The Aircraft Supplies Company, Lt* are at all times only too pleased to send this publication to anyone in the Aircraft Industry to whom may be of interest, they regret to inform their numerous customers and friends that the time has no arrived when a drastic step has to be taken to keep the circulation as low as possible without deprivi persons to whom the list is essential of receiving copies regularly—also, in view of the coming rationi of paper to commence on the 24th of this month, owing to paper shortage in the country, it necessary to conserve our resources in paper in order to provide for the regular publication of *"Aircr Supplies"* in the future.

To meet these difficulties it has been decided to levy a subscription, and to only circulate *"Aircr Supplies"* among subscribers, excepting in occasional instances where it will become necessary to se out single copies. The subscription of 10s. per annum is not a great charge, and it is felt that if *"Asc House"* issues the Fortnightly Journal and Stock List to subscribers only, no copies will be publish excepting to persons who are using the publication regularly for the purposes of their business a incidentally the continued increased output of Aircraft.

The Directors of *The Aircraft Supplies Company* take this opportunity of informing their ma customers and friends that the levying of this subscription is made entirely to meet the difficulties ou lined above, and that there is no intention whatsoever to allow any profit to accrue to the Compa from this publication; it has therefore been decided to make a payment at the end of each six months the Secretary of the *R.A.F. Aid Committee,* such payment representing the surplus funds in respect the publication of *"Aircraft Supplies,"* which sums will be duly announced in the *Technical Press.*

Commencing with the issue of 30TH JULY, *"Aircraft Supplies"* will only be sent to subscribe but it is hoped that the majority of those names appearing on the mailing list at the present time wi become subscribers. In order to meet the convenience of customers, please note that subscription rat can be invoiced in advance, thus obviating the necessity of firms enclosing Postal Orders or other form of remittance with their subscription papers.

THE AIRCRAFT SUPPLIES COMPANY LTD

ASCOL

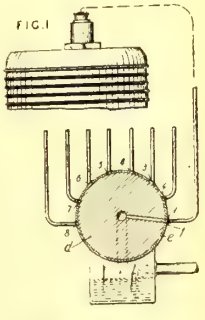
held together by a central bolt *e*. A hinged damper may d to the front of the hood to vary the inlet of air.

3. Aeronautics. Chester, W. E., 231, Hammersmith oad, London.

ck of Landing, Deadening; Land Wheels.—The two land A of an aeroplane are carried by separate axles B sup- by rubber shock-absorbers D from bowed frames E which

nnected to the underside of the fuselage by struts J and apart by streamline members K. Radius-rods G connect arings C of the axles to the front ends of the frames E, axles may be guided by vertical guides on the frames.

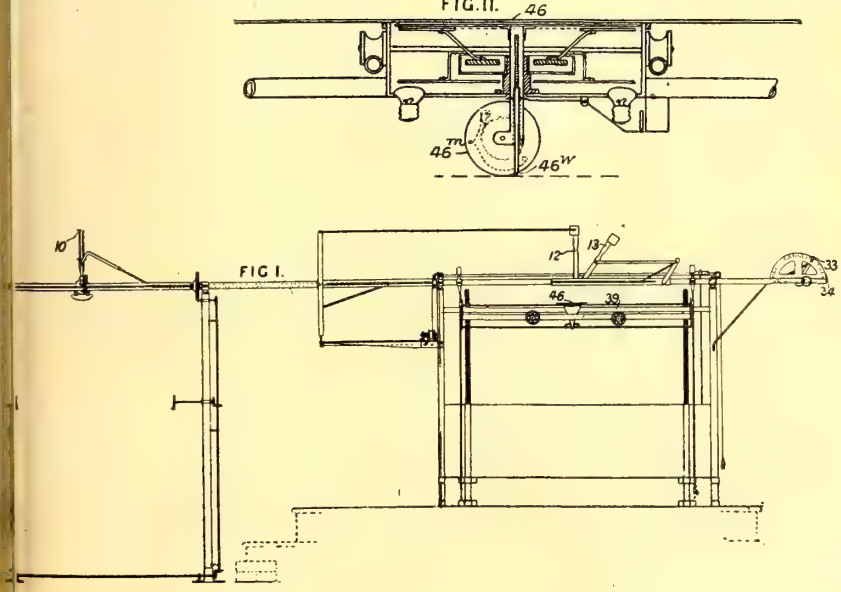
1. Anti-aircraft Gunnery Apparatus. Harris, F., Manor ouse, Dogsthorpe, Peterborough, Northamptonshire.



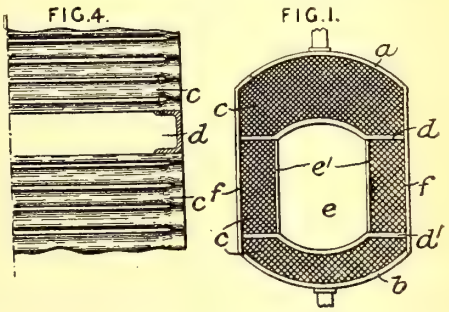
sists in an instrument wherein the movements of an aerial are reproduced to a known scale by an indicator moving horizontal table which is adjustable in height to represent eight of the target. The instrument also comprises a ted chart whereon are indicated the data necessary for ting the gun sights, such as height of target and angle e. In the apparatus shown, the height, angle of site, peed of an aerial target are determined from observations at two stations. The triangle having the target as apex roduced in miniature in the object plane by two rays of produced by pivoted electric lanterns controlled respectively e home sighting-device 10 and by a protractor device 33, 34 is set in accordance with directions signalled from the t station. The home sight 10, the two lanterns 12, 13, he protractor 34 are all mounted in the same plane on an ntal frame or shaft which is rotated by the sight to bring e devices into the object plane. The rays are directed wards on to an horizontal indicator 46 which is adjusted an horizontal table 39, which itself is adjusted in height, the rays fall beyond their points of intersection on two on the indicator spaced apart a distance equal to the distance between the pivots of the lanterns. The adjusted vertical position of the table gives the height of the target, this height being indicated on a graduated chart by an horizontal wire geared to the height-changing mechanism. The angle of site of the target is indicated on the same chart by a vertical wire controlled from the home sight. The indicator 46 may be fitted with a pencil 46*w*, Fig. 11, to trace a graph on a map placed on the table. The pencil is moved up and down at regular speed by clockwork mechanism so that it marks a series of dashes, thus recording the speed of the target. A wheel 46*m* rolling on the table is provided with a clicking device whereby the speed of the target can be determined by counting the clicks in a given period of time. A magnetic and electric device combined with the indicator shows the direction of travel of the target relative to the bearing of the target.

114,724. Clinometers. Miller, A. R., Queensmount, Helensburgh, Dumbartonshire.

A clinometer comprises a casing A filled with liquid and fitted with a scale K, and a buoyant air or gas compartment F, in the form of a segment of a cylinder, and carrying one or more indicating marks, mounted on pivots E coaxial with the cylinder; the compartment F is completely submerged in the liquid and is protected from surface action by a cylindrical shell L having perforations M, N. The casing A has a glazed front B, and the back may also be glazed or made flexible to permit of expansion of the liquid. The instrument may be mounted on pivots in a bracket so that it may hang vertically, the axis of the pivots being at right-angles to the axis of the pivots E.



114,698. Sparking-plugs. Matthews, W. C., Lammascote House, Stafford.



Oxygen is supplied to the interior of a spark-plug by way of a rotary valve *d*, a radial duct *f* in which successively registers with openings in a surrounding sleeve *e*, these openings being connected by tubes 1 . . . 8 to the plugs. The oxygen supply may be arranged so as to draw petrol through with it. A ball valve and sharp edge or other obstruction may be placed in the path of the oxygen, or oxygen and petrol. The apparatus may be warmed by exhaust gas. The inner end of the plug electrode may be closed by a substance such as graphite, which would be forced away by the pressure. The oxygen may be used for starting up a cold engine. Specifications 107,747 and 109,403 are referred to.

114,798. Radiators for aircraft, etc. Soc. Anon. des Etablissements L. Bleriot, 14, Rue Duret, Paris.

Radiators for aircraft engines, etc., having a central opening *e* and upper and lower headers *a*, *b* are provided with intermediate collectors or headers *d*, d^1 extending across the radiator and forming the upper and lower sides of the opening, in place

of an annular collector, as formerly. The cooling elements *c* comprise corrugated plates united at their edges, and the headers *d*, d^1 are preferably formed by front and rear parts of channel section, as shown in Fig. 4, the elements being united to the flanges of the parts. The flanges towards the opening are connected by a plate or sheet to complete the header and form the sides of the opening, and the side walls of the radiator are strengthened by plates e^1, *f*.

THE AIRCRAFT TRADE

MARKET TOPICS.

Prices are for quantities on usual terms.

June 13th, 1918.

COPPER.—This market is very steady and ample supplies appear to be available. The output in April was most satisfactory. The demand, however, was also very high. It is reported that the miners in U.S.A. have sent in a demand for an increase in wages.

Official prices remain unchanged.

TIN.—This market has suffered a collapse and prices both here and in the East have dropped to a more reasonable level. This decline was foreshadowed in these columns quite recently. At the beginning of the week buyers were not eager, but large quantities were bought on the Eastern market when the price dropped. It is very unlikely that there will be a further decline yet. A large business has been done in Straits Tin. Large supplies of Tin are coming forward and there does not appear to be any fear of a shortage being experienced.

Comparative Prices.		Eastern price.
Standard, June 10th	£330	£336
Standard, June 4th	£345	£362
A month ago	£380	
April	£320	

LEAD.—Recent arrivals of Lead have been on the light side. There are, however, good supplies available for national requirements.

Prices remain unchanged.

STEEL.—There are ample supplies of aircraft steel bars available. This cannot, however, be said of sheets. There appears to be an acute shortage of the latter. It is difficult to understand how this has arisen, as we had at one time an apparent glut of steel sheets. The shortage can only be attributed to sheer lack of foresight. It is to be hoped that the authorities responsible will move heaven and earth to get over this difficulty at once, as the next few months will undoubtedly witness an unprecedented hustle in aircraft factories.

Cast Steel and High Speed Steel supplies continue to improve, and prices remain unchanged.

TIMBER.—It is now confirmed that a certain timber is being supplied to constructors for aeroplane construction which will not give anything like the same results as Silver Spruce, and it remains to be seen whether it will prove to be a satisfactory substitute. It is reported that official tests have given satisfaction to official people, but so did other substitutes, since condemned.

The position is certainly a little more hopeful, but cannot be considered very satisfactory. Some of the prices which are being asked for Plywood are simply atrocious, and if one only had confidence in official control of output and supplies, an order from the Ministry controlling this market would be welcomed.

Supplies of Mahogany are a little difficult to obtain.

Official prices remain unaltered.

FABRIC.—Good supplies are still procurable and there does not, at present, appear to be any fear of a shortage.

MONTHLY MARKET PRICE LIST.

June 13th, 1918.

The prices given below are the prices ruling on the above date

Terms.—Usual for the various materials mentioned.

Prices of old metals are as quoted by scrap dealers.

Prices must not be taken as specific quotations for definite quantities delivered to any part of the country.

ROLLS-ROYCE REWARDS.

the King's Birthday Honours, Mr. A. Wormald, the Works nager of Rolls-Royce, Ltd., was created an Officer of the ish Empire and Capt. L. W. Cox, the Head of Rolls-Royce don Sales Room, who is serving with the A.S.C. in Egypt, given a Military Cross.

AERO COVERINGS, LTD.

The writer recently had occasion to pay a visit to Aero erings, Ltd., an establishment situated in North-West don, whose functions begin where other firms have left This firm is of unique interest to the Aircraft Industry in it is the only firm who have made a speciality of covering doping planes. As long as fabric and dope remain com- ent and indispensable to the complete unit, so will the ortance of this concern increase.

needs but little knowledge to realise that covering and ing are arts and crafts outside the ken of the ordinary ineer. The man or the firm who has specialised on metal k or woodwork must necessarily be in the kindergarten when dope question arises.

nd there is another view to take. The establishment of a ic room on a sufficient size means the expenditure of several dred pounds whilst the establishment and installation of a e room also runs into hundreds of pounds, also there is the r space or a acreage involved, which demands great attention, ticularly if the factory is situated in or near a populous rict. Looking at the proposition, by and large, it would n to be a commercial proposition for one firm to concentrate specialise on this sort of work.

nyway Aero Coverings, Ltd., have found that an increasing ber of firms are willing to take advantage of the facilities offer and certainly as far as one could see, the motto ned to be "full steam ahead." Except for the engineer and two assistants, the entire staff are women and are one and all imbued with esprit de corps.

Aero Coverings, Ltd., are one of the few firms that have successfully solved the application of the dope-by-spraying problem. One say, lying idle, one of the old-time sprayers, a complicated affair, composed of a revolver-like gadget, several lengths of tubing, gauges, a compression container and an overall stand. Then one was introduced to the firm's own sprayer, a very simple device, working efficiently and without complication. One is not allowed to say more at the moment, as it is shortly to be produced in quantity and sold as a marketable proposition, which it certainly is.

SAGECRAFT.

Fredk. Sages, of Peterborough and London, who have won a prominent position in the aircraft world, have suffered quite a loss at the departure of Mr. Dudley, foreman of their erecting shops. He has obtained a post worthy of his ability as works superintendent with an important firm on the South Coast. He was the recipient, at the hands of Mr. Gordon England, general manager of the Aviation Department, of a gold watch, a suit case and a silver case as parting tokens of esteem from his colleagues.

The following changes are announced in "Sagecraft," the firm's house organ:—Mr. Harper, late foreman of the Walton metal machine shop, has left for a new position and Mr. J. Hancock has returned as foreman of the same shop. A new stores foreman, Mr. R. Scott, has been appointed.

THE NORMAN THOMPSON FLIGHT CO., LTD.

It is a matter of common knowledge now that there has lately been a change in the financial control of the Norman Thompson Flight Co., but one is pleased to state that this firm will continue to carry on its work, certain substantial orders having been received. This must be exceedingly gratifying to the directors and employees. Directors like to feel that their efforts are successful and appreciated, whilst employees like to know that their work has not been in vain, especially when much of it is research or experiment.

Writing apropos the Norman Thompson Flight concern reminds one that Mr. G. H. King, late of this firm, is still alive and active. He is, I understand, now in charge of the progress and external contracts of A. V. Roe and Co., Ltd., at Southampton.—F. W. N.

MAGNETO FELICITY.

The spirit of goodwill and mutual understanding existing among the leaders of the British Magneto Industry was very manifest at a gathering which followed the annual general meeting of the British Ignition Apparatus Association. Mr. Ernest Garton, who has acted as honorary secretary of the Association from its inception, was entertained at dinner by the members and presented on their behalf by the Chairman, Mr. Peter F. Bennett, with a token of appreciation and thanks in the form of a handsome grandfather's clock, doubtless to demonstrate to his grandchildren what he did in the Great War.

AN OLD HAND.

All old members of the Aircraft Industry will be interested to learn that Mr. "Bill" Law is now at the Beatty Aircraft Works. Mr. Law was for so long with the Grahame-White concern that it seemed impossible to imagine the factory without him, and when he left last September he was re-installed in October. However, as is the way with all good men, he found wider scope for his activities and appreciation of his unique experience.

OUR CONTRACTORS.

At London Sessions, on June 12th, Robert Scott, 17, engineer, pleaded guilty to unlawfully receiving a quantity of tools, the property of Edward Albert Boynton, and stolen by one of the latter's employees.

Mr. St. John Hutchinson (defending) asked the Court to take a merciful course. Prisoner left the Hugh Myddelton School when 14 years old, and entered Boynton's employ. He displayed such engineering skill as to earn 35s. a week. He left, and although only 15 years old, he and another boy took a back room and began to make nuts and screws for machinery. The business was a success, but the partner, on reaching the age of 18, had to enter the Army, and prisoner kept it on.

He did so well that he took large premises, rented at £130 a year, and employed eight women and eleven men. Of the profits he had spent £400 on machinery, and invested a fair amount in War Stock. At the time of his arrest he was holding large contracts from the Government in connection with aeroplane work. He was undoubtedly a youth of exceptional ability, and would appear to have a good future before him.

Sir Robert Wallace said it was regrettable that such marvellous gifts had been used so badly. He would give him another chance, and bind him over to come up for judgment if called upon.

AIRCRAFT FINANCE

CURRENT TOPICS.

Treasury's Action Successful.

ar financing is now assuming a most interesting phase. sequent upon the suggestion of the Treasury, the maxi- 1 rate of interest, offered by the banks of every calibre, ie and Colonial, Anglo-Foreign and Discount, for money on sit is 3 per cent. Hitherto, many traders found it conve- t and profitable to lend surplus funds not needed for, say, a le of months or so to their bankers on "fancy" terms.

Money That Shirks.

o doubt this change will be inconvenient to many, yet, at th e time, it must not be overlooked that the company with a nable quantity of money lying fallow for a few months can y purchase Treasury Bills, either new or secondhand and uring at practically any date required, on terms offering more the deposit rate of 3 per cent. Of course, the objective of the ent action is to drive into war financing surplus money h is really shirking. If the scheme is to be properly effective w modifications seem necessary: then the business man will little to complain about.

Aircraft Shares Strong.

rcraft and kindred shares continue to absorb considerable ition due to the knowledge that profits are being constantly nented. There are possibilities, therefore, not only of nced dividends, but in some cases of bonuses arising out of capitalisation of reserve funds.

the case of Aircraft Manufacturing Company "B" Par- ating Preference shares it seems to be expected that the pany should be in a position to pay an extra dividend of thing like 7 per cent. in respect of the participating rights, and above the fixed 7 per cent. cumulative dividend.

The Dividend Expected.

his, of course, is simply what the Stock Exchange expects. ther these expectations will be realised remains to be seen. way the shares are standing about 23s. 6d. each, so that speculative investor is really not paying much for the ibilities. Of course it must be realised that the company has vn to its present dimensions as a result of the war, and it will fare when peace conditions return must be argued " according to taste," as the culinary recipes put it.

What is said about Triumphs.

nsiderable interest is being taken in the shares of the mph Cycle Co., which is now concerned with aeroplanes as as with cars or cycles. The £1 shares are being bought up 3s. on the belief that the dividend results, due for announce- three months hence, will be very satisfactory. The com- has certainly been very generous to the shareholders ng recent years. Indeed, it capitalised a portion of its re- fund last year. This resulted in a bonus of two new es in respect of each share held in addition to the cash divi- of 15 per cent. As a result of this operation the capital is £240,000; but, even on the higher capitalisation, it is said the dividend in respect of the current year will be at least ntained at 15 per cent.

New Magneto Company's Results.

is rare that promises made in prospectuses are fulfilled. etimes there is an immense gulf between the promises and real performance; sometimes the difference is small. The al results of the Fellowes Magneto Co. covering a period of teen months to December 31st last are not so good as was shadowed. For the period in question the net profits before ving for depreciation, were £12,900, or the rate of £8,600 ar, whereas the prospectus foreshadowed a net profit when company settled down to its full capacity of £30,000 after iding for excess profits.

Government to Help.

l things considered this is not so bad, and in any case the r cent. participating preferred shares receive a little extra the ordinary get 15 per cent. dividend for the eighteen ths. The Government is considering proposals for the rgement of the company's production. Regarded in con- tion with the results of some other undertakings it would gest that this country is securing a strong position in the magneto business; let us hope it will be maintained if ever there is a renewal of German competition.

Gnome and Rhone.

A dividend of 300 francs per share by the Gnome and Rhone Motor Company is being talked of in French financial circles. The profit for 1917 is stated to be 7,686,514 francs in comparison with 14,283,848 francs for 1916, and including the balance brought in there is disposable surplus of 8,017,905 francs against 14,756,391 francs a year ago. The dividend named would involve 4,425,000 francs.

Excess Profits in France.

By the way one does not hear much about the harvest being reaped by the French Government out of war profits. An instructive and interesting commentary thereon is provided in the annual report of that big armament concern of France named the Hotchkiss Co. As from November last when the law became operative the company will strike its profits after allowing an extra 10 per cent. for any increase in expenditure, and the result will be divisible as follows:—45 per cent. will be handed over to the State, 45 per cent. will go to the company for division amongst the shareholders and the balance of 10 per cent is to provide a Benevolent Fund for the workers. Of course the State would not share in any possible loss.

A Wise and Pleasant Practice.

Incidentally, in respect of last year's working, a dividend of 100 per cent. was distributed, in comparison with 75 per cent. In addition, however, some of the reserve funds were capitalised and provided a bonus to the shareholders, who received a new share gratis in respect of each share held. This pleasant practice of capitalising the reserve fund is becoming quite common in the French industrial world: in many cases circumstances justify the procedure.

More Capital for Aero Engines.

The Rochet-Schneider Co., another important French armament concern, is increasing its capital, and dividing amongst its shareholders its Special Contingencies fund. The additional capital is needed in order to cope with the construction of aero engines and other war work. There are to be offered to the shareholders 50,000 shares of 100 francs each at par in the rate of two new for each old share. To help subscribe for these a sum estimated at 80 francs will be distributed out of the fund named at the same time as the dividend of 25 francs.

Aeroplanes and Furniture.

It is not without interest to record the fact that Waring and Gillow, the furniture and store people, are actively concerned in the output of aeroplanes. During recent weeks there has been quite a lot of speculation in the company's shares, not prompted by the knowledge of the aeroplane work, but by a belief that the financial position has undergone a material improvement. No doubt this is true, but it is questionable whether the improvement fully justifies the rise in the preference shares. Financially the record of the company has been far from brilliant, probably because of excessive capitalisation or because of a too ambitious programme, or both. Incidentally one notes with interest that Mr. S. J. Waring, who has long been identified with the Oxford Street Stores, is also pecuniarily associated with aviation ventures

COMPANIES ANNOUNCEMENTS.

NEW COMPANIES REGISTERED.

The files of the following new companies are available for inspection at Somerset House.

Whitworth Engineering Co., Ltd.—Private company. Registered May 30th. Capital £20,000 in £1 shares. Permanent governing director : B. Ison. Solicitors : Neve, Beck and Kirby, 21, Lime Street, E.C.

BRUSH ELECTRICAL ENGINEERING COMPANY, L

The 29th General Meeting of the company was held June 17th at the Manchester Hotel, Aldersgate Street, Mr Garcke (the chairman) presiding.

The Secretary (Mr. F. M. Hodson) read the notice conve the meeting.

The Chairman said that the year under review had been of considerable activity in all departments of the comp works. Notwithstanding the difficulties of manufacture, d shortage of labour and materials, the output—measured in m value—constituted a record. On their engineering side there been a sufficient and increasing demand for their star products for war services to keep the shops well employed. the rolling stock side their standard business had, however, practically at a standstill, all their resources in the woodwo shops having been devoted to another product, in which they been particularly successful.

The demand for Brush Ljungstrom turbo-generator sets auxiliaries had increased so rapidly that to keep pace wi they had been compelled to arrange for a large extension of machine tool equipment. Notwithstanding the difficulties of ducing a new system of ship propulsion at the present time, friends, the British Ljungstrom Marine Turbine Company, controlled the marine propulsion rights of this turbine, had excellent progress, and details had recently been publish the first British-built vessel equipped with plant of this Other important similar orders were now in hand. With r to the excess profits duty, he observed that the present high tion of profits would not favour the increase of capital would be so greatly needed after the war.

After referring to the profits and to the proposals for d with them, as set out in the report, he said that the stockh would be asked to authorise the directors to postpone the pa of the dividend on small fractional holdings. The portion dividend so postponed amounted in the aggregate to only but as in fact they were held by over 1,100 members it wo appreciated what a large amount of clerical work and ex would be saved if the dividend on these fractions was post

The Board did not propose anything more than a postpon pending the preparation of a scheme enabling members t their fractional holdings, or to buy further stock, and thu vert their holding into whole amounts of not less than If the stockholders approved, a circular embodying such a s would be issued a little later. In conclusion, he move adoption of the report and accounts

Mr. B. S. Broadhurst (managing director) seconded the m which was adopted, and the proposed dividend at the r 6 per cent. per annum on the Ordinary stock for each years 1916 and 1917 was confirmed. A resolution was also to the effect that payment of the Ordinary stock divide holdings of less than £10 and on fractions of less than £ by holders of £10 and upwards be postponed.

POSTAL SERVICES.

According to the "Petit Journal," a proposal to establis aerial postal services—namely, between Paris and St. N and between Paris, Marseilles and Nice—is under conside

BRUNTONISED NON-RUSTING WIRE-

FOR AIRCRAFT.
BRUNTONS, MUSSELBURGH.

All our machines returned.

Many offensive patrols have been carried out.

In home waters during the same period numerous anti-submarine, hostile aircraft, and escort patrols were carried out by seaplanes, airships, and aeroplanes. Submarines were sighted and bombed, enemy mines located and floating mines sunk.

On occasions while on patrol single British machines have been attacked by enemy formations. In one case a stray bullet shot away a control and the British machine was forced to alight. The crew were subsequently rescued by another British seaplane, which had been sent to search for them.

In another instance our machine—after being disabled—was sunk by hostile machine-gun fire, the crew being rescued by our surface craft.

June 14th.—During the period June 10th to 12th inclusive operations by Air Force contingents have to some extent been attended by unfavourable weather. In addition to the usual patrols, however, bombing operations have been carried out during the day and night against Zeebrugge, Bruges Docks, and Ostend Docks.

On these objectives in all 18 tons of bombs have been dropped. Two hits were observed on the Mole and bursts on seaplane sheds at Zeebrugge; at Bruges fires were caused in Eastern Darse and hits observed in Brugeoise Works; bursts were observed at Bassin de la Marine and Gare Maritime at Ostend; clouds at times prevented observations.

One enemy aircraft was destroyed, and one of our machines is missing.

In home waters, in spite of the handicap of fog, numerous anti-submarine, hostile aircraft, and escort patrols were carried out by seaplanes, airships, and aeroplanes. Submarines have been sighted and bombed and enemy mines located on a number of occasions.

In Mediterranean waters submarines have also been sighted and attacked, enemy mines located, and Allied and neutral shipping convoyed.

During the same period aircraft attached to the British Ægean squadron have bombed aerodromes and enemy works at Drama and other places on the Bulgarian and Turkish coasts. Enemy formations which we met over the Dardanelles were attacked, and two of their fighter scouts were brought down in flames.

MILITARY.

G.H.Q. Communiqués.

June 11th, 7.57 p.m.—On the 10th inst., in spite of cloudy weather, our aviators on the French battle front worked early and late, dropping eight tons of bombs on enemy troops and transport, ammunition dumps, guns, and trenches.

Direct hits were obtained on the railway at Roye-sur-Matz, and on concentrations of infantry in the triangle Montdidier-Ricquebourg-Roye.

Flying low, our machines attacked with machine-gun fire every target that offered itself along the roads behind the fighting line, and an immense number of rounds were fired from the air with good effect.

In this area we shot down six enemy aeroplanes and drove seven down out of control, ourselves losing five machines.

On the British front there was little aerial activity. One German aeroplane was destroyed and one driven down out of control.

We lost two machines.

During the night 10th-11th inst. we dropped seven tons of bombs on Cambrai and Bapaume.

All our night bombers returned safely.

June 12th, 7.40 p.m.—On the 11th inst. British aeroplanes assisted the French counter-attack on the western portion of the Noyon battle front by special patrols sent out to deal with German machines, as well as by vigorous and constant bombing of the enemy's trenches, gun positions, and communications. Heavy machine-gun fire was directed from a low altitude upon hostile troops and transport throughout the same area.

Ten German aeroplanes were destroyed by us during these operations, and four more were driven down out of control.

We lost three machines. Two of our machines reported yesterday as missing have now returned.

Since the German attack began in the Noyon sector on June 9th our squadrons co-operating with the French have dropped 21 tons of bombs and accounted for 29 enemy machines.

On the British front, our aviators and balloons carried on as usual the direction of our artillery fire; some useful aerial reconnaissance and photography were also accomplished.

On this front two hostile machines were shot down and two others driven down out of control.

One of our machines is missing.

The total weight of bombs dropped by us on June 11th, including those dropped beyond the French battle lines, amounted to 14 tons.

On the night of June 11th-12th our night bombing machines heavily attacked the railway at Cambrai and billets at Frémicourt (on the Bapaume-Cambrai road), dropping four tons of bombs without loss.

June 13th, 8.40 p.m.—Our flying squadrons on the French battle front on the 12th inst. were chiefly engaged in offensive patrol work, seeking out German machines and fighting them wher they were found. They destroyed 15 enemy aeroplanes, som which went down in flames, while others broke in the air.

One of our machines in this sector is missing.

On the British front a good deal of aerial reconnaiss photography, and artillery observation was carried out.

We lost two machines, and destroyed five German mach Two other hostile machines were driven down out of control, a German observation balloon was brought down in flam

Twenty-two tons of bombs were dropped by us during the the principal targets attacked being Don junction, the rail at Courtrai, Armentières, and Chaulnes, the dump at Bapa and Bruges docks.

The weather at night was unsuitable for flying.

On the afternoon of the 12th inst. two successful raids carried out by our squadrons against the Metz-Sablon rai station and sidings. Many heavy bombs were dropped.

On the 13th inst. one squadron of our aeroplanes attacke station at Trèves, another dropped a ton of bombs on the fact and stations at Dillengen (north by west of Saarbrücken). the same time the factories and station at Hagendingen (nor Metz) were subjected to attack. At Dillengen direct hits observed on two furnaces. Successful long-distance photogr reconnaissances were carried out by our machines.

In the course of attacks made by the enemy on our bom machines one hostile aeroplane was destroyed and two o were driven down.

One of our machines is missing.

June 14th, 7.40 p.m.—On June 13th low clouds and poor bility impeded work in the air, but our machines took advar of spells of clearer weather to observe for artillery fire, a carry out numerous patrols and reconnaissances.

Nine tons of bombs were dropped by us on Zeebrugge Armentières, and Comines stations, and on targets in the F battle area.

Ten hostile aeroplanes were destroyed during the day, and driven down out of control. A German balloon was brought in flames.

We lost five machines.

Heavy mists prevented flying at night.

June 15th, 10 p.m.—Flying on the 14th inst. was much li by low clouds and high wind.

Two enemy aeroplanes were driven down out of control.

We lost two machines.

June 16th, 8.35 p.m.—On the 15th inst. our aviators carrie reconnaissance work and co-operation with the artillery as and took a number of photographs.

Ten tons of bombs were dropped by us during the day, and tons by night, the most important targets being the railway tions of Estaires and Armentières and Bruges docks.

In air fighting we brought down three German machine one observation balloon, and drove down two other hostile planes out of control.

None of our machines is missing.

June 17th, 8.45 p.m.—Uncertain weather interfered with operations on the 16th inst., but a good deal of observatio artillery fire was carried out by our aeroplanes and ball Numerous photographs were taken, and many useful reco sances were accomplished by our machines.

Enemy aircraft were active at times on the northern p of the British front and in the French battle zone.

Eleven hostile machines were destroyed by us in air fig and nine driven down out of control. One German balloo brought down in flames. In addition, one hostile machine wa down and another driven down out of control by our anti-ai fire. We lost 10 machines during the day, six of which working south of Montdidier.

We dropped 22 tons of bombs by day and 12 tons durin following night, heavily attacking the railways at Arment Estaires, Comines, and Courtrai, and the docks at Bruges.

Two of our night-flying machines failed to return.

War Office Communiqués.

June 12th.—The G.O.C. Italy reports:—

Since my last report the Royal Air Force have destroy enemy aeroplanes.

Four of our machines have failed to return.

June 15th.—The G.O.C. Macedonia reports:—

On June 12th four hostile aeroplanes were brought down Miletkovo (in the Vardar Valley, 13 miles behind the en line) during a combat with our scouts. Three were observ crash in flames. All our machines returned safely.

June 16th.—The G.O.C. Palestine reports:—

On June 11th Amman railway station (on the Hedjaz Rai 25 miles east of the Jordan), together with the enemy's aeroc and hostile troops and transport in its vicinity, were h bombed by our aeroplanes.

June 15th.—The G.O.C. Italy reports:—

For several days no flying has been possible owing to we conditions, and to-day was also unsuitable for flying except i very early morning. During this period seven hostile ma were destroyed and two balloons brought down in flames.

During the afternoon our flying squadrons have been contir engaged in machine-gunning and bombing enemy bridges

n small and large stone bottles, and in , ½ and gallon trums.

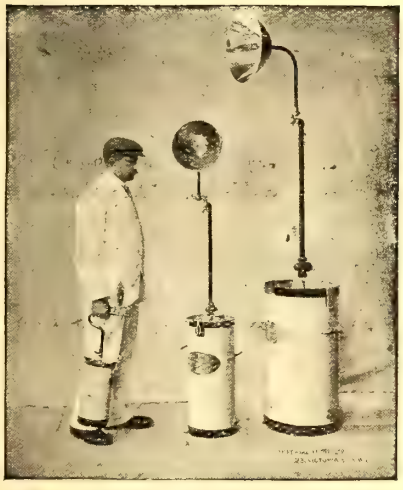
THE TIELOCKEN

Burberry Weatherproof

As a distinguished and efficient, light-weight and healthful safeguard for R.A.F. Officers THE TIELOCKEN is perfection.

Its ease of adjustment and double protection over vital areas are features of special value.



Burberry materials are proofed without rubber, oiled-silk or other air-tight agents, being faultlessly self-ventilating and hygenic in all temperatures.

Complete R.A.F. Kits in 2 to 4 Days; or Ready for Use.

Service Weatherproofs.

transport on the Lower Piave, doing great damage from low altitudes.

June 16th.—The G.O.C. Italy reports :—

Three further enemy aeroplanes were destroyed in air fighting yesterday, in addition to the seven previously reported. The clouds remain low, and distant reconnaissance is impossible. The energy of our Air Service has been mainly confined to attacks on the bridges and troops which the enemy are attempting to throw across the Piave. In these attempts (? attacks) they have been very successful.

June 17th.—The G.O.C. Italy reports :—

On the 15th and 16th the R.A.F. dropped over 300 bombs and fired over 25,000 rounds of machine-gun ammunition at troops and transport attempting to cross the Piave.

Home Command Communiqué.

June 17th, 3.15 p.m.—A hostile aeroplane crossed the Kent coast shortly after mid-day to-day. It was fired at by the anti-aircraft defences, and made out to sea immediately.

AIR FORCE.

June 17th.—The following bombing operations into Germany were carried out by the Independent Force, R.A.F., from June 6th to June 11th both dates inclusive :—

The railway station and sidings of Thionville were attacked no fewer than four times; several direct hits were observed on the station, and an explosion was seen to take place near the Carlshütte Works.

At Metz-Sablon, which was twice attacked, a train received a direct hit and was wrecked.

In all, some six tons of bombs were dropped on these objectives, and a large number of rounds was fired from machine-guns at low altitudes.

Attacks were also delivered against the railway sidings at Karthaus (south of Trèves) and railways and munition factories at Hagendingen (north of Metz) and Dillingen (north by west of Saarbrücken), some 3½ tons of bombs being dropped with good results.

From all the expeditions all our machines returned in safety.

MARRIAGE.

WILD-COOPER.—On June 8th Flt.-Lt. H. Wild, R.N., of Peddie, South Africa, was married to Elaine Cooper, elder daughter of Ernest Charles Cooper, C.E., Shanklin, I.W.

* * *

Flt.-Lt. F. J. Bailey, R.N., arrived in Holland on June 14th, from Germany for internment.

MILITARY.

DEATHS.

D'ARCY.—Sec. Lt. Samuel H. D'Arcy, D.S.O., R.A.F., who was killed on June 8th, was the son of Viscount and Vicountess D'Arcy, of Ladbroke House, Redhill. He was 19 years of age. Mr. D'Arcy was killed while looping a new type of biplane off the ground. He had performed the feat with this machine several times before, but apparently misjudged his distance and failed to flatten out in time. He had seen much service in France and was at the time of his death attached to a testing establishment.

HAMILTON.—Capt. H. J. Hamilton, M.C., D.C.L.I., and R.A.F., who died on June 13th, as the result of a flying accident, was the second son of Mr. and Mrs. A. E. Hamilton, 59, Ridge Road, N.8. He was mobilised with the Artists' Rifles in 1914. He was 23 years old.

MEDLICOTT.—Lt. Harold W. Medlicott, R.F.C., aged 23, who was shot and killed while attempting to escape from the prison camp at Bad Colberg (Sachsen Meiningen), on or about May 19th, was the only surviving son of Mr. and Mrs. J. W. Medlicott, Ealing, W., and a brother of Sec. Lt. S. N. Medlicott, R.F.A., who was killed at Loos on October 6th, 1915. He obtained his commission in the R.F.A. in September, 1914, and shortly after was transferred to the R.F.C. During several months of good work, he proved himself to be a daring and skilful pilot, and was successful in bringing down a number of enemy machines, for which he was mentioned in dispatches. On November 9th, 1915, while on special work, a blinding snow-storm and consequent engine trouble compelled an enforced landing within the German lines, and he has since been interned in various prison camps, from which he made many unsuccessful attempts to escape.

SIMMS.—Sec. Lt. John Basil Palling Simms, 5th Fusiliers, attd. R.A.F., who was killed in action on June 4th, was the only son of the late Henry Simms and of Mrs. Simms, Jesmond Road, Newcastle-on-Tyne. He was 19 years of age

TYRRELL.—Capt. Walter A. Tyrrell, M.C., R.A.F., who has been killed, was 19 years of age. He was one of three soldier sons of Alderman Tyrrell, of Belfast, and was recently awarded the Military Cross for bringing down three enemy aeroplanes within 15 minutes. He had in all 15 German machines to his credit.

Capt. Tyrrell was the younger son of Mr. and Mrs. John Tyrrell, Ballyholme, Bangor, Co. Down, Ireland

VAN RYNEVELD.—Lt. John Percival Van Ryneveld, R.A.F., whose death was announced recently, was educated at Winburg and Grey College, Bloemfontein. He was wounded in 1914 while serving under Commandant Pretorius in the operations against the Rebels. He left South Africa in April, 1917, to join the R.F.C., and was killed in a flying accident near Dartford on June 2nd.

WHITESIDE.—Lt. Miles Bruce Dalzell Whiteside, Highland Light Infantry, attd. R.A.F., who died on June 13th of injuries received while flying in Herts on June 10th, aged 23, was the son of the Rev. M. Whiteside, late rector of St. Nicholas, Cardiff. He joined the Artists' Rifles in 1914, subsequently obtaining a commission in the A.S.C., went out to France in 1914, and transferred to the Highland Light Infantry in May, 1915. He was wounded the following August, and rejoined his regiment in Mesopotamia in May, 1916, and was again wounded in January, 1917. He was temporary A.D.C. to the Lt.-Gov. of Burma, and returned home in October, 1917, to join the R.A.F. He obtained his wings the day of his accident.

ENGAGEMENT.

BARR—WILSON.—The marriage between Capt. A. Douglas S. Barr, R.E. and R.A.F., eldest son of Professor Archibald Barr, LL.D., and Mrs. Barr, of Westerton of Mugdock, and Maude Charlotte, younger daughter of Mr. and Mrs. H. Arnold Wilson, Underfell, Milngavie, will take place in Milngavie and Baldernock U.F. Church on Tuesday afternoon, July 9th, at 1.30. All friends will be welcomed at the church.

MARRIAGES.

ALFORD—CHAMBERLAYNE.—A marriage has been arranged, and will shortly take place, between Capt. Francis R. Alford, M.C., R.A.F., and Rosalie Francesca, daughter of Mr. and Mrs. Hankerville Chamberlayne, of Cranbury Park, Hampshire.

BASS—HALL.—On June 15th, at the Royal Chapel of the Savoy, Lt. K. C. Bass, S.A. Inf. and R.A.F., eldest son of Maj. and Mrs. Bass, Johannesburg, was married to Lois, only daughter of Mrs. Hall, London.

BORWICK—GREY.—On June 8th, at the Chapel Royal of the Savoy, Lt. George Borwick, of the Bedfordshire Regt., attd. R.A.F., was married to Dorothea Gertrude, second daughter of the late Mr. Charles Grey and Mrs. Grey, of Anerley, by the Rev. H. B. Chapman.

HENSHAW—MOORE.—On June 12th, at St. George's, T nell Park, Capt. Albert G. Henshaw, A.F.C., R.A.F., eld son of Alderman J. E. Henshaw, J.P., and Mrs. Henshaw, Englishcombe House, Bath, was married to Winifred Margar eldest daughter of Mr. and Mrs. Moore, of 30, Carleton Ro Tufnell Park, N.

MACLEOD—BRISCOE.—On June 10th, at Kilmacow Chur Ireland, Lt. Norman Harry Neynol MacLeod, R. Scots. Fu attd. R.A.F., late E.I. and C.T. Co., Ltd., elder son of the l Norman Nevile MacLeod, Tirhoot, India, and of Mrs. MacLe was married to Blanche, second daughter of the late Edw. Whitby Briscoe and of Mrs. Briscoe, of Harristown Hou Piltown, Co. Kilkenny, Ireland.

BIRTHS.

COVERDALE.—On June 11th, at "Hillsboro," Albion Ro Sutton, to Joyce, wife of Lt. Harry Coverdale, London Reg attd. R.A.F.—a daughter.

BIRTHS.

BEST.—On June 17th, at 6, Park Gardens, Glasgow West, Beryl Gladys (*née* Smith), the wife of Lt. Robert Dudley Best, R.A.F.—a daughter.

BIRD.—On June 8th, at "Bosgrove," The Ridgway, Chingford, to May Eveline (*née* Pemberton) and Alfred Harry Bird, Lt., R.A.F.—a daughter.

HAWKINS.—On June 12th, at 3, The Park, Highgate, Margaret (*née* Lacey), the wife of Captain R. M. Hawkins, R.A.F.—a son.

* * *

Capt. J. C. Harrison, R.A.F. (Middle Temple), was called to the Bar on June 12th.

FOREIGN COMMUNIQUES.

FRANCE.

JUNE 11th.—Our daylight bombarding squadrons continued their operations during the day of June 10th, notwithstanding the bad weather. On the most exposed points of the battlefield some groups of machines, flying at a low altitude, dropped their bombs on the enemy concentrations, dispersing the reinforcing troops and causing them considerable losses.

Certain crews made several trips in the one day. Eight tons of explosives were employed in this manner, and yielded the best results.

During the night of June 10th and 11th the bombardment of the rear zone of the enemy front was actively continued. Our squadrons dropped 20 tons of bombs on convoys, cantonments, and railway stations. Two munition depôts were exploded, the one situated in the Chaulnes region and the other in the Soissons region. A fire was also reported in the railway station at Fismes. During the same day (June 10th) four enemy machines and a German captive balloon were brought down by our chasers.

JUNE 12th.—Our day bombing squadrons continued their operations yesterday, participating with their customary boldness in the counter-attack launched by us on the front Montdidier-St. Maur. They attacked with bombs the enemy divisions which were coming up to meet the shock of our troops against their right wing. Before this attack the enemy units were compelled to scatter, leaving corpses on the ground.

Convoys were bottled up, and batteries of heavy artillery in full blast were abandoned by the gunners and ceased fire. Moreover, a convoy caught fire, and a huge fire broke out in Ressons-sur-Matz, where there was a large concentration of enemy troops.

Altogether 26 tons of projectiles were dropped with excellent results.

During the night our bombing crews dropped 13 tons of explosives on the stations of the enemy zone, particularly in the region of Nesles, Roye, and Ressons-sur-Matz. Fresh fires were observed at the places bombed.

On the 11th our chasing crews brought down or put out of action 13 German machines.

JUNE 13th.—On Wednesday, our bombing squadrons dropped on the battle zone 16 tons of projectiles and 25 tons during the night of June 12th-13th.

Cantonments, convoys, troops on the march, and the rear of the enemy front were bombarded, as well as the villages of Ressons-sur-Matz, Ricquebourg, Orvillers-Sorel, and the regions of Roye and Guignicourt. Several outbreaks of fire were observed.

The same day seven enemy machines were brought down and nine put out of action.

During the first week of the month of June 13th enemy machines were brought down by our anti-aircraft defence service.

JUNE 14th.—On June 13th our chasing aeroplanes shot down five German machines and two captive balloons. Seven other enemy machines were put out of action.

During the night of June 13th-14th our bombing aeroplanes dropped 19 tons of projectiles on the establishments, railway stations, and cantonments in the enemy zone, causing much damage.

JUNE 16th.—Several groups of aeroplanes crossed the French lines last evening, and proceeded in the direction of Paris. The alarm was given in Paris at 11.40 p.m., and our air defences were put into action, our batteries shelling the raiders violently. Some bombs were dropped. There were several victims, and some material damage was done. The "All clear" was given at 12.45 a.m.

JUNE 17th.—ARMY OF THE ORIENT.—Two enemy aeroplanes were brought down.

GERMANY.

JUNE 13th.—In the two last days 35 enemy aeroplanes were shot down.

Capt. Berthold and Lt. Meckoff obtained their 33rd aerial victory, First-Lt. Schleich his 29th and 30th, Lt. Veltjens his 20th and 21st, and Capt. Reinhardt his 20th.

JUNE 14th.—Twenty-eight enemy aeroplanes were shot down yesterday. Capt. Berthold obtained his 34th aerial victory, Lt. Udet his 29th, and 1st Lt. Lörzer his 25th.

The losses of the enemy's Air Forces on the German front for the month of May amount to 23 captive balloons and 413 aeroplanes, 223 of which fell behind our lines and the rest on the other side of the enemy's positions.

We have lost in the fighting 180 aeroplanes and 28 captive balloons.

JUNE 16th.—Lt. Meckhoff has obtained his 34th aerial victory, Lt. Udet his 30th, and Lt. Kirschstein his 25th and 26th.

JUNE 17th.—Eight enemy aeroplanes and eight captive balloons were brought down yesterday.

AUSTRIA.

JUNE 14th.—At the repulse of an aerial attack made on Cattaro an English aviator was shot down by our naval aeroplanes.

ITALY.

JUNE 10th.—At dawn yesterday a squadron of Austrian seaplanes flew over Brindisi, dropping several bombs. No damage was done to war material, but several persons were killed or wounded. Our anti-aircraft guns and chaser planes soon compelled the Austrian squadron to withdraw. The loss of three enemy machines is reported. The enemy aviators were taken prisoners.

The same day British aeroplanes bombarded the aerodrome and hangars at Cattaro. Italian aeroplanes in two successive attacks bombarded military establishments at Durazzo. At Cattaro a steamer moored near the aerodrome was observed to be on fire. All the British and Italian machines returned undamaged to their bases.

JUNE 13th.—Bad weather limited the activity of aviation.

JUNE 14th.—One enemy aeroplane was brought down. One of our airships in difficult atmospheric conditions carried out effective bombardment operations.

JUNE 16th.—Our own and Allied aviators are taking a strong part in the battle by bombarding the crossing points on the Piave and attacking the enemy's massed troops with machine-gun fire. Thirty-one enemy aeroplanes have been brought down.

JUNE 17th.—The aviation service has continued to take a very valid part in the fighting, notwithstanding unfavourable flying conditions.

Forty-four enemy machines have been brought down during the last two days.

U. S. A.

JUNE 13th.—Last night our aviators bombed with good effect the station of Dommary-Baroncourt, north-west of Metz. All our machines have returned.

JUNE 14th.—Yesterday our aviators shot down two hostile machines.

JUNE 15th—Our aviators bombed the station and railway tracks at Conflans (north-west of Metz). A number of direct hits were made. All our machines returned.

THE demand for National Service of our entire output of the famous Bowden Wire Mechanism—which provides the perfect method of transmitting power by a tortuous route—prevents our acceptance for the present of any orders except those classified under a high priority.

Established 1897.

Godbolds

TURKEY.

UNDATED.—On June 11th enemy caravans and camps were bombarded by our aviators. One enemy machine was shot down on June 8th.

JUNE 14th.—The encampment (of the Meccan troops) in the neighbourhood of Tafile (south of the Dead Sea) was subjected to bombing attacks and machine-gun fire from our aeroplanes.

THE WAR IN REVIEW.

U.S.A. Finance.

It was reported from Washington on June 11th that a Bill for a Federal-controlled Corporation of £20,000,000 to build aircraft has been introduced in Congress.

A Burn Out.

It was stated on June 16th that a fire broke out at a new aerodrome established at Nivelles and the whole place was destroyed, with its contents of 15 new Gothas, just arrived from Germany.

Two German non-commissioned officers have been arrested. It is believed they were responsible for the fire.

The Death of a French Ace.

It is reported that Flt. Lt. Marty, the French aviator, was killed in action on June 9th. Lt. Marty had seven victims to his credit.

An Untiring Hun Killer.

Lt. Nungesser, although still under treatment at the American hospital, took advantage of the fine weather to return to the front, and on June 13th brought down two enemy biplanes in four seconds, thus bringing the total number of his victims up to 38.

Showing up the Enemy.

The "Kölnische Volkeszeitung" recently published an article describing the great popularity of the German War Air Fleet Exhibition, which was visited by over 44,200 people on Whit Sunday and Whit Monday. Military bands play on Sundays, holidays, Wednesdays, and Saturdays.

The people of Cologne are flocking to this very apposite Exhibition, where, in response to many requests, lectures, with demonstrations, are daily given on bomb throwing, from which the people derive valuable instruction concerning the best way to behave during a hostile air attack. The lecturers show how bombs are thrown, and give demonstrations of their arrangement in aircraft and their liberation therefrom, while from a tower a miniature air raid is carried through, clearly showing the public the tactics of bomb attack.

[It is a pity that educative exhibitions are not open in this country on Sunday, which is the only day of the week when people have any right to spare time. One had hoped that the excellent show which the Countess of Drogheda has been taking round the British Isles would have been expanded into something on a big scale similar to this and previous German exhibitions. Is it too late for that energetic lady to go ahead with the organisation of a properly arranged exhibition of enemy aircraft?—Ed.]

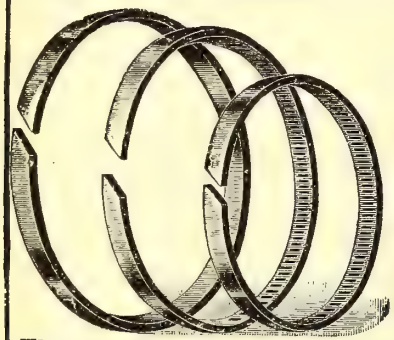
An American Pilot's Death.

Through a faulty landing in Norfolk, on or about June 14th an American aeroplane tester, named Sam Campbell, was killed.

The Second American "Ace."

The "Times" correspondent with the American Army in France writes on June 15th:—

The French have to-day officially confirmed Lt. Eddie Rickenbacker, of Columbus, Ohio, as the second all-American-trained air "ace." Douglas Campbell, of California, was the first.



Rickenbacker was formerly a speed "king" in American motor-car races, and is well known for his daring driving. He landed his first German aeroplane on April 29th and his last on May 30th, though unofficially he has other German machines to his credit. He came to France a year ago in the motor-car service, but soon transferred to the Air Service, where he has become one of America's best and most successful fliers.

KINDLY MENTION "THE AEROPLANE" WHEN CORRESPONDING WITH ADVERTISERS.

The AEROPLANE

The Editorial and Advertising Offices of "The Aeroplane" are at 166, Piccadilly, London W.1.
Telegraphic Address: "Aileron, London." Telephone: Mayfair, 5407.
Accounts, and all correspondence relating thereto, should be sent to the Registered Offices of
The Aeroplane and General Publishing Co., Ltd., Rolls House, Breams Buildings, E.C.4.
Subscription Rates, post free: Home, 3 months, 7s. 6d.; 6 months, 15s.; 12 months, 30s.
Foreign, 3 months, 8s. 9d.; 6 months, 17s. 6d.; 12 months, 35s. Canada, Year, $8.
U.S.A., 1 Year, $8.50c.

ON SEVEN YEARS' WORK.

With this issue THE AEROPLANE completes its four-eenth half-yearly volume, and so its seventh official ear of issue, though actually its first number ppeared at the beginning of June, 1911. Somehow it as managed to stagger through another year of xistence in spite of difficulties, such as paper shortage, inimisation of staff, and difficulties with D.O.R.A.

Yet, if one may judge by the ever-increasing mass f daily correspondence and the variety of questions hich one has to answer, all concerned in one way or nother with winning the war, though not in the least oncerned with the regular work of running THE AERO-LANE newspaper, one feels justified in believing that ie paper is helping the R.A.F. and the Aircraft In-ustry in its own way, if not in any officially recognised ay.

A MIXED BAG.

For instance, to take at random one morning's post st week, the letters included a request from an Ameri-n newspaper syndicate for a propagandist article on merican aviators in aerial warfare; an inquiry from firm of blast-furnace proprietors for information as maximum speeds for air-screws for aeroplanes—a rious combination; an inquiry from a firm of organ-uilders for information as to the best way of getting touch with the right people to place orders with em for aeroplane parts; an inquiry from an anti-rcraft gunnery officer for charts of enemy aircraft; inquiry from a mechanic in an aircraft factory who anted to know how to join the R.A.F.; a request from Government Department for information concerning ie character of one who had applied for a berth in at Department; a request from a Government Com-ittee for a copy of a lecture which one wrote a year so ago for another Government Committee; a request om a firm of accountants, on the suggestion of an fficial of another Department, that one would advise em as to how to find a competent valuer for the ock of an aircraft factory; an inquiry from an in-entor as to what is really wanted in the way of level dicators; and sundry other equally diverse and varied quests and inquiries, none of which had anything to with THE AEROPLANE as a newspaper, and all of hich required special knowledge of a separate subject.

Naturally one takes such implicit faith in one's omni-ience as a compliment. Where, as frequently, one is norant of the special subject, one takes immediate eps to obtain accurate information and transmit it desired—always provided, of course, that the inquirer entitled to receive it. And in answering such in-uiries one feels that one is helping to win the war at ast as much as if one were a special constable direct-g fair damsels where to find the latest matinée idol, directing belated revellers to their homes, or shep-erding unsavoury aliens in a tube station.

DANGEROUS CURIOSITY.

Frequently it occurs that inquiries are such as cannot properly be answered. There is, for example, the ardent student of aviation who sends a sketch of a strange machine which he has seen in his neighbourhood and wants to know what it is and all about it. Sometimes it so happens that such inquiries hit on the very latest "hush-hush" machines, which ought rightly to be kept in a locked shed, so all one can do in such cases is to warn the inquirers against infringing D.O.R.A. by seeking to elicit information concerning munitions of war, to wit aircraft.

It is quite surprising how many inquiries of this nature come in, ranging all the way from a question such as the instance mentioned to an inquiry as to what officer is commanding such and such a force of the R.A.F. Therefore one has to be fairly watchful as to what information not to give, as well as watchful as to what should be given in the interests of the R.A.F. and of aircraft production.

STRENUOUS TIMES.

Being thus a free gratis general enquiry office entails quite an amount of work on a staff consisting of two "Grade III" men, quite apart from the fact that THE AEROPLANE itself has grown considerably in size of late.

It may be of interest to record that just before the outbreak of war the editorial staff of this paper consisted of six male members, and produced a paper with from 14 to 18 pages of reading matter. To-day the male editorial staff is two in number—the present writer and one assistant—and produces a paper varying between 24 and 28 pages of reading matter.

The work, naturally, is somewhat strenuous. Ordinary office hours are fairly well occupied by what one might reasonably call voluntary work of some national importance, seeing that it is concerned with helping the R.A.F. and with aircraft production, and not with the routine work of the paper, for besides answering inquiries by post, such as those mentioned, there are innumerable callers to be interviewed and telephone calls to be answered. The result is that the ordinary editorial work has mostly to be done in what is called by the average business man "one's own time." One desires here to place on record one's appreciation of the way in which the other half of the editorial staff has done his duty by giving up his own time to the work of the paper, and to other work for the good of aviation, such as helping in the editing and compilation of various educative books in which one has been concerned, and in writing propagandist articles for various publications.

Also one wishes to acknowledge the loyal and hard work done by the feminine members of the staff and the keen interest which they take in their respective departments of the paper.

The Doubtful Future.

Whether it will be possible to continue for another year, or for the duration of the war, under similar conditions, is on the knees of the gods, or perhaps one should say in the hands of the Ministry of National Service. It is being more and more impressed on the people of this country by the Government that the Army needs men. Therefore quite conceivably it may happen that either half, or both halves, of the staff of The Aeroplane may be roped into the Army to wash dishes or to become batmen for any of the happily fit and able-bodied young men whom they have helped towards obtaining the King's Commission.

Technical papers concerned exclusively with promoting the production of munitions of war have no prescriptive right to special consideration as compared with luxury papers or humorous papers of any grade, therefore it rests with various people who are not concerned with technical affairs to decide who shall or who shall not be considered to be doing work of national importance and what shall be considered work of national importance. When washing dishes in the Army is considered to be of greater national importance than purveying technical information for the good of the R.A.F. and of the Aircraft Industry, presumably one will go and wash dishes.

Solid Satisfaction.

When that time comes one will at any rate have the satisfaction of looking back on some ten years well spent entirely in working for the cause of aviation, or, as our French confrères call it more picturesquely, "the Conquest of the Air," and for seven out of those ten years this paper, The Aeroplane, can claim to have led the way in every agitation for progress and reform.

Thanks to the foresight and wisdom of those from whom one has drawn one's inspirations, it has always come about in the end that the steps advocated in this paper have eventually been taken, whether they have been concerned with purely technical affairs or with matters of policy.

The I.A.F.

The latest of all examples is the casual disclosure by the Air Ministry in a Communiqué of the existence of the Independent Air Force, R.A.F. It seems only the other day, though actually it was early in 1916, when this paper, along with sundry enthusiasts—or fanatics, call them which you will—in the Flying Services and out, was advocating strongly, in season and out of season, the creation of a striking force specially organised for the aerial invasion of Germany.

We advocated that it should be entirely separate from the R.N.A.S. and R.F.C., so that the air work of the Navy should be done by the Navy, and so that Army Reconnaissance and all that it entails should be done by the Army.

The Force of the Future.

We wrote and spoke of it for convenience as the Imperial Air Service. From Imperial Air Service to Imperial Air Force is not a long step. Nor is it much further from Independent Air Force to Imperial Air Force, in name. And from the position of the I.A.S. which we all advocated then to the position of the I.A.F. which exists to-day appears to be no step at all.

One believes that in this I.A.F. even more than in the parent R.A.F. one sees the beginning of the great defensive and offensive force which will be the safety of this country in the future. If one has only toiled seven years for the R.A.F. Leah, it isn't half a bad-looking Leah after all, and one is quite prepared, if one is allowed to do so, to toil for another seven years for the Imperial Air Force Rachel.

A Great Privilege.

One has been privileged to see the beginning of the three greatest means of human locomotion, the bicycle, the motor-car, and the aeroplane. Still greater has been the privilege of seeing the development of the aeroplane from its earliest feeble efforts to the great aerial locomotion of to-day, and of being right on the inside of every movement in that development.

But the greatest personal satisfaction of all is that of having been concerned with the first attempts at Naval and Military aviation at Eastchurch, Farnborough, and Lark Hill, in 1909-10, and thereafter of having been privileged, by the kindness of the Air Board, not then become the Air Ministry, to spend one glorious week in France in 1917, watching from almost every point of view—G.H.Q., Brigade Staffs, depôts, and aerodromes—the operations of that splendid war machine, the Royal Flying Corps, which had just then attained to that definite superiority over the enemy which it has since held so gallantly, and which one hopes it will always hold. One felt then that, however humble one's efforts had been to help the Flying Services, they had not been wasted, and that they were appreciated by those most concerned.

However long or however short a time The Aeroplane may continue to exist, one is determined that so long as it does exist its whole aim and object will be, as it has always been, to aid to the utmost ability of its staff the work of the King's Flying Services.

C. G. G.

ON FIRE IN THE AIR.

For some unexplained reason, possibly due to the increase of public interest in aviation generally, aided by the fact that tens of thousands of people in this country have intimate friends and relatives in the R.A.F., where, before the war, only tens of people were casually acquainted with those strange beings who flew, there seems to have arisen lately something approaching general anxiety concerning the number of fires which occur in aeroplanes both at home and on active service. Probably the proportion of fires which occur to-day are fewer in proportion to the miles flown than before the war, even if one includes those caused by incendiary bullets or by punctured tanks set on fire by the engine on active service. Nevertheless the mileage is so immense that the total number of men killed by fires in the air is large enough to make the subject worthy of very serious attention by those in authority.

So great is the interest taken in this subject by even such extremely ignorant people as the editors of daily papers that whole articles on fire in the air have appeared in the non-technical Press. One naturally finds references to machines being shot down in flames in all books written by flying officers. Also in books by ordinary civilian visitors to the battle-fields one finds notes on these fires. One recalls particularly, if one remembers rightly in Mr. Jeffery Farnol's graphic description of his visit to an R.F.C. aerodrome, a casual

remark quoted as having been made by an R.F.C. officer, who said, apropos of the crews of machines which had been on fire: "They generally jump overboard before the fire reaches them." Also in a recent issue of an illustrated paper there was a terrifying sketch of a pilot standing on the wing of a blazing machine, controlling it with one hand inside the fuselage, as described in a story from the front published a week or so earlier. And practically ever since the beginning of the war there has been story upon story of the heroism of the pilots of burning aeroplanes.

The Results of Publicity.

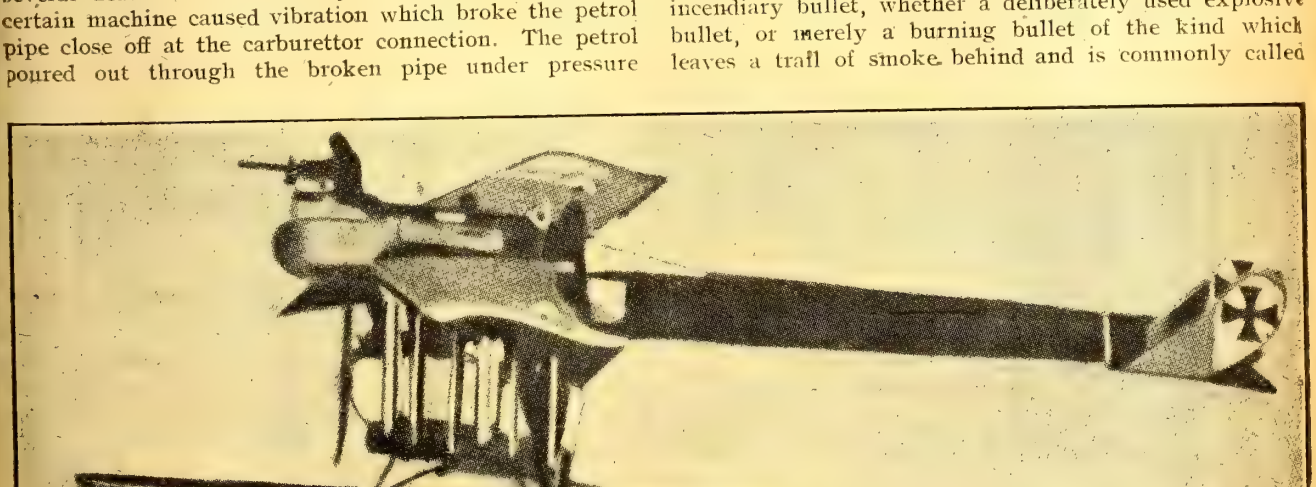
The net result of all these stories is twofold. For one thing they foster the idea that fires in aeroplanes are part of the regular risk, if not of the regular experience, of everybody who flies. This idea, if allowed to spread unchecked, is likely to have an evil effect on the supply of pilots for the R.A.F., for many a brave man who would cheerfully face any of the horrors of war on the ground might well funk the prospect of being burnt to death thousands of feet up in the air with no prospect of escape, other than jumping overboard and being smashed on the ground. The prospect is distinctly worse than that of having to meet German *flammenwerfer,* which, at any rate, can be avoided by dodging or retreating or by shooting the user.

A secondary result in some minds, especially in the minds of technical gentlemen who do not fly themselves, is that fires are more or less inevitable, and so must be regarded as a risk to be taken with equanimity—by somebody else. Familiarity breeds contempt, especially among those whose familiarity is second-hand.

It seems eminently desirable, therefore, to set down definitely the statement that fires in the air can be prevented, and that the risk of an aeroplane catching fire should be no greater than the risk of a railway train catching fire, and rather less than similar risks in a motor-car or a steamship.

Causes of Fire at Home.

The causes of fire are many, even when not flying in the face of the enemy, and as the causes are discovered they are cured. One may mention, merely as an instance, one cause which resulted in several deaths in this country. A certain engine in a certain machine caused vibration which broke the petrol pipe close off at the carburettor connection. The petrol poured out through the broken pipe under pressure into the space below and flooded the body of the machine, and when the supply in the carburettor was exhausted the resulting weak mixture "popped back"—as the motorist's phrase has it—into the carburettor and set light to the mass of escaped petrol, which by then was sufficient to burn up the front of the machine and set the main tank alight.



The trouble was cured very simply by cutting the petrol pipes of machines of this type and joining the cut ends by a piece of petrol-proof rubber piping, which was not affected by the vibration. Instructions were sent out accordingly to all squadrons using these machines, but still fires and consequent deaths occurred. When the matter was traced down it was found that the machines in which the later fires happened had not been altered, either because the instructions had not been received or because they had not been carried out.

Other fires have happened, especially in rotary-engined machines, through new pilots switching off the ignition and forgetting to turn off the petrol, so that the engine, continuing to revolve during a descent, has sucked in liquid petrol and thrown it out again all over the front of the machine, with the result that when they have switched on again the machine has caught fire. In most of such cases the fire would die out in a few seconds if the pilot would turn off his petrol as soon as the fire started, but frequently the pilot has lost his head and forgotten to do so, with the result that the petrol-connection has been burnt through and the fire has been fed by petrol constantly poured into it from the burnt-off pipe.

One could mention many similar cases in which machines have been burnt in the air from various causes, frequently through the pilot's own stupidity or through his refusing to obey the instructions given to him on taking over a new type of machine or engine. But even such stupidity or wilful carelessness does not justify anyone in exposing a pilot, still less an entirely unresponsible passenger, to avoidable risks of fire.

Fire on Active Service.

Fires on active service are generally caused by incendiary bullets, or through bullets perforating tanks or breaking petrol connections and releasing petrol which catches fire from the engine. As a rule, an incendiary bullet, whether a deliberately used explosive bullet, or merely a burning bullet of the kind which leaves a trail of smoke behind and is commonly called

WAS IST DAS?—A German nightmare seaplane, designed, apparently, to be offensive to the vision as well as to the enemy. The tractor airscrew can be seen in the front of the small nacelle underneath the gunner's perch. The machine is believed to be called the "Ursinus," possibly because it was built by the motor firm of that name, and is said to have been designed by the Editor of "Flugsport."

a "tracer," does not set fire to a petrol tank if it hits it direct.

If a tracer penetrates a solid mass of petrol it is simply drowned. What generally happens is that several bullets puncture the tank and the petrol is squirted out all over the inside of the machine by the pressure which exists inside the tank for the purpose of forcing the petrol up to the carburettor or gravity tank as the case may be. This petrol mingling with the air forms an inflammable mixture which is set on fire by the next tracer which comes along, or even by a spark from the magneto, or by a short-circuit from a broken ignition wire, or by a flame through a bullet-hole in the exhaust-pipe, or any one of a dozen other causes.

Anyhow, whatever the causes of the fire, the results are the same. Someone is "shot down in flames," and one has no hesitation in saying that the ever-present idea of being shot down in flames is the greatest strain which the nerves of active-service pilots have to bear. The prospects of being shot dead, or of being badly wounded and crashed, or even of being shot down out of control, are, according to experienced pilots, nothing like so bad as the prospect of fire.

The *moral* of the R.A.F. is immensely high, thanks to the superiority which the fighting pilots have won over the enemy's fighting pilots. Our bombing and reconnaissance pilots naturally participate in this high *moral*, for, however much they may be harassed in their work by anti-aircraft guns and enemy fighters, they know that the enemy's bombers and reconnaissance people are still worse harassed by our fighters. Nevertheless, it is beyond dispute true that if immunity against fire could be assured, or even if a reasonable chance of escape from fire, after it had broken out, could be guaranteed, active-service pilots of all classes would be far happier at their work.

Not only would many lives be saved, but the relief from the ever-present idea of fire would so relieve nerve-strain that men would be able to stand much longer periods of active-service flying before it became necessary to send them home for a rest. No matter how brave a man may be, nor how reckless he may be in a fight, that idea of fire is always present at the back of his brain, and the mere mental work of watching for signs of an outbreak, and keeping in mind what is the right thing to do immediately it shows, puts extra work on his nerves which would add materially to his value if it were removed. And, let it be here repeated, the risk of fire, and the consequent nerve-strain and the brain-fag, can be removed if only the subject of fire in the air is tackled really energetically by the right people.

The Desired End.

The means by which dangers from fire may be removed must naturally be discussed with caution, for one does not want the enemy to get ahead of us in this most important matter.

So far as the R.A.F. is concerned, one believes that all our aviators would be almost as glad to see the dangers of fire removed from the enemy as from our own people. Though one has talked over the subject with very many of our best fighting pilots, one cannot recall a single one who did not honestly hate setting an enemy machine on fire.

Shooting a man down is all in the day's work. The odds are even, more or less, which combatant scores. Putting a clean bullet-hole through an enemy naturally does not trouble a fighting man any more than giving an opponent a black eye troubles a boxer. Either would shake hands and help his opponent to the nearest doctor after the fight was over. But setting a ma alight seems to be another matter. The spirit whic prompts this feeling of aversion may be found quit clearly expressed in their respective books by suc widely diverse characters as the late Captain vo Richthofen and the late Captain Ball.

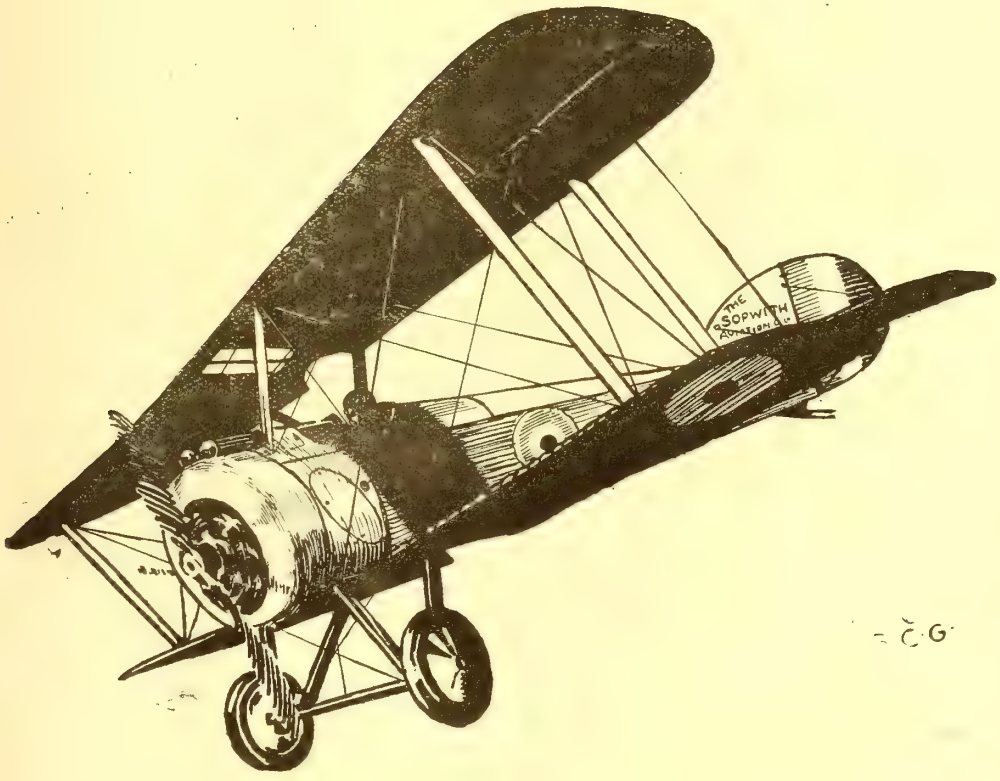
Nevertheless, it is necessary that the R.A.F. shoul be made safe against fire before the Germans attai to that same desirable end. Therefore one can bu recall what has already appeared in print on the sub ject, and refer to what the Germans are known to b doing in this direction.

The Means to the End.

The first and most obvious cure for fire is to use fuel which will not ignite till it is required to do so Years ago, long before the war, one advocated strongl the study of the possibility of producing an engine t burn crude oil, such as a Diesel engine used. Th difficulties are many, and one recalls that at that tim Mr. Howard Wright suggested, only half-jokingly taking our leading aero-engine designer, our leadin Diesel expert, and our leading metallurgist, and lock ing them up together till they produced what wa wanted, namely a very light engine using very heav oil. The method of propagation antedates the much advertised production of the designs of the "Liberty engine, and one feels sure that the results would b not less satisfactory in the case advocated.

Many people are convinced that such an engine i possible if only there is sufficient demand for it an if only sufficient money is available for experiment To-day the demand exists and the money is available It is for the Air Ministry to say whether such exper ments shall be pursued. One knows already of a ga producer plant, using common coke, which can be fitte to an ordinary motor-car, so there seems a distinc possibility for an oil-gas plant for use on aeroplanes.

Be it noted particularly, also, that such an engin would not only prevent fires in the air, but woul practically make it impossible for fires to occur throug crashes on the ground, a form of fire which probabl costs as many lives as does fire in the air—apart, pe haps, from fires caused by incendiary bullets.



Armoured Tanks.

Until petrol can be abolished, the most obvious an simple preventive of fire from incendiary bullets is a armoured tank. The Germans have tried not onl armoured tanks but armoured machines. The earlie people of the R.F.C. will remember their old frien "Copper-Belly" of the Ypres Salient in 1915, and on gathers that of late the Germans have been usin special armoured machines for "ground-strafing. One recalls, also, M. Blériot's effort of 1914, in whic the engine, tanks, and pilot sat in an armoured bath to which was bolted a three-ply tube for a fuselage with the whole tail-unit bolted onto that. It faile because of the engines of the period, but things hav changed since that day.

The equally obvious disadvantage of armoured tank or armoured machines is their weight. Hitherto i has been argued that the advantages of extra speed an climb more than outweigh the risk of fire. One suggests however, that the far lighter and more powerful engine now available more than compensate for the extr weight of an armoured tank.

Even if the result is a reduced "ceiling"—or limit ing height of climb—the advantage remains. There i no particular object in having a ceiling at 20,000 fee if there are no machines to fight when one gets there or if, when one descends to the fighting level of, say

SBAC — THE SOCIETY OF BRITISH AIRCRAFT CONSTRUCTORS

Paris Office:
21, RUE DU MONT THABOR.

15,000, or even 10,000, feet, one finds oneself opposed to enemy machines which, owing to their armour, are almost invulnerable.

One still regards the armoured petrol-tank as a makeshift, and "non-inflammable" fuel as the true solution of the problem. But for the purposes of the present war one believes that the Germans are, not for the first time, on the right track.

Freak Ideas.

Naturally the wild untamed inventor comes along with all kinds of freak ideas to abolish the fire danger, of which he has read in the daily news-sheets for the first time within the last few days or weeks. There is the crank who has a lovely idea for jettisoning his whole tank as soon as it catches fire. He quite forgets that such a device means redesigning the whole fuselage of the machine, and possibly the wings and undercarriage as well.

Evidently he never came across an ancient notion put forward years ago in this paper for night-flying machines, to enable them to descend in the dark without risk of fire and with the minimum of damage. It was simply a ripping-panel in the tank, which was designed to open out like a sardine-tin on pulling a lever, so that all the petrol would fall out in a second or two and leave the machine dead light, so that it could glide slowly and damage the pilot as little as possible if it hit any obstruction in the dark. The idea originated with the late Mr. Harold Barnwell, somewhere in 1915, if one remembers aright.

Also, the detachable tank gentleman forgets that the bullet which set the tank on fire, or some of its predecessors, would probably hit and jamb the levers or cranks or slides or whatever other arrangements he proposed to use in jettisoning his tank. Or they might hit the quick-release gear and let the tank go just when he wanted it most.

Then there is the equally ingenious gentleman who wants to make his tank into a kind of Thermos flask, arguing that if escaping petrol escapes into a vacuum it will have no air to burn with it. He conveniently forgets that bullet-holes might conceivably spoil his vacuum. And he probably does not know that it is not the bullet going in which makes the big hole, but the bullet going out on the other side, which takes a chunk of metal with it.

The number of people who want to put aeroplane tanks into bullet-proof waistcoats—such as were widely advertised some time ago, till the front-line troops found that they were not worth their weight—is legion. And there are heaps of freak notions of other sorts.

Some few really promising ideas have turned up, and one hopes that experiments with them are being encouraged, because even if they prevented a quarter or a fifth of the fires which happen they would justify their existence. Still one believes that, for the immediate present, the plain common-sense armoured tank of the Germans is the soundest notion of all.

The Emergency Exit.

Meantime, pending the production of the fire-proof engine and the bullet-proof tank, one advocates most strongly the close, and very quick, study of the parachute question.

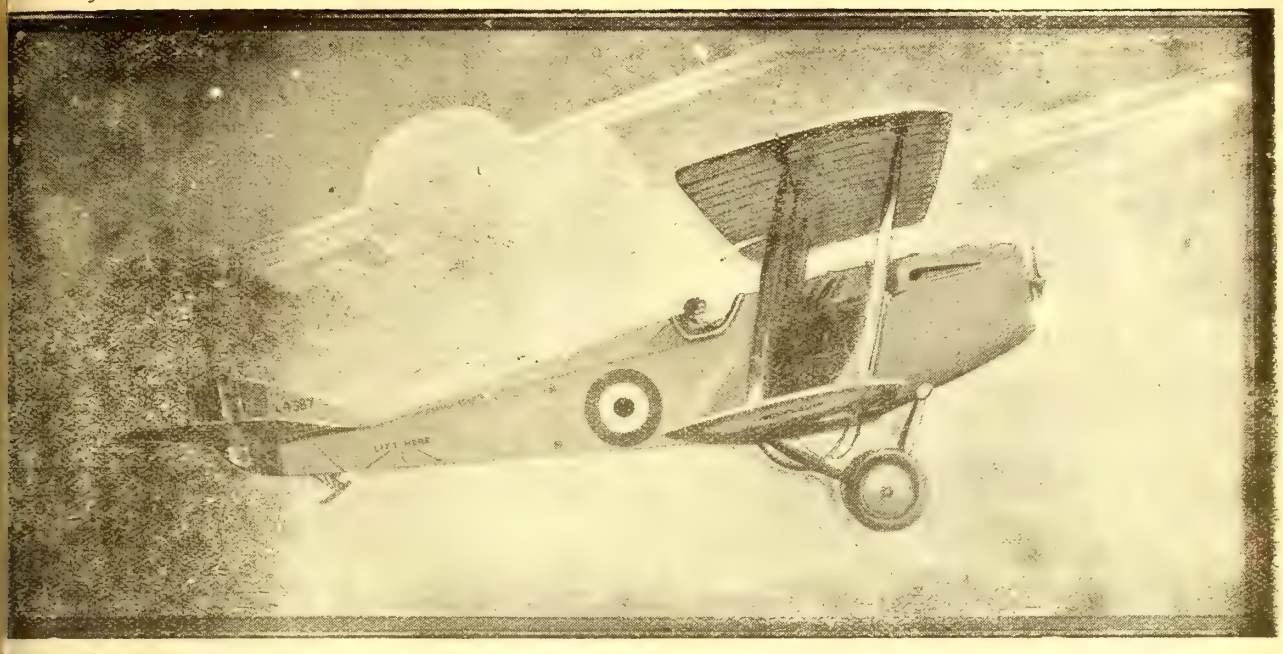
Beyond all question the next best thing to prevention is cure. And if we cannot guarantee to our aviators that their machines will never catch fire, the very least we can do is to provide them with a means by which they can get out and walk when the fire starts.

The ordinary superior engineer person associates parachutes with balloons and trapeze artists at country fairs. He will not realise even now, with all the lessons of our Kite Balloon and Airship people before his eyes, that the designing of a parachute is an exact science and that its stowage is a high art. The scientifically designed and artfully packed parachute of to-day is no more like the open-mouthed umbrella of the country fair than the latest fighting aeroplane is like a 1909 box-kite.

Moreover, the whole design of the modern aeroplane has developed of its own accord in such a way that it actually provides without any alteration a volume of waste space which is simply gaping to receive a parachute.

Parachute descents, with old-fashioned parachutes, were made from aeroplanes a couple of years before the war, so there is nothing new in the mere descent. That gallant little sportsman, the late lamented M. Pégoud, descended by parachute from a single-seated Blériot some time before he looped the loop. Yet here we are, after almost four years of war, with every pilot looping all day long as part of his daily job, and still we do not provide our pilots with a life-saving apparatus which is at least as certain and very nearly as simple as a life-buoy on board ship. Certainly it looks as if lives were cheaper than brains in the estimation of some Government departments.

At this time of day every aeroplane should be provided with an emergency exit, as regularly as is every theatre.



An Additional Safeguard.

One does not, as do some misguided converts, regard a parachute as a guarantee of eternal life. It is no use in a crash in getting off or in landing, such as cause the majority of deaths in training. Nor is it any use in a spin near the ground. But it does give its owner a sporting chance if anything goes wrong at a reasonable height.

For example, one has heard of tails breaking at a height of several thousands of feet and causing a fatal crash several minutes afterwards, owing to a machine coming down in a slow spin or in a series of alternate dives and stalls. Also, one has heard of control-wires breaking at home, or being shot away on active service, and of many other accidents which have ended fatally after quite a long descent. In practically every one of those accidents the pilot, and passenger if any, could have been saved by a parachute.

And, as already stated, in practically every case of fire in an aeroplane there would be plenty of time for the crew to abandon ship by means of a parachute long before the fire could prevent the departure. The whole operation can be made automatic, so that even a badly wounded man, who feels himself losing control of his machine, can, with his last conscious act, release himself from the aeroplane and descend unconscious, but with a fair chance of safety, by parachute, instead of lying in his machine to be crashed when it hits the ground.

One feels certain, as the result of many discussions on this subject, that, next to complete immunity from fire, an automatic parachute would be the best saver of nerves, and one states unhesitatingly that, even if the fireproof engine existed, the parachute should also be fitted as a safeguard against breakages in the aeroplane itself, and as a last resort for a badly wounded man who can no longer control his machine. The whole question is therefore commended to the earnest attention of those who have the best interests of our aviators at heart.—C. G. G.

WOKING, Surrey.

A PEERAGE FOR THE AIR MINISTER.

It was announced on June 19th that the King has been graciously pleased to approve that the dignity of a Peerage of the United Kingdom should be conferred upon the Right Hon. Sir William Weir, Secretary of State for the Air Force.

Sir William Weir was appointed Secretary of State for the Air Force last April in succession to Lord Rothermere. He is a member of the Glasgow engineering firm of G. & J. Weir, Ltd. In 1915-16 he held the post of Scottish Director of Munitions.

In January, 1917, he became Controller of Aircraft Supplies under Lord Cowdray, and on the formation of the Air Ministry in January, this year, he became Director-General of Aircraft Production.

Under his able direction during 1917 the output of aircraft increased enormously, so that at no time for the past twelve months has the R.F.C. ever suffered from a shortage of machines. Without attempting the almost impossible task of reorganising the Supply Department, on account of the delay which would ensu and realising the importance of the time-factor, speeded up the existing system to an astonishing e tent, with highly satisfactory results, as the history the R.F.C. during 1917-18 bears witness.

All who have watched his work during the year 19 and the first half of this year will agree that few publ servants have so well deserved the honour of a peerag Apart from a peerage being the Air Minister's just du it is also good policy that he should go to the House Lords, so that when it is necessary for him to make public pronouncement it may be made in the intellectu and dignified atmosphere of the Upper Chamber, rath than that he should be subjected to the badgering politicians in the House of Commons.

One tenders to the new Peer, on behalf of concerned with aeronautics, hearty congratulations o his promotion and all good wishes for his future succes

C. G. G.

THE AERONAUTICAL SOCIETY OF GREAT BRITAIN.

The Annual General Meeting of the Aeronautical Society of Great Britain was held on Wednesday, June 19th, at 5 p.m., at the offices of the Society, 7, Albemarle Street, London, W.1. The Chairman of the Council, Major-General R. M. Ruck, C.B., C.M.G., R.E., presided.

The Chairman, in introducing the Annual Report of the Council and the balance sheet for 1917, said :—

"Before beginning the business of the meeting I wish to say a few words about the great loss which has been sustained by the Society in the death of Mr. B. G. Cooper.

"Mr. Cooper was for nearly eight years a member of the Council and for over four years secretary to the Society, during which time I was closely associated with him and can state from personal experience that the Society could not have had a more devoted official. Whatever action he took or opinion he expressed, it was always with the object of furthering the interests of the Society. He took a special interest in the scientific and educational aspects of Aeronautics and was always urging the necessity for maintaining the prestige of the Society in these particulars. He was a most conscientious secretary, and I am sure all members of the Society with whom he was brought in contact had the greatest respect for him.

"He resigned the secretaryship, having received the offer of an appointment at the Air Ministry, which he thought it his duty to accept. It is evident that his services were greatly appreciated by the Air Ministry for he received an honorary distinction and quite recently an important appointment. As to his death, all that need be said is that his life was given to further the interests of the national cause and the development of science, the subject on which he had concentrated the efforts of his valuable life.

"The Council of the Society have expressed their regret and sympathy with Mr. Cooper's relatives, and I am sure all members will be anxious to endorse this action.

"There has been a gratifying increase in membership and also in the funds of the Society, which are in a sound financial condition.

"The activities of the Society have been considerable, notwithstanding the exceptional difficulties due to the war. I wish to direct special attention to the work which is being done by members of the Society in connection with Government committees during the past year. I can state from personal knowledge that the status and valuable work of the Society are fully acknowledged by the Government authorities: a particularly gratifying example of which is the consent of the Secretary of State for the Air Ministry to preside at our annual Wilbur Wright lecture next week, on which occasion Dr. Durand, the distinguished scientific American aeronautical expert, has kindly consented to give a lecture.

"Another Committee which I would specially refer to is the Technical Terms Committee, presided over by Colonel O'Gorman. This Committee consists, in addition to representatives of the Aeronautical Society, of representatives of the Air Council, War Office, Admiralty, Patent Office, Meteorological Office, the Advisory Committee for Aeronautics, Royal Aero Club and the Society of British Aircraft Constructors. They have also been assisted by the National American Advisory Committee for Aeronautics, and the results are most valuable.

"Whilst all this points to the continued progress of the Society I think I ought to refer to some difficulties which have been experienced: more especially in securing an adequate attendance of members of the Council except in certain cases. It is quite realised how difficult it is under present circumstances for the members to attend more frequently, but if this cannot be done throws the management to a great extent on the Chairman and the Secretariat, which, I am sure, is not a satisfactory arrangement in the long run. I hope, therefore, it may be possible revise the activities of the Sub-Committees to a greater exte and that in future the bulk of the work will be done by th means.

"In saying this I do not reflect in any way on the work the Secretary and Staff; in fact, I am sure that all membe appreciate thoroughly the improvement in membership ar financial position which is due in considerable measure to M Faraday and his assistants. I am rather speaking of the gener policy which should be pursued by the Society with regard to i future organisation and activities. There is a great deal of mo useful work to be done in developing the scientific, technic and educational aspects of Aeronautics and I am convinced th this can only be effected satisfactorily by the combined effor of the Council and the members of the Society."

Sir Mackenzie Chalmers moved the adoption of the report. was, he thought, more than satisfactory, and those responsib for the working of the Society were to be congratulated on th record of work done and the great success achieved. He woul like to draw attention to two points. One was the very necessar work of co-ordinating much of the scientific work done on beha of the Civil Aerial Transport Committee. The second point wa the desirability of sympathetic co-operation with similar societi to their own in the United States.

Mr. Bairstow said that the first point was receiving attentio from the proper authorities.

The Secretary said that the Society was in regular correspond ence with the various American Aeronautical organisations.

Sir Mackenzie Chalmers said that was very satisfactory.

Mr. C. G. Grey seconded the adoption of the report. He asso ciated himself entirely with the congratulatory remarks of th mover of the resolution.

The Council's Report.

The Council's Report reads as follows :—

The past year has been one of continued success and a develop ment in the work and influence of the Society. As will sub sequently appear the membership has continued to grow, whil fresh opportunities for useful work are continually being offere as open to the Society's activities.

Membership.

In January, 1917, the total membership of the Society stoo at 343; the acting membership (i.e., those whose subscription were less than three years in arrears) was 297. Owing to th outbreak of war and the impossibility of carrying on the activitie of the Society at the time, for some considerable period th membership had shown a decline and the Council viewed this with some anxiety in view of the increasing demands made upon the Society's funds.

Towards the close of 1916, however, the Council decided to attempt to renew these activities, and it was clearly necessary that the Society should keep abreast of the progress that was being made in aeronautics through the agency of the Flying Services, the Manufacturers, and the National Advisory Committee on Aeronautics, with the assistance of the National Physical Laboratory and the Royal Aircraft Factory. The association of the Aeronautical Society with that of the recently formed Society of British Aircraft Constructors also made it

desirable that an effort should be made to increase the membership amongst the manufacturers.

After a good deal of consideration the Council decided that it was essential to adopt a forward policy, to remove the offices and library to more suitable premises, to institute an up-to-date series of lectures, to improve the Journal, to endeavour in every way to increase the membership, and to engage a competent staff sufficient in number to deal with the amount of work anticipated.

From subsequent experience, however, it has been apparent that the enterprising policy followed has been amply justified, the Society now numbers 772 members and is still rapidly increasing, so that it may be confidently predicted that before the next annual report is presented the number will be considerably in excess of 1,000. While expressing their satisfaction with the progress thus made, the Council view with even greater pleasure the quality of the new adherents to the Society's ranks, including as they do, many of those who names have in recent years been prominent in both the administrative or engineering branches of aeronautics in this country and the United States of America.

On the technical side of the Society, the improvement has been specially marked. The number of Fellows and Associate Fellows has increased from 79 to 226. As these are the official qualifications for an aeronautical engineer, all concerned may be congratulated upon the fact that in substance as well as in name the Society is now the recognised professional institution for this branch of engineering. Although it would be manifestly impossible during the present crisis of public affairs to require the test of examination for candidates admitted to these grades of membership the Council have in all cases rigorously exacted a high standard of qualification in making election to it

In regard to the student members of the Society the increase per cent. has been larger than in any other class of member. As these represent the Fellows and Associate Fellows of the future, the progress made in this particular is very gratifying.

The Civil Aerial Transport Committee.

One of the most important events in the year as far as the Society is concerned was the action of the Government in forming the Civil Aerial Transport Committee to report upon the possibilities of civil aerial transport after the war. This Committee was appointed in May last with Lord Northcliffe as chairman. The terms of reference were very wide and included aeronautical research and education in addition to many other matters in which the Society is specially interested. In fact the discussions of this Committee have had such a bearing upon the activities of the Society and upon those of the Society of British Aircraft Constructors that development in those directions has been deferred until after the Committee has made its report, an event which appears to be likely to occur in the near future.

It may be mentioned that in addition to Lord Northcliffe, the chairman, and the acting chairman, Major Baird, D.S.O., M.P., Under-Secretary of State of the Air Ministry, all the chairmen of the special sub-committees (five in number), Lord Sydenham, Major-General Ruck, Mr. White Smith, Mr. H. G. Wells and Colonel O'Gorman, and many of the members of the Civil Aerial Transport Committee are also members of the Aeronautical Society, so that the Society is very fully represented.

Meetings.

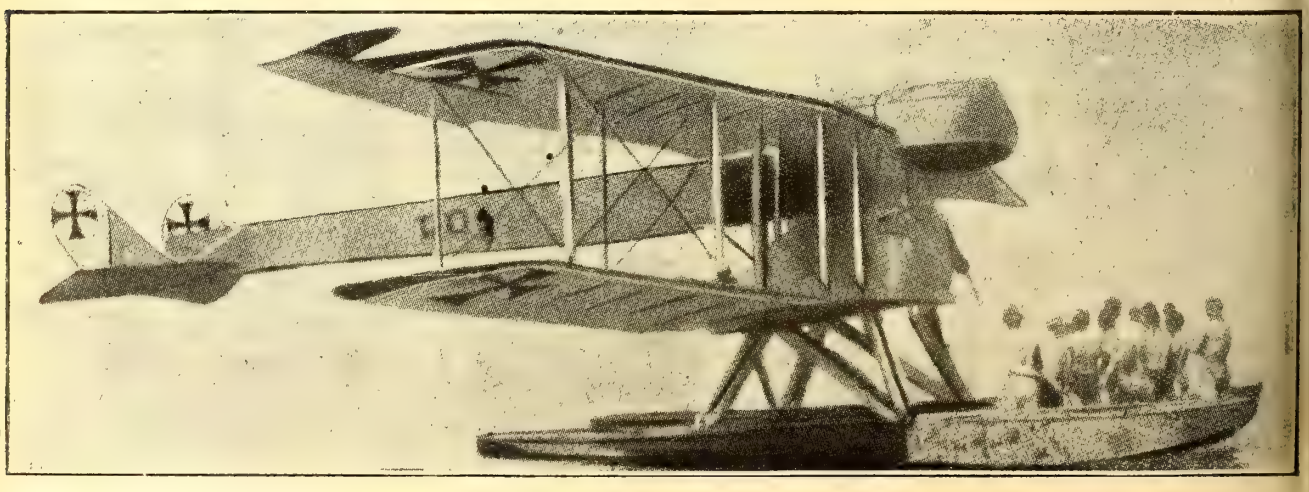
During the early spring of the present year the excellent series of lectures provided for the members was largely interrupted by public necessity. Many of the papers offered had on account of the subjects with which they dealt to be withdrawn, as in the opinion of the authorities it was prudent to withhold such matters from publication lest they prove of service to the public enemy In spite of this, however, many interesting and valuable papers were given and the Council desire to acknowledge the kindness of Major-General W. S. Brancker, Sir Richard Glazebrook F.R.S. (Director of the National Physical Laboratory), Sir Napier Shaw, F.R.S. (Director of the Meteorological Office) Major Lyons, F.R.S., Lieutenant-Colonel O'Gorman, C.B. Lieutenant-Colonel R. K. Bagnall Wild, A.I.D., Major Bertram Hopkinson, F.R.S., Sir Henry Fowler (Assistant Director of Equipment to the Air Ministry), Professor Groom, and Mr. G. Holt Thomas for their support in consenting to preside at the fortnightly meetings.

The Council also offer their most cordial thanks to Captain F. M. Green, Mr. W. H. Dines, F.R.S., Mr. J. R. Pannell Dr. A. P. Thurston, Mr. R. Borlase Matthews, Mr. W. H. Barling, Messrs. W. W. and A. G. Hackett, and Mr. W. J. John for the series of admirable lectures.

Popular Lecture.

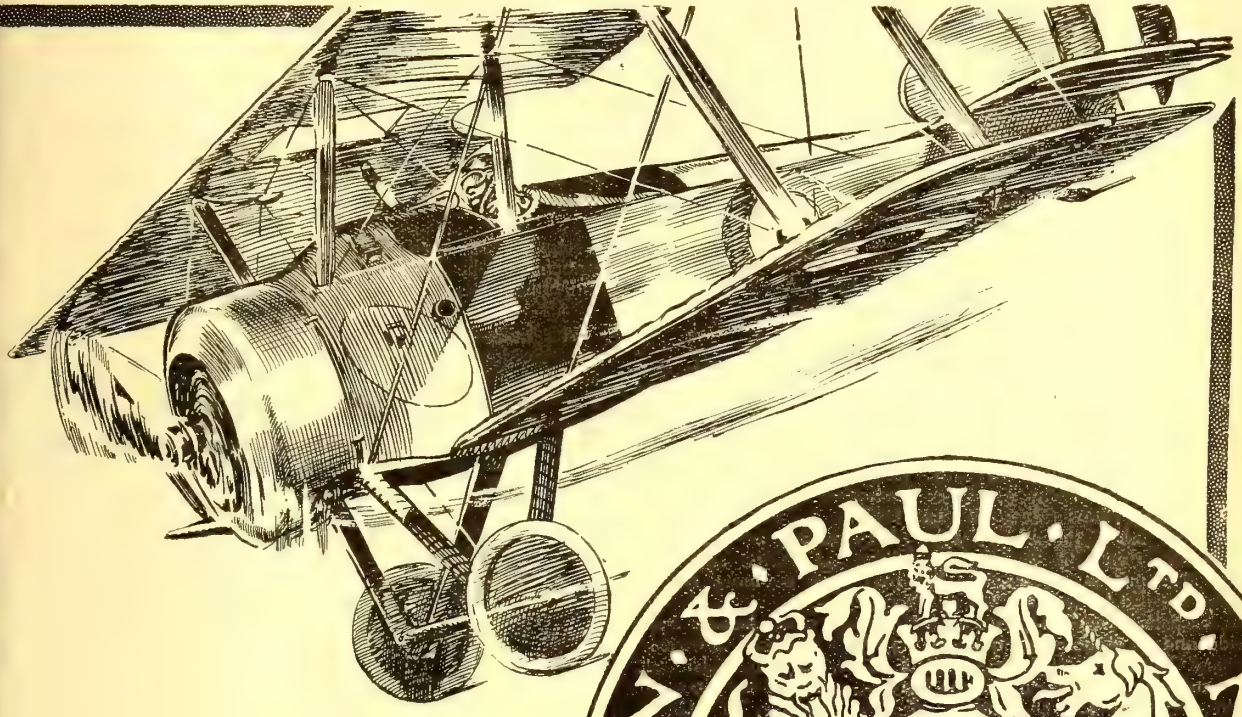
A second popular lecture was arranged in the Central Hall Westminster, on June 21st, 1917, when Colonel Lord Montagu of Beaulieu lectured on "The World's Air Routes and their Regulation." The meeting was an unqualified success, over 2,500 persons being present. General R. M. Ruck, C.B., C.M.G. R.E., the Chairman of the Society, presided.

Juvenile Lecture.



On January 2nd a new departure was made in the syllabus of the Society in that a Juvenile Lecture was given to the children of members and friends. An attendance of more than 500 young people listened to an excellent lecture on "The Aeroplane," kindly delivered by Dr. A. P. Thurston. The Council desire to acknowledge the assistance they received from Mr. Smith Woodward of the Natural History Museum, Mr. Edwards of the Northampton Polytechnic, Mr. A. F. Houlberg, Captain Maddick of the Scala Theatre, Messrs. Pathé Frères, Messrs. Calthrops, Ltd., Messrs. Handley Page, Ltd., and Dr. R. Mullineaux Walmsley, in providing and arranging slides, cinematograph, models and experiments.

Educational Lectures.



Acting on the suggestion of the Air Ministry courses of educational lectures similar to those delivered at Hendon last year through the generosity of Mr. Handley Page have been delivered in other principal centres of the aircraft industry, and these lectures, principally intended for the workpeople engaged in the industry, were very largely attended, the average attendance being over 500 per lecture. Courses of ten lectures each were given at Birmingham, Hammersmith, the Royal Aircraft Factory (South Farnborough), Bristol, Southampton, Peterborough, Leeds, Norwich, Lincoln and Coventry.

The thanks of the Society are due to the National Advisory Committee of Aeronautics and to the Air Ministry for the permission given for members of the staff of the National Physical Laboratory and for officers of the Flying Services respectively to give lectures. The Council confess their great indebtedness to Captain F. M. Green, Mr. E. F. Relf, Mr. A. Fage, Captain F. S. Barnwell, Captain Aston, Commander C. C. Turner, Lieutenant-Colonel J. N. Fletcher, Major G. I. Taylor, Professor Duffield, Mr. R. O. Boswall, Captain J. S. Irving, Mr. J. D. North, Mr. F. H. Bramwell, Commander W. Lockwood Marsh and Captain Fleming Williams, who so ably delivered the lectures.

The Council also desire to acknowledge the great kindness of Sir Henry Fowler, Major H. Grinsted and Mr. Greenley of the Royal Aircraft Factory, the Austin Motor Co., Ltd., of Birming-

Another view of the quaint German seaplane, which is faintly reminiscent of an experimental aeroplane built in the early days of the war, and called The "Sparrow."

BOULTON & PAUL LTD NORWICH

HONI SOIT MAL Y PENSE
DIEU ET MON DROIT
By Appointment

THE firm of Boulton & Paul, Ltd., was established in the Eighteenth Century and has enjoyed for many years a world wide reputation as engineers and craftsmen in metal and woods. In the making of aircraft it brings to bear on the problems of a new industry knowledge and experience possessed by scarcely any other firm. Coupled therewith is a determination to maintain at all costs the fame it has so long enjoyed for the high quality of its products.

ham, Messrs. A. V. Roe, Ltd., Dr. A. Hill of the University College of Southampton, Messrs. Gwynnes, Ltd., of Hammersmith, the British and Colonial Aeroplane Co., the University of Bristol, the Blackburn Aeroplane and Motor Co., the University of Leeds, the Siddeley-Deasy Motor Car Co., Ltd., of Coventry, Messrs. Boulton and Paul, Ltd., of Norwich, Messrs. Ruston, Proctor and Co., Ltd., of Lincoln, and Messrs. Frederick Sage and Co., Ltd., of Peterborough, in assisting with the arrangements for the lectures.

The thanks of the Council are again due to Mr. Handley Page for arranging a second course of educational lectures at Hendon.

The Technical Terms Committee.

Recognising the importance of standardising the terms used in relation to aircraft, the Council last July appointed a strong sub-committee to deal with this subject. Other bodies interested were invited to send representatives, and the Sub-Committee, as finally constituted, consisted of the following:—Lt.-Col. O'Gorman, R.A.F., Mr. L. Bairstow, F.R.S., Lt.-Col. Briggs, R.A.F. (late Wing Comdr., R.N.), the late Mr. B. G. Cooper, Major A. R. Low, R.A.F. (late Lt.-Comdr., R.N.V.R.), and Mr. R. Borlase Matthews (Aeronautical Society); Messrs. W. Cannell, R. K. Pierson and R. Seabrook (Society of British Aircraft Constructors); Mr. C. G. Grey (Royal Aero Club); Lt.-Col. Cave Brown Cave, R.A.F. (late Wing Comdr., R.N.), Major Clarson, R.A.F., Captain Ewen, R.A.F., Lt.-Col. Landon, R.A.F., and Capt. Myers, R.A.F. (Air Ministry); Lt. A. C. Day (War Office and Admiralty); Mr. A. S. A. Ormsby (Patent Office); Mr. F. J. Selby (Advisory Committee on Aeronautics); and Sir Napier Shaw (Meteorological Office).

[One has taken the liberty here of correcting as nearly as possible the ranks of the various officers as varied since the Report was put into print, so that they may be more readily recognised.—Ed.]

On occasion the Sub-Committee has been much helped from outside and is grateful particularly to the National American Advisory Committee on Aeronautics for its sympathetic assistance. The American Missions in Europe have on occasion been present at the meetings in the persons of Dr. Durand, Mr Coker Clarkson and Mr. Ericson, and are now permanently represented on the Committee by Mr. W. G. Renals.

In view of the risk of overlapping of this important work, by arrangement with the Engineering Standards Committee, the Technical Terms Sub-Committee also acts as the Nomenclature Committee (Aircraft Section) of the British Engineering Standards Committee. The Sub-Committee has already examined and classified several hundreds of terms. It is dealing with the matter in an exhaustive manner and due acknowledgments should be made for much patient and laborious work in important undertakings on the part of all those who have co-operated. The Council desire especially to mention the services of Lt. Col.-O'Gorman, who undertook the onerous and responsible duty of Chairman of the Committee.

Patents Bill.

The Society took part in an important conference on the rights of inventors under the New Patents Bill, convened by the Institution of Mechanical Engineers, the Society being represented by Mr. Griffith Brewer, Mr. A. Pickles and the Secretary. The informal opinion of the conference was duly taken and negotiations are still pending.

Engineering Training.

On the initiative of Mr. A. E. Berriman, a member of the Council of this Society, a conference of all the bodies in this country interested in engineering education was summoned at the Institution of Civil Engineers on October 25th, the representatives of this Society being Dr. R. Mullineux Walmsley and Mr. B. G. Cooper. An influential committee was formed with the object of co-ordinating this branch of technical education, and to carry into effect the decision of the conference.

Department of Scientific and Industrial Research.

The Council has in common with the Society of British Aircraft Constructors taken the initial steps towards forming a Research Association in connection with this department.

The Library.

The Council desire to express their grateful acknowledgments to Mrs. McAlister, who has re-catalogued and arranged the whole of the Library. A large amount of binding has been done and many new books added. Every attempt is being made to bring the Library thoroughly up to date and as complete as possible. The Council desire to acknowledge gifts of books and prints from Mr. Charles Bright, Colonel de Villamil, Mr. Hatton Turner, and others. The Council also desire to acknowledge the courtesy displayed to this Society by the Society of Automotive Engineers in the United States in arranging with them for a supply of American aeronautical publications.

The Journal.

After running for exactly twenty years as a quarterly, the "Aeronautical Journal" is now being issued as a monthly, and it is hoped that members will appreciate this attempt to give them earlier access to the recorded proceedings of the Society. The price of the Journal to non-members has been largely increased, and the Council desire to point out that members of the Society now receive in the form of publications considerably more than the nominal amount of their subscription, and this quite apart from the other advantages of the Society.

Branches.

Negotiations are in progress for the establishment of graduate branches of the Society at South Farnborough, Hendon, Glasgow and Manchester.

Abstracts.

The need of a complete abstract of the world's Press and scientific journals dealing with aeronautical subjects, has long been felt. The Council are glad to announce that in consequence of arrangements which have been completed and with the valued assistance of the War Office and the National Physical Laboratory the Society will shortly be in a position to publish complete abstracts for the benefit of aeronautical science and industry in this country.

Administration.

The Council desire to acknowledge the very willing and able assistance which they have received from their Secretary (Mr. W. Barnard Faraday) and the staff in carrying out the programme of work sketched out above, together with the general secretarial duties of the Society.

Miss Phyllis Boyd, who was appointed Assistant Secretary in December, 1916, resigned her position for private reasons in September. The Council desire to acknowledge Miss Boyd's efficient services. After a little delay Miss Olive St. Barbe was appointed to the vacancy and has rendered valuable assistance to the Society.

Finance.

The financial position of the Society is satisfactory and continues to improve, but the Council strongly urge the necessity of a further increase in membership. Much work remains to be done which can only be accomplished by the greater income which will follow the enlargement of the Society.

The credit balance of the Society on December 31st, 1917, was £1,409 5s. 2d., an improvement of £704 15s. 8d. over the previous year, notwithstanding a large increase in necessary expenditure. On March 31st, 1918, the credit balance of the Society stood at £2,499 2s. 8d.

The Society has been in a position to convert the whole of the sums received as entrance fees and life compositions in accordance with the view of the hon. auditors that their money should be treated as capital and not as income. Investment was made in July of funds belonging to the Society amounting to £750 in War Loan, and in "Tank Week" in London on March 9th, 1918, the Society invested a further £100 in National War Bonds. Further sums are awaiting investment.

In addition to this the various trust funds which the Society administers stand at nearly £2,000. The Council are glad to announce that the lack of punctuality in payment of subscriptions, to which they drew attention in the last report, has been very much mitigated and that the number of overdue subscriptions is comparatively small.

The Hon. Officials.

The Council desire to express their most cordial thanks to the hon. auditors, Messrs. Jas. E. Ward and Co., for their services in auditing the books of the Society, and to Mr. B. Woodward, the hon. solicitor, who has advised them throughout the year.

Mr. R. Borlase Matthews moved the adoption of the accounts and balance-sheet. It was a great pleasure to learn of the satisfactory financial position of the Society. Mr. F. Bramwell seconded, and the accounts were unanimously approved.

The Council of the Society.

The Scrutineers announced the result of the Ballot, having found that on a count of the votes received the following were elected to the Council:—

Major-General Ruck,
Mr. L. Bairstow,
Dr. T. E. Stanton,
Maj. A. R. Low,
Lt.-Col. R. K. Bagnall Wild,
Mr. H. White Smith,
Dr. R. Mullineux Walmsley,
Mr. F. H. Bramwell.

AEROPLANE DESERTERS.

According to an Exchange message from Copenhagen three German aeroplanes participated in the flight of deserters from an aerodrome near Berlin to Scandinavia. One aeroplane reached the Danish island of Langeland, another came down at Valby, outside Copenhagen. The third was probably shot down in the Baltic.

NO. 12 SQUADRON, R.F.C. (1916), B.E.F.

Will officers who were serving in the above squadron in France in 1916 please communicate giving their present addresses to Lt.-Col. J. C. Halahan or Captain Creswell Turner?—Replies should be addressed c/o H., The Aeroplane.

ROLLS-ROYCE

Rolls-Royce Aero Engines like Rolls-Royce Cars are the Best in the World.

"By-the-way, I hear most enthusiastic accounts of the quality of these Rolls-Royce Engines from those who use them, and certainly Rolls-Royce, Ltd., deserve the thanks—which I believe have been expressed officially—of the Allies for the manner in which they have from the very beginning put all their energies into, and devoted all their resources to, the equipment of our aerial forces."

ROLLS-ROYCE

THE PARLIAMENTARY AIR COMMITTEE.

About eighty Peers and Commoners interested in military aeronautics were present at a meeting of the Parliamentary Air Committee, held at the House of Commons on June 18th under the presidency of Mr. Joynson-Hicks. The following resolutions were passed :—

1. The Committee view with grave concern the arrangements for the construction and supply of high-power flying machines for next year's campaign.

2. They observe with great anxiety the heavy loss of life sustained in the training of pilots in this country, and the inadequate medical service.

3. They feel that the question of the Loch Doon aerodrome cannot be allowed to remain in its present inconclusive position, and that further investigation should be undertaken by the War Office Sub-Committee on National Expenditure, with the view of fixing responsibility for such an unwarrantable waste of public time, labour, and money.

4. They consider that the position of the Secretary of State for the Air Force, without a seat in either Houses of Parliament, is highly unconstitutional, and request the Government to provide a date for the discussion of a resolution on the subject.

(After the meeting it was ascertained that the Secretary of State, Sir William Weir, had been elevated to the Peerage.)

The peers attending the gathering included the Duke of Somerset, Earl of Powis, Earl Russell, Viscount Galway, Lord Aberdare, Lord Leith of Fyvie, Lord Saye and Sele, Brig.-Gen. Lord Montagu of Beaulieu, Lord Sydenham, and Lord Oranmore and Browne. Maj. Alan Burgoyne was present as hon. secretary.

THE SECRETARY OF STATE AND THE PARLIAMENTARY AIR COMMITTEE.

On June 20th Sir William Weir—as one must call him for lack of his new title—met a number of Members of Parliament, to enlighten them on the position of the Royal Air Force. One gathers that the Air Minister's statement was eminently reassuring, without in any way minimising the gravity of the situation in some respects.

AIRCRAFT IN THE HOUSE.

On June 20th **Colonel Yate** asked the Under-Secretary to the Air Ministry whether the officers of the Royal Air Force were about to be ordered to provide themselves forthwith with light blue uniforms instead of continuing to wear the recently-introduced khaki Royal Air Force uniform until the end of the war, as had been hitherto understood; and if so, considering the expense that would be inflicted upon all the young officers who had provided themselves with the khaki uniform, the Air Board would consider the advisability of postponing the issue of the proposed orders.

Major Baird: This matter is under consideration. If the change is decided upon officers will not be ordered to provide themselves with the new uniform until their present uniform is worn out.

Colonel Yate asked whether it was not the case that the present uniform was only brought into use in March last, and was it not very unfair to bring in another before the end of the war.—**Major Baird** replied that if a new uniform was brought in, it ought not to be compulsory until the present uniform was worn out.—**Mr. Harcourt:** Has the hon. and gallant gentleman considered the point that these officers in large numbers already have a military khaki uniform, a Royal Air Force uniform, and a naval uniform, and does he consider another uniform is justified on public grounds?—**Major Baird** said the whole question had been gone into. It was a very important matter from the point of view of *moral* and *esprit de corps* of the force, and if it turned out to be necessary and desirable that a new uniform should be decided upon for the corps as a whole, the officers would not be called upon to incur expense before the old one was worn out.

AN AIR MINISTRY ADDITION.

Mr. Frederick Palmer, C.I.E., M.I.C.E., partner in the firm of Messrs. Rendel, Palmer, and Tritton, consulting engineers, has accepted the invitation of the Secretary of State for the Royal Air Force to act as honorary adviser to the Air Ministry in engineering questions associated with the Department of Works and Buildings.

Mr. Palmer, who was born in 1862, was an articled pupil and assistant engineer on the Great Western Railway. While engineer to the East Indian Railway, from 1884 to 1901, he constructed the bridge over the River Sone, the largest bridge in India. He became chief engineer of the Calcutta Port Commissioners in 1901, and eight years later was appointed chief engineer of the Port of London Authority, a position which he held until 1913.

RECENT AIR OPERATIONS.

Mr. Percival Phillips, the "Daily Express" Special Correspondent, with the British Armies in the Field, in a message, dated June 24th, says :—German losses in aeroplanes have been very severe of late. Long-distance bombing machines, which form the backbone of the new offensive formations, have been lost while returning from their expeditions over the British lines, sometimes in consequence of attacks by British battle squadrons and also through crashing heavily while trying to land in the darkness.

I understand that the attack on London on the night of May 19th-20th was an especially disastrous enterprise. Seven machines were reported missing, and three others crashed on landing, a the crews being killed.

The activity of British bombers is unrelaxed. During th second week in June nearly 120 tons of bombs were dropped o various military targets, and over 60 hostile aeroplanes wer brought down, in addition to 31 driven down out of control.

Among recent feats of British aviators was the location an pursuit of a long-range gun on the railway which was preparin to fire into British back areas. The gunners were attacked re peatedly as they shifted from place to place, and finally, afte moving back nearly three miles, they gave up the attempt i disgust and the gun remained silent.

FOR A GOOD CAUSE.

It will be remembered that in September, 1914, at the speci request of Gen. Sir David Henderson, K.C.B., D.S.O., the Aeri League of the British Empire, organised a fund for assisting th widows and other dependents of N.C.Os. and men of the Roy Air Force who lose their lives on active service.

The fund has been instrumental in giving financial assistance t over 160 families, but the claims are coming in so increasingl that it has been decided to hold a performance at the Scal Theatre, Charlotte Street, W., on June 30th, which will be unde the patronage of :—The Rt. Hon. Sir William Weir, Secreta of State for the Air Force, and now a Peer; Maj.-Gen. Sir F. H Sykes, C.M.G., Chief of the Air Staff; Maj.-Gen. Sir Godfre Paine, K.C.B., M.V.O., the Master-General of Personnel; Maj Gen. H. T. Arbuthnot, C.B., chairman and hon. treasurer of th fund.

The use of the theatre has been given gratuitously by the pr prietor (Dr. Distin-Maddick), and the performance is being o ganised by Lt. St. J. Shadwell Clerke and Lt. E. Clive Fowle both of the R.A.F.

Permission has been granted by the Air Ministry for the exhib tion of special films, which have never been shown publicly, and number of artistes have given their services.

The prices of tickets are as follows :—Dress circle stall 10s. 6d., 7s. 6d., 5s.; orchestra stalls, 7s. 6d., 5s.; balcony (upp circle), 3s., 2s.; pit stalls, 2s.

Applications for tickets should be addressed to Mr. H. H. Va nier, hon. secretary of the fund, the Aerial League of the Briti Empire, 46, Dover Street, W.1.

A CANADIAN AERIAL MAIL.

The "Daily Telegraph" correspondent at Montreal, cablir on June 23rd, said that the first aerial mail delivery in Cana was to be inaugurated on Monday, June 24th, between Montre and Toronto, a distance of 320 miles. Capt Bryan Peck, the Royal Air Force, who has seen several years' service France, was to leave Montreal at sunrise, with a packet of 3 letters, directed to various persons in Toronto.

The aviation authorities at Montreal and Toronto intend th as the beginning of aerial mail service developments, with t object, at the close of the war, when hundreds of expert Canadi military aviators return to Canada, of establishing a regul mail service between Montreal, Toronto, and other cities.

The Canadian air service has been growing rapidly lately, a the training camps in the neighbourhood of Toronto are fille a feature being the popularity of this service with the Frenc Canadians, who have sent a large number of men to train f aviation service overseas.

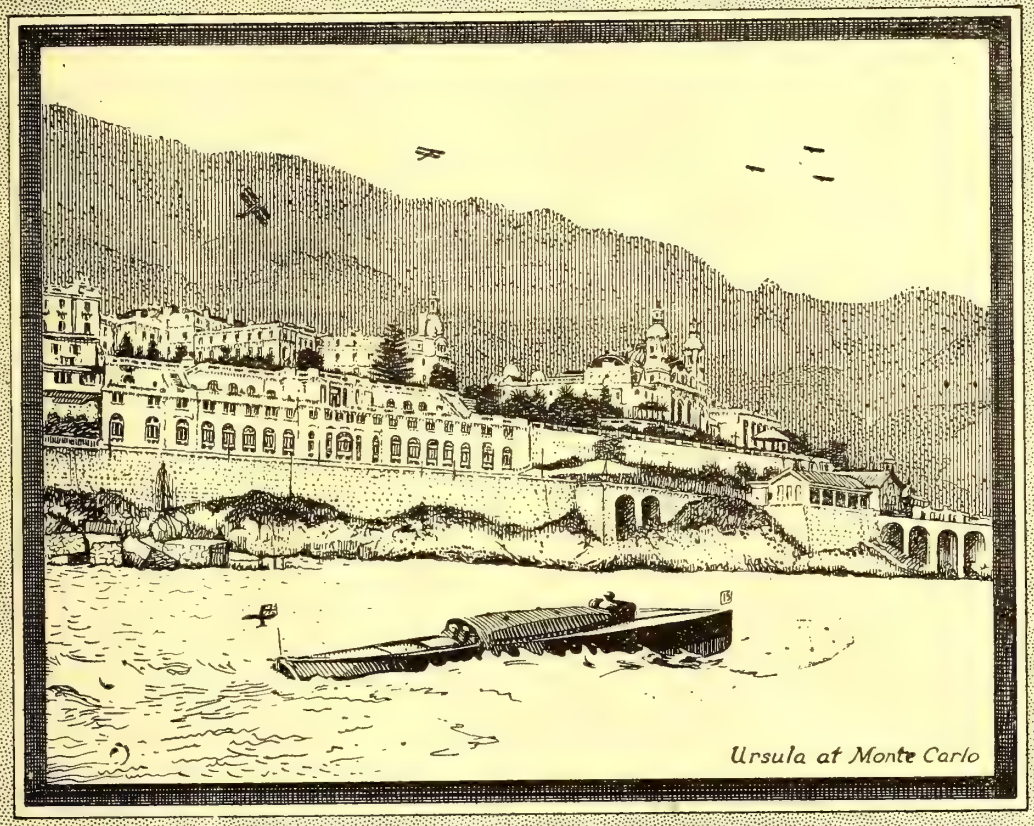
Later news says that Capt. Peck duly started on Monday.

FINDINGS NOT KEEPINGS.

From the "Stratford Express," June 15th, 1918 :—

At East Ham Police Court, on Thursday, Charlotte Wall w summoned for failing to notify the finding of an article from a enemy aeroplane.

Station-Sergt. Smith 66K, said that on May 26th he sa Mrs. Wall, and told her he had information that she had portion of a machine in her possession. She produced a gaug She said it was in her back garden, and thought it was of litt value.



An Army Captain described the article as a height gauge fro a German aeroplane that was brought down by gunfire. Th instrument was made at Stuttgart.

Mr. Grubbe: If not tampered with, it would in all probabili have registered the heignt which the aeroplane had reached?- That is so—which information, of course, is of great valu to us.

Defendant pleaded not guilty, and called her husband, a stok in the Navy, who said he picked up the gauge in his garde A gentleman from the Town Hall came to his house, and witne gave him a souvenir, and thought he would keep the gaug himself as a souvenir. This gentleman reported it to the polic and when the officers called, he—not his wife—handed the the gauge.

P.C. Randall, 92K, who accompanied Station-Sergt. Smith confirmed the latter's statement. He did not see the husband.

Mr. Grubbe said he believed the police evidence, and reminde the defendant that the offence came under a very importa section of the Defence of the Realm Act. She was liable to penalty of £100, in addition to six months' hard labour. H imposed a fine of 20s. or 13 days.

GEOFFREY WATSON

FROM THE "LONDON GAZETTE."

ADMIRALTY, June 18th.

The King has been pleased to award the Albert Medal to Actg. Flt. Comdr. Paul Douglas Robertson, R.N.A.S., in recognition of his gallantry in endeavouring to save life in February last. The circumstances are as follows:—

On February 28th, 1918, a seaplane got out of control and spun to the ground. Actg. Flt. Comdr. Robertson, the observer, jumped from the machine just before it reached the ground and landed safely, as the ground was marshy. The pilot, Flt. Lt. H. C. Lemon, was imprisoned in the seaplane, which, on striking the ground, immediately burst into flames, and, notwithstanding that the vicinity of the seaplane was quickly a furnace of blazing petrol, and that heavy bombs, a number of rounds of ammunition, and the reserve petrol tank were all likely to explode, Actg. Flt. Comdr. Robertson returned and endeavoured to extricate the pilot, and only desisted when he had been so severely burned in the face, hands, and leg that his recovery was for some time in doubt.

He displayed the greatest gallantry, self-sacrifice, and disregard of danger in his efforts to extricate the pilot.

AIR MINISTRY, June 18th.

R.A.F.—The follg. temp. appts. are made at the Air Ministry:—Staff Officer, 1st Cl. (Q.).—A. Sykes, O.B.E. (temp. Lt.-Col. in Army), and is granted a temp. commn. as Lt.-Col., April 15th.

Staff Officer, 2nd Cl. (S.).—Capt. (temp. Maj.) V. Ward-Brown, M.C., May 20th.

Staff Officer, 4th Cl. (S.).—Sec. Lt. J. Keyes, and to be temp. Lt. while so empld., May 26th.

The follg. temp. appts. are made:—

Staff Officers, 2nd Cl.—And to be temp. Majs., if not already holding that rank (Air):—Capt. G. C. Anne, Capt, T. E. Longridge, April 1st; (Q.) Maj. J. W. Allsop, April 20th; (P.) Capt. L. M. P. Sullivan, June 11th.

Staff Officers, 3rd Cl. (Air):—Capt. E. N. E. Waldron, April 1st; Lt. (temp. Capt.) E. D. Cole, June 8th; (P.) Capt. (temp. Maj.) H. F. A. Gordon, and to relinquish his temp. rank, May 9th; Lt. J. A. D. Wallis, and to be temp. Capt. while so empld, May 15th.

FLYING BRANCH.—Maj. J. A. Cunningham to be temp. Lt.-Col. while empld. as Lt.-Col. (A. and S.), June 2nd.

Lts. to be temp. Lt.-Cols. while empld. as Lt.-Cols. (K.B.):—(Temp. Maj.) S. Bell (Temp. Capt.) O. A. Butcher, D.S.C., May 22nd.

Lts. (temp. Capts.) to be temp. Majs. while empld. as Majs. (A. and S.):—A. J. M. Clarke, April 1st; J. B. Solomon, M.C., April 13th.

Lts. (Hon. Capts.) to be temp. Majs. while empld. as Majs. (K.B.):—E. A. O. Auldjo-Jamieson, A. W Cassy, H. E. Crawfurd, J. de Francia, J. H. D. Grant, M. Lyon, H. C. Morris, R. S. Smith, E. Willis, April 24th.

Lts. (Hon. Capts.) to be temp. Majs. while empld. as Majs. (K.B.):—P. H. Hepburn, J. Wann, April 24th.

Lts. to be temp. Capts. while empld. as Capts. (A. and S.):—R. Halley, E. G. B. Morton, S. E. Siedle, June 5th; J. D. de Pencier, June 7th; E. W. Fletcher, June 8th; F. J. Davies, N. P. Davis, June 9th.

Lts. (Hon. Capts.) to be temp. Capts. while empld. as Capts. (A. and S.):—A. W. I. Ashe, E. G. Hopcraft, J. F. Horsey, J. G. Ireland, W. R. Kenny, A. R. T. Pipon, G. H. Simpson, L. H. Wilkins, May 1st; R. E. Dean, June 6th.

Lts. to be temp. Capts. while empld. as Capts. (K.B.):—(Temp. Capt.) T. F. Morris, (Hon. Capt.) A. J. O'Reilly, (Hon. Capt.) W. H. Sharpe, April 24th.

W. Wallace (Lt., actg. Capt., R.F.A., T.F.) is granted a temp. commn. as Lt., and to be temp. Capt. while empld. as Capt. (K.B.), May 25th.

R. H. Galloway (prob. Flt. Officer, late R.N.A.S.) is granted a temp. commn. as Sec. Lt. (A. and S.), June 2nd.

Temp. Sec. Lt. H. W. Petter (late Gen. List, R.F.C., on prob.) is confirmed in his rank as temp. Sec. Lt. (A. and S.), April 3rd.

Temp. Sec. Lt. W. Thornton (late Gen. List, R.F.C., on prob is confirmed in his rank as temp. Sec. Lt. (K.B.), April 1st.

Temp. Sec. Lts. (late Gen. List, R.F.C., on prob.) are co firmed in their rank as temp. Sec. Lts (Obsr. Officers):—A Slinger, May 2nd; L. F. Thurlow, May 7th; M. B. Josep May 8th; E. REGULAR FORCES—Establishments—R.F.C.—Mil. Wing. —Flt. Comdrs.—From Flying Officers, and to be temp. Capts. whilst so empld.:—Lt. R. S. Larkin, M.C., Spec. Res., Jan. 22nd; Temp. Sec. Lt. W. M. Blackie, M.C., Gen. List, Feb. 25th.

Admiralty, June 21st.

The King has been pleased to approve of the award of Bars to the Distinguished Service Cross to the following officers late of the Royal Naval Air Service:—

A Bar to the Distinguished Service Cross.

Lt. (temp. Capt.) S. T. Edwards, D.S.C., R.A.F.

For conspicuous bravery and most brilliant leadership of fighting patrols against enemy aircraft. On May 2nd, 1918, while leading his patrol of four scouts, he encountered a hostile formation of eight enemy scouts, and drove down one enemy machine completely out of control. Soon afterwards he engaged another formation of six enemy scouts, driving down one to its destruction while his patrol accounted for another. He only broke off the fight owing to lack of ammunition. He has destroyed or driven down out of control many enemy machines since he was awarded the Distinguished Service Cross, and has at all times shown the greatest gallantry and a fine offensive spirit.

Lt. (Hon. Capt.) A. R. Brown, D.S.C., R.A.F.

For conspicuous gallantry and devotion to duty. On April 21st, 1918, while leading a patrol of six scouts he attacked a formation of 20 hostile scouts. He personally engaged two

Fokker triplanes, which he drove off; then, seeing that one of our machines was being attacked and apparently hard pressed, he dived on the hostile scout, firing the while. This scout, a Fokker triplane, nose-dived and crashed to the ground. Since the award of the Distinguished Service Cross he has destroyed several other enemy aircraft, and has shown great dash and enterprise in attacking enemy troops from low altitudes despite heavy anti-aircraft fire.

Lt. (Hon. Capt.) A. T. Wheatly, D.S.C., R.A.F.

For conspicuous gallantry and devotion to duty. He has proved himself to be a brilliant fighting pilot. Under his able and determined leadership his flight has engaged and accounted for many enemy machines, he himself being personally responsible for many of these.

A Second Bar to the Distinguished Service Cross.

Lt. (temp. Capt.) T. F. Le Mesurier, D.S.C., R.A.F.

For gallantry and consistent good work. He has at all times displayed the utmost gallantry in action, and by his determination and skill has set a very fine example to the pilots of his squadron. On April 23rd, 1918, in spite of bad weather conditions, he successfully dropped bombs on the Ostend Docks from a height of 800 ft. amidst very intense anti-aircraft and machine-gun fire. He also made valuable observations. He has taken part in many bomb raids, and has destroyed or driven down out of control several enemy machines.

Air Ministry, June 21st.

R.A.F.—The follg. temp. appts. are made at the Air Ministry:—Staff Officer, 2nd Cl. (S.)—Lt. (temp. Capt.) D. C. James, and to be temp. Maj. while so empld., vice Capt. (temp. Maj.) G. S. Peacock, June 6th.

Staff Officers, 3rd Cl.—And to be temp. Capts. if not already holding that rank (S.):—Sec. Lt. (temp. Capt.) A. W. Rippon, April 1st; Sec. Lt. D. L. C. Evans, vice Lt. (temp. Capt.) F. A. Barton, April 24th; Sec. Lt. R. H. Smyth, vice Lt. (temp. Capt.) D. C. James, June 5th.

The follg temp. appts. are made:—Staff Officers, 1st Cl. (Air).—Maj. (temp. Lt.-Col.) P. C. Maltby, D.S.O., and to retain his temp. rank whilst so empld, May 1st; Maj. R. Hilton-Jones, and to be temp. Lt.-Col. while so empld., June 3rd.

Staff Officers, 2nd Cl.—Lt. (temp. Capt.) C. Death, and to be temp. Maj. while so empld, April 1st.

Staff Officers, 3rd Cl.—And to be temp. Capts. whilst so empld. if not already holding that rank (Q.):—Sec. Lt. (Hon. Lt.) E. Vevers, May 13th (P).—J. Robertson (temp. Capt., Gen. List), and is granted a temp. commn. as Capt., June 3rd; Lt. H. Lawson, June 8th. (Air).—Capt. D. L. Cox, June 5th.

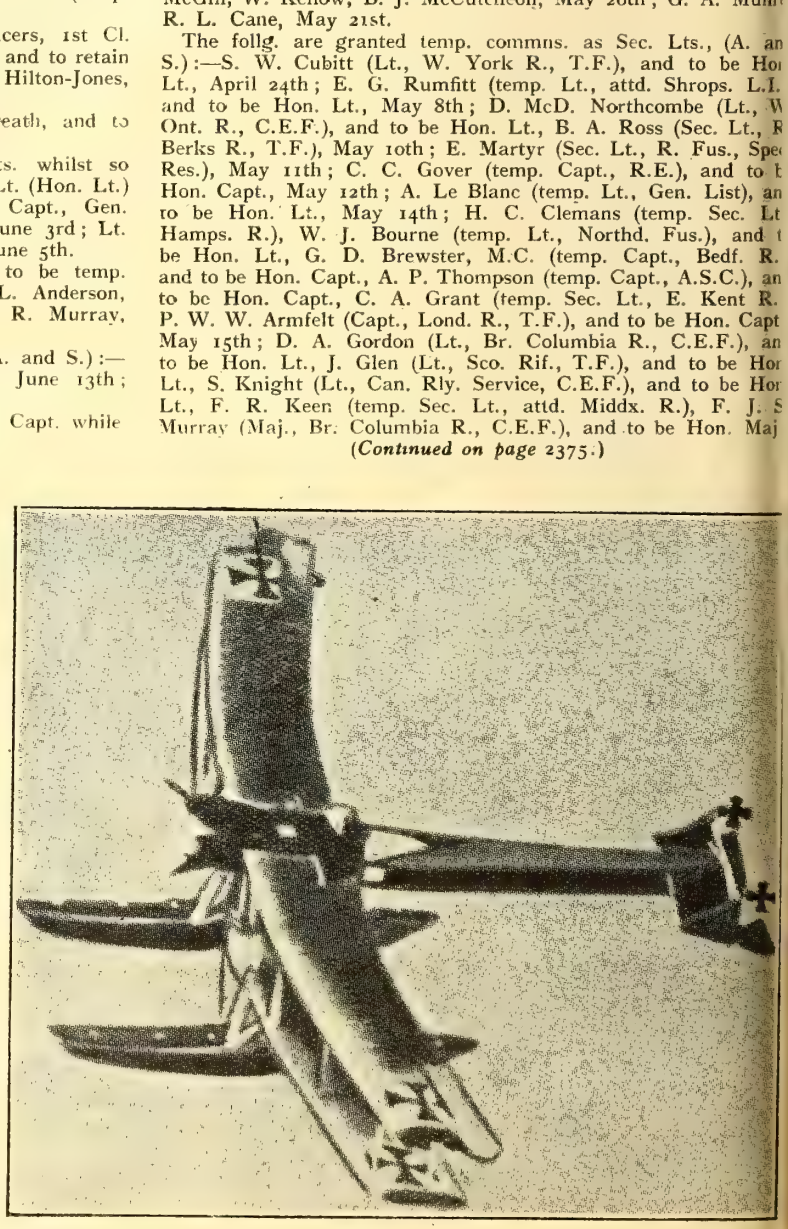
Flying Branch.—The follg. Lts. (Hon. Capts.) to be temp. Capts. while empld. as Capts. (A. and S.):—W. L. Anderson, D.S.C., C. H. Keith, C. R. Morrish, D.S.C, E. R. Murray, May 1st; H. C. Sootheran, June 3rd.

Lts. to be temp. Capts. while empld. as Capts. (A. and S.):—V. F. Jaynes, June 12th; C. F. Horsley, M.C., June 13th; J. Gray, R. J. Rodwell, June 15th.

Sec. Lt. (Hon. Maj.) F. W. K. Davies to be temp. Capt. while empld. as Capt. (A. and S.), May 11th.

The follg. temp. Lts., Obsr. Officers, to be temp. Lts. (A. and S.):—J. B. Pierce, April 27th; W. K. McMillan, May 6th; R. F. Hill, M.C., May 14th; A. R. Gibson, C. H. Jordan, May 15th; J. E. L. Skelton, May 16th; W. S. Cowper-Coles, May 18th.

Temp. Lt. (Hon. Maj.) J. A. C. Wright, from Obsr. Officer, to be temp. Lt. and to be Hon. Maj., May 17th.



Temp. Sec. Lt. H. W. Arnott (Tech.) to be temp. Sec Lt. (A. and S.), May 17th.

The follg. Sec. Lts. (late Spec. Res., R.F.C., on prob.) are confirmed in their rank as temp. Sec. Lts. (A. and S.):—R. Russell, May 10th; W. J. Barber, May 19th; T. D. H. Alderton, May 20th.

The follg. temp. Sec. Lts. (late Gen. List, R.F.C., on prob.) are confirmed in their rank as temp. Sec. Lts. (A. and S.):—E. Mulcair, April 1st; J. K. Stewart, J. R. Quinn, April 2nd; P. S. Manley, April 4th; L. J. Weatherall, April 5th; W. Campbell, April 7th; F. J. Russell, C. E. Gregory, A. H. Freed, April 8th; E. G. Jones, April 13th; L. W. Savidge, H. N. Thornton, A. B. MacPherson, April 26th; S. Levett, April 28th; J. F. C. Oliver, April 30th; G. L. Winterbottom, S. B. Wright, May 4th; A. T. Dunlop, C. W. Frasier, May 6th; J. R. Brown, C. Brooks, E. C. Clarke, H. J. C. Seymour, May 8th; J. B. G. Bradley, A. Lewis, M. Tallentire, D. Oxley, C. A. Crichton, May 9th; F. C. Wiltshaw, H. F. V. Battle, R. S. McKenna, A. A. S. Milne, H. L. McLellan, P. Phillips, May 10th; H. G. Marsay, R. J. T. Wray, May 11th; A. L. Pearce, T. C. Clarkson, E. Peacock, C. O. Frost, L. S. Morck H. H. Palmer, J. Farquhar, May 12th; L. C. Holliday, H. Rae, G. E. AERONAUTICAL ENGINEERING
SUPPLEMENT TO "THE AEROPLANE"
INCORPORATING AIRCRAFT ENGINEERING, AERODYNAMICS, AND MATTERS PERTAINING TO THE AERONAUTICAL ENGINEER AND THE AIRCRAFT TRADER

THE AEROPLANES OF THE ROYAL AIRCRAFT FACTORY.

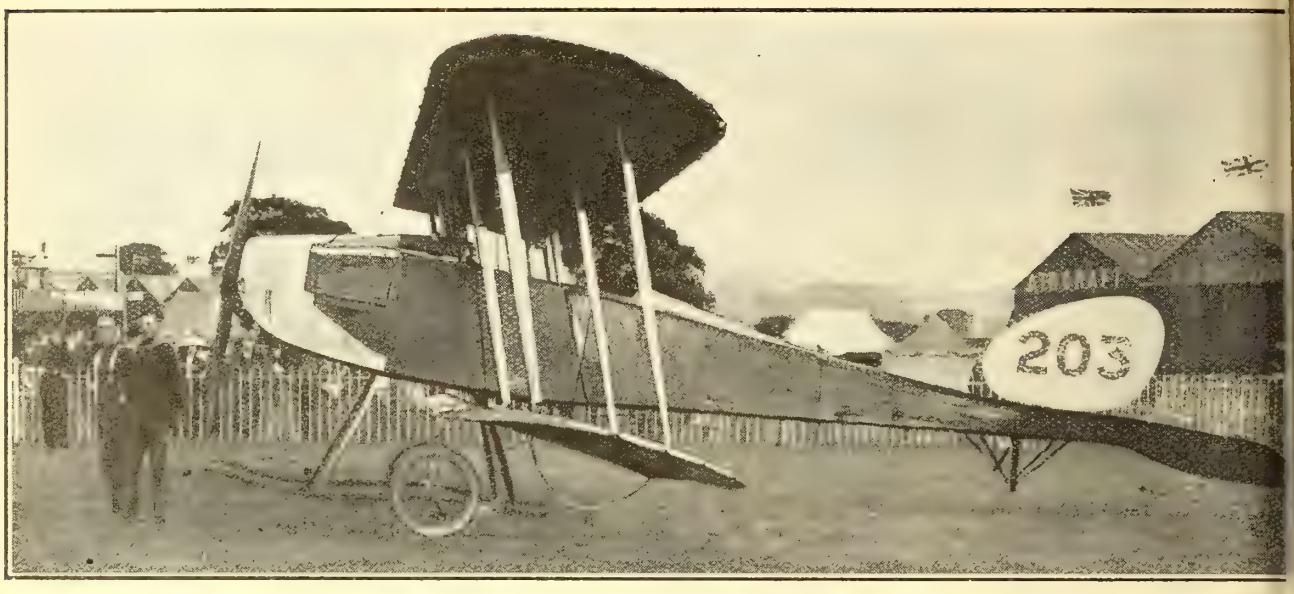
Now that the daisies have begun to grow over the grave of the Royal Aircraft Factory and, phœnix-like, the Royal Aircraft Establishment has arisen from its ashes and flapped its miniature wings over the tomb of its corpulent father, it seems fitting that a review of the aeroplanes produced by the deceased though unlamented institution should be attempted.

The courtesy of the Technical Department of the Air Ministry makes it possible to exhibit to the readers of THE AEROPLANE a collection of photographs of different aeroplanes, which though not a complete catalogue of the great procession of types which have passed out of the Royal Aircraft Factory, is sufficiently representative of the genus.

THE FONS ET ORIGO.

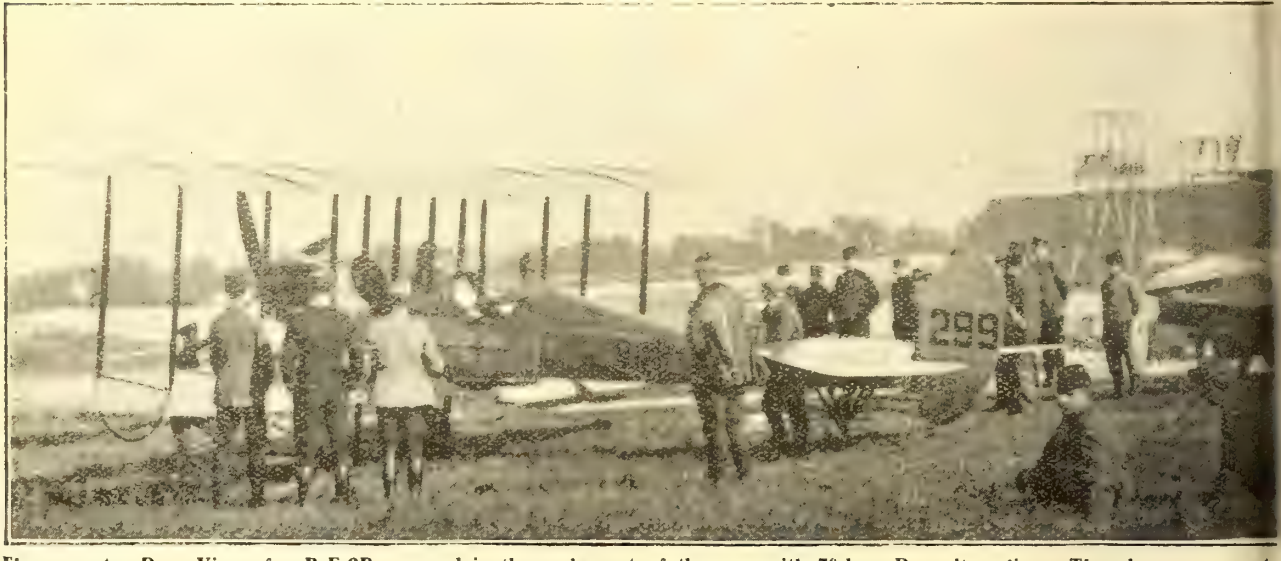
The Royal Aircraft Factory, like Rome, was not built in a day, and, unlike Rome, was not founded deliberately by a Romulus. It simply happened.

There existed at the commencement of the 20th century a certain Balloon Company, R.E., at Farnborough, whose duty in life was to control all the aerostatic appliances of the British Army, the "all" representing a few spherical balloons of various sizes.

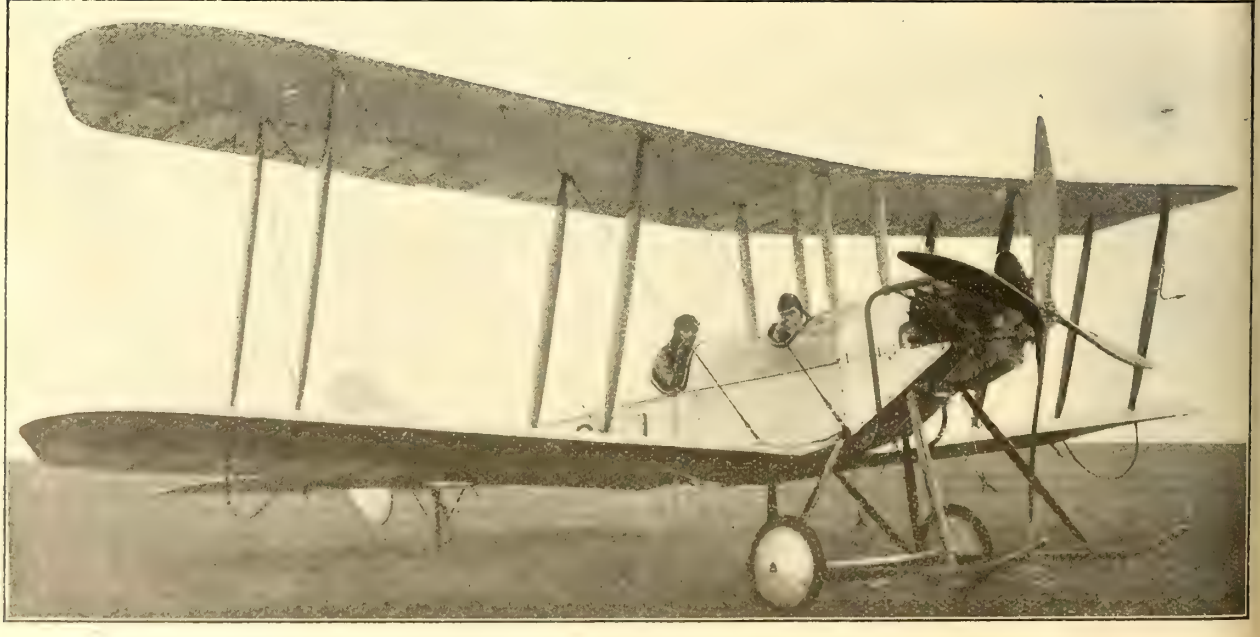


A few years later when the British Army deigned to associate itself with an airship or so, the Balloon Company was placed in charge of the self-propelling sausage balloons, and later still, when aeroplanes of weird structure were purchased from France the Balloon Co., R.E., once more assumed the glory and the danger of the new acquisitions.

The original establishment and the original name both outgrew their capacity, so additional sheds, etc., were built and the outfit was first called the Army Aircraft Factory, and in process of time the Royal Aircraft Factory.



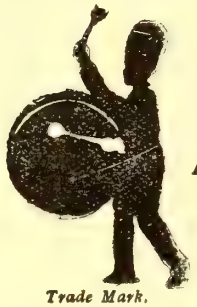
Also the control was placed in civilian hands and Mr. Mervyn O'Gorman (now Lt.-Colonel, C.B.) became superintendent.



Side View of the original B.E.2 Biplane, with 70-h.p. Renault engine, at the Military Trials of 1912.

Side View of the B.E.3, which with minor variations or with engines of different powers and altered cowls became the B.E.4 and the B.E.8, and was generally known as the "Bloater" or "Goldfish."

Three-quarter Rear View of a B.E.2B, as used in the early part of the war with 70-h.p. Renault engine. The planes were not staggered and it was not inherently stable.



Three-quarter Front View of the early type B.E.2C, with 70-h.p. Renault engine and long skids to the undercarriage. The planes were heavily staggered and it was inherently stable.

Front View of the B.E.2D Biplane. The protuberance under the upper plane is a gravity tank. The planes were of equal span, and the ailerons were operated by cables.

Various experiments were made with privately built aeroplanes and with one or two quaint structures compiled at the R.A.F., but not until 1912 was an aeroplane produced which really flew.

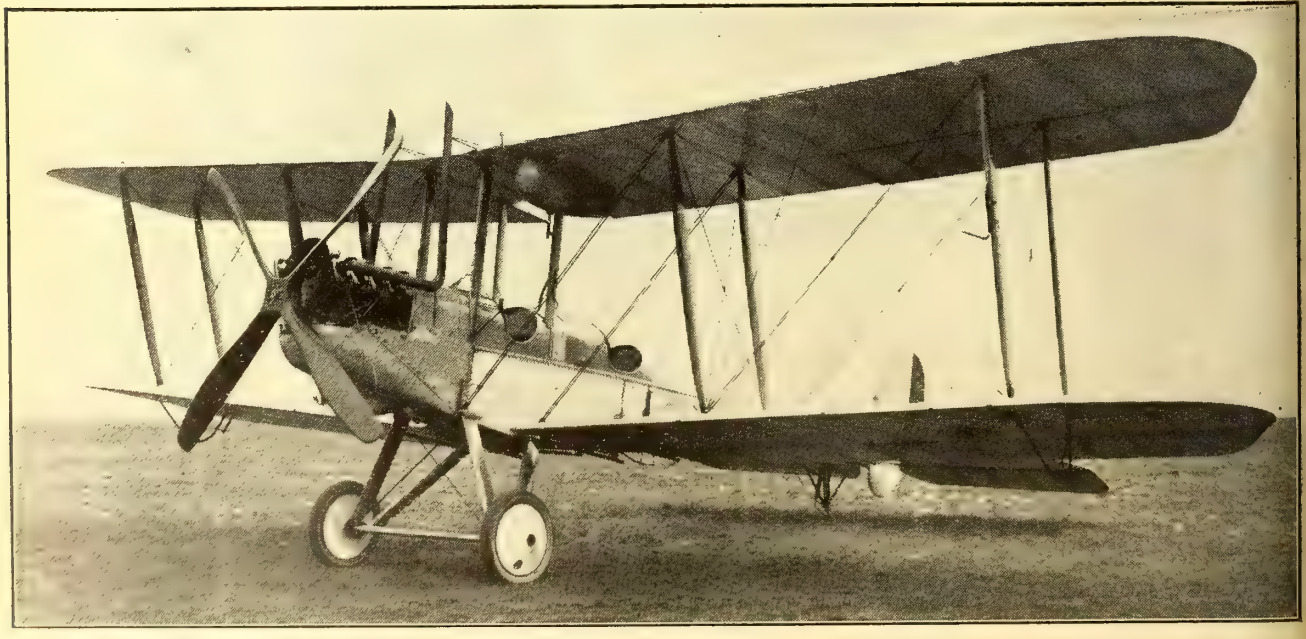
Then, with something approaching suddenness, and with a tinkling of cymbals, if not with the booming of guns, came forth in the summer of 1912 a tractor biplane with a four-bladed airscrew, a two-seater, which, taking part *hors concours* in the British Military Aeroplane Competition, was supposed to represent the quintessence of contemporary design.

As a matter of fact, the staff of the Royal Aircraft Factory had good reason to be proud of its baby, which beat all the other fledgling aeroplanes in the competition, except that of the late Mr. S. F. Cody, whose big machine was before its time in the matter of engine power.

Taking everything into consideration this R.A.F. tractor biplane, which was designed by Mr. (now Captain) Geoffrey de Havilland, now chief designer to the Aircraft Manufacturing Co., Ltd., was probably the best machine present at the trials from a general military point of view. The ultimate trouble was that, like Peter Pan, it never grew up, or rather its growth was stunted in relation to its age, rather as if it had been the child of a slum instead of the cultured product of an official hot-house.

The machine in question was named the B.E. biplane, which was construed into "Blériot Experimental" because M. Louis Blériot was officially regarded as having evolved the tractor type aeroplane.

With Blériot shaped wings, Wright type wing bracing, a Deperdussin fuselage, more or less, a Nieuport tail-plane and a Renault motor, and the general lay-out of an Avro, no one type could be said to be unduly favoured, but because of the aggregation of component parts which severally resembled similar parts of various trade machines, the B.E., was not an "eyeable" job, and throughout the career of the Royal Aircraft Factory the peculiarity has existed, and became more and more accentuated, so that one might say that one could recognise the average "Trade" machine by its lines, and the "Factory" machine by its angles.



Variations.

During the next two years the B.E. biplane was produced in all manner of variations, the most noteworthy being the B.E.2b, and the B.E. 8, the latter with a Gnome engine inside a coal-scuttle cowl and a fish-like body which earned for it the name "Bloater."

Then not long before the outbreak of war there arose a craze for inherent stability, and, largely as the result of the work of the late Mr. Edward Busk, the first B.E.2c, or "Stability Jane," was evolved.

Still a two-seater tractor, her wings had been given a considerable dihedral and the warp control of the B.E. was replaced by double acting ailerons. An enormous tail, more or less rectangular in shape, and a big fin in front of the rudder, combined with proper weight distribution, made the machine perfectly stable, although her lift was somewhat impaired.

Thereafter other types, slightly modified in essentials and radically altered in details, were evolved, which, equipped with more powerful engines built by the R.A.F., strove to emulate the performances of their opposite numbers in the "Trade."

Three-quarter Front View of the B.E.2D Biplane with 90-h.p. R.A.F. engine. Planes of equal span and a cable link between the ailerons are characteristic features.

Three-quarter Front View of the B.E.2E Biplane with 90-h.p. R.A.F. engine. Note the overhanging upper planes and th slender strut between the ailerons.

Notable examples were the B.E.2d, B.E.2e and B.E.12. Many of these have been used in the war as general purpose aeroplanes, and equipped, like the White Knight, with all manner of impedimenta "because it might be useful," they earned the title of "Christmas Trees."

The first B.E. 2 had a 70-h.p. Renault engine and a single open cockpit for pilot and passenger.

The B.E.2b had separate cockpits, and a better streamlined fuselage.

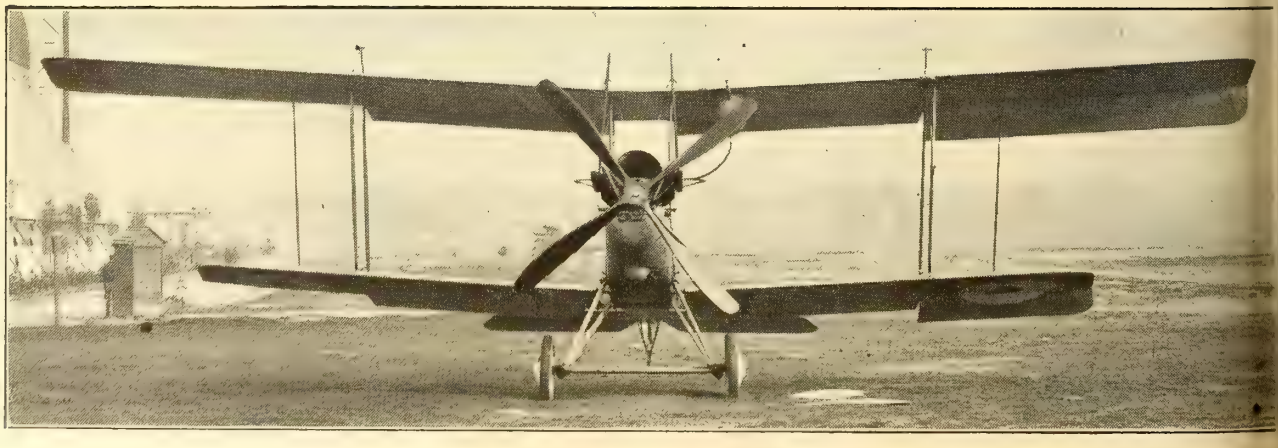
The B.E. 2c was the first "stable" machine, also it had a marked forward stagger to the upper planes.

The B.E. 2d was similar to the 2c, but had a faster wing section. In this type the under-carriage skids were altogether abolished, the exhaust-pipes were carried up over the upper planes, and the machine generally was streamlined down to give increased speed. Also, the majority of the type had the 90-h.p. R.A.F. engine in place of the 70-h.p. Renault.

The B.E. 2e, differed materially from the 2d in having a single pair of interplane struts outside the centre section of the wings, and a big overhang to the upper planes, in which overhang the big ailerons were connected by a slender tubular strut to the small lower ailerons, this strut being outside the line of the interplane struts. It was designed to give more lift than the 2d, but its power-plant and fuselage were practically the same as in its predecessor.

In these machines the passenger sat in front of the pilot.

The R.Es.



Some months before the outbreak of war a need was felt for a faster and also for a larger type of aeroplane, and the R (Reconnaissance Experimental) was produced. The first of type was a modified B.E. with a single pair of struts outside centre section on each side. This had a Renault engine 70-h.p. It was fast, but did not lift much weight. It succeeded by other variants, including the R.E. 4, which fitted with an Austro-Daimler engine of 120-h.p. This excellent climbing ability, and, piloted by Mr. Norman Spr beat the existing height record handsomely. As an aeroplan was probably the most eyeable product of the R.A.F., but some aerodynamic reason, which was very obscure at the ti it was not popular as a flying machine.

Subsequent incarnations such as the R.E. 5, R.E. 7 R.E. 8, came to light, and the later types as self-prote artillery observation machines, as night-bombers and con patrol machines did good work. These later machines have b fitted with 12-cylinder R.A.F. engines of about 130-h.p Fo considerable time, especially in 1916-17, they were very unpopu but subsequent alterations in design made them better fly machines, both pleasanter and safer. But by the time this accomplished they were already becoming obsolescent.

The "Feeplanes."

Before the exigencies of war proved the contrary, it was c sidered that the only really practical gun-carrying aeroplane the "pusher" type, such as the Henry and Maurice Farma the Vickers' "gun-'bus," and the Voisins.

The authorities of the R.A.F. chose to label the type F.E., indicating "Farman Experimental," though it might with eq

Front View of a B.E.2E Biplane with 90-h.p. R.A.F. engine. Note the single pairs of interplane struts and the slender aileron strut. Also the immense overhang of the upper planes.

GALLAY ACHIEVEMENTS

WE GUARANTEE TO CURE
OVERHEATING

Occasions arise when radiators that were eminently suitable for winter conditions are found to be inefficient in summer.

It is not necessary to slow the machine and upset the general arrangements by fitting larger radiators.

INSTALL A GALLAY BLOCK
and the trouble will cease.

We undertake an improvement of from 15 per cent. to 50 per cent. according to type of tube block previously used.

We carry out experimental work for the leading firms, all details are treated in strict confidence.

THE MACHINE SHOP

The Birthplace of the manufactured article demands to-day a far higher standard of organization and exactitude than ever before in the history of manufacturing.

The War with its demands has raised that standard, and the War and its demands on us have resulted in an experience which will be infinitely valuable in the days of Peace ahead.

Then will the enhanced facilities of our own machine shops be fully utilized in the execution of orders for all kinds of Auto Products which we have booked for After-War delivery.

Then will that higher standard prove its worth.

We should like to hear from you as to your probable requirements.

BELLING ELECTRIC GLUE POTS

for Aeroplane and other work

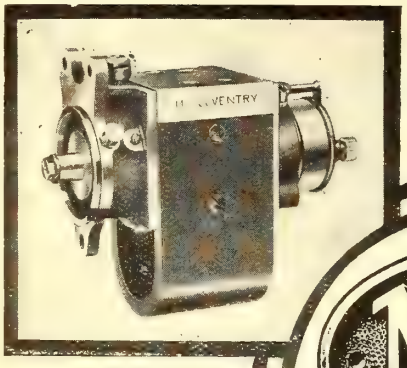
List No. 38.
Price 32/-
(Spare Elements 3/6 each)

Strongly made in cast iron, the Glue container being tinned.
CAPACITY: 2 pints of glue.
LOADING: 900 watts.
3 elements, 3 heats, 3 loose connectors for attaching the cable to.
WEIGHT: 14 lbs.
For use off a power circuit.

List No. 39.
Price 35/-
(Spare Elements 3/6 each)

As above, but with a loading of only 600 watts so that it can be used off an ordinary lamp socket.
Complete with connectors, 2 yards flex, and lamp holder adaptor.

List No. 40.
Price 47/6
(Spare Elements 3/6 each)



Similar to List No. 38, but fitted with a 3 heat switch on a separate panel, which is connected to the Glue Pot by 4 feet of metallic flexible tubing.
For use off a power circuit and recommended for Factory work.

All prices are subject to 50% advance.
Carriage extra on orders under £3 net value.

M-L

All-British
Magnetos

Type P.L.R.

Type P.M. 6.

All-British
Magnetos
for
Aircraft.

THE strong features of M-L All-British Magnetos which have made the aero types so successful are lightness, efficiency and effective sparking at very low speeds.

M-L Magnetos are smaller, lighter and stronger, and are more efficient than any pre-war magnetos of equal electrical output. All parts are interchangeable, "spares" can be quickly supplied.

The M-L Magneto Synd., Ltd., have been making magnetos for Aero Engines since 1914.

The illustrations show some of the M-L All-British Magnetos for Aircraft. Types A D S and P L R are designed for Rotary Engines. Types P L 6 and P L 7 are for 6 and 7 cylinder Radial Engines. Types P L 6 and P M 6 are for Vertical and V Type Engines.

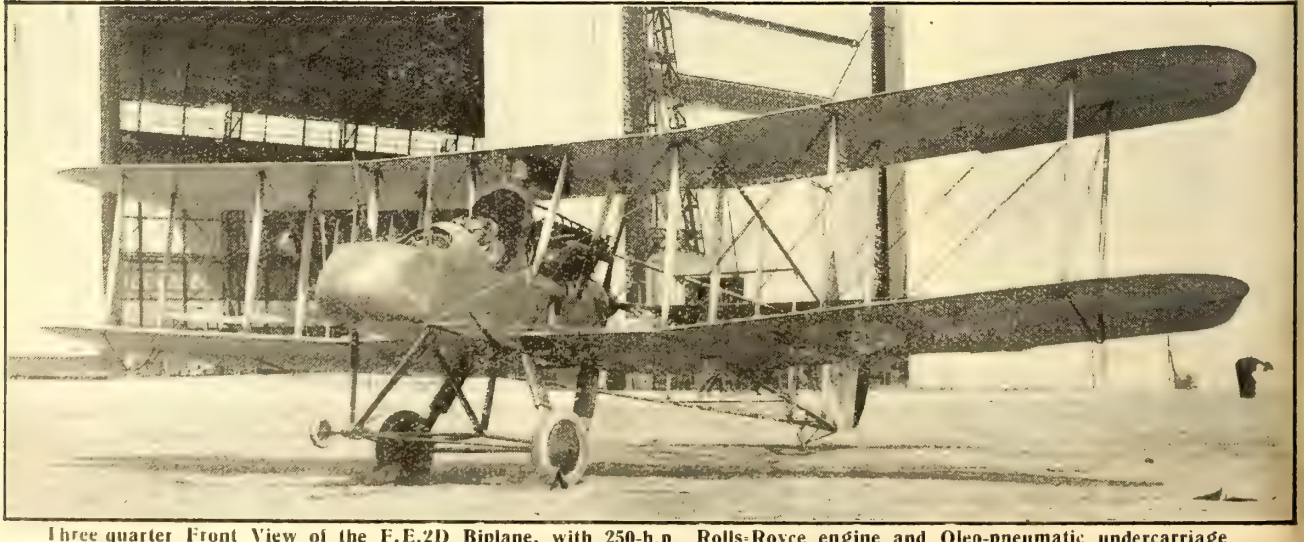
or more justice have been called t V.E. in recognition of the fact th Voisin Brothers originated the "pushe type from which the Farman veloped.

The first R.A.F. essay at the spec was, like the physiognomy of a Germ prisoner, merely "unprepossessing but the second attempt, known as t F.E.2, was frankly a calamity. It w a bull-nosed brute with a deep nacel at the rear of which was a 70-h. Renault engine driving the typic R.A.F. four-bladed airscrew. T Blériot-shaped, Wright-braced warpi B.E. type planes were retained, as al the B.E. type pear-shaped rudd hitched to Farman type tail-boom The machine evinced a tendency spin, a penchant which developed as t planes became soggy, and finally a lon foreseen accident occurred which kill the passenger and crippled the pilot.



Later examples, fitted with rig wings, ailerons, Beardmore engine and Oleo-pneumatic undercarriages pe formed more satisfactorily, and we largely used at the front, first for figh ing and subsequently for nigh bombing.

The official significance of their nam was changed from "Farman Exper mental" to "Fighting Exper mental," and colloquially they hav long been called "Feeplanes."

A single-seater pusher fighter wit a monosoupape Gnome engine, c

Three-quarter Side View of the F.E.2B Biplane, with 120-h.p. Beardmore engine and a "trip wheel" Oleo-pneumatic undercarriage.

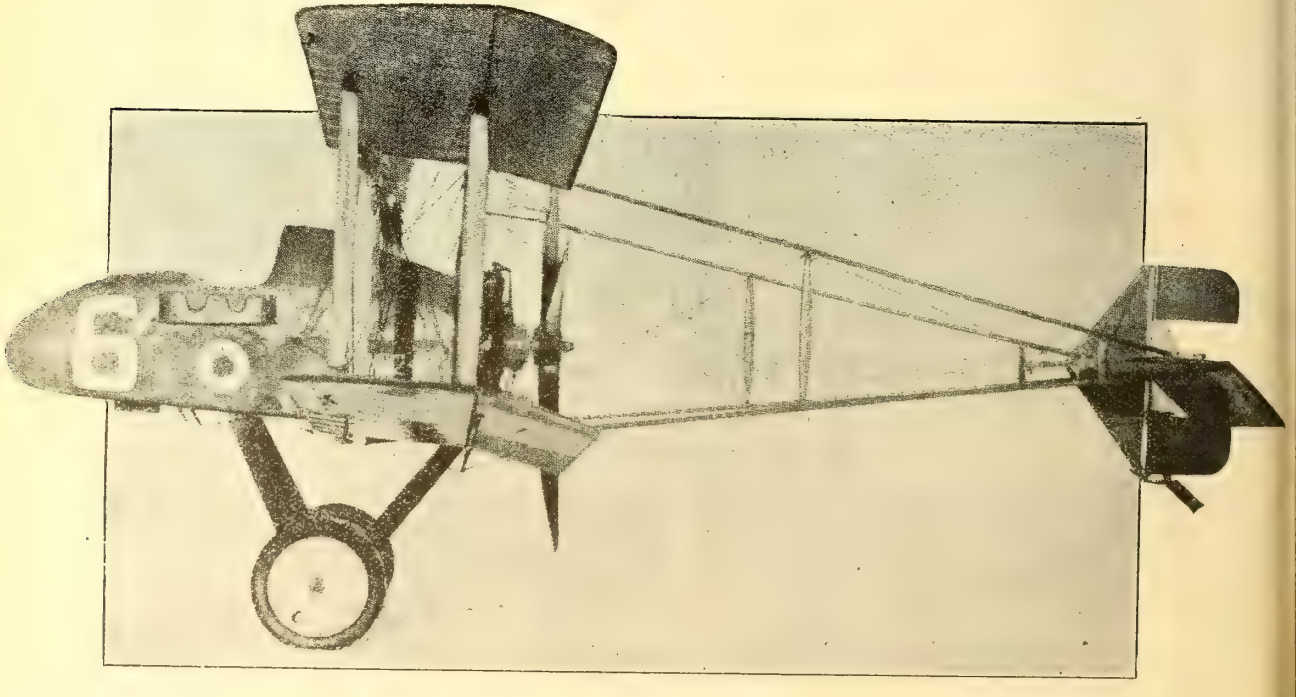
lines which resembled in many ways the de Havilland 2, and known as F.E.8, had quite a creditable performance. And a further development in the opposite direction produced the F.E.2D, with a 250 Rolls-Royce engine, the very first example of which to cross the Channel landed behind the German lines and was captured without being seriously damaged.

The S.Es.

The desire of the Royal Aircraft Factory to produce a single-seater scout biplane in competition with the fast Bristols and Sopwiths, and later with Nieuports, Martinsydes, Spads, etc., found expression in the S.E.

Side View of the F.E.2D. Biplane, with 250-h.p. Rolls-Royce engine. The small triangular fin above the tail plane is characteristi of the bigger F.E. two-seaters. The supplementary fins, created by putting specially deep streamlining on the rear-most tail struts, are worthy of note.



(Scouting Experimental) type. S.E.2, which flew in peace time, was an elaborate attempt at reducing head-resistance, there being only one row of struts between the wings and a round tapering fuselage. Driven by a 160-h.p. Gnome, with 14 cylinders, this small machine exhibited great speed, but otherwise her performance was poor and she was almost impossible to control. Also the type of engine was very unreliable.

The S.E. 5 type, an improved version with Hispano-Suiza engine, show a better all-round performance. The chief criticism is that they are too stable, and that it is therefore difficult to manœuvre them rapidly in air-fighting, for which reason slower enemy aeroplanes which are specially controllable can hold their own by keeping on turning inside the S.E. wh the pilot tries to bring his gun to bear.

The Raison d'Etre.

It would be difficult to demonstrate that the Royal Aircra Factory has ever produced an aeroplane (except the origin B.E.) which was superior to its contemporaries, but if only t existence of the B.Es., R.Es., F.Es. and S.Es. has resulted spurring the Aircraft Industry to further efforts, they have n been useless.

At the same time one is entitled to register the person opinion that internal competition between "Trade" firms wou have produced equally good results, especially if the money whi

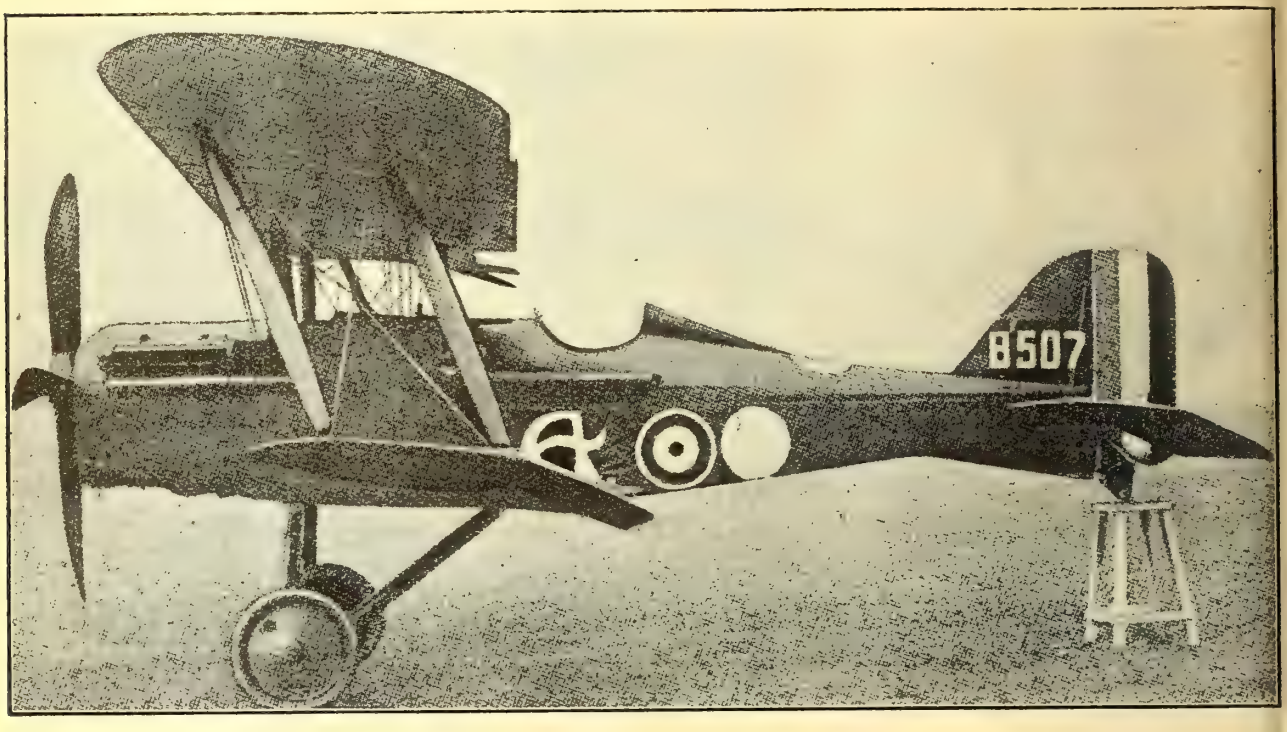
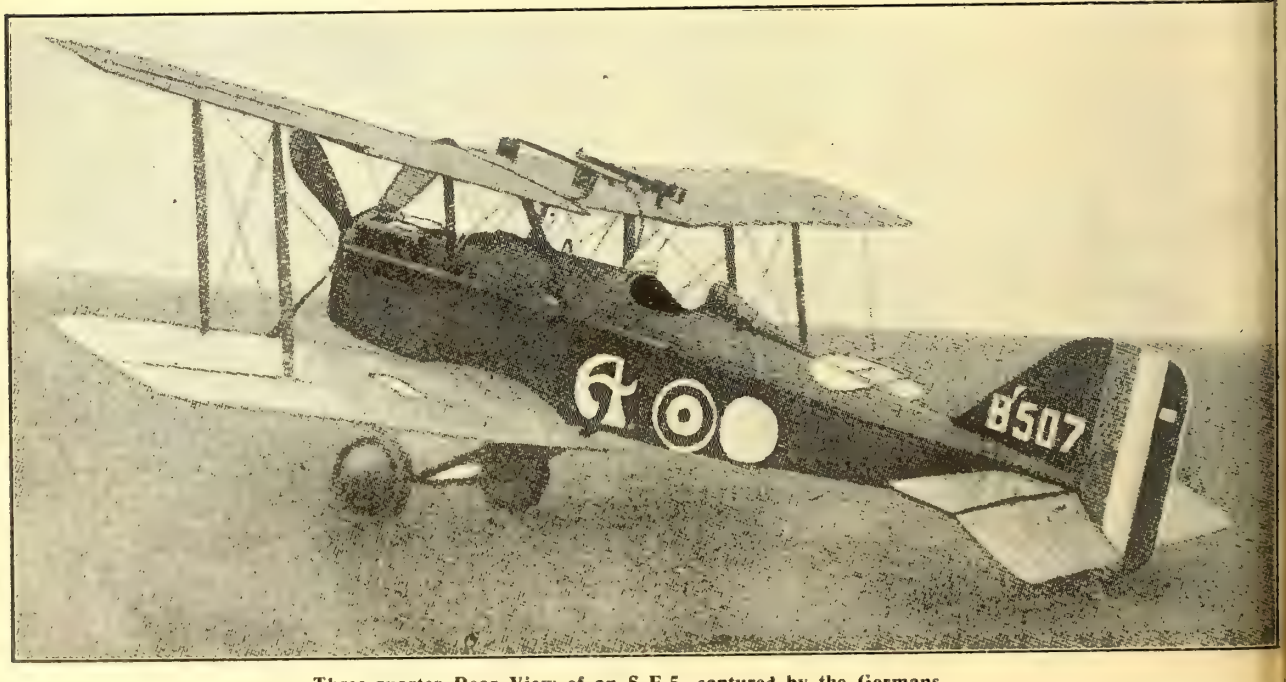
Front View of an F.E.8, captured by the Germans.

Three-quarter Front View of an S.E. single seater with 150-h.p. Hispano-Suiza engine. The grille in the nose is the adjustable blind, which regulates the supply of air to the radiator. The pronounced dihedral angle of the wings is unusual in a single-seater, and the resulting stability is an advantage which is still debated.



Three-quarter Rear View of an S.E. The arrangement of the Lewis gun on the top plane is clearly indicated. It will be seen that ailerons are fitted to the top and bottom planes. The "conservatory" wind-shield is not commonly found in these days.

was spent between 1911 and 1916 in developing the R.A.F. types, and in buying "Chinese copies" built under contract, had been expended freely in buying "Trade"-designed machines produced under the spur of competition increased by prospects of handsome rewards in the form of large orders.



This argument is borne out by the fact that the best machines of to-day are all "Trade" products designed by people who have never been connected with the R.A.F., with the sole exception of the designer of the original B.E. A comparison between the performances of the D.H. types produced by him since he left the R.A.F., and those of the types produced by the R.A.F. since he left rather emphasise the benefits of free competition unhampered by "State Aid."

To-day the policy of the Air Minister, himself a business man and engineer of wide experience, is to encourage to the fullest degree the production of new and improved "Trade" designs, and the position of the R.A.F. at the Front is the fullest justification of this policy, which he has pursued during the 18 months which he has spent in various responsible positions at the Air Board and Air Ministry.

Nevertheless, for purely historical reasons, it seems well to place clearly on record the developments of the R.A.F. aeroplanes so far as it is possible to do so, which means up to the types which are known to have fallen into enemy hands. One hopes that the collection of photographs will be found of interest.

Side View of an S.E.5, captured by the Germans. The stream lining behind the pilot's head is noteworthy.

ABRIDGMENTS OF RECENTLY PUBLISHED SPECIFICATIONS.

114,891. Aeronautics. MOORE, E. H., 20, Baskerville Road, Wandsworth Common, London.

SHOCK OF LANDING, DEADENING; LAND WHEELS.—A landing chassis comprises a frame having means for guiding the end of a wheel axle against the resistance of a pair of opposed semi-elliptic springs connected together by links and secured respectively to the axle and frame. A single axle carrying two wheels may be used, or separate axles, each having a wheel at one end and pivoted at its other end to a member depending from the machine, may be employed. Fig. 2 shows a side view of a chassis having a single axle. Two side frames each comprise two convergent members A, B, connected at their lower ends by a plate C, on the outside of which two angle members D are secured. The lower ends of the members D are bent outwardly at D^2 to form a bracket, to which is secured a gusset plate G for connecting the side frame to one of two inclined members F, F^1 extending to the machine frame. A plate E, which may be part of the plate C, is secured to the parts D^2, and carries a spring M. The ends of the spring M are connected by links N to a spring L, secured to a member K on the axle guided between the members D. Fig. 3 shows a front view of a modification in which two axles H are used pivoted at their outer ends to members O depending from the planes. In this form, a central frame similar to that shown in Fig. 2 is used, but the side members are brought close together at their lower ends, and the gusset plate G secured between them. The gusset plate has an extension G^1, slotted at G^2, to take pins or rollers K^3 carried by cheeks K^2 on the inner ends of the axle, and embracing the plate extensions G^1. A spring suspension similar to that shown in Fig. 2 is used, but the links N are joined at their centres to compensate for the curvilinear movement of the axle ends.

THE HUMBER COMPANY'S SPORTS MEETING.

As the result of the recent sports meeting held by the firm of Humber, Ltd., Coventry, the very substantial donation of £520 has been handed to the Coventry and North Warwick hospital.

THE BRITISH MAGNETO INDUSTRY.

The first member of the newly instituted British Magneto industry on whom public honours have been bestowed is Mr. Charles Ashton Lister, J.P., the chairman of the M-L Magneto Syndicate, Ltd., of Coventry, who has been gazetted a Commander of the Order of the British Empire. Mr. Lister, who is a director of the famous agricultural engineering firm of R. A. Lister & Co., Ltd., of Dursley, Glos., has devoted much of his time recently to public work.

A WORTHY TRIBUTE.

On June 23rd a memorial to Douglass Morris Harris, A.B., R.N.V.R., the heroic wireless operator of his Majesty's drifter "Floandi," was unveiled by Major-General Mark Kerr, who was Rear-Admiral in command of the British Adriatic Squadron at the time Mr. Harris was killed when making entries in the log of the vessel. The memorial has been subscribed for by readers of the Wolverhampton "Express and Star," and the form was thrown open to competition by past and present pupils and teachers of the Wolverhampton Art School.

Douglass Harris was the son of Mr. Leo Harris, well known to the Aircraft Industry as being a moving spirit in the Imperial Light Co., Ltd., and in the firm of Hays, Hunter & Standen Major-General Mark Kerr, R.A.F., was one of the earliest of Naval officers to appreciate the importance of aviation, and now commands an area of the Royal Air Force.

A WORKS ENTERTAINMENT.

On June 15th the employees of the Pulvo Engineering Co., Ltd., held a concert at the Holborn Hall in aid of the British Red Cross Society. A very successful programme was presented and a satisfactory amount was realised for the Red Cross.

THE AIRCRAFT TRADER

MARKET TOPICS.

Prices are for quantities on usual terms.

COPPER.—Business is proceeding favourably, now that the American authorities have fixed the price, and although there are rumours of a shortage of Copper, the output continues to give satisfaction and would rather indicate that there is a likelihood of a small surplus being available for general commercial purposes, although, in view of the critical position during the second year of the war, one would expect the authorities to exercise a little foresight and build up stocks as a safeguard against unforeseen difficulties.

The U.S.A. official price is still being discussed in certain quarters, and there will undoubtedly be strong representations made in August for an increase. Furthermore there are certain indications that they may meet with success.

Official prices here remain unaltered, and the position continues favourable.

TIN.—The position here is more comfortable, and prices are declining to a more reasonable level. Stocks have, apparently, increased recently. Eastern prices have had a collapse, having declined to as low as £337, which is about £8 higher than the market here. It is certainly time there was a drop.

It was indicated in these columns about five weeks ago that the Allies should co-operate with the object of eliminating speculation from the Eastern market, and it is stated that this is now being done.

The position in U.S.A. is now a little steadier although there is still a feeling of nervousness, and although about ten days ago American buyers were buying everything they could lay their hands on, at any price, they are now apparently holding back in order to see what effect the recent fall in prices will have on the market there.

COMPARATIVE PRICES.

June 17th	£329	0	0	per ton.
June 4th	£345	10	0	per ton.
May 22nd	£360	0	0	per ton.
May 9th	£380	0	0	per ton.
Highest price, 1917	£309	0	0	per ton.

LEAD.—There is not much difficulty in obtaining supplies for national requirements. It is, however, impossible to obtain any Lead for domestic purposes. Prices remain unchanged.

STEEL.—Supplies of Aircraft Steels are still very satisfactory. In fact there appears to be a surplus available. It is quite probable that this state of affairs is only temporary. The output of Steel, at present, is still on the increase, and the efforts to effect still larger increases in output are unrelaxed. There are ample supplies of Cast Steel available, due, as pointed out in these columns before, to the large quantity which was ready for Russia when deliveries were stopped. High Speed Steel is fairly easy to obtain at present.

Steel Sheet to A.M. specification is becoming extremely difficult to obtain, and the situation does not, at present, show any signs of improving.

Prices are unchanged.

TIMBER.—There is hardly any Silver Spruce whatever coming into the country, and although, as stated previously, a substitute has been issued to contractors, very few have as yet had any practical experience of its use and the position cannot be considered satisfactory.

A little more Walnut has been received recently. There does not, however, appear to be much available. The same remark applies to Mahogany.

The question of Plywood control appears to be "hanging fire."

Prices remain unchanged.

FABRIC.—Supplies are still satisfactory, and prices remain unchanged.

A CHANGE OF NAME.

To avoid confusion with a firm of similar name, the title of the Super Aviation Co., Ltd., has been changed to the Sceptre Aviation Co., Ltd. No change has been made in the management or in the organisation of the firm.

A GREAT LOSS TO ITALY.

As if to disprove those futile statements as to "soft, safe jobs at home aerodromes" one regrets having heard that Italian firms have had to bear two more losses since my last notes.

It has fallen to the lot of the Macchi firm to lose that great pilot Clement Maggiora, who has been associated with them since the beginnng of the war and was a well-known pilot outside Italy for several years before it. He was understood to have been the first man to land on a frozen lake, which he found different to his expectations. Since when he has been trying new things almost continuously. His death occurred through an accident at Varese.

ANOTHER CAPRONI LOSS.

The Caproni Brothers had their second loss by the death of Capt. Silvio Resnati, in America, through the disintegration in the air of a C.A. biplane built in that country. He was the son of an esteemed Milan professional family; the other son, also a pilot, is a prisoner of war.

Capt. Resnati had done a big "bit" at the front before he joined the Aero Corps, and was immensely valuable as a C.A. propaganda pilot. The accident, coming only a few days after the officially announced decision of our North American Allies to produce Caproni bombing machines, is doubly unfortunate to all concerned.

POSTAL AFFAIRS IN ITALY.

In a projected Bill being drawn up for presentation to the Cabinet, the monopoly of the aerial transport of correspondence is to be conceded to the Ministry of Posts and Telegraphs.

T. S. HARVEY.

THE CONSERVATION OF IRISH FLAX SEED.

The Minister of Munitions has issued an Order directing every grower of flax in Ireland during the season of 1918 to save the seed from one-eighth of his crop, and to comply with any regulations that may be prescribed in this behalf by the Department of Agriculture and Technical Instruction for Ireland. The Order does not apply to any grower having under flax in the year 1918 a total area not exceeding two statute roods, nor to flax of any variety other than a fibre variety.

No person shall, without a permit issued by the Department of Agriculture and Technical Instruction for Ireland, purchase, sell, or offer for sale from or on behalf of any grower of flax or any other person, any flax on foot, or undeseeded flax straw saved for seed in compliance with the provisions of the Order

THOSE AWFUL ORDERS.

From the "Times" of June 13th:—

Sir,—I am glad to see four civilian friends have been made Knights of the British Empire. One of them, under 50, has been working for the Government for nearly one year—the others less. I am glad, too, to see other friends get the C.B.E., including one under 40 who has not had the satisfaction of crossing the Channel since war broke out, though he wears uniform. But I am thinking more of another friend, who, at the commencement of the war, although he was over 50, volunteered, went out with his battalion, fought in the trenches, was knocked out but went out again, has been twice recommended for an award, and is still serving. He wears on his breast just the ribbons for a previous war—no more. I know, too, that his is no exceptional case; and I just wonder how these things are arranged.

Your obedient servant, X.

A COLE FESTIVITY.

On Saturday, June 1st, the employees and various friends of the directors of William Cole & Son, Ltd., of Hammersmith, spent an evening at the Café Monico, as proof of the goodwill which exists amongst the personnel of the firm.

Mr. Albert Cole was responsible for the function and presented a watch to each of five or six of the oldest employees of the firm, a knife to each of the charge-hands, and a cheque to the Secretary and Assistant. The proceedings terminated with a musical entertainment which was well received by those present.

ANOTHER BONUS.

Semi-skilled and unskilled men aircraft workers are awarded 12½ per cent. bonus to time-workers and 7½ per cent. to piece-workers, as from January 1st, 1918.

Kaiser (*loq.*): "How is it at such a height on so cold a morning the lubricants do not freeze?"
Gen. Hoppner: "The British have discovered the secret which we have been seeking for months."
Vide "Daily Mail," see above.

A BRITISH FIRM BEATS THE GERMANS

THE SECRET

THE HANDLEY-PAGE.

After the two royalties had descended from the machine it was loaded with dummy bombs in preparation for a flight. The now famous German flying officer Richthofen took the seat which the Kaiser had vacated, and two other officers also boarded the plane. With a terrific roar the two engines were started, and like a bird the aeroplane rose in the air. It climbed rapidly to about 10,000ft., and the Kaiser turned to General Hoppner, saying:

"How is it that, at such a height and on so cold a morning, the lubricants do not freeze?"

"The British have discovered the secret which we have been seeking for months," replied the general. "Our great difficulty is now surmounted. It is

AIRCRAFT FINANCE

CURRENT TOPICS.

BUOYANT CONFIDENCE.

One might reasonably pardon an unsophisticated stranger, who, after a casual view of present Stock Exchange conditions, jumped to the conclusion that either a very successful Peace was imminent or else that the financial strain of the war is absurdly light. Markets are so deceptively buoyant; the price of most securities is rising and it would seem easier to sell things than buy them.

The Real Position.

But the buoyancy is not quite so genuine as it seems. Unquestionably the war news is considered encouraging, but present conditions are primarily due to the recent action of the Treasury in artificially lowering the value of money. The object was to force money lying fallow on deposit with the banks into War Bonds, Treasury Bills, and essentially national financing, and it happens that a lot of this money is finding its way into a multitude of other investment securities for remunerative employment.

Activity of Vickers Shares.

It will be noted with considerable interest that aircraft and associated securities have claimed more than an ordinary degree of attention in this scramble for investments. Noteworthy prominence, for example, has been attained by Vickers shares, which have risen substantially. Not only is it now being rumoured that the company will soon disgorge some of the accumulated war profits in the shape of a bonus among shareholders, but also that a big amalgamation scheme is in progress of evolution. Every little helps the speculator, no matter how unconvincing it may be.

Most Others Conspicuous.

Rolls-Royce shares also have developed conspicuous strength, being steadily absorbed on prospects, and Armstrong Whitworths have claimed a big following. Humbers and a host of others have each got their own followers who claim to know that profits are expanding rapidly, and who claim to see correspondingly bigger dividends, and in some cases substantial bonus in the form of new shares. Without a doubt, the existing high level of prices discounts a lot of prosperity; but, as some of the optimists put it, is there any other industry making such a pile of money as many of these undertakings?

Why Darracq Shares Fell.

The recent weakness in the shares of A. Darracq & Co. would seem to have disturbed some holders. Only a few weeks ago they were selling as high as 38s. each, since when they have been well under 30s. and have rallied a little. The set back is to be ascribed to the German bombardment of Paris, where the company's factories are situated. It does not transpire that these have been damaged or even that they are really in the danger zone, so shareholders ought to sit tight.

Dividends and Present Price.

The Darracq is really a holding company which owns practically the whole of a French concern similarly named. At the present price of 32s. the shares represent a yield of well over 12 per cent. to the purchaser on the basis of last year's dividend. This was 20 per cent., including a bonus of 5 per cent., and compared with 9½ per cent. for each of the two preceding years. The financial year ends in about three months, and as the company is loaded up with business, chiefly war work, satisfactory results are expected again. Of course, one does not know how much of the extra profit, if any, will be swallowed up by war taxes.

The Latest Amalgamation

Ruston Proctor & Co., who are actively engaged in the aeroplane industry, and Richard Hornsby & Sons, another Lincolnshire engineering concern, have agreed to amalgamate. This will be consummated by the former acquiring the assets of the latter and issuing securities like for like to the debenture and preference shareholders and to the ordinary shareholders £17 of shares in exchange for every £20 held.

Two Prosperous Concerns.

With an issued share capital of £1,352,300 and £500,000 debentures the amalgamated business will be known as Ruston and Hornsby. Both have a fine record for earnings and have paid regular dividends, and since the war both have made record distributions of 10 per cent. From the preliminary dividend statement of Ruston Proctor, it is clear that substantially bigger profits were made during the past financial year. The dividend is merely maintained, but £55,000 instead of £45,000 is added to the reserve, and £24,200 against £19,600 goes forward.

The Blériot Contract Case.

In the Chancery Division, last Wednesday, before Mr. Justice Younger, the hearing was fixed of the action brought by the Army and Navy Contract Corporation (in liquidation), of Moorgate Street Chambers, E.C., against M. Louis Blériot.

The company claimed specific performance of three contracts dated March 9th and 17th and May 17th respectively for the sale by the defendant to the company of the business carried on by defendant in the United Kingdom under the style of L. Blériot-Aeronautics. The case has many times been before the Court, his Lordship saying on the last occasion that if M. Blériot could not produce a satisfactory affidavit as to his inability to leave France at the present time, the case would proceed on Wednesday in his absence.

When the case was called on Wednesday Mr. Gore-Browne, K.C., who appeared for the Official Receiver as liquidator of the plaintiff company, said the matter had been settled, and on a certain sum being paid by defendant the action would be stayed. Mr. Hansell (who was, with Mr. Upjohn, K.C., for the defendant) had a summons for hearing on Friday, the effect of which was simply and solely that all proceedings should be stayed, and he suggested that this should be disposed of now. Counsel said he had got the sanction of the Registrar.

Mr. Hansell agreed, and his Lordship made the order.

Excellent Rolls-Royce Profits.

Excellent results are disclosed by the profit statement of Rolls-Royce covering the year to October 31st last. At £142,056 the net profits compare with £82,640 for the preceding period, which in their turn compare with a modest £44,200 for 1914-5. The dividend of 10 per cent. was declared some time ago along with the bonus of one new share "free, gratis, and for nothing" in respect of each share held.

Consolidating Their Position.

In themselves the figures are unquestionably good, but in reality they may be infinitely better than they look. And for this reason the profit is struck "after paying for all trading expenses and liberal depreciation of buildings, machinery and plant, making due provision towards writing-down to estimated post war value, and depreciation of new buildings, machinery and plant erected, making provision for estimated amount payable under the Finance Acts and charging repairs and replacements to revenue."

Generous Reserve Allocations.

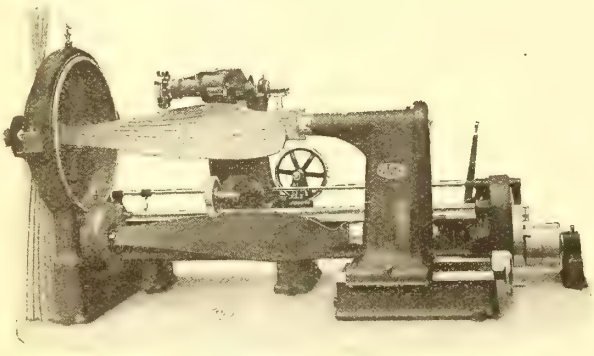
These allowances are an unknown quantity to the outsider; but it is different with the allocation to the various reserves. Thus it is specified that £45,000 to be ear-marked for Income-Tax Account in comparison is £30,000 twelve months previously. Moreover, £50,000 is added to the reserve, and £30,000 is provided for the War Contingency Account, whereas in the previous year the only corresponding allocation was £20,000 to the Debt Guarantee Fund. There remains a balance of £40,200 to be carried forward, against £44,100 brought into the accounts.

COMPANIES ANNOUNCEMENTS.

NEW COMPANIES REGISTERED.

T. H. M. Manufacturing Co., Ltd.—Private company. Registered June 18th. Capital £2,000 in £1 shares. Manufacturers of and dealers in aerial conveyances, and component parts thereof, motor cars, lorries and cycles, mechanical, electrical and marine engineers, etc. The subscribers are:—

B. N. Taylor, Glenside, Edgwarebury Lane, Edgware, Middlesex, motor engineer (80 shares); F. C. Hayter, Aspendin, Manor Park Crescent, Edgware, Middlesex, aeronautical engineer (5 shares); H. S. Mallett, 172, Finchley Road, Hampstead, window blind maker (5 shares).



The first directors are:—B. N. Taylor, F. C. Hayter and H. S. Mallett. Registered office: 11, Rosmont Road, Hampstead, N.W.3.

Aero Engine Reconstruction Co., Ltd.—Private company. Registered June 19th. Capital, £3,000, in £1 shares. To manufacture, reconstruct, repair, purchase, sell, or deal in all electric, steam, gas, and oil, or other engines for motor cars, omnibuses, lorries, aeroplanes, ships, etc.

The subscribers (each with one share) are:—W. W. Clois, Torquay, marble merchant; C. Wright, The Hollies, Mill Hill, N.W., engineer. The first directors are not named.

Lts. whilst so empld.:—Temp. Sec. Lt. N. G. Arnold, Gen. List, March 1st; Sec. Lt. E. W. Brooks, Spec. Res., March 26th.

FROM THE COURT CIRCULAR.

BUCKINGHAM PALACE, June 22nd.

The following were severally introduced into the presence of The King, when His Majesty conferred decorations as follows:

The Distinguished Service Cross.—Capt. James Hart, R.A.F.; Lt. Frederick Stringer, R.A.F.

The Military Cross and Bar.—Capt. Ralph St. John Dix, R.A.F.; Lt. Arthur Hammond, R.A.F.

The Military Cross.—Capt. Basil Clark, Black Watch, attd. R.A.F.; Lt. Ross Cuthbert, R.A.F.; Lt. Harry Ford, R. Welsh Fus., attd. R.A.F.

The Albert Medal.—Flt. Lt. Victor Watson, R.N.; and

The Albert Medal in Gold.—Air Mech., 1st Grade, Harold Robinson, and Boy Mech. Eric Steere. On the occasion of an accident to one of his Majesty's airships, which resulted in a fire breaking out on board her, Flt. Lt. Watson, who was the senior officer on the spot, immediately rushed up to the car of the airship under the impression that one of the crew was still in it, although he was well aware that there were heavy bombs attached to the airship which it was impossible to remove owing to the nearness of the fire, and which were almost certain to explode at any moment on account of the heat. Having satisfied himself that there was in fact no one in the car, he turned away to render assistance elsewhere, and at that moment one of the bombs exploded, a portion of it shattering Lt. Watson's right arm at the elbow. The arm had to be amputated almost immediately.

Air Mech. H. V. Robinson and Boy Mech. E. E. Steere, on the occasion of an accident to one of his Majesty's airships which caused a fire to break out on board her, approached the burning airship without hesitation, extricated the pilot and two members of the crew, all of whom were seriously injured, and then unclipped the bombs from the burning car and carried them out of reach of the fire. The bombs were surrounded by flames and were so hot when removed that the hands of the rescuers were scorched in carrying them.

The Albert Medal.—Flt. Serjt. Albert Warne and Flt. Serjt. Horace Cannon. On Jan. 26th last, while flying in England, a pilot when attempting to land lost control of his machine, which crashed to the ground from a height of about 150ft. and burst into flames. Flt. Serjts. Warne and Cannon went to the rescue of the pilot at great personal risk, as one tank of petrol blew up and another was on fire; moreover, the machine was equipped with a belt of live cartridges, which they dragged out of the flames. They managed to extricate the pilot, who was strapped to the burning 'plane, but he died shortly afterwards from his injuries and burns.

OFFICIAL COMMUNIQUES.

NAVAL.

Admiralty Communiqués.

June 18th.—During the period June 13th-16th inclusive weather conditions have somewhat hindered operations by Naval Air Force contingents.

Bombing raids were, however, carried out on the following objectives:—Zeebrugge, Ostend docks, Bruges docks, Thorout railway junction and aerodrome, Ghistelles aerodrome, Le Brugeoise works, (and) Aertrycke (north of Thourout)

Good results were obtained, and hits were observed on the Bassin de Chasse, railway station, docks, Bassin Leopold, Frederick Battery and Lock Gates, and a fire was started at junction of Canal and Bassin Leopold at Ostend. Bursts were also observed on the Mole at Zeebrugge and near the lock gates. At Bruges Docks bursts were observed north-east of quay and alongside West Bassin, on Northern Darse, eastern side of dock, on land between North and No. 3 Darses, on the North Quay, and south end of East Bassin. The railway station at Thourout was also hit.

In all nearly 24 tons of bombs were dropped, and all machines returned safely except one, which was hit by anti-aircraft fire over Bruges and forced to land, the machine being subsequently destroyed by enemy artillery. Bombs were also dropped on an enemy vessel.

In addition to the above, the usual patrols were carried out. Enemy machines were sighted and attacked, but no decisive combats are reported.

In home waters, during the same period—unsuitable weather notwithstanding—anti-submarine, escort, and hostile aircraft patrols have been maintained by seaplanes, aeroplanes, and airships. Hostile submarines have been sighted and attacked, enemy mines have been located and destroyed, and Allied and neutral shipping has been convoyed.

June 20th.—A British squadron while on reconnaissance in the north of the Heligoland Bight on the morning of June 19th was attacked by German seaplanes.

No hits were made by the enemy, and one enemy seaplane was brought down and destroyed by gunfire.

June 21st.—During the period June 17th-19th inclusive, to some extent weather conditions have again interfered with naval air operations.

Night and day bombing raids were carried out on the following objectives:—Bruges Docks, Ostend Docks, Zeebrugge, St. Denis Westrem and Maria Aelter Aerodromes, La Brugeoise works, Thourout railway junction, and railway sidings at St. Pierre Capelle (east of Nieuport).

In all, approximately 16 tons of bombs were dropped with good results, bursts being observed on Brugeoise works and the south-west side of Southern Darse, Quai de Paquebots, and Flotilla Wharf, and on a ship three miles off Ostend Dock. At Bruges Docks bursts were also observed north of docks, west of West Bassin, on the submarine shelters and sheds at East Bassin. A hit was obtained at Zeebrugge between the lock gate and Mole, and at Ostend Docks bursts were observed on piers and warehouses, and on sheds and submarine shelters near Bassin de Chasse and Ateliers de la Marine.

Attacks with bombs and small arms ammunition were made on enemy shipping. Two direct hits were observed—one on an enemy destroyer—and other bombs fell very close.

Enemy aircraft attacked two of our bombing formations, and one hostile machine was driven down. All machines returned safely except one, which was forced to descend in Holland, owing to a damaged engine, sustained in an engagement with enemy aircraft. Crew safe.

Despite unfavourable weather conditions, anti-submarine, escort, and hostile aircraft patrols have been maintained by aeroplanes, seaplanes, and airships in home waters during the same period. Enemy mines have been located and destroyed, and hostile submarines sighted and attacked. Allied and neutral shipping has also been escorted.

MILITARY.

G.H.Q. Communiqués.

June 18th, 9.10 p.m.—On June 17th the enemy's machines were active on the northern portion of the British front, and there were many combats in the air, in the course of which we destroyed 25 German aeroplanes, and drove three more down out of control. One hostile balloon was shot down in flames.

The usual observation and photographic work was carried on by our aircraft until stopped by thunderstorms in the afternoon.

Twenty tons of bombs were dropped during the day on the enemy's railway stations, junctions, dumps, and aerodromes, and a further nine tons during the following night.

Five of our aeroplanes are missing.

June 19th, 7.38 p.m.—The weather on June 18th was cloudy, but this did not prevent our aeroplanes from carrying out their work of observing for our guns.

In air fighting we destroyed 15 German machines and drove down five out of control.

Eight of our aeroplanes are missing.

Nineteen tons of bombs were dropped by us during the day. Heavy rain rendered work at night impossible.

June 20th, 9.25 p.m.—Low clouds and rain interfered with flying on June 19th and enemy aircraft showed little activity. Nine German machines were destroyed during the day, and two were driven down out of control.

One of our machines is missing.

June 21st, 7.50 p.m.—On the 20th instant low clouds and rain greatly hampered flying operations.

One enemy machine was brought down, and one of our machines is missing.

June 22nd, 7 p.m.—In spite of adverse weather conditions on the 21st inst., some artillery co-operation, photographic reconnaissances, and patrols were carried out by our aeroplanes.

One hostile machine was destroyed.

Two of ours are missing.

June 23rd, 7.45 p.m.—There was very little enemy activity in the air on June 22nd.

Low clouds and high winds interfered with observation and photography, but work was carried out by our aeroplanes in co-operation with the artillery and a number of hostile battery positions and other targets were engaged.

There were no combats in the air, and none of our machines is missing.

At night the weather improved, enabling our night-flying machines to show greater activity.

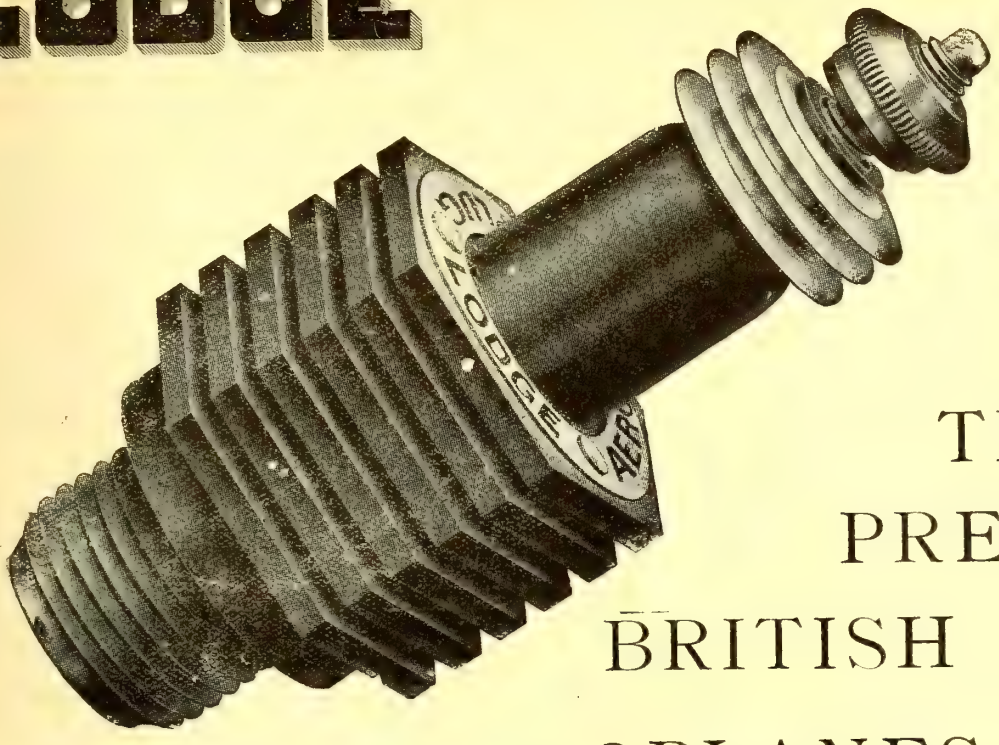
During the 24 hours 15 tons of bombs were dropped. Bapaume dump, railway stations at Armentières, Steenwerke, and Bac St. Maur, and Bruges Docks being heavily attacked by our machines.

June 24th, 7.49 p.m.—In the strong winds and low clouds of the 23rd inst. our aeroplanes carried on reconnaissance work and artillery co-operation with difficulty.

There was little air fighting. One hostile machine was destroyed during the day and two of our machines failed to return.

Five tons of bombs were dropped by us during the day and 15 tons on the following night, over six tons falling on the sidings and stations at Cambrai with good effect.

One of our night flying machines is missing.



War Office Communiqués.

June 19th.—The G.O.C. Italy reports:—

In the battle of the 15th inst. the Royal Air Force, who were unable to operate on the plateau during practically the whole of the battle owing to the mist, delayed the advance of the enemy across the Piave with their usual gallantry.

The number of enemy aeroplanes destroyed on the 15th inst. was eight, and not ten, as previously reported.

June 20th.—The G.O.C. Palestine reports :—

Imperial and Australian air squadrons executed an extensive bombing raid on El Kutrani railway station (on the Hedjaz Railway, 30 miles east of the south end of the Dead Sea) and the enemy camps in its vicinity on the morning of June 16th. Direct hits were observed on a troop train full of troops and on the enemy shelters. The station buildings were set on fire.

On June 18th a similar raid was carried out on Amman station (25 miles east of the Jordan at the Jericho bridgehead).

June 20th.—The G.O.C. Italy reports :—

Yesterday the weather was fine, and our aircraft were active. Ten enemy aircraft were destroyed, and 1,460 lb. of bombs dropped on various targets. Heavy rain this morning

June 22nd.—The G.O.C. Italy reports :—

Between June 12th and 21st inclusive the Royal Air Force have destroyed 23 enemy aeroplanes. During the same period two of our machines have failed to return.

THE CASUALTY LIST.

MILITARY.

Reported June 20th.

Previously reported Missing, now reported Killed.—Thompson, Capt. P., R.F.C.

Prisoner in German Hands.—Burnard, Sec. Lt. R. A., Lond. R., attd. R.F.C.

Canadian Force.—Accidentally Killed.—Evans, Lt. W. D., Sask. Regt., attd. R.A.F.

Reported June 21st.

Australian Force.—Wounded.—Simpson, Capt. T. L., F.C.

Missing.—Rintoul, Sec. Lt. A., F.C.

* * *

Casualties among N.C.Os. and Men. The Dates are those of the Official List :—

Previously Missing, now reported Died as Prisoners of War in German Hands.

June 12th.—R.F.C.—Postons 29138 1st Cl. Air Mech. H. L. (Hall Green).

Australian Imperial Force.

Died.

June 11th.—A.F.C.—Clutterbuck 1342 T.

Reported June 24th.

Previously reported Missing, now reported Killed.—Millett, Sec. Lt. J. N. L., R.F.C., and R.A.F., Spec. List.

Accidentally Killed.—Lee, Sec. Lt. J. W., S. Wales Bord., attd. R.F.C.

Prisoner in Turkish Hands.—Everard, Maj. A. J., M.C., R.F.C.

Canadian Force.—Killed.—Spencer, Lt. E. D., Can. Rly. Troops, attd. R.A.F.

Previously reported Missing, now reported by German Government Killed or Died of Wounds.—Agar, Capt. E. Z., Alta. Reg., attd. R.A.F.

Harmon, Lt. B. W., M.C., Man. Regt., attd. R.A.F.

Wounded.—Denison, Lt. F. B., Cent. Ont. Regt., attd. R.A.F.

Missing.—Hall, Lt. C. R., Que. Regt., attd. R.A.F.

Kelly, Lt. T. T. S., E. Ont. Regt., attd. R.A.F.

Previously reported Missing, now reported Prisoners in German Hands.—Hustwitt, Lt. S. A., Can. Eng., attd. R.A.F.

Scott, Lt. W. A., Can. For. Corps, attd. R.A.F.

Reported June 25th.

Previously reported Missing, now reported Killed.—Williams, Capt. R. M., R.F.C.

* * *

The following officers, who were prisoners in Switzerland, have now arrived in England :—

Binney, Capt. F. B., R.F.C.; Black, Lt. W., Durh. L.I., attd. R.F.C.; Harle, Lt. W., Northd. Fus., attd. R.F.C.; Orde, Maj. M. A. J., R.F.C.

Canadian Force.—Smith, Lt. L. A., Gen. List, attd. R.F.C.

* * *

The follg. Officers, who were prisoners in Germany, have arrived in Holland for internment :—

Clements-Finnerty, Lt. H., Lancers, attd. R.F.C.; Farmer, Lt. E. R., Yeo., attd. R.F.C.; Graham, Lt. L. N., W. Yorks R., attd. R.F.C.; Long, Lt. H. O., R.E., attd. R.F.C.; McEwen, Capt. J. H. AIR-WISDOM.

BEFORE a man sports a squadron-commander's streamers there are few tricks of the air that he isn't up to.

He's just chock-full of weird and wonderful air-wisdom; particularly air-*kit* wisdom, which he ranks highest in importance. For the enquirer's benefit he usually condenses that particular portion of his lore into three words—which he shoots at you and then turns to other things with a that's settled air—"Go to Dunhills."

Go to the people, that is (if he had time to elaborate), who know exactly what your needs are; whose name was a household word amongst motorists years ago when this highly specialised kind of clothing first became a serious necessity; whose unrivalled knowledge of materials and fastenings is at your service, who alone can give you the distinctive Dunhill cut; and who fix their prices with a benevolent eye for your pocket.

Call in, if you can, at our well-known "Base" in Conduit Street—a few paces from Regent Street—to inspect the full kit. Or, if London is "out of bounds" drop a line for patterns and full details which will be sent gladly on request.

Dunhills

PERSONAL NOTICES.

NAVAL.

Deaths.

PACKE.—Flt. Lt. Robert Christopher Packe, R.N., who was killed on June 21st when on patrol duty, was the elder son of Mr. and Mrs. Vere Packe, of Geldston Hall, Norfolk, and Sulivan House, Falkland Islands. He was 19½ years old.

* * *

Flt. Sub-Lt. E. G. Stocker, R.N.A.S., attd. R.F.C., has been missing since March 27th. Will friends of prisoners of war kindly ask for news of him, which will be gratefully received by Mrs. Stocker, 50, Albany Road, Salisbury.

MILITARY.

Deaths.

BUSBY.—Capt. Vernon Busby, R.A.F., who was accidentally killed while flying over London on June 8th, aged 23, was the eldest son of Mr. and Mrs. George Busby, of Fairfield, Selly Hill, Birmingham. He was educated at King Edward's High School, Birmingham, where he was a member of the O.T.C. He was an expert motor cyclist, and rode in two tourist trophy races. He volunteered for active service abroad on August 6th, 1914, and going to France with the first Expeditionary Force, he was made engineer of his unit. He was wounded in the battle of Mons, and in November, 1914, was given a commission in the Royal Engineers, stationed at Aldershot and at Dunstable, where he held a temporary staff appointment. He was transferred to the R.F.C. in 1915, and again went to France, where he remained until December, 1916, flying every kind of machine in the British Army. An injury to his leg kept him in hospital in this country for several months, and since the early part of 1917 he had been employed at the Air Ministry. During the last few months he was engaged on special flying work.

CAMPBELL.—Lt. Kenneth Turner Campbell, who was killed in aerial combat in France on June 17th in his 19th year, was the only son of Lt.-Col. Spurgeon Campbell, C.A.M.C., and Mrs. Campbell, of Winnipeg, Canada. He was brought up and educated in Winnipeg, where he had many friends. Early in 1917 he followed his father overseas, and was later granted a commission in the R.F.C. He had only recently gone to France, but had already earned recognition for his zeal and devotion.

COFFEY.—Lt. Charles Reay, D.L.I. and R.A.F., who was killed in action on May 27th, was the eldest son of Mrs. Reay Coffey, Kensington. He was 24 years of age.

HAMILTON.—Capt. Herbert James Hamilton, M.C., D.C.L.I., attd. R.A.F., whose death was announced last week, was educated at the Stationers' Company's School. He mobilised with the Artists Rifles in the early stages of the war, and in October, 1914, proceeded to France, where, after 12 months, he was given his commission and drafted into the D.C.L.I. After serving on the Somme for six months he transferred into the R.F.C., acting as observation officer for nearly six months. He obtained his pilot's certificate in the latter part of 1916, and was appointed flight instructor at Montrose. He returned to the front as temporary captain, which promotion was confirmed on November 25th last. On March 21st he rendered valuable service in low flying over the enemy, and was personally commended by the King. For this service he received the M.C. with three other officers of his flight, each being trained by Capt. Hamilton.

HEIGHAM-PLUMPTRE.—Sec. Lt. Leslie Grantham Heigham-Plumptre Bed. Regt., attd. R.A.F., whose death was recently announced, was educated at Westminster and Sandhurst, and was gazetted to the Bedfordshire Regt. in September, 1917, being attached to the R.A.F. three months later. He was wounded on March 22nd and returned to the front on May 19th.

HENDERSON.—Capt. Ian Henry David Henderson, M.C., Arg. and Suthd. Highrs. and R.A.F., was killed on June 21st while on flying duty. He was the only son of Lt.-Gen. Sir David Henderson, K.C.B., D.S.O.

Capt. Henderson, who was only 21 years of age, took his commission in the Argyll and Sutherland Highlanders in January, 1915, and transferred to the Royal Flying Corps in August, 1915. He was gazetted captain in July, 1916.

A memorial service will be held in the Church of St. Martin-in-the-Fields on Thursday, June 27th, at 12.30 p.m.

Ian Henderson was beloved by all who knew him. His personal charm and kindness of heart won for him many friends who will deeply mourn his loss. He had seen much active service, and in addition to displaying great personal gallantry had proved himself to be a pilot of very considerable skill. In him the King has lost an officer of real ability and still greater promise.

The sympathy of all who are concerned with aeronautics will go out to Sir David Henderson and Lady Henderson in the death of their only son.—C. G. G.

One who served with the late Capt. I. H. D. Henderson writes:—

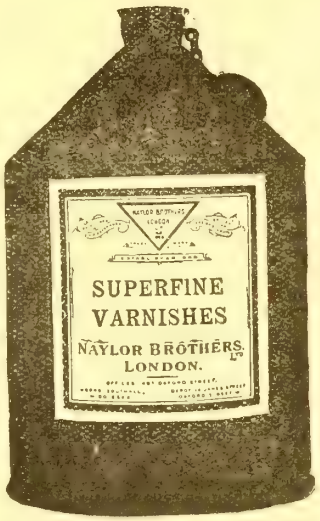
"The death of Ian Henderson has robbed the King of a loyal servant and the Army of a gallant comrade. Those who have served with him know his generosity of mind and his devotion to all that part of military life which concerned practical work in the field. In the trenches or in the air engaged with the enemy he was happy. Home appointments, if they prevented him from flying, had no attraction, however pleasant they might be in other ways.

"All who knew him liked him. His entire lack of rancour and jealousy and his whole-hearted admiration for those who had acquired merit in the field endeared him to all.

"The deepest sympathy is felt for his parents, who have given unreservedly their best to the King and country. There is a tragic coincidence in the fact that Ian Henderson died in and for the service which his father has done so much to organise and to create.—A Friend."

MEADWAY.—Lt. Brian Wilton Meadway, Northamptonshire Regt. and R.A.F., only child of Mrs. Meadway and the late G. H. Meadway, grandson of John Wilton, of Heathlands, Chadwell Heath, and great-grandson of George Wilton, of H.M.S. "Agamemnon" (Trafalgar, 1805), was educated at St. Lawrence College, Ramsgate. He joined the U.P.S. Brigade in September, 1914, received his commission in the Northamptonshire Regt. in January, 1915, and went to France in the following September. He was twice wounded. In September, 1917, he joined the R.F.C. and became an instructor. He was killed on June 4th while flying in Hertfordshire. He was 22 years of age.

PITHER.—Capt. S. C. Pither, K.O.S.B. and R.A.F., who died abroad on June 11th of wounds accidentally received, was the second son of the late Fras. L. Pither, of Tollington Park, N.



REDLER.—Lt. Harold Bolton Redler, M.C., R.A.F., was accidentally killed on June 21st. Aged 21.

SESSIONS.—Lt. Donald Humphrey Sessions, M.C., R.A.F., who was killed whilst flying in Kent on June 20th, was the youngest son of Mr. and Mrs. Herbert Sessions, Quedgeley Court, near Gloucester.

SCOTT.—Lt. Norman Scott, R.F.C., killed in an aeroplane accident at Beverley, was the third son of Police Supt. Scott, of the South Lonsdale Division, Lancashire County Constabulary, the senior police supt. in Lancashire. Deceased was 24 years of age, and a native of Wigan. For five years before the war he was a wireless operator at Toronto. In August, 1915, he joined the 3rd University Corps of Princess Patricia's Canadian Light Infantry, and had been three years in France attached to Headquarters Signalling Staff. In June, 1916, he was awarded the Military Medal for holding to his duties as signaller during a heavy bombardment and maintaining communication with the first line. Afterwards he was wounded, given his commission, and transferred to the Royal Flying Corps.

WILKINSON.—Sec. Lt. Louis Wilkinson, R.A.F., formerly a member of the reporting staff of the "Lancashire Daily Post," has been killed in a flying accident in Scotland. He was a son of the Borough Engineer, Burnley, and joined the Royal Flying Corps upon attaining the age of 18 last October. He received his commission in December, 1917, graduating for his wings in June.

ENGAGEMENTS.

BLOUNT—LEMPRIERE.—The engagement is announced of Lt.-Col. C. H. B. Blount, M.C., The Queen's, and R.A.F., son of the late Maj. C. H. Blount, R.A., and Mrs. Blount, of Felixstowe, and Beatrice Joan, second daughter of the late John Lempriere, of Melbourne, Australia, and Mrs. Lempriere, of 9, Philbeach Gardens, S.W.

MACKAY—HODGKINSON.—A marriage has been arranged, and will shortly take place, between Lt. Lewis Hugh Mackay, the Cameronians and R.A.F., only son of Mr. and Mrs. Lewis G. M. Mackay, of Whitecroft, Beckenham, and Miss Madge Hodgkinson, only daughter of the late W. A. T. Hodgkinson, of Ilkley, Yorks, and Mrs. Hodgkinson, of Wembley Park, Middlesex.

PAYNE—HARVEY.—A marriage has been arranged between Rawdon Shears Payne, R.A.F., late of the R. Ir. Regt., son of the late Capt. Ludlow Payne, of Upton House, Upton, Co. Cork, and Sylvia, daughter of Mrs. C. B. Harvey, East Burnham Lodge, Slough, and the late Maj. C. B. Harvey, R. Hussars.

MARRIAGES.

GODSAVE—POOLE.—On June 18th, 1918, at St. Mark's, North Audley Street, W., Capt. G. Elliot Godsave, London Scottish, and R.A.F., only son of Mr. and Mrs. G. H. Godsave, of South Norwood Hill, S.E., was married to Mildred, only daughter of Mr. and Mrs. Poole, of Athelstan, Honor Oak Park, S.E., by the Rev. F. Barber, Chaplain to the Forces.

ROE—STOPES.—The marriage took place at St. Margaret's Church, Westminster, on June 19th, between Humphrey Verden Roe, Lt., R.A.F., late the Manchester Regt., and Marie Carmichael Stopes, D.Sc., Ph.D., Fellow and Lecturer in Palæobotany at University College, London.

The bridegroom, who was wounded at the front some time ago, is one of the pioneers of aviation, having helped to found the firm of A. V. Roe & Co.; and the bride is well known in the scientific world.

The Bishop of Birmingham (Dr. Russell Wakefield) officiated, assisted by the Rev. Russell Napier, vicar of Old Windsor, uncle of the bridegroom. The bride was given away by Mr Aylmer Maude. Dr. B. Dunlop was best man.

SANSOM—BLEARS-CROCKER.—On June 20th, at St. Luke's Church, Kew Gardens, Lt. William Edwin Sansom, A.F.C., of Melbourne, Australia, was married to Doris Murie Marjorie, daughter of the late W. H. Blears, solicitor, Manchester, and Mrs. Crocker, and stepdaughter of Dr. Crocker, Parkside, Richmond, Surrey, by the Rev. C. H. Dix, M.A.

SPARGO—FURNISS.—On June 18th, at St. Peter's Church Rock Ferry, Cheshire, Lt. William Harvey Spargo, Liverpool Regt. and R.A.F., second son of Mr. and Mrs. W. H. Spargo of Rhodesia, South Africa, was married to Alice Elizabeth, second daughter of Mr. and Mrs. Frederick Furniss, of Rock Ferry, by the Rev. Archibald Ball.

TURNER—BAMFORD.—On June 18th, at St. Thomas's Church, West Hill, S.W., Maj. Ernest Turner, R.A.F., youngest son of the late William Turner, Esq., and Mrs. Turner, of Kingston, was married to Nora, elder daughter of Mr. and Mrs Frederick Linwood Bamford, of 70, Wimbledon Park Road, S.W. by the Very Rev. Canon E. F. Murnane, assisted by the Rev. J Cooney.

BIRTH.

CARTER.—On June 20th, at Dilston, Mumbles, to Millicent wife of A. C. Carter (Capt., Welsh Regt., attd. R.A.F.)—a son.

AIR FORCE.

DEATHS.

BOWICK.—Lt. William Robie Bowick, R.A.F., whose death was announced last week, was the eldest son of J. R. and Isabe Bowick, Bedford. He was 20 years of age.

KITCHEN and COLE.—At a South Coast town on June 22nd verdicts of death from misadventure were returned in the cases of Lt. John Frederick Raymond Kitchen, R.A.F., aged 19, and Sec. Lt. George Cole, R.A.F., aged 26, respectively pilot and observer of a seaplane, who were killed the previous day. The evidence showed that difficulty was experienced with the machine in rising from the water owing to a rough sea. It struck a pier overturned, and fell into the sea, the deaths of the occupant being due to drowning.

MALTBY.—Sec. Lt. A. J. Maltby, R.A.F., was killed on June 21st while flying at Montrose. Whilst in the act of diving the machine fell heavily to the ground. The deceased was a son of Mr. J. H. Maltby, Abingdon, Sandgate, Kent, and was 18 years of age.

NEWTON.—Sec. Lt. Fleming Newton, R.A.F., who was previously reported missing, is now known to have been killed on May 9th. He was the second son of Mr. and Mrs. Isaac Newton of Bayham House, Tonbridge, and was 19 years of age.

PEARSON, MACFARLANE, and FLYNN.—A verdict of accidental death was returned at an inquest in Cheshire on June 21st on Capt. William Reginald Guy Pearson, R.A.F. (late of the R.F.C.), of London; Lt. William Smith Macfarlane, R.A.F., of Edinburgh; and Lt. Vincent Flynn, of New Jersey, U.S.A., who were killed as the result of a collision while flying at a height of 1,000 ft. on June 20th. The evidence showed that Capt. Pearson

was in a machine with Mr. Macfarlane, and that Mr. Flynn was flying alone. They came together as though practising fighting. Capt. Pearson turned to the right, which was the rule of the Force when flying, but Mr. Flynn turned to the left, and the machines collided, and came to the ground wrecked. Capt. Pearson and Mr. Flynn were killed instantly, and Mr. Macfarlane died a few minutes after being picked up. In a witness's opinion, had Mr. Flynn adhered to the rules, and turned to the right, the accident would not have happened.

STOKES-REES.—Lt. Philip George Stokes-Rees, R.A.F., who died on June 18th as the result of a flying accident, was the son of Admiral and Mrs. Stokes-Rees. He was 19 years of age.

ENGAGEMENT.

WIGRAM—TRUMAN.—A marriage has been arranged, and will shortly take place, between Maj. Cyril Wigram, R.A.F., youngest son of the late Henry James Wigram, of Northlands, Landford, and Olivia Marie, daughter of the late Maj.-Gen. W. R. Truman and Mrs. Truman, of Winterbourne, Bonchurch, I.W.

MARRIAGE.

DIPPLE—BOAZMAN.—On June 18th, at St. Peter's Church, Berkhamsted, Sec. Lt. Eric Dipple, R.A.F., son of Mr. and Mrs. Charles Dipple, Handsworth, Berkhamsted, was married to Alice, daughter of the late Henry Boazman, Acorn Bank, Westmorland, and of Mrs. Boazman, Aycliffe, Penrith.

BIRTHS.

NICOLSON.—On June 16th, at 38, Crediton Hill, Hampstead, N.W.6, the wife of Leslie G. Nicolson, R.A.F.,—a daughter.

NORRIS.—On June 15th, at Morton Vicarage, Gainsborough, the wife of Lt. L. Norris, R.A.F., of a daughter.

* * *

Sec. Lt. C. J. MASON, R.A.F., has been missing since April 21st. Any NEWS of him will be gratefully received by Mrs. Mason, High Street, Wimbledon, S.W.19.

FOREIGN COMMUNIQUES.

FRANCE.

JUNE 18th.—During the last five days 32 enemy machines have been brought down or forced to land. In addition, four German aeroplanes were brought down by the anti-aircraft defences, and three captive balloons were set on fire.

During the same period 22 tons of bombs were dropped, both by day and night, on the railway stations of Soissons, Roye, Nesles, and Chaulnes.

ARMY OF THE ORIENT.—British aviators bombarded the stations on the Seres-Drama line (Struma front), and caused a fire at Furka (west of Lake Doiran).

JUNE 19th.—On June 18th in spite of the cloudy weather, our crews brought down or put out of action six German aeroplanes and set fire to a captive balloon. Our bombers dropped 10 tons of projectiles during the night of the 18th-19th on railway stations, cantonments, and bivouacs in the region of Villers-Franquex, Favorelles, and Fismes.

ARMY OF THE ORIENT.—Allied aviators carried out numerous bombardments. British aviators in addition brought down thr enemy machines.

JUNE 20th.—ARMY OF THE ORIENT.—Two enemy aeroplanes we brought down, one by our artillery, the other by our aircraf which also set on fire a balloon to the north of Ghevgeli.

JUNE 22nd.—An enemy aeroplane has been brought down.

JUNE 24th.—During yesterday five enemy aeroplanes we brought down or forced to land in their own lines in a damage condition.

Fifteen tons of projectiles were dropped on enemy aerodrom in Picardy and on the Aisne, as well as on bivouacs in the regi Chaulnes-Montdidier.

Captain Doullin brought down his 20th machine. Captain Sevin accounted for his 10th.

GERMANY.

JUNE 19th.—Yesterday, 23 enemy aeroplanes and three capti balloons were shot down. Capt. Berthold achieved his 35 aerial victory, and Lt. Veltjens his 22nd.

JUNE 20th.—Capt. Berthold achieved his 36th aerial victory.

JUNE 21st.—The large, clearly-marked hospital buildings the valley of the Vesle, between Breuil and Montigny, which we formerly used by the French, have recently twice been the obje tive of enemy air raids.

JUNE 22nd.—An enemy air raid on Bruges has caused casualti to the population.

Lt. Loewenhardt has gained his 28th aerial victory.

JUNE 24th.—Lt. Udet attained his 31st and 32nd aerial victorie Ober Lt. Goehring his 20th and 21st.

AUSTRIA.

JUNE 20th.—The co-operation in the fighting of battle aviato and of the reconnoitring service are mentioned in the troop repo with special praise. Among our battle aviators Capt. Brumowo

sky achieved his 33rd and 34th aerial victories. First Lieut. von Linke Crawford his 25th, and First Lieut. Fiala his 23rd.

June 22nd.—Between the 15th and the 20th inst. the enemy lost 42 aeroplanes owing to the activity of our aviators and of our anti-aircraft guns. He also lost four captive balloons.

ITALY.

June 18th.—The violence of the battle somewhat decreased along the mountain front, but is increasing along the Piave.

The aviators tirelessly continued to participate effectively in the battle, notwithstanding heavy rain.

June 20th.—From dawn to sunset our own and Allied aviators and the seaplanes of the Italian Royal Navy, all active in chasing, in not allowing the enemy to approach our lines, in observation for the other arms, in carrying out bombardments and attacking the enemy with machine-gun fire, participated uninterruptedly and effectively in the battle. Fourteen enemy machines were brought down. One of our aviators did not return. Along the whole front the observation balloons co-operated usefully and courageously.

June 21st.—The aviators, in spite of adverse atmospheric conditions, carried on their usual activities. Enemy machines were brought down. For the first time our aviators and those of the Allies had as their companions American pilots, who, as soon as they arrived on our front, wished to participate in the battle. The valiant Maj. Baracca, who had achieved his 34th victory in the air, did not return on the 19th inst. from an heroic war flight.

June 22nd.—Ten enemy aeroplanes and three captive balloons were brought down.

June 23rd.—Our own and Allied aviators continued the struggle with undiminished daring. Yesterday they also carried out big and effective bombardments on the immediate lines of communication of the enemy. Ten enemy machines were brought down. Lt. Flavio Baracchini gained his 29th victory.

The aerial losses suffered by the enemy since June 15th amount to 95 aeroplanes and six captive balloons.

June 24th.—The Naval General Staff announces:—Our seaplanes yesterday bombed Durozzo. A direct hit was secured on a large steamer, and fires were seen to break out near the enemy's sheds. In spite of lively anti-aircraft fire, all our machines returned safely to their base.

This morning (June 24th) the aerial bombardment of Durozzo was repeated with greatly successful results. At the same time British machines on a reconnoitring flight over Cattaro engaged enemy machines which had gone up in pursuit and hit one, which was seen to crash out of control. All the British and Italian machines returned safely.

U. S. A.

June 19th.—Last night our aviators were again successful bombing the railway yards and tracks at Conflans.

THE WAR IN REVIEW.

Interned in Holland.

The "Telegraaf's" Flushing correspondent reports on Jun 18th that Lt. George Brenton Coward and John Fountain Read British aviators, who descended near Souburg, Zeeland, informe him that they bombarded Zeebrugge on June 17th. They ha thrown their bombs and were returning, when four Germa machines barred their way. They gave battle. The fight wa furious, and suddenly a shot hit the English machine. The mot worked badly, the oil tank leaked, and petrol ran out of th machine, and there was danger that the aeroplane might take fir The Germans, certain of their prey, redoubled their attacks. Th British pilot realised that it was impossible to reach his own line As they approached Holland they were fired at by Dutch gun shrapnel flying into and around the machine. They continue however, to make for neutral territory, and the Germans saw the escape.

The Cavalry of the Air.

All reports speak of the assistance which Italian aeroplan rendered in the routing of the Austrian forces in the Piave battl much low-flying being done when the retreating enemy wa machine-gunned and bombed as he crossed the river. Also Italia aeroplanes bombed the retreating enemy in advance of the cavalr

A PRESENTATION.

A pleasant ceremony took place at the works of Handley Pag Ltd., after working hours on June 24th, when the employe presented a wedding gift to Mr. F. Handley Page, C.B.E., an his bride.

Mr. Meredith, who took the chair, opened the proceedings wit a few words about Mr. Handley Page's services to aviation fro the time before Bleriot flew the Channel.

The task of reading the illuminated address and of presentin the gifts fell to Miss Dyter, the Lady Welfare superintenden who performed the office charmingly, adding a few sincere wor of felicitation on behalf of the women workers. Mr. Handle Page then replied on behalf of his wife and himself in a spee which struck exactly the right note, and which was receive with acclamation.

With a vote of thanks to the chairman and an admirable rep followed by three cheers for Mr. and Mrs. Handley Page wit musical honours the cheery little ceremony ended.

The presents included a silver tea service, coffee pot and cup silver rose-bowl and cigarette case.
